The ICE CREAM REVIEW

Volume Eight—No. One Milwaukee, Wisconsin—August, 1924 Two Dollars Per Year

WHERE GOOD ICE CREAM STARTS

Cherry Upright Batch Mixers

THE freezing process alone will not give you good Ice Cream. Spend a little time studying your mixing batch. Here is where the foundation for the quality of your product is laid.

The Cherry Upright Batch Mixer enables you to hold the batch at a comparatively uniform temperature, and the positive action of the agitator provides for thorough distribution of the fats in the mixture.

Bulletin No. 2036 describes this equipment—ask for a copy. If you prefer, we will send you Bulletin No. 2031 giving details of Cherry Coil Batch Mixers.

MANY successful business men and leading economists are devoting attention to the merits of business budgeting....In a semi-seasonal industry budgeting permits a spreading of cash disposition from the months of greatest income only, throughout the entire year. It inwardly stabilizes and gives an orderly progression to an individual business. For example, it makes it easier for a business, whether large or small, to be in a position to take cash discounts in its purchases—and the National Association of Credit Men has pointed out to American industry and commerce that no business is fair to itself that does not try to earn the 36% a year to which cash discounts at 2% –10, net 30 days, are equivalent, or the 24% a year which is equivalent to discounts on 2-30-60 items....Sounder economy and greater scope of operation for the ice cream industry in all its branches is the end to which the Association, through co-operation with all ice cream manufacturers, has been long committed. Many ice cream manufacturers and supply houses, both, are experiencing real benefit today from the employment of some system of business budgeting.

AUGUST, 1924

THERE is a danger that so much stressing of the food quality of ice cream will make some manufacturers lose sight of the palate appeal. If ice cream men had nothing more than a food argument, many people would say, "Well, why not eat potatoes, which are cheaper?" But potatoes are not so nourishing, they will be reminded. "All right, what's the matter with spinach?"

Fortunately, however, folks don't look at things that way. The public is a little fairer than we think. But it must be remembered that ice cream must be good and appetizing as well as wholesome. People will cultivate a taste for spinach when they don't like it but know they ought to eat it. You never hear of anyone who doesn't like milk cultivating a taste for ice cream simply because it's a good food. They have to be tempted through the palate.

Let's don't forget to make it good as well as wholesome.

MANUFACTURERS throughout the country are awaiting with eagerness announcement of the winning slogan in the contest recently conducted by the slogan committee of the National Association of Ice Cream Manufacturers. This slogan will mean a regular trade-cry for the industry. The slogan campaign already has given the industry considerable national advertising. Thousands of letters were received with suggested slogans. The one that wins will be used in ice cream manufacturers' advertising all over the country. If we once make it as well known as some of the trade slogans now out, such as those of the florists, bread bakers and some of the cigarette manufacturers, we shall have ice cream in the minds of the public much oftener than in the past.

⚜

PLANS are fast formulating for the big convention of the National Association of Ice Cream Manufacturers to be held in New Orleans next November. Few men who have never served in an official capacity realize the amount of work to be done in connection with a big trade convention. One is scarcely out of the way before it is necessary to lay plans for the succeeding one.

Ice cream manufacturers in the Southern states are proud of their opportunity to show their brothers in other sections that no mistake was made when "The Crescent City" was selected for the 1924 convention. They court the obligation that rests upon them as hosts. They welcome the chance to demonstrate the importance and possibilities of their industry.

It is none too early to resolve to attend the New Orleans convention. We asked an Indiana manufacturer last week whether he was planning to attend the National Dairy Exposition. "When does it come?" was his reply. We told him and then he added, "All right, I'll be there, but I am not taking on anything that will conflict with my trip to New Orleans—and Panama."

⚜

A READER wants to know what we have in the boat when the "muskies" insist on jumping into it. That's just the way with some fellows; right away they get suspicious. This man wants us to commit ourselves and then his next move will probably be to inquire our source of supply. It will soon be dairy show time and no doubt he will be here. Then he would insist on our leading him to it.

We don't propose to get mixed up in such a deal. We are intensely loyal to the constitution of this land and we wouldn't use any "bait" that is prohibited. Anyway, we don't know where to get it.

⚜

KEEP in mind that Thursday, October 2, is Ice Cream Day at the National Dairy Exposition, Milwaukee, Wis. Plan to spend as many days as possible at the show, but be sure to be there on Thursday. Then you will meet the other good folks who talk the same language.

THIS industry's connection with the dairy exposition becomes clearer as the ice cream division of the National Dairy Club of Wisconsin proceeds to get busy and prepare for their industry's part in the exposition. This club, as previously explained in The Ice Cream Review, was organized to assist in preparations for the National Dairy Exposition, which will be held in Milwaukee September 27 to October 4.

George D. Mansfield of Milwaukee is at the head of the ice cream division. He is laying his plans carefully for the reception of visiting ice cream manufacturers. He has enlisted the support of manufacturers operating in virtually every part of Wisconsin.

Ice cream manufacturers who attend the exposition will find everything ready for their reception. Wisconsin members of the industry have left nothing for their friends outside the state to bother over. All details will be taken care of within the state, and visitors will have nothing to do but smile and have a good time.

Few of us stop to think that the dairy exposition affords the opportunity to kill two birds with one stone. This year the ice cream manufacturers will see an excellent exhibit of ice cream supplies, equipment and machinery. They will have the chance to note the important strides dairying is making in this country. At the same time the exposition will serve to advertise dairy products.

A large attendance of ice cream manufacturers will mean more advertising for the industry. Wisconsin manufacturers understand the value of the advertising thus afforded. They have made arrangements to put on sale a "dairy show special" brick. This will go before the people of their state on the week-end preceding the opening of the exposition. It will be accompanied by special advertising literature regarding ice cream.

People other than dairymen and dairy manufacturers will attend the exposition. Officials believe there will be a hundred thousand visitors. As a matter of fact, it is likely that there will be twice that number. Many of these visitors will be bankers, merchants, railroad officials, real estate men, chamber of commerce officers and state officials. Many of them will bring their wives and children. The part that ice cream men and the exhibiting of dairy products play in the exposition will result in just so much national advertising for the industry.

Ice cream manufacturers of every state should make up their minds to visit the National Dairy Exposition. There will not be any special meetings to hold you tied down; you can walk around and look and listen to your heart's content. You can even dodge the reception committee of Wisconsin manufacturers if you wish. This visit will not conflict with any of the ice cream conventions to be held in winter. People will be on hand to talk up the national convention at New Orleans in November, the Pacific joint convention at Los Angeles in December and many of the other conventions that loom ahead.

A delightful feature of the exposition is you will not have to stay over several days to wait for something you want to see or hear. Thursday, October 2, will be Ice Cream Day. That is the only day you are expected to be in Milwaukee. It is the only time you stand a chance to see other ice cream men. You can run out and see the cattle in the afternoon, and then look over the exhibits in the hall during the forenoon, hop on a train and beat it for home that night. Simple, isn't it?

IT WILL be interesting to watch developments in connection with budgeting the ice cream industry. There is an article on the subject in this issue. Officials of the National Association of Ice Cream Manufacturers are interested in the matter. They have held conferences on the subject with officials of the International Association of Milk Dealers, who have made much progress in this direction.

The ice cream industry has suffered greatly from loose play in business methods. Millions of dollars have slipped through the industry's fingers in this way.

The fever of anxiety over new accounts and more new accounts has prevented the ice cream manufacturer from keeping up with his costs. A man cannot reason out things in a business-like way when his veins are fairly afire with desire to beat another man to new acccounts.

There must come the time when the manufacture of ice cream will be more of a definite localized proposition than it is now. That will come about through greater consumption per capita. The shipping business has been one of the greatest eye-sores to the industry. It is probable that more than fifty per cent of the shipping business today is on an impractical scale—probably far more than that. This has been the cause of more failures in the industry than anything else with the exception of loose credits, and indeed, this has been a great factor contributing to unwise extension of credit.

Desire for more gallonage leads many ice cream manufacturers to fight locally for all the dealers they can get and with more or less success, then to look around for more worlds to conquer.

Pride over local achievement has led more than one rookie prize-fighter and bush-league baseball player to butt his head against the pillars of distant glory. When an ice cream manufacturer builds up a fairly profitable business in his own vicinity, shipping to nearby points with some success, he finds it the greatest kind of temptation to work up some business a little farther away, and then still farther on, and ofter he gets entirely too far away for the safety of the black-ink columns of his ledger.

We cannot keep up with our business if the territory we try to cover is greater than we are prepared to handle. Many men who think they are making money suddenly wake up to the fact that they have just been a clearing house for the exchange of money, with little of it sticking to their fingers.

We must concentrate in the ice cream industry. The coming of more ice cream factories is cutting down

much of the shipping business. This will be a good thing for everybody. It will mean that ice cream manufacturers will intensify their efforts to sell ice cream in the territory in which they operate.

Then we shall understand how perfectly silly it is to fight for business far away that some other man should have instead of going after the business that is right under our noses!

Farmers have learned that they don't necessarily need more land, but can prosper in proportion to how intensively and intelligently they cultivate the land they are working. Business men will learn the same thing some day, ice cream manufacturers included.

⚜

THE ice cream industry is so young and growing so fast it would be unreasonable to expect that all of the problems incident to the business would be settled up to date. Some day when more of the big problems have been solved we will look back to 1921 and smile when we consider the comparatively crude methods which now prevail. This may sound like a wild prophesy to some, but if it is, then the ice cream industry will have a different history than other industries in which methods have been improved from year to year covering a long period of time.

Some ice cream manufacturers are right now years ahead of their competitors in the race to secure a high consumption of their product. They have solved many of the problems which now hinder most ice cream manufacturers in their efforts to build up tonnage.

One of the chief faults of ice cream, as found on the market, is the lack of uniformity of temperature. When the customer calls for a dish of ice cream he is too often furnished with cream that is too soft or too hard. He is not always furnished with ice cream that is "just right." The degree of hardness of the ice cream at the time the consumer eats it makes a big impression on him. It materially affects the opinion he forms as to the quality of that particular ice cream.

We are not blaming anybody for this condition of affairs. It is simply one of the big problems to be worked out. We know that it is difficult to get ice cream to the consumer at just the right temperature, but we have faith enough in the men in the industry to predict that sometime this problem will have been solved. It is one of the faults of the trade today, but some day it will be corrected. It must be corrected before the consumption of ice cream will have reached the maximum.

⚜

WISCONSIN ice cream manufacturers will feature an ice cream brick to be known as "Dairy Show special" for one week previous to the opening of the National Dairy Exposition. This special will be on sale in every city and hamlet in the state and will materially aid in advertising the big dairy function. A splendid idea.

SOME retail dealers appreciate the possibility of greatly increasing the sale of ice cream in their locality by giving the right kind of service to the home trade. They are not satisfied with the sales over the counter or at the fountain; they encourage housewives to place their orders for ice cream, to be delivered at a certain hour, so that it will be in the right condition for serving at meal time. When the customer wants an order of ice cream delivered at 6:30 p. m., the delivery is made at that time and in good condition. The customer is made to feel that his patronage is appreciated and that he is not asking a favor when he asks the dealer to make the delivery.

Dealers in other food products are meeting this growing tendency on the part of city consumers to order the day's supplies, and they make delivery promptly and in good condition in order to hold and build up trade. They know that if they give the right kind of service the matter of price is a secondary consideration in the minds of their best customers.

With the sanitary containers now on the market the retail dealer of ice cream has opportunities to greatly increase the consumption of ice cream over what it has been in the past. The progressive ice cream manufacturer spreads the idea among his retailers and cooperates with them in every way possible to build up their trade. He backs up the retailer's effort to increase the consumption of ice cream in the home by efficient advertising, and by giving him the benefit of his experience in handling ice cream.

BULLETIN OF EVENTS

National Dairy Exposition—Wisconsin State Fair Grounds and the City Auditorium, Milwaukee, September 27 to October 4. Secretary, W. E. Skinner, 910 South Michigan Ave., Chicago.

Southern Association of Ice Cream Manufacturers—Twelfth Annual Convention, New Orleans, November 14 and 15, 1924. Secretary, J. W. Clopton, Decatur Ice Cream & Creamery Co., Decatur, Ala.

Illinois Association of Ice Cream Manufacturers—Silver Jubilee Convention, Chicago, October 28-29, 1924. Hotel headquarters, Hotel Sherman. Secretary, N. Loewenstein, 155 N. Clark St., Chicago.

National Association of Ice Cream Manufacturers — Twenty-fourth Annual Convention, New Orleans, La., November 17, 18, 19 and 20, 1924. Convention headquarters, Hotel Roosevelt. Secretary, L. Loewenstein, 155 N. Clark St., Chicago.

Louisiana Association of Ice Cream Manufacturers—Annual convention, November 21, 1924. New Orleans, La. Secretary, N. F. Maning, Monroe.

Texas Ice Cream Manufacturers' Association—Annual Convention, Dallas, December 3, 4 and 5, 1924. Secretary, A. J. White, San Antonio.

Georgia Ice Cream Manufacturers' Association—Annual Convention, Augusta, Ga., December 2, 1924. Convention headquarters, Richmond Hotel. Secretary, Sam Marshall, Marshall Ice Cream Co., Albany, Ga.

Oklahoma Association of Ice Cream Manufacturers—Annual Convention, Tulsa, December 8-9-10. Secretary, W. M. Hawk, Tulsa.

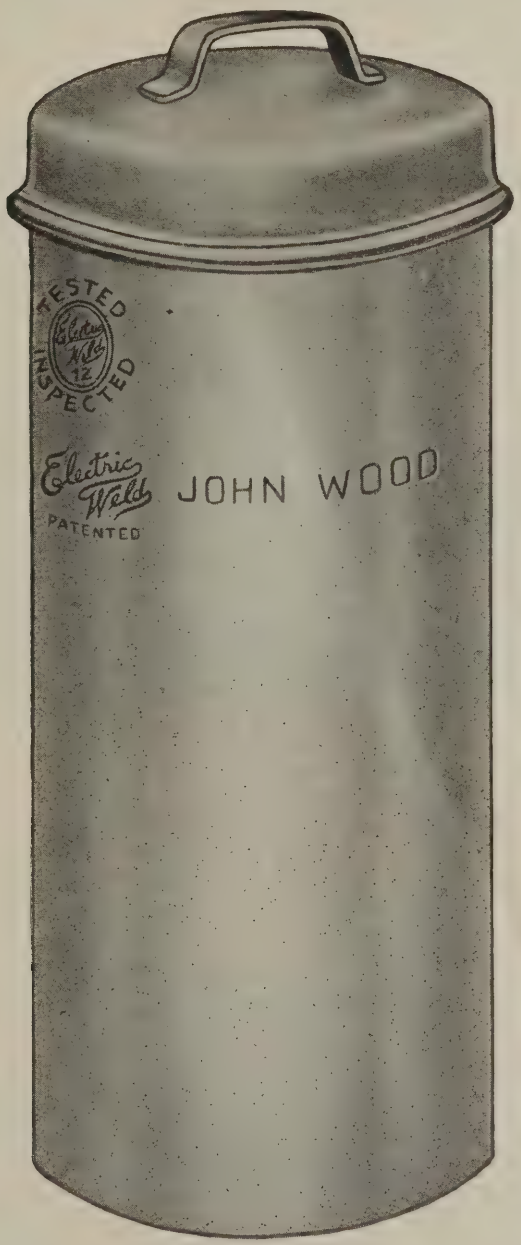
Pacific Slope Dairy Show—Exposition under the auspices of the California Dairy Council with co-operation of dairy councils of the Western states and dairy divisions of the agricultural colleges and departments of the Pacific Coast states, Oakland, Cal., December 10 and 16 inclusive. Secretary-manager, Sam H. Greene, 216 Pine St., San Francisco.

Pacific Ice Cream Manufacturers' Association—Annual convention, Oakland, Cal., December 10, 11 and 12. Secretary, Bert H. Walker, Tacoma, Wash.

California & Southwestern States Ice Cream Manufacturers' Association—Annual convention, Oakland, December 10, 11 and 12. Secretary, Jay Kugler, San Francisco.

Supply Men of the Pacific Coast Ice Cream Manufacturers' Association—Exhibition in connection with joint convention of Pacific Northwest, Pacific Coast and Southwestern States, City Auditorium, Oakland, Cal., December 10, 11 and 12.

Kansas Association of Ice Cream Manufacturers—Annual convention, Topeka, Kansas., December 16, 17 and 18. Convention headquarters, Hotel Kansas. Secretary, B. T. Perkins, Pittsburgh, Kans.



Arkansas Ice Cream Manufacturers' Association—Annual Convention, Little Rock, some time in December, 1924. Convention headquarters, Hotel Marion. Secretary, Charles Hooberry, Pine Bluff.

North Carolina Ice Cream Manufacturers' Association—Seventh Annual Convention, Charlotte, January 13-14, 1925. Secretary A. E. Dixon, Fayetteville.

Mighty Deluge of Ice Cream Slogans

Slogan Committee's Workers Wade Through Sea of Correspondence to Select National Trade-Cry for Ice Cream Manufacturers

THE slogan committee of the National Association of Ice Cream Manufacturers has finished its campaign and now work is on in earnest to select the winning slogan. Herewith is shown a view of the clerical force at work handling the material received in the slogan contest.

The winning slogan will be the one to be adopted by the National Association of Ice Cream Manufacturers and will be used in connection with advertising ice cream by the members of the association.

It will be the ice cream industry's official slogan, just the same as "Say it with Flowers" is the trade cry of the florists.

Late tabulations in the office of Walz-Weinstock, Inc., Washington Building, Buffalo, N. Y., where the slogan contributions are being tabulated, show that the contributions will exceed several hundred thousands in number.

The boxes on the right foreground, shown in the accompanying illustration, contain unopened letters, the packages containing letters which have been opened and the slogans tabulated.

Looking for the Winning Slogan.

THE tabulated slogans are all arranged numerically according to file number, so they can be readily referred to in selecting the winner.

Behind the packages are boxes containing the cards on which are written slogans, these slogans being arranged alphabetically according to state and slogan.

The workers announced early in July that the work of weeding out the slogans would not be known for two or three weeks.

According to the method of handling this work, it will be impossible for the judges to know the name of the winner until after they have judged the slogan itself.

Then the serial number on the card will be referred to the file containing the letter, and the winner's name will be identified.

ICE cream manufacturers throughout the country are waiting with much interest to receive news of the winning slogan. It is felt sure that this will be the greatest stimulant to nation-wide advertising of ice cream of anything that has developed in many years.

Officials of the National Association of Ice Cream Manufacturers have received congratulations from many parts of the country on the success of this movement and much credit is being given to the intensive work of the slogan committee for the remarkable results that have come of their advertising for slogan suggestions.

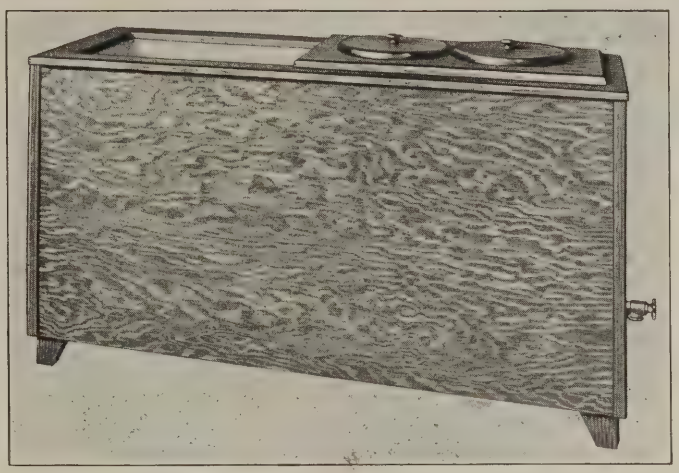
As previously related in The Ice Cream Review, the winner of the slogan contest will receive quite a bit of prize money, as different state associations hung up a number of prizes of their own to award the winner in addition to the national association's prize if the winner happens to be a resident of the state in which these state and regional associations operate.

NATIONAL DELEGATES ASSURED OF CORDIAL RECEPTION AT NEW ORLEANS.

New Orleans is going to make every effort to see that visitors to the national convention in November will receive every attention possible to give them, according to word from E. B. Geisel, manager of the Anheuser-Busch Ice Cream & Beverage Co., Inc., New Orleans, La. Different committees have outlined features that they believe will be of deep interest to every visitor. Mr. Geisel points out that historic features of his quaint city will be of interest to every visitor.

"New Orleans has taken care of many large conventions, and we feel that in having the ice cream convention held in this city, it will have a tendency to bring the ice cream makers from all over the United States who possibly have or have not had the opportunity of visiting America's Most Interesting City," writes Mr. Geisel.

"In handling other large conventions," continues Mr. Geisel, the city of New Orleans has always been complimented on the hospitality that has been shown the visitors during the convention, and we feel that inasmuch as we are fortunate in having the ice cream makers of America visit our city, it is up to us to do everything in our power to make their visit a pleasant one."



AMERICAN INSTITUTE TO HOLD BIG EXPOSITION OF INVENTIONS.

Manufacturers and handlers of ice cream and confectionery supplies, equipment and machinery, as well as manufacturers of ice cream and confectionery products, will be interested in the Exposition of Inventions, to be held, December 8 to 13, inclusive, 1924, in the famous Engineering Societies' Building, New York City. The American Institute of the City of New York is handling this display through its inventors' section, with behind it an experience of 96 years in fostering and portraying American industrial life.

A feature of the exposition will be exhibits from the leading American industries, showing development of various machines, utilities and processing methods. In all fields the ingenuity of the inventor and the part he has played in the progress of America will be emphasized.

Ice Cream Men Adopt the Budget

**Manufacturers of the Country Outline Views on Cost Records—
Actual System to Replace "Hit-or-Miss" Methods**

By ELDRIDGE HAYNES

THE ice cream man has joined the progressive ranks of men in industry who are planning their future business by past experiences—who are advancing their business profits through budgeting. The ice cream man has come to the point where he can plan with precision and accuracy his future course.

The success of the United States budget program has given impetus to budgeting in general—it has made the business man realize the value of planning and profiting by experience, not blindly striking out.

The Chamber of Commerce of the United States, as well as other organizations, has been generous in giving out budgeting information. It has issued a pamphlet, "Budgeting for Business Control." A similar study has been published by the Boston Chamber of Commerce. Budget committees of the National Dry Goods Association and the National Electric Light Association are developing studies for the department stores and public utility companies.

Individual firms have taken their cue from these organizations. Experiments are being made in every type of business; ideas are being exchanged. The business man is becoming farsighted.

A middle Western ice cream manufacturer, sensing the progressive turn in business management, wrote the Policyholders' Service Bureau of the Metropolitan Life Insurance Co. for any information they might have on budgeting in the ice cream industry.

The bureau immediately set out to gather information. It discovered that the ice cream industry was practically a virgin field for budgeting. However, some of its ice cream policyholders had definitely worked out careful budgeting plans over long periods and were succeeding under them.

1924 PRODUCTION LEADS LAST YEAR'S RECORD IN FIRST QUARTER.

A slight increase is shown in ice cream production of all kinds in the United States for the first quarter of 1924 over the first three months of 1923. Although beginning the first month of the year with production of 1,000,000 gallons, approximately, less than for January, 1923, production gains set in in February and March, and gave the first three months of 1924 a gain of nearly 3,000,000 gallons over the same period of 1923.

Figures recently announced by the department of agriculture show that in January of this year the production of ice cream of all kinds amounted to 5,750,000 gallons against 6,052,000 for January, 1923, with 2,420 plants reporting. Production went up to 7,754,000 pounds in February, 1924, against 5,625,000 gallons in February, 1923; and March showed a production of 9,152,000 gallons, against 8,507,000 for March, 1923.

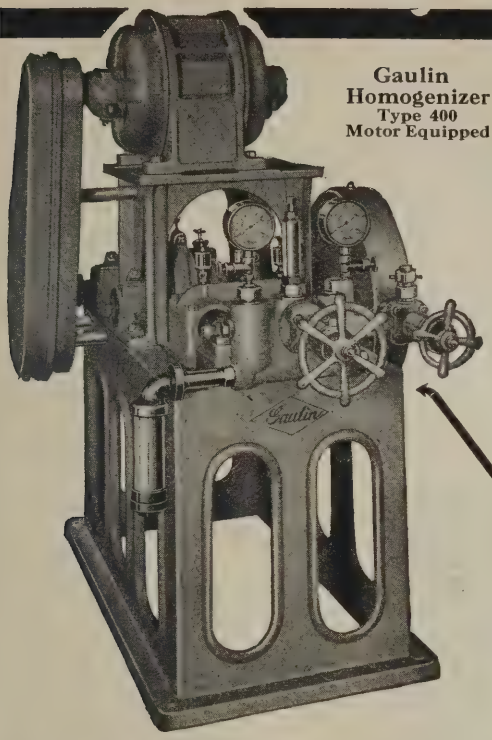
THE Purity Ice Cream Co., Limited, of St. John, Canada, practically attributed its success and growth in business over four years to careful planning and budgeting. This company started out on the following budget plan:

"Accurate cost figures were kept from the beginning so that now our budget predictions are based on actual performance over this average of years after the careful compilation of statistics.

"..... the careful charting of vital data has been found advantageous. Such sales as ice cream, milk, cream, and butter are charted daily for the month, weekly for the year, and monthly for a five-year period. This has been done by the usual line graph or chart—preference charts for flavors and sizes by bar charts—distribution of sales by locality by means of colored pins on maps—cost of sales and expenses in total and by departments by means of circle charts—procedure charts and numerous others."

A near approach to budgeting was found in the plant of Tait Brothers of Springfield, Mass. This firm operates under a system which endeavors to standardize costs and methods in all of its plants, and provides a procedure to fix responsibility on department heads within definite limits, to expediate the preparation of financial and operation reports, and to distribute the heavy carrying expenses of the winter months on a gallonage basis equitably throughout the year. With the actual practices of this company, and a number of additional suggestions made by the bureau, the report, "A Budget for the Ice Cream Industry," was prepared. *

As soon as news was given out of the existence of this report, several hundred ice cream manufacturers who were interested in budgeting requested it. An attempt was made to see what these interested ice cream men thought of budgeting and what they were actually doing in the field. A vote taken by mail indicated that they unanimously approved of budgeting and that about thirty per cent of the voters had established a budget system. Forty-seven per cent, although not actually operating a budget, were taking steps in that direction. Twenty-three per cent approved of budgeting but had made no definite attempts to use it.



These figures, gathered from the vote, may be considered representative of the industry. They indicate that the ice cream man has entered a new field, investigated it, and found budgeting worth adopting.

THE first step in budgeting involves a forecast of sales. Some ice cream firms use the "rule of thumb" method of establishing sales quotas. That is to say, the quota is set by adding or subtracting an arbitary percentage from the sales of the previous year. Such a method, however, is far from scientific. Some manufacturers are, therefore, giving more careful consideration to the sales budget; a few allow each salesman to set his own quota. These quotas must, of course, be approved by the management. Other firms make a

(Continued on page 66)

* The Policyholders' Service Bureau of the Metropolitan Life Insurance Company, New York, will be glad to send a copy of this report to any manufacturer upon request, without obligation.

Gaulin
Homogenizer
Type 400
Motor Equipped

More Than

100% Gain in Efficiency

with this New

2-Stage Gaulin Valve—

THE Manton-Gaulin Mfg. Company's latest development in homogenizing devices is the Gaulin 2-STAGE VALVE. Unquestionably, this device is far in advance and superior to anything of its kind on the market today. Efficiency, long life and adaptability are built into it and leave nothing to be desired.

ADVANTAGES

of the New 2-Stage Gaulin Valve

- ¶ **Over 100 per cent gain in efficiency.** Comparative tests show 150 per cent greater reduction in size of fat globules with the 2-stage Gaulin than was possible with the single Gaulin Valve.
- ¶ **Permits using a lighter mix and eliminates waste of time and materials caused by handling an extremely heavy and viscous product.**
- ¶ **Viscosity or body of mix absolutely under control.**
- ¶ **Unnecessary to limit degree of homogenization—"The more complete the homogenization the finer the finished product"—*Government Bulletins.***
- ¶ **Its increased efficiency produces a finer ice cream at no increase of power consumption.**
- ¶ **All the foregoing advantages obtained with no increase in price.**

Manufacturer's Guarantee

The manufacturers of the Gaulin Homogenizer positively guarantee that the Gaulin 2-Stage Valve will produce a better emulsion than any other homogenizing device on the market today.

Over 100% Gain in Efficiency—Absolute Control of the Mix

Not only is the homogenizing efficiency increased over 100 per cent with the 2-stage Gaulin, but in addition it is now possible to so effectively control the mix that the degree of homogenization and the body of the mix after homogenizing bear no relation to each other. In other words, the product may be thoroughly homogenized and yet be as light in body as when it left the pasteurizer, or it may, at will, be made so heavy and viscous, that it will not run over the cooler.

Unnecessary to Limit Degree of Homogenization

Thorough and complete homogenization is essential to a smooth, velvety product, but up to the present time the advantages of thorough homogenization have been denied many ice cream manufacturers, due to the fact that too heavy a body resulted if the pressure was increased sufficiently to obtain a thoroughly homogeneous product. With the 2-stage Gaulin it now becomes possible to manufacture a finer grain and better quality ice cream and at the same time tremendously increase operating efficiency.

With all these advantages in addition to the fact that the 2-stage valve *has been proven* over 100 per cent more efficient than the single Gaulin Valve, which for years has been the Standard of Efficiency, it will be readily seen that the Manton-Gaulin Mfg. Co. has developed a valve which is the most conspicuous advance ever recorded in the history of homogenizing. *Ice cream manufacturers can't afford to be without it.*

With the increased economy in manufacture, due to greater production, we are enabled to equip the Gaulin Homogenizer with the 2-stage valve at no increase in price.

We can recommend the Gaulin Homogenizer absolutely as a money-saver and money-maker in your plant—won't you let us tell you more about it?

Wisconsin Ice Cream Manufacturers Lay Exposition Plans

Ice Cream Manufacturers of Other States Invited by Badgers to be Their Guests at National Dairy Exposition—Reception Committee Appointed—"Dairy Show Special" Brick to Advertise Exposition

ICE cream manufacturers of Wisconsin have lined up behind the National Dairy Exposition and are moving to enlist the support of state officials in virtually every part of the country in working up a large representation from this industry when the different dairy divisions gather in Milwaukee, September 27 to October 4.

This action, which has been "in the air" for the past several weeks, serves to bring out the assurance repeatedly expressed in The Ice Cream Review that the 1924 exposition will hold greater interest for ice cream men than any past dairy exposition.

George D. Mansfield, head of the Mansfield Ice Cream Co., Milwaukee, one of the industry's veteran champions of high standards in trade and trade practices, is the vital spark behind the ice cream manufacturers' part of the program in the exposition. He is chairman of the ice cream division of the National Dairy Club of Wisconsin, the organization recently formed by dairy manufacturers and trade leaders of the Badger state to prepare for the mighty gathering in September.

GEORGE D. MANSFIELD.
Chairman, Ice Cream Division, National Dairy Club of Wisconsin, and one of the sensations of the club's activities.

IT WAS at the July 17 luncheon-conference of the club, which represents every branch of the industry, that Mr. Mansfield fired his broadside. The ice cream men were in charge of the meeting. As chairman of his division, Mr. Mansfield presided. The passing of preliminary matters found the general conference concluded and Mr. Mansfield was in possession of the center of the stage with ice cream manufacturers representing all parts of Wisconsin.

Wisconsin ice cream manufacturers are not mincing words in letting it be known that they want brothers in the industry of every state to join them at Milwaukee in September and enjoy a stay of real pleasure and profit in Dairyland's magic trade carnival.

The secretary of the National Dairy Club of Wisconsin several weeks ago wrote state association secretaries suggesting co-operation in arranging for the attendance of manufacturers from their states. This matter was acted upon at the meeting of the ice cream division on July 17 and was left in the hands of the secretary, who now is working with the officials of other organizations of ice cream manufacturers with this end in view.

FURTHER plans of the ice cream manufacturers of the state call for a "dairy show special" brick to be put on sale the week-end preceding the exposition, the issuing of window streamers advertising the exposition, and a luncheon for Wisconsin ice cream manufacturers at the Auditorium restaurant during the exposition, with visiting manufacturers guests.

The "dairy show special" will contain printed matter advertising the exposition. The special brick will be one pint. The printed matter will be fitted on the top of each brick, under the outside wrapper, and sent into many homes on the eve of the great dairy classic. Newspaper advertising will feature the sale of the "dairy show special," which will be made of New York ice cream, in the center, and vanilla on the ends.

The board of directors of the Wisconsin Association of Ice Cream Manufacturers, virtually every member of which was present, voted against holding the annual convention of the association at the time of the dairy exposition. This decision was reached largely because the association wishes its members to be free to extend courtesies to visiting ice cream manufacturers.

The campaign now is on in earnest to prepare for the ice cream men's part in the exposition. In the June issue of The Ice Cream Review, there was published the schedule of events to prevail during the occasion. Each branch of the industry will be in the limelight on one particular day. Thursday, October 2, will be Ice Cream Day. That will be the occasion for the ice cream manufacturers to occupy the center of the stage. All manufacturers contemplating attending are urged to be in Milwaukee on that particular day, not two or three days earlier nor a day or so later, but on that specific date—October 2. The Wisconsin committee will be on hand to welcome all visiting members of their industry.

AS TIME for the exposition draws nearer, it becomes more certain that the ice cream industry will have a large representation. There will be a large exhibition of ice cream supplies, machinery and equipment, as stated in previous issues of The Ice Cream Review. The largest houses of the industry will display their goods, representing all parts of the country, supplymen of the South, the North, the East and the West, and points in between, will be on hand.

WISCONSIN ICE CREAM MANUFACTURERS LAY EXPOSITION PLANS.

(Continued from page 12)

Officials of the National Association of Ice Cream Manufacturers, are expected to be present, as also representatives of The Association of Ice Cream Supply Men, the Dixie Flyers, the Michigan Dairy Boosters, and virtually all bodies of supply men.

WISCONSIN manufacturers have gone into these advance preparations with their whole hearts in their job. They are determined to do everything possible to show visiting ice cream manufacturers every courtesy. With this thought in mind Mr. Mansfield appointed a general reception committee of the ice cream division to act on Ice Cream Day, Thursday, October 2, at the State Fair Grounds:

A. H. KRAMER,
President, Wisconsin Association of Ice Cream Manufacturers.

S. J. DUFNER,
Former president Wisconsin Association of Ice Cream Manufacturers.

WALTER BENDFELT,
Treasurer, Wisconsin Association of Ice Cream Manufacturers.

Ice Cream Division's Reception Committee at National Dairy Exposition

J. D. Hughes, chairman, Milwaukee.
A. H. Kramer, Madison.
F. E. Caughey, Madison.
Chas. Touton, Janesville.
D. D. Smith, Fond du Lac.
J. R. Fess, La Crosse.
Arthur Mory, Appleton.
Geo. Morey, Stevens Point.
Chas. Carver, Oshkosh.
A. E. Sorge, Reedsburg.
C. E. Wright, Beloit.
Mr. Nelson, Racine.
C. R. Jeffrey, Waukesha.
Walter Bendfelt, Milwaukee.
Geo. Blommer, Milwaukee.
A. R. Ruttan, Milwaukee.
C. C. Mueller, Milwaukee.
Ralph J. Baker, Marshfield.
S. J. Dufner, Eau Claire.
H. S. Russell, Superior.
Mr. Bruner, Monroe.
D. Blaesser, Manitowoc.
Prairie du Chien Creamery Co., Prairie du Chien.
H. A. Hass, Madison.
Edward Barclay, Green Bay.
C. A. Walther, Green Bay.
Mr. Huebner, Shawano.
Mr. Duma, Sheboygan.
O. A. Elliot, Chippewa Falls.
J. A. Kleinheinz, Wausau.
Kiefer Products Co., Wausau.

Test Proves Ice Cream is Health Food

E. B. Geisel Conducts Ice Cream Experiments in New Orleans' Schools Which Result in Increased Weight for Pupils

THE value of ice cream as a health food and its particular importance to the growth and good health of youngsters was strikingly impressed following result of an ice cream nutrition class for undernourished children of New Orleans, recently held through the co-operation of the Anheuser-Busch Ice Cream & Beverage Co., of which E. B. Geisel is secretary-treasurer and manager.

Mr. Geisel, who is one of the southern industry's most prominent members, and is among those actively at work in preparation for the great joint convention to be held at New Orleans in November, has given The Ice Cream Review some information concerning this educational event.

The New Orleans' newspapers refer to Mr. Geisel as the "fairy godfather" of the New Orleans school children. For six weeks he conducted an ice cream test at the Alexander Dimistry School. This test enabled Mr. Geisel to show just how well justified are the ice cream manufacturers' claim to produce America's greatest food dessert. The remarkable gain of these children proved that ice cream was more beneficial to children than milk, according to Mrs. Cecile Holleman, trained nurse of the public school board, and Mrs. W. D. Clayton, who assisted in keeping the record.

"It is usually considered a good record when children gain one-quarter of a pound every two weeks," they explained, "but on the ice cream diet the children have averaged three times that much. Ice cream contains the sweets that children crave, as well as butterfat and plenty of milk. Children who refuse to drink milk need no inducement to take ice cream."

Dairy Refrigeration

The First of a Series of Articles on a Timely Matter of Importance to the Industry. From a Recognized Authority

*By F. B. FULMER**

REFRIGERATION in its broader sense may be defined as the process of transferring heat. The heat is extracted from the material or goods in one place and carried to another place where it is disposed of by dissipation in the atmosphere, or by allowing water to extract the heat from the circulating media used, after which the water passes to some form of a cooling device and is used over again, or is allowed to run away as a waste product.

In the popular conception, refrigeration is a comparative term, as it assumes a condition of cold as measured by the temperature of some substance, like the surrounding atmosphere, but in a stricter sense it is a condition of heat, as the term "cold" is purely a relative one, for cold is really a passive state, while heat is an active form of energy. The study of refrigeration, therefore, resolves itself into a study of heat.

The early history of refrigeration is not clearly defined, but from meager references in ancient literature we are justified in assuming that the process of cooling various articles below atmospheric temperature was given considerable attention. Undoubtedly the first attempts were made to preserve the more common articles of food in their natural state for relatively short periods of time in the warmer climates in natural caves, which maintained a temperature several degrees below that of the temperature of the air outside.

* Written especially for The Ice Cream Review.

NATURAL ice was used at an early period, but we can only conjecture as to the approximate date. One of the earliest authentic references that we have of ice being used in a commercial way is that during the time of Emperor Nero storage houses were constructed for holding ice.

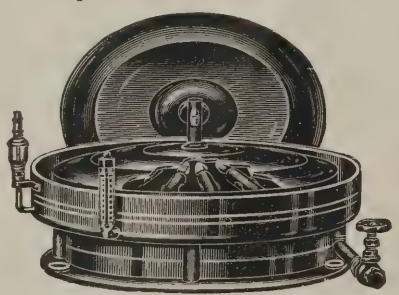
The first application of any form of mechanical refrigeration dates from 1755 when some experimenting was done with various liquids under a partial vacuum, though nothing of real importance was accomplished. In 1834 an English engineer developed an ether compression machine, which in a way was the forerunner of our present compression system. In 1845 Dr. Gorrie, an American, perfected a cold air machine, and in 1850 Carre, a Frenchman, developed an ammonia-absorption machine. In 1855 Professor Twining, an American, perfected the Perkins ether compressor and performed the then marvelous feat of artificially freezing blocks of ice with fish inside.

The commercial storage of natural ice in America is supposed to date from 1805 and in the natural ice belts it developed to large proportions. As the cold storage industry developed in the warmer sections of the country, is was shipped and stored during the ice harvest season, but the great shortage in the crop of natural ice in 1890 caused a serious situation in the then rapidly growing cold storage industry and attention was at once turned to the possibilities of dependable refrigeration as supplied by mechanical processes.

THE demand being present, the basic principles underlying the operation of mechanical refrigeration were applied by many designers, improvements were incorporated in the design, more efficient methods were applied and the process of manufacturing clear and merchantable ice from raw water was introduced and perfected and at the present time there appears to be more mechanically frozen ice manufactured than stored natural ice.

Aside from being more dependable, the mechanical refrigeration appears to have a more sanitary and economical application to many industries, like the ice cream industry, for instance. Many ice cream plants produce 1,000 gallons per day, and it does not require much thought to demonstrate the herculean task of handle the required amount of natural ice to freeze and harden the above amount of ice cream, not to mention the other uneconomical factors associated with the operation.

THE present-day application is very great indeed. There are approximately 150 industries depending more or less upon mechanical refrigeration for the production of some commodity, and the uses of it are constantly increasing.



The total number of plants in the United States at present is approximately 25,000, and the total number of factory machines is about 35,000, while the small units that are applied to household refrigerators, and more recently, the mechanically refrigerated ice cream cabinet, will total between 50,000 and 60,000. The estimated value of this refrigerating equipment, exclusive of buildings, is $1,200,000,000.00.

SALESMEN'S SUMMER COURSE QUOTA NEARLY FILLED.

The Salesmen's Club of The Association of Ice Cream Supply Men announced early in July that a very few vacancies only still existed in the quota of member salesmen to take the Penn State College short course in dairy products manufacturing and merchandising subjects, to be given August 18 to 29, inclusive, under the joint sponsorship of the club and the college.

Practical ice cream topics will be stressed throughout the course. A maximum of 50 salesmen may be enrolled. The companies represented through the salesmen already enrolled manufacture a wide range of products and travel in widely separate sections of the country. Officers of the Salesmen's Club believe that the bringing together for such practical purposes of this group of salesmen will in itself be beneficial to those enrolled.

The lectures and laboratory work of the course have been worked out on a practical basis by the Penn State academic staff which will be in charge, comprising Messrs. A. A. Borland, head of the dairy department; W. H. Martin, market milk and dairy manufacturing; L. W. Morley, extension specialist in dairy manufacturing; W. D. Swope, testing dairy products; M. H. Knutsen, bacteriology, and I. R. Knapp, butter and cheese.

"There is no better way to combine two weeks of good fellowship with an improvement in your earning power in your chosen vocation," is the way in which the opportunity to enroll in the course has been phrased in recent Salesmen's Club bulletins. "State College is one of the finest places in the country to spend a vacation in the hot, dull month of August."

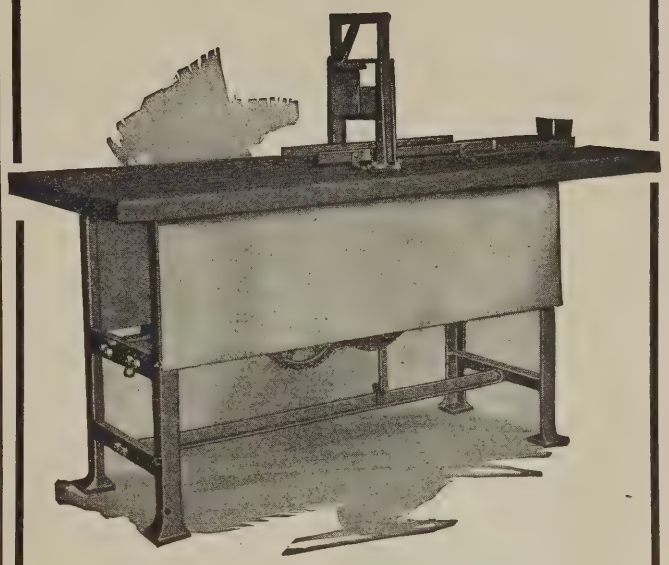
SUPPLY MEN PREPARING FOR NEW ORLEANS.

Representatives of a great majority of the member companies of The Association of Ice Cream Supply Men have made, or are now making, hotel reservations in New Orleans for the period of the annual convention of the National Association of Ice Cream Manufacturers, November 17 to 20, inclusive.



This information is issued by The Association of Ice Cream Supply Men, which is keeping in touch with the hotel situation in the famous southern city. The Hotel St. Charles will be the convention week headquarters of The Association of Ice Cream Supply Men. The Hotels Roosevelt and De Soto are to be for the accommodation exclusively of, respectively, the National Association and the Southern Association of Ice Cream Manufacturers. The Dixie Flyers, the organization of southern supply salesmen, will have headquarters at the Hotel Monteleene.

Other New Orleans hotels are the Bienville, Lafayette, La Louisiana, Chalmette, Planters and the La Salle.

FROZEN FRUIT MADE AT MIAMI.

"Frozen Fruit" is the name of a new ice cream delicacy that is said to be meeting with much favor in Florida. It is made by a Miami ice cream manufacturer. This product is described as a combination of fruit, mixed thoroughly including the juices, plus about twenty per cent sugar for sweetening and preserving. The mixture is filled into eight quart-brick slabs, and without running through frezers, is placed in the hardening room. Then it is run through a machine commonly used for Eskimo pies, dipped into chocolate and wrapped in a manner similar to Eskimo pie.

The New Era

Ice Cream Brick Cutter

is now equipped with two scale boards that have adjustable scale racks. Each board, with a simple adjustment, will make ten different cuts to the quart.

The feed plate is now equipped with a screw adjustment, making it possible to adjust machine, so same will space with unfailing accuracy.

Placed on ten days' trial, guaranteed to be practical, durable, and efficient.

Our representatives are the leading Ice Cream Supply Houses.

Dixie Flyers Prepare For Elaborate Exhibition

Space Available for 188 Exhibit Booths, Announces President Harry A. Benners, Who Says Space is Melting Fast

THE Dixie Flyers are getting in readiness for the great joint convention at New Orleans in November. President Harry A. Benners has fired the opening gun in advance preparations. He advises that arrangements have been made for the construction of booths and the decorating of the exhibit hall.

As previously announced exclusively in The Ice Cream Review, the Dixie Flyers will not exhibit in connection with the national convention, but will present to the delegates to the Southern Association of Ice Cream Manufacturers' convention one of the most complete exhibitions ever held in the Southern industry. The Southern association will meet November 14 and 15, and the sessions of the National association will open the following Monday, November 18, and continue through November 20.

HARRY A. BENNERS.

It will be possible to take care of approximately 188 exhibits at the convention. Floor plans for the exhibition show 88 booths on the floor, but the president advises that at least 100 more booths can be provided in the balcony.

All meetings of the Southern association, as well as all entertainment features of the Dixie Flyers, will be held in the exhibit hall, thus assuring a continuous attendance of ice cream manufacturers during the convention.

A LARGE number of supply houses already have made application for space and from the present outlook, the president believes that space will melt away fast in the next few weeks.

As stated in The Ice Cream Review last month, many Dixie Flyers will be present at the National Dairy Exposition, to spread the good word about the Southern convention and exhibition and to encourage ice cream manufacturers of states in the North and West to make it a point to attend the national convention.

President Benners has not announced any official committees to represent his association, but many members of the Dixie Flyers will exhibit at the National Dairy Exposition and will not fail to let it be known that the South is facing the most important ice cream event in its history.

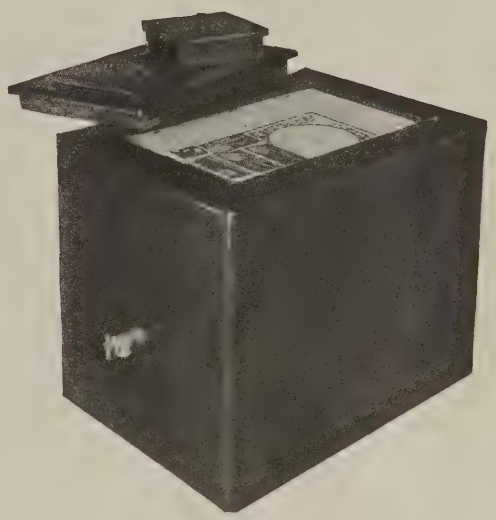
MUCH interest is reported from different points in the South. Readers who remember the occasion of the exposition of The Association of Ice Cream Supply Men in connection with the convention of the Southern association in Atlanta in 1921, know just how much interest was created at that time. It was the first time an exhibition had been held in the Southern ice cream industry. In fact, at that time The Association of Ice Cream Supplymen had held only three or four regional exhibitions.

Special arrangements had to be made for the exposition that year, as the Southern association the year before had voted to meet next in Little Rock. Officials of the supply association had to confer with Southern association heads and get the consent of the Little Rock people to change the convention dates and place of meeting in favor of Atlanta, thus making the exposition possible.

There is much disappointment this year over the failure of The Association of Ice Cream Supply Men to stage an exhibit in New Orleans. But as plans unfold for the Dixie Flyers' exhibition, delegates to the Southern convention this year seem to be assured of an interesting and profitable stay while in New Orleans. New Orleans itself is a very interesting city. It is a place Southern ice cream men like to visit. The Southern association has some very important work to take up this year. The very fact, however, that the National Association of Ice Cream Manufacturers will favor their city, holding its 1924 convention there, is alone sufficient to make ice cream manufacturers in all parts of the South eager to be on hand.

Further details of convention preparations will be announced from time to time in The Ice Cream Review, which publishes much exclusive information concerning coming conventions.

The following committee on publicity has been appointed by President Benners and will serve until the next annual meeting of the Dixie Flyers: C. Mortensen, chairman; Ben Brown, Craddock Goins, W. B. Savell, H. P. Olsen, L. A. Gibson, Jas. J. Harvey.



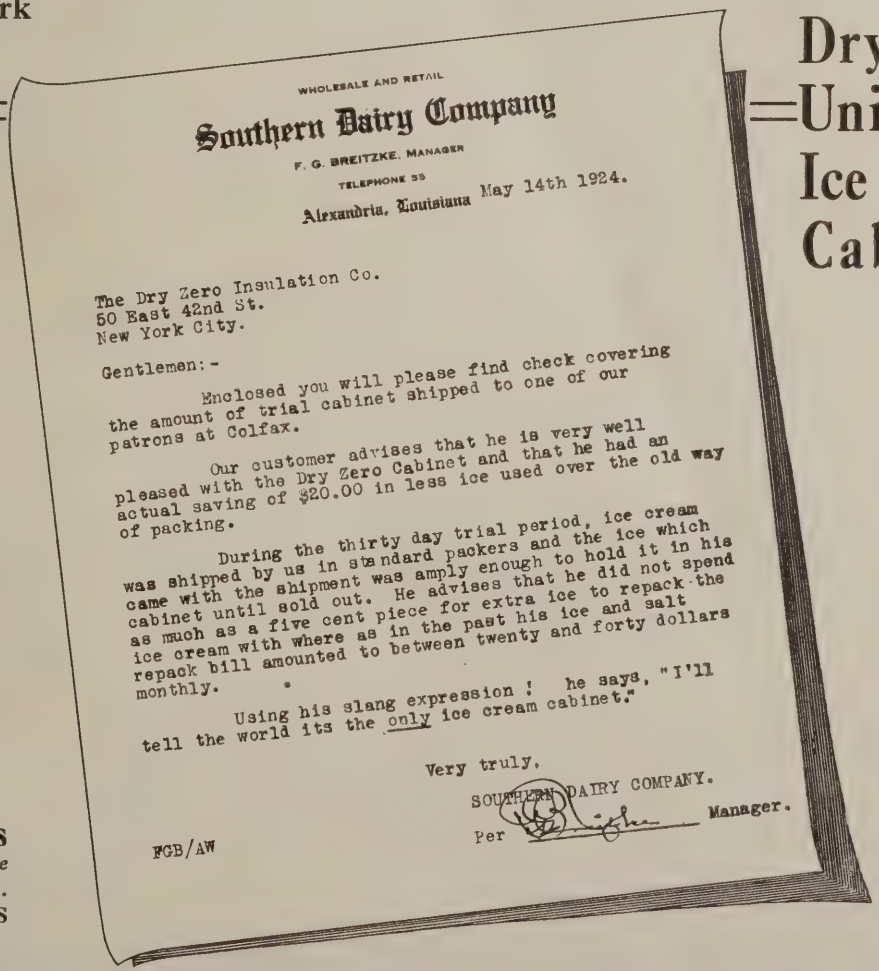
BENJ. C. BROWN.

SOME of the entertainment features to be provided at the convention have been announced in President Benners' tentative entertainment program, drawn up by the officers of the Dixie Flyers and approved by officials of the Southern Association of Ice Cream Manufacturers.

These features provide for a boat ride on the Steamer Capitol; a visit to one of the large sugar plantations near New Orleans where visitors can witness the cutting of sugar cane, grinding cane and making of sugar.

There will be a luncheon on the boat, dancing, etc.

Now is the time to make a practical test



Put a Dry Zero Cabinet along side of what you are now using at some reliable dealer's store.

Check carefully the ice used and note personally the quality of ice cream served. Then draw your own conclusions and ask the dealer's candid opinion. We are satisfied your conclusions will convince you of new economies and greater dealer satisfaction.

You can do all this without cost to yourself. Just write or wire us to send a trial cabinet subject to your approval after a thorough practical test.

The Dry Zero Insulation Co.
50 East 42nd St.
New York City.

Gentlemen:-

Enclosed you will please find check covering the amount of trial cabinet shipped to one of our patrons at Colfax.

Our customer advises that he is very well pleased with the Dry Zero Cabinet and that he had an actual saving of $20.00 in less ice used over the old way of packing.

During the thirty day trial period, ice cream was shipped by us in standard packers and the ice which came with the shipment was amply enough to hold it in his cabinet until sold out. He advises that he did not spend as much as a five cent piece for extra ice to repack the ice cream with where as in the past his ice and salt repack bill amounted to between twenty and forty dollars monthly.

Using his slang expression ! he says, "I'll tell the world its the only ice cream cabinet."

Very truly,

SOUTHERN DAIRY COMPANY.

Per _____ Manager.

United Fruit Bldg.
NEW ORLEANS

All visiting members of the National Association of Ice Cream Manufacturers are invited to participate in the entertainment of the Dixie Flyers, who have made themselves famous by their lavish entertainments.

Southern conventions every year stand apart from those in any other section of the country. The Southern ice cream manufacturer firmly believes in taking his ladies to his conventions. The social side is a very important feature of every Southern convention.

The ladies and members of the Southern Association of Ice Cream Manufacturers will be tendered an entertainment affair the first evening of the convention, at 8 P. M. Friday, November 14, designated on the tentative program as "A Louisiana Jambalaya." There also will be entertainment for the ladies on the following day, while their husbands are in convention sessions. The boat ride will fall on Sunday, and it is then that the sugar plantations will be visited.

* * *

Southern Exhibition-Convention Notes.

All sessions of the Southern Association of Ice Cream Manufacturers will be held in the exhibit hall.

Exhibit hall will be opened at 9 o'clock Friday morning, November 14, 1924.

All exhibits and supplies to be sent to the Imex warehouse, New Orleans, La., and marked "For Southern Ice Cream Convention," freight or express charges to be prepaid. Storage and drayage to be paid on delivery to exhibit hall.

Exhibits must be in place by Thursday night, November 13.

Exhibitors will close booths during sessions of the Southern Association of Ice Cream Manufacturers.

Only members of the Southern Association of Ice Cream Manufacturers, National Association of Ice Cream Manufacturers, and Dixie Flyers will be admitted to convention and exhibit hall.

Guest badges and tickets will be issued to all members of the National Association of Ice Cream Manufacturers in attendance at the Southern convention, which will admit them to the exhibit and convention hall as well as all entertainments provided by the Dixie Flyers.

Don't fail to attend the big boat ride, as this will be one of the most instructive as well as entertaining trips ever enjoyed at an ice cream convention.

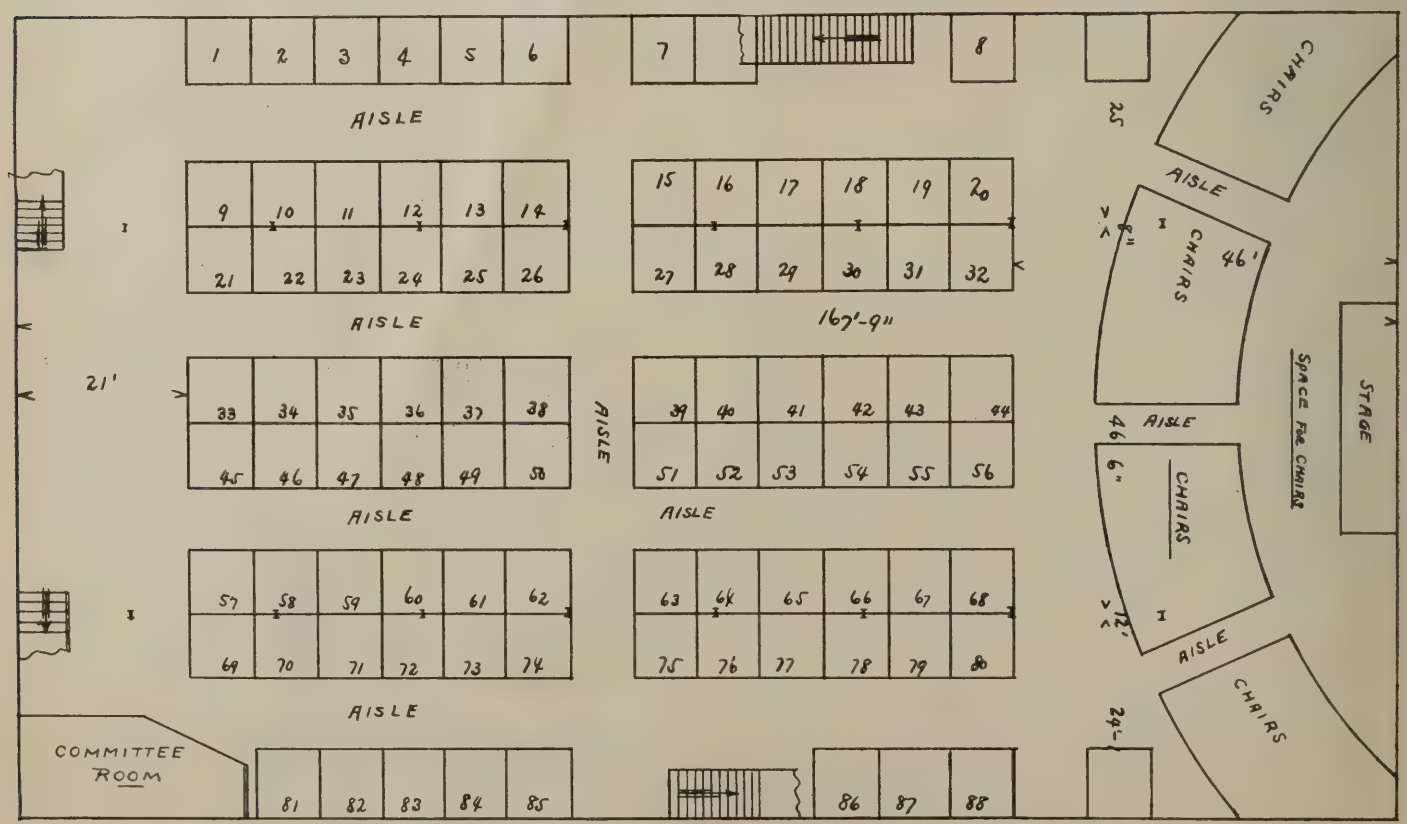
The services of the officers and members of committees are at the command of the ice cream manufacturers and Dixie Flyers, so don't hesitate to write if we can serve you.

H. A. BENNERS,
President Dixie Flyers,
605 United Fruit Building,
New Orleans, La.

PROGRAM OF DIXIE FLYERS.

Friday, Nov. 14, 8 P. M. "A Louisiana Jambalaya." (A little bit of everything.)

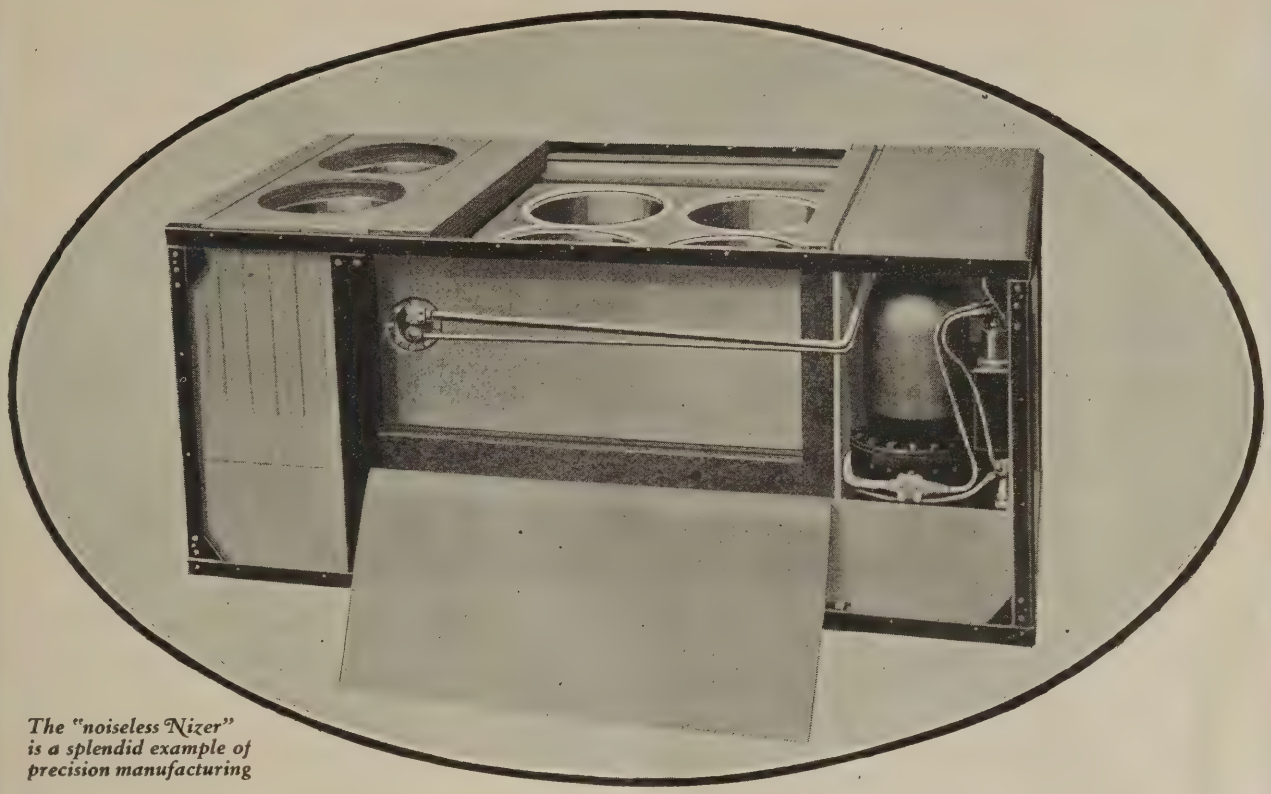
Tendered the ladies and members of the Southern Association of Ice Cream Manufacturers.



Saturday, Nov. 15. Entertainment for visiting ladies. Details will be announced later.

Sunday, Nov. 16, 9 A. M. All day boat ride on Steamer Capitol. A visit will be made to one of the large sugar plantations near New Orleans where the visitors can witness cutting of sugar cane, grinding cane, and making of sugar.

Luncheon will be served on the boat. Continuous dancing, etc. (Keep your eye on the etc.)



All visiting members of the National Association of Ice Cream Manufacturers are cordially invited to participate in the entertainment of the "Dixie Flyers."

FLOOR PLAN FOR THE DIXIE FLYERS' EXHIBIT.

Booth rates: Ground floor, 8 by 8 ft., $35; Balcony, 8 by 8 ft., $25.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

The "noiseless Nizer" is a splendid example of precision manufacturing

Half the Speed, Half the Hours —Four Times the Life

EXPERIENCE with ice and salt has taught ice cream manufacturers to watch depreciation keenly.

"How long will this equipment last?" is a first question.

Let us answer for Nizer Cabinets by giving the facts which have developed to date.

Thousands of Nizer Cabinets have been in use in all parts of the country for periods up to three years, and so far have shown practically no signs of wear.

After an endurance run in which a Nizer was operated the equivalent of nine years, it was put into use and has already given three additional years of satisfactory service. Yet we hesitate to claim the total life which such a record indicates.

The following facts, however, are more conclusive:

(1) In ordinary compressors, moving parts easily last five years or more. The moving parts of a Nizer turn at but half the ordinary speed.

(2) The refrigerating efficiency of a Nizer has been thoroughly proven to be double what may be called "ordinary" for small unit machines. And thousands of reports confirm this, for they show that Nizers operate only from three to eight hours per day—the first figure being for a 4-hole in mid-winter, the other figure for an 8-hole in mid-summer.

Half the speed—for half the hours—seems to assure the Nizer user of four times the "ordinary" life.

This Firm Picks and Educates Its Dealers

Retailers are Compelled to Meet Quality and Quantity Standards by The Steffen Ice & Ice Cream Co., which Employs Service Man to Instill Salesmanship

ONLY dealers properly equipped to handle their ice cream are given this privilege by the Steffen Ice & Ice Cream Co., Wichita, Kan., with branch plant at Oklahoma City, Okla.

Ice cream manufacturers who are continually scrapping for accounts will find something to wonder about in connection with the success of this firm, and its success is something more than a matter of passing interest. It is clearly demonstrated by this firm that a manufacturer who makes the best ice cream that he possibly can and holds to high trade ideals, can make dealers want to do business with him and properly prepare themselves to handle this business in keeping with high standards.

The Ice Cream Review repeatedly has pointed out that the industry's greatest development is coming through quality practices by the dealers as well as by the manufacturers. The best ice cream made cannot make a favorable impression upon the public unless it is properly handled by dealers and properly served. John D. McEwen, secretary of the firm, has written The Ice Cream Review the following outline of his company's activities, which no doubt will be of considerable interest to our readers:

IN WICHITA all cream is delivered in packers with no re-icing at the fountain. The aim of some manufacturers is to sell volume regardless of how, when or where, it is served.

"Wichita has about 150 hamburger stands, in cement block, one-room buildings," explains Mr. McEwen. "In summer these stands are buying from one-half to two gallons of cream each day, or every other day. Unless the manufacturer loans a cabinet, the cream is served from the delivery tub.

"This to our notion is a very poor means of distribution, and, as we do not care to loan equipment to such stands, we have made two rulings. We will not furnish equipment, each dealer must serve our cream from regular cabinets, and order not less than two gallons each day, of any one flavor. By this method we are able to weed out small, undesirable dealers that are leeches to the industry. This is our first step to educate the people in, and around Wichita to the fact that Steffen's dealers are hand-picked.

AS WE are not re-icing, we have a service man who checks all dealers twice a week as to the cleanliness of the fountain, dippers, spoons, floor and cabinets; also noting the condition of the syrups and toppings used.

"Advice is tendered as to the proper means of serving and mixing drinks and making syrups.

"We find that considerable damage to the industry at large has resulted in the improper dispensing of ice cream. We advise the consuming trade to go to a Steffen store first, if that store does not carry the flavor they wish, or keeps the cream in proper shape to come to our factory.

"Each person coming to the factory is asked from what dealer he buys. If it happens to be a competitor's store, he is asked why he does not buy from so and so, our dealer. This enables us to find many a mistake that our dealer has made. A 20 per cent discount is credited to the nearest Steffen dealer or to the Steffen dealer designated.

"As to the volume of our business, last year more ice cream was sold by our Wichita plant than in any previous year during our 38 years of operation. This was not caused by weather conditions as the mean temperature was on the average with other years. We felt that better merchandising and improved product with our years of experience, was responsible for such an increase."

Better Merchandising Through Select Dealers

MANY of us have been going at this thing backward for a long time. We have been spending so much time looking for dealers that we have not had time to help our own dealers sell more ice cream.

The Steffen Ice & Ice Cream Co., Wichita, Kan., has made it a point to see that dealers are properly prepared to handle ice cream. The best ice cream made, as often has been pointed out in The Ice Cream Review, will not be much good to the public if it is handled by sloppy dealers unprepared and unwilling to handle it in the right manner.

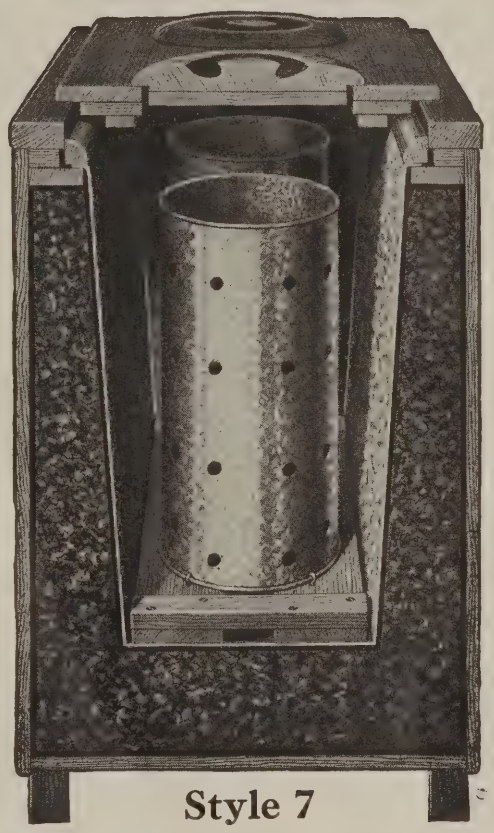
But this firm helps its dealers and has a special service man to see that they follow the right methods in serving and selling. Better merchandising enabled the company to sell more ice cream last year than in any previous year in its 38 years in business, this, despite the fact that dealers are selected—picked. There is food for thought here. Digest it.

LARSON HEADS BUREAU OF DAIRYING.

C. W. Larson, chief of the dairy division, bureau of animal industry, U. S. Department of Agriculture, has been named head of the newly created bureau of dairying. For some time it has been generally known that the dairy industry has reached the point where it was necessary for the dairy division to be entirely divorced from the bureau of animal industry.

The appointment of Mr. Larson was expected and meets with deep gratification in the dairy industry. His work as the leader of American dairying development has attracted widespread attention. It has been a very splendid influence he has weilded toward better dairying methods. The industry owes much to Mr. Larson.

BETTER SERVICE—LESS EXPENSE



with

The Grand Rapids
ICE CREAM CABINET OF QUALITY

THE palatability of ice cream depends largely on how it is kept. Grand Rapids Ice Cream Cabinets protect the quality of your cream, hence assure perfect service to the consumer.

The excellent insulating quality which is the distinguishing mark of all our cabinets protects you equally against shrinkage—a big item when figured on a yearly basis.

Grand Rapids Ice Cream Cabinets effect big savings in two other important essentials. They reduce ice bills to a minimum. The dependable soundness of their construction insures many years of 100% service.

WORLD'S LARGEST MANUFACTURERS OF ICE CREAM CABINETS

Cost Accounting Conference Held by National Association Officials

President Confers with Milk Dealers on Timely Subject

STEPS toward a cost accounting system in the ice cream industry were considered at a meeting in Chicago on June 25 attended by Vernon F. Hovey, president of the National Association of Ice Cream Manufacturers; Samuel T. Nivling, director-at-large; and Messrs. C. E. Eurich of New York City, and C. B. Harpster of Columbus, O., who conferred with members of the executive and accounting committees of the International Association of Milk Dealers.

The latter organization started intensive work in October, 1922, on a uniform accounting system. About sixty accountants, representing milk dealers all over the United States, participated to some extent in the construction of their system which was offered to members in reasonably complete form at the National Dairy Exposition at Syracuse, last fall. Because of the participation of so many accountants in the building of their uniform accounting system less trouble than might have been anticipated has been encountered in getting the acceptance and installation of this system. About fifty members have started installation of this system up to the present time, with every prospect that this number will be doubled within another year.

For the first time in the history of the milk business, milk dealers are going to find it possible to compare costs. There is every reason why these comparisons should increase efficiency and economies, also giving to the members participating, the satisfaction of knowing how the efficiency of their own operations compare with similar operations, in other plants.

THE International Association of Milk Dealers has about seventy-five members who manufacture ice cream, and they are accordingly very anxious, indeed, that the accounting work to be done by this association shall, if possible, be co-ordinated with the work they have done. Ice cream manufacturers' interests are very closely allied, and it is the thought of ice cream officials that the accountants of the two associations should work very closely together. The meeting in Chicago was held to make this possible.

"The success of the National Association of Ice Cream Manufacturers' efforts toward cost accounting will depend largely upon how well the officers can get the assistance of accountants from a rather large number of representative ice cream concerns in the development of the work," according to President Hovey. The president is very hopeful that this movement will receive progressive and liberal support of the ice cream executives of companies in the association.

CALIFORNIA'S ICE CREAM APPETITE.

California people have a compelling appetite for ice cream, as evidenced by the fact that the per capita consumption of this delicious dairy food in the Golden State is more than 30 per cent greater than in the United States as a whole.

This is one of the interesting facts brought out by a recent survey by California Dairy Council of the use of dairy products in California. This survey, in addition to showing that California people are probably the greatest consumers of ice cream in America, fully verified the belief that California people use more butter than do people of other states.

The average Californian eats 2½ gallons of ice cream a year, whereas the average American consumes only 1.7 gallons a year. Though eighth among the states in population, California is sixth in ice cream manufacture. The great state of Texas, with a million more of population than California, uses less than half the amount of ice cream, the consumption there being less than a gallon per capita. Missouri, with approximately the same population of California, uses half the amount of ice cream.

THE priceless ingredient of any product is the honor and integrity of its maker. If you can depend on the reliability of the House from which you buy, you can be assured of satisfaction.

Into the composition of DERYCOTE Tub and Can Enamel, The National Paint & Varnish Co., has put that dependability and reputation achieved from twenty-one years of satisfactory service, and distribution of "paints for specific purposes."

Derycote
PAINT YOUR PERSONALITY ON YOUR PACKAGES

has given satisfaction because of our desire to live up to our reputation and give you the BEST that years of experience and research can possibly give.

You can soon learn why DERYCOTE does please. Try it yourself.

You can depend upon the flavor!

Golden State Powdered Skim Milk is uniform in quality and flavor—free from burnt particles or sediment—without any objectionable scorched or "cooked" taste.

Combined with Golden State Pure Milk Fat or a high grade of unsalted butter it offers the Ice Cream Manufacturer a cream supply with a flavor closely approximating the flavor of natural sweet cream.

Experience proves that it pays to insist upon *the best.*

Believing that Ice Cream Manufacturers are interested in our methods of insuring a superior, uniform product, we have published a descriptive booklet. Write for it.

Your "Flavoring Dollar"

SETHNESS COMPANY, this past winter, decided to offer the Ice Cream Trade some Vanillas which would win instant recognition wherever used.

The feature about this determination that interests **you**, Mr. Ice Cream Manufacturer, is that Sethness Company, after the expenditure of a world of time and money is able to offer you more for your "Flavoring Dollar."

An outstanding example of this is to be found in

Cosco

Special "H" Compound

"A Pleasantly Flavored Vanilla Compound of Exceptional Strength"

Our label does not exaggerate the flavoring power of this Extract. One and one-half ounces or **less** will flavor adequately and with a delicious Vanilla character, ten to twelve gallons of any Ice Cream you may make. If you use all fresh Cream one and one-quarter ounces will give you fine results.

Order out a fifteen gallon keg at $5.65 a gallon. It's a sound investment

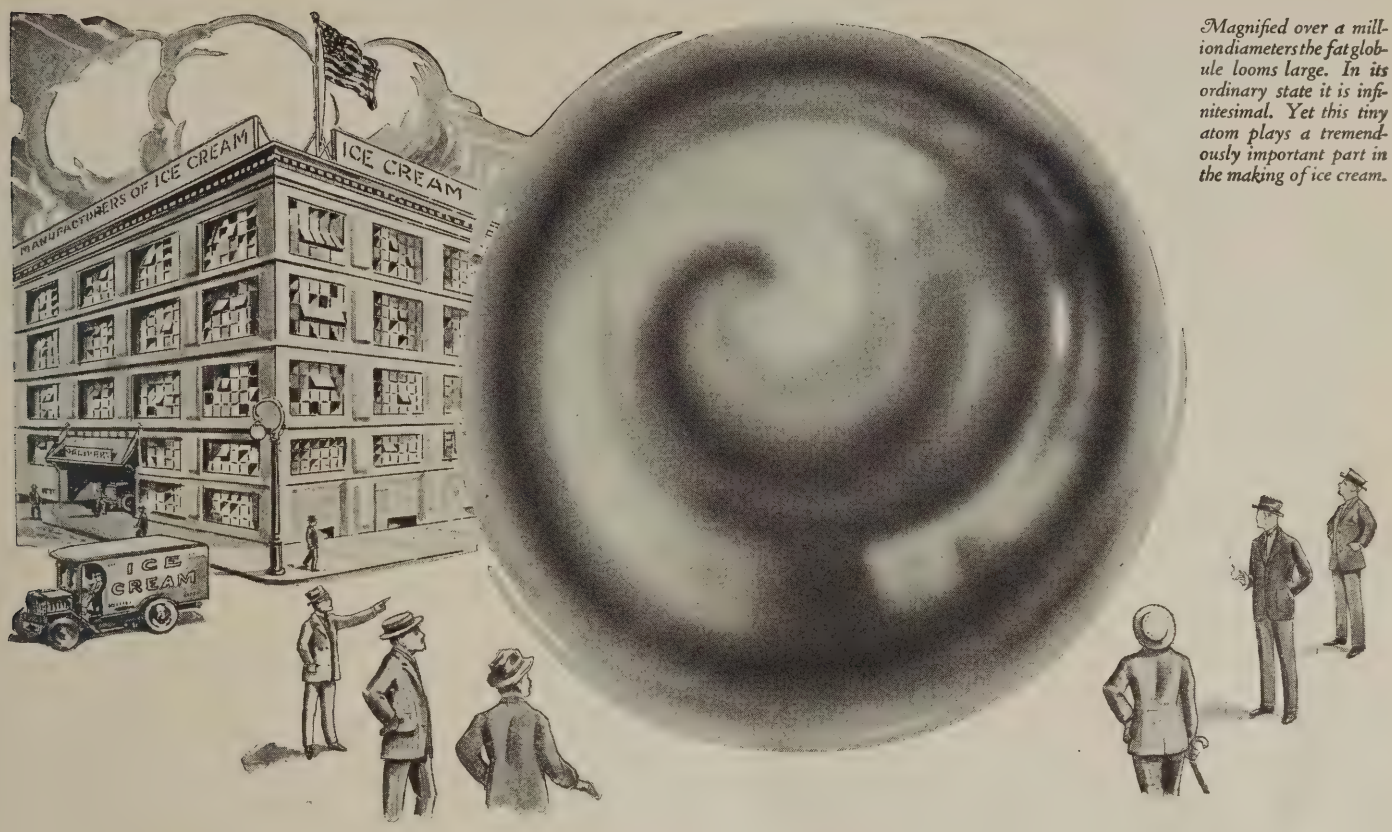
Harold Thomas Gloven

"Tom" Gloven has been promoted. Maybe you never saw him, but this will be of interest to you, for "Tom" had an interest in every reader of this publication. He was our artist, until a few weeks ago. He sketched many of the cartoons and striking front covers that aroused so much comment, and he also outlined some of the attractive ads you have admired. He never sketched a cartoon or laid out an ad without giving earnest thought to the likes and dislikes of our readers. So "Tom" knew you.

H. T. GLOVEN.

He was a native of Milwaukee, having lived in the "Cream City" virtually all of his life. He joined The Olsen Publishing Company about two years ago. A few days ago "Tom" pushed back the palette, laid aside his brush, washed the inkspots from his hands and went home for a rest. Now there are flowers on his desk.



All is still around "Tom's" palette as this is being written. The palette remains as he left it. The brush is waiting for the master touch that it will not feel again. The inkspots are dry and—all is still. Every once in a while someone looks over in the direction of the art department where the head of the staff once was wont to sit hunched over, making a stroke now and then and stopping to eye the result; looking up every once in a while for a friendly word in passing to a companion-in-arms; or maybe to dig down into his pockets for a piece of change for a friend out of luck. "Tom" was that sort of a fellow; he smiled and lent money and shared his smokes and shook hands with troubled friends in just the same way he lived—straight from the heart.

"Tom" was the sort of chap that employers speak of as "—a good boy"—fair and square; with a soul as pure as a drink of milk and a heart as golden as the top of a butter tub—and just as big.

It is no wonder that "Tom" got promoted. He had it coming to him. But we didn't expect it in just this way; at least, not till the day he went home for a rest. Then we knew that he was marked for higher company; for a place in ranks higher than even this discriminating company can give to anyone. Somehow, we think he knew it too, for all the time he smiled and chatted and showed that he was far from unhappy—unafraid.

On July 2, 1924 A. D., we passed by "Tom's" lonely little court in the art department, dropped lingering glances at the brush he left behind, and then realized that he won't ever come back to share his last dime with a friend out of luck or pass out a friendly hand to a chap stuck on a hard job. For at 8 o'clock that morning he embarked upon a long journey, the most wonderful adventure of his career. When anybody comes in to ask for him we can only say, with a far-away look in our eyes and a far-away note in our voice,

"Tom—he's been promoted—gone home to rest."

Magnified over a million diameters the fat globule looms large. In its ordinary state it is infinitesimal. Yet this tiny atom plays a tremendously important part in the making of ice cream.

The Biggest "Little Thing" In Your Business

SO SMALL that it requires a powerful microscope to distinguish it, yet a mighty atom in the success of your business—that's the story of the fat globule.

It plays a vital role in producing quality ice cream, in building your business. For on it depends the proper degree of ripening—the most elusive factor in making ice cream of rich taste.

But you can regulate this tremendously important factor, you can now control it. You can *ripen to just the right degree. The result is ice cream of wonderful richness of taste.* Over 2,000 foremost ice cream manufacturers are using

Gumpert's Ice Cream Improver

Make finer ice cream by overcoming the uncertainty, the slowness and the expense of time ripening. Control the biggest "little thing" in your business by adding Gumpert's Ice Cream Improver to your mix. It softens the solids, thus allowing you to *use your mix at a proper degree of ripening.* Finer, smoother, richer tasting ice cream is the result.

If you are not at present using Gumpert's Ice Cream Improver, we will be delighted to send you a sample.

The Ice Cream Industry of the Middle West

Covering the Ice Cream Development of More States Included in the Middle Western Groups a Discussion Begun in the June Issue of The Ice Cream Review

THIS is a continuation of the discussion of the development of the ice cream industry in the Middle West. It was begun in the June issue of The Ice Cream Review, and in the July issue we left off the subject long enough to discuss what our friends in the mountain states are doing.

The manufacture of ice cream has gone forward at a rapid rate in recent years in Wisconsin, Minnesota, Iowa, Illinois, Kansas and other Middle Western states. It is significant that dairying is making more progress in these states than in most sections.

Wisconsin has climbed to high rank in the production of quality ice cream. A good cream supply is one of the principal reasons. Six million gallons of the frozen beverage was made in Wisconsin last year, approximately one-half of which was made in the city of Milwaukee, which has been running a neck-and-neck race with Philadelphia as America's premier ice cream cities.

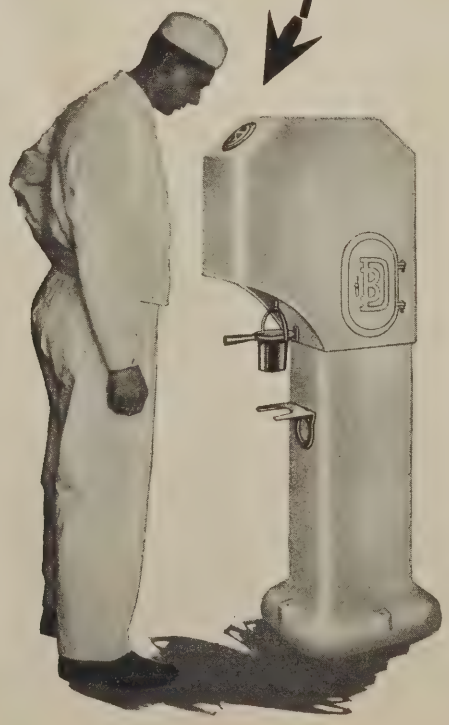
Illinois is one of the outstanding states in the Union in the production of ice cream, and behind the activities of the industry in that state is the aggressive work of the Illinois Association of Ice Cream Manufacturers, the oldest organization in the industry.

MINNESOTA has gone forward rapidly. For many years Minnesota and Wisconsin have carried away the honors in butter production, though in late years Wisconsin became so busy producing most of the nation's cheese that it slipped out of the running with the Gopher State. Last year Iowa crept ahead of Wisconsin in butter production. Now all three of these great dairying states seem to be just as determined to hang up some records in ice cream production as they have been in producing butter and cheese.

Some of the nation's most progressive ice cream manufacturers are operating in the states of Wisconsin, Minnesota, Iowa, Kansas and Illinois. At this time it is not practicable to mention more than a few of the outstanding ice cream men in these states, but the industry is proud of such men as George D. Mansfield, William F. Luick, Charles P. Touton and Mr. Carver of Wisconsin; W. W. Dunn, Jr., and J. J. Farrell of Minnesota; Z. G. Gassman, T. H. McInnerney, F. W. Holmes, L. W. Roszell, G. R. Courtright, J. T. Cunningham and J. W. Knobbe of Illinois, and W. H. Hammond, W. H. Chappell and B. T. Perkins of Kansas.

THESE are only a few worthy of honorable mention on the ice cream industry's honor roll of quality. The industry owes much to them and their constructive work, as well as to many of their neighbors not mentioned here. It would be interesting some day to work up an article on the personal characters of the men in the ice cream industry who are serving the industry's every good interest. Sometime, maybe, this will be undertaken by The Ice Cream Review, when time and space are at generous disposal.

There is no doubt that this national survey of the ice cream industry's development is providing interesting reading. It has served to bring out that this industry is advancing on all fronts. The manufacture of ice cream no longer is a business confined to one small group of states; it has in very deed become a national industry.



The states of the Middle West have been making steady progress. They now boast of plants among the most up-to-date in the world. Milwaukee, Minneapolis, St. Paul, Kansas City, Omaha, Des Moines, Chicago, Springfield, Dubuque, Racine, Kenosha, Oshkosh, Green Bay, Peoria, and many other cities in the Middle West have up-to-date, high-class ice cream plants, with advanced production and business methods in force.

A Simpler Way To Test Overrun

The smooth, simplified cup with no weights to adjust makes the overrun testing process a faster and more certain operation. The accessibility of the cup hanger is also a great advantage while the reading always shows itself in large illuminated letters through the bullseye indicated by the arrow. The direct front view reading is positive. The adjustment for specific gravity variation is made on the tester itself. Write for descriptive literature and price.

Growth of Minnesota Ice Cream Industry

Association Has Played Important Part in Boosting Per Capita Consumption

*By W. W. DUNN, JR.**

MINNESOTA'S per capita consumption, better than one and one-half gallons of ice cream in 1923, approximated the average per capita consumption of the three Pacific Coast states for the same period, although California doubled this consumption. Our per capita nearly doubled that of the Southern tier of states and came within one-half gallon of the average of the states bordering on the Great Lakes, also the New England states.

W. W. DUNN.

Minnesota's natural dairy resources provide her manufacturers with ample fresh products the year around and a surplus enables the exportation of many cars.

The growth of the industry in Minnesota has been consistent with that of other states along with increased population and popularity of the product. We have every reason to feel that our growth will keep pace with that of other states in the future.

Our climatic conditions cause an approximate ratio of gallonage summer to winter of 8 to 1 at present, but this extreme ratio has been reduced from one greater than 12 to 1 of ten years ago, indicating promises of steadier output gradually in the future.

The natural increase in consumption of ice cream during the winter months is being helped along in every way possible by our manufacturers through the medium of advertising.

IN 1923 Minnesota's one hundred ice cream factories supplies its population of 2,500,000 people with 4,000,000 gallons of ice cream, of which gallonage 60 per cent was produced by 10 per cent of its factories. This rather one-sided percentage of output is due to the segregation of population at one point, the Twin Cities, with Duluth in the extreme northern part of the state the only other large center, where the per capita consumption is very low due to unfavorable climatic conditions.

The Minnesota State Association of Ice Cream Manufacturers has a membership of about 60 per cent of the manufacturers. It was formed thirteen years ago in the Twin Cities and holds annual sessions, alternating between St. Paul and Minneapolis.

The organizers of the association were originally members from Minnesota of the "Three "I" Association composing the states of Illinois, Indiana and Iowa. After the Three "I" had expanded itself into the present national association these members organized a Twin City round-table, with A. H. Ives of Minneapolis, president, and J. C. Vander Bie of St. Paul, vice-president, and this organization later encompassed the whole state.

THE association has grown from five members to sixty-two over a period of fifteen years, and during that time has afforded considerable protection to its members in nullifying adverse legislation and fostering that which was favorable, and has been fairly successful in adjusting transportation problems.

Chicago, Ill.

Gentlemen:-

A week ago we installed the new LP hydraulic ice cream can washer in our plant and have since used it daily. This can washer has fulfilled all our expectations.

It is easy to operate and the material is of the best quality. It delivers an absolutely clean and dry can and lid. Since we started using this can washer not a single can has been returned from the filling room. Also we have operated it at a 600 can per hour speed.

We are not afraid to recommend this can washer very highly.

Very truly yours,

CRANE ICE CREAM COMPANY.

Production Manager.

AS/CL

L.-P.

ICE CREAM

Can Washer

Fast, Efficient and Fool Proof.

Washes All Sizes of Cans and Covers from 5-gal. Down to Smallest. Small Cans May Be Washed Together with Larger Ones Increasing Capacity to 1200 per Hour.

Cans Are Fed in and Delivered at the Same End of Machine.

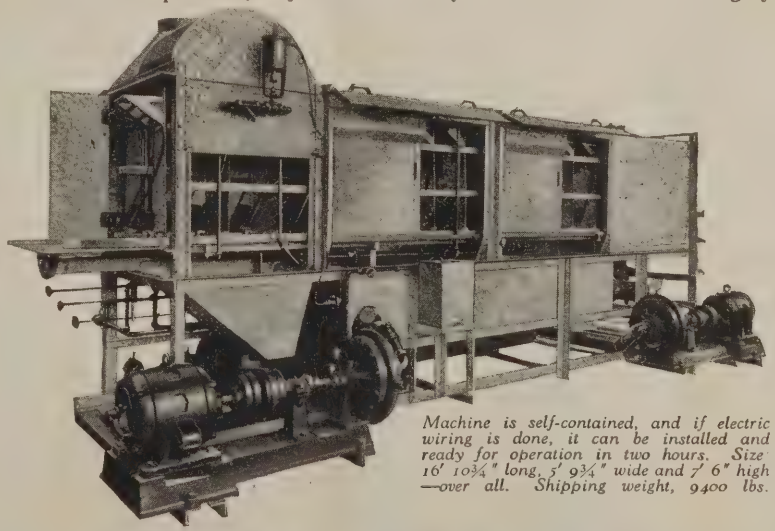
This machine embodies many of the L. P. features of efficiency, simplicity and durability which characterize L.-P. equipment.

600 Cans and Covers or Brick Pans Per Hour

Absolutely Clean, Sterile and Dry

THIS machine has two speeds—600 and 300 per hour. At the 600 speed it will efficiently wash, sterilize and dry all ordinary city and shipping cans, and at the 300 speed it cleans, sterilizes and dries the dirtiest of cans. Handled at 600 per hour, cans, brick pans and covers come from the machine **absolutely clean, sterile and dry.** Cans are washed on outside as well, freeing the cans, lids, pans and covers from brine. This machine eliminates the necessity of washing cans and covers separately. Cans which have been stored and coated with oil do not have to be brush washed. They come out ready for service, or may be piled in storage racks without danger of rust. The machine will also handle brick tanks up to 12-qt. size.

Each Can Receives 17 Distinct and Intensive Treatments



All cans are placed in machine upright. They are first thoroughly rinsed with preliminary tempered water, which thoroughly flushes out the cans, freeing them from refuse. This rinse water is caught in a separate tank and carried away. They are next washed inside and out with six separate intense soda solution treatments under 40 lbs. pressure; they are then entirely freed from soda and thoroughly drained before receiving six clear hot water washes, which are followed by scalding hot unused water rinse. Next comes the steam, inside and out, thoroughly sterilizing the cans, lids, pans and covers. They then pass over two hot air jets (the same as are used on all L.-P. Can Washers) and are delivered absolutely dry and ready for immediate service.

Only two men are required to operate the machine at maximum speed, and one man can handle the work efficiently at the 300 speed.

There are two powerful pumps operated by 10 h.p. and 7½ h.p. motors in separate units. No other power required.

The machine is sturdily constructed and heavily galvanized. Temperatures are thermostatically controlled. Soda solution is automatically controlled by L.-P. patent Soda Regulator.

This machine has passed its experimental stage. It has stood the most rigid tests in actual operation, and is sold on a results-guaranteed basis. Write for full information and names of users.

Machine is self-contained, and if electric wiring is done, it can be installed and ready for operation in two hours. Size 16′ 10¾″ long, 5′ 9¾″ wide and 7′ 6″ high —over all. Shipping weight, 9400 lbs.

THE LATHROP-PAULSON COMPANY

2459 West 48th Street *There Is an L.-P. Representative Near You* **CHICAGO, U. S. A.**

SILVER JUBILEE FOR ILLINOIS ASSOCIATION.

Illinois Association of Ice Cream Manufacturers, the oldest state organization of the industry, will celebrate its silver anniversary on October 28-29 with a jubilee convention at the Hotel Sherman, Chicago, according to recent announcement by Secretary Loewenstein.

The secretary announces that officials plan to present a program that will be of exceptional interest, not only to the members of the Illinois association but to the manufacturers of all surrounding states, as well as to the industry-at-large.

One of the high spots of the convention will be a banquet on the evening of the first day. An elaborate entertainment program will be provided, according to the secretary. He invites ice cream manufacturers of the nation to attend the convention.

PACKAGING ICE CREAM SODAS.

A novel ice cream feature introduced last year and said to be proving popular this year is called the "I. C. Soda." This is said to be a principle of manufacturing ice cream sodas to be kept in cold storage on the same principle as ice cream. The manufacture of this product is described as being done with a pint paper container with a one-inch tube of cardboard placed in the center and then filled with ice cream. The balance of the interior of the receptacle is filled with carbonated water, plus flavors, put on cover and place in hardening room at a temperature of about zero or five below for a short period. Then the product is handled similar to brick ice cream, and these sodas are sold at fifteen cents per container. When ready to drink, the idea is to shake up the container which mixes the combination, remove the cover and even after it has been away from the refrigerator for three or four hours, they claim it is a very palatable drink.

ICE CREAM SUPPLYMEN REPRESENTED IN DAIRY FEDERATION.

The Association of Ice Cream Supply Men is represented in the American Dairy Federation by Harold A. Sinclair, Mark H. Fox, and C. A. Gould. The American Dairy Federation, recently organized, comprises about a score of the dairy and dairy manufacturing organizations of the country.

Frank O. Lowden, former governor of Illinois, is president of the association; John D. Miller of New York City, is vice-president; John D. Hollowell of Chicago is treasurer, and A. M. Loomis of Washington, D. C., is secretary.

ANTRIM HONORED AT INDIANAPOLIS.

J. Martin Antrim, vice-president of the R. W. Furnas Ice Cream Co., was elected president of the Indianapolis Board of Trade at the annual election of officers and directors on June 9. Mr. Antrim is a member of the National Association of Ice Cream Manufacturers, is one of the most prominent members of the industry in Indiana and is widely known among ice cream manufacturers of the country.

Wisconsin's Ice Cream Development

Badger State Rapidly Becoming One of Nation's Greatest States in Production of Ice Cream, Already Having Forged Among Leaders in Quality. A Review of Early Days

Organization History

THE rise of the ice cream industry in Wisconsin is is one of the romances of the industry's history, a chapter glowing with high enterprise. Wisconsin is known far and wide as the world's greatest dairy state. There was a time when Wisconsin led the world in butter production. Later the Badger state turned its attention so largely to cheese production and the distribution of market milk that the manufacture of butter fell off, Wisconsin thus yielding to Minnesota as the premier butter state. This tendency continued last year and Iowa forged in ahead of Wisconsin in the ranking of the butter states.

But the Badger state retains its rank as the country's greatest dairying state, and in late years it seems that the ice cream manufacturers are determined to give Wisconsin the same place in ice cream production that it once held in the making of butter.

When it is stated that six million gallons of ice cream was manufactured in the state in 1923 the reader is not given the proper idea of how rapidly strides are being made in this industry. It was in 1915, nine years ago, that the call was sent forth for a state organization of ice cream manufacturers. That was before the time of The Ice Cream Review. The call was issued by H. P. Olsen, president of The Olsen Publishing Co. At that time only seven ice cream manufacturers responded to form a temporary organization. This meeting was held at Fond du Lac on February 4, 1915. No one dreamed then of the large, up-to-date ice cream manufactories that since have appeared in many parts of the state. Guy Spiers of Eau Claire was named temporary chairman, and D. D. Smith of Fond du Lac was elected temporary secretary.

The purpose of the association was set forth as follows:

"The object of this association will be to promote the ice cream industry of the state of Wisconsin, and to safeguard the product and protect the interests of the members of the association. That there is much need for such an organization among ice cream makers in the state of Wisconsin was manifested by the support this movement received, everyone present at the meeting offering to lend both their moral and financial support."

THE suggestion for calling the meeting was made by T. J. Gibson of the Gibson Ice Cream Co., La Crosse. It was decided at the meeting to hold another session on March 2 to complete final organization. This meeting was called for Madison, with the Park Hotel as headquarters. In the meanwhile the temporary officers served as a committee on organization. They set about drawing up a system of by-laws. A temporary mem-

Waukesha Specialty Co.

WAUKESHA, WIS.

bership fee of $2 was collected from each delegate to the Fond du Lac meeting.

A permanent organization was formed at this first regular meeting. There was a representative attendance. The association named as its official organ the Butter, Cheese & Egg Journal, at that time the only periodical published by The Olsen Publishing Co. This honor was held until the coming into the field of The Ice Cream Review, when the latter publication was named.

The following description of the organization meeting is taken from the March 10, 1915, issue of the Butter, Cheese & Egg Journal:

"Wisconsin is recognized as the leading dairy state in the Union, and the ice cream industry in this state is no small factor of the dairy industry today. With the rapid progress the ice cream industry is making in general it is a wonder to many why Wisconsin should be among the last states to have an ice cream manufacturers' association. However, judging from the interest taken in the new organization by all in attendance, and especially the progressiveness of the new officers and directors of the association, we venture to say that before the year rolls around some of the older state ice cream organizatioins will have to take off their hats to the Wisconsin 'youngster'."

This was a prediction well made. The time has come when many of the older state organizations have paid their respects to the good work of the Wisconsin association.

THIS initial meeting resulted in the election of permanent officers. Presiding over the meeting was Guy Spiers of Eau Claire, and the report of the meeting in the Butter, Cheese & Egg Journal had the following to say about him:

"The meeting was presided over by the temporary president, Guy Spiers of Eau Claire, who outside of Milwaukee is probably the largest ice cream manufacturer in the state. Mr. Spiers has had large experience in building up his ice cream business, and gave freely of his knowledge to the members."

Then, continuing the report of the meeting:

"The temporary secretary-treasurer, D. D. Smith of Fond du Lac, read the minutes of the meeting held at Fond du Lac, February 3, when the temporary organization was formed. These were approved as read. He also read the articles of incorporation and by-laws, which with a few amendments were adopted."

Officers elected at the organization meeting consisted of Guy Spiers, Eau Claire, president; Charles E. Wright, Beloit, vice-president; D. D. Smith, Fond du Lac, secretary-treasurer, and the following directors: T. J. Gibson, La Crosse; H. A. Hass, Madison; Howard Carver, Oshkosh, and A. O. Sorge, Reedsburg.

Picking up the trend of proceedings from the report in the Butter, Cheese & Egg Journal, we read:

"There was no special program prepared for this meeting, but some time was spent in discussing several subjects of vital interest to the ice cream trade. The return of unclean cans was among the questions taken up, and it was voted to authorize the secretary to have rubber stamps made calling attention to the state law prohibiting the return of unclean cans, each member of the association to be furnished with such stamp at cost.

"The question of express rate also came up. * * * The president appointed the following to act on this committee: Howard Carver, Oshkosh; G. A. Shurtleff, Janesville, and F. C. Mansfield, Johnson Creek."

A committee to wait on the new dairy and food commissioner was made up of H. A. Haas, O. A. Sorge and D. D. Smith.

It will be interesting to look back and see who attended the organization meeting of the association. The registration follows:

Saves Ice and Salt *for Ice Cream Manufacturers*

This diagram shows why A-B Ice Cream Cabinets cut your ice and salt bills to the lowest possible figure. Notice how cream compartments and ice and salt chamber are fully protected against warm outside air. No wonder the A-B Cabinet saves ice and salt!

Every ice cream cabinet has two costs—first cost and operating cost. Sometimes ice cream manufacturers lose sight of this second cost, and, as a result, keep on paying for cheap cabinets in wasted ice and salt—year after year.

A-B Ice Cream Cabinets cost less by the year than any other pack cabinet you can buy. Fifty to one hundred A-B Ice Cream Cabinets will save thousands of dollars' worth of ice and salt for the average ice cream manufacturer every year. A single icing will give 48 hours' service should emergency require. You see why as you examine the A-B Cabinet inside and out.

Square, perfectly dry cream compartments are surrounded on all four sides by the ice and salt chamber, which tapers downward from a broad, easily filled throat at the top to a narrow bottom.

Cold air is kept in and warm air out by a novel insulating material, which tapers from a thick section at the bottom of the ice chamber to a thinner section at the top, as shown by the accompanying diagram. Notice that even the lid is fully insulated, yet it is feathery light. In fact, the whole A-B Cabinet is exceptionally light—10% to 15% lighter than ordinary pack cabinets—hence will place no strain on your floors.

Full details and prices gladly furnished on request. Write

MANY tubs of ice cream have gone forth since that gathering of earnest and enthusiastic men. The Wisconsin ice cream industry has gone forward with rapid strides. But it is not in the light of what has been in the last few years that observers are optimistic over the outlook for the industry in the Badger state; it is from what is strongly indicated for the near future. If the Wisconsin ice cream industry has not much of a past, it can well be said that it has a very remarkable future. Some of the nation's greatest ice cream plants have been established in Wisconsin cities in the last few years. They are shipping ice cream into many states.

Wisconsin's metropolis, Milwaukee, is one of the ranking ice cream cities of the country, enjoying with Philadelphia the distinction of supplying the greater part of the nation's quality ice cream. Quality is the foundation of the Milwaukee industry, whose several high-grade plants and progressive ice cream manufacturers will be the subject of a special feature to appear in the September issue of The Ice Cream Review in connection with the National Dairy Exposition to be held in the city that has well earned its title of "America's Dairy Capital."

WISCONSIN PLANT BEGINS OPERATING.

The Pleck Ice Cream and Dairy Co., Sturgeon Bay, Wis., recently began the manufacture of ice cream and other dairy products in their new two-story building, which is made of a brownish face brick, modernly arranged and equipped with up-to-date machinery.

All the milk used by this company is pasteurized and it is reported that only milk from tested cows is purchased. Milk will be distributed throughout the city and all of their dairy products will be sold to retailers, except buttermilk which can be bought in paper bottles direct at the factory at any time.

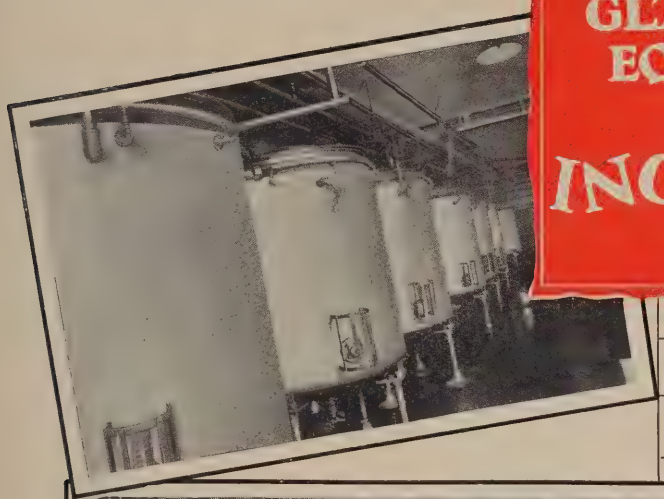
In addition to distributing milk and manufacturing ice cream, this company will manufacture cottage cheese packed in small paper tubs, fancy cheese in cake form, and make butter.

Allen Piron will superintend the manufacture of ice cream, while Joseph Weirich will be in charge of the cheese manufactory. Frank Pleck is general manager and his son, Louis, will be in charge of sales.

The entire layout of the plant is most efficient and is designed in units so that it can be enlarged upon without any radical changes. The business is capitalized at $40,000.00.

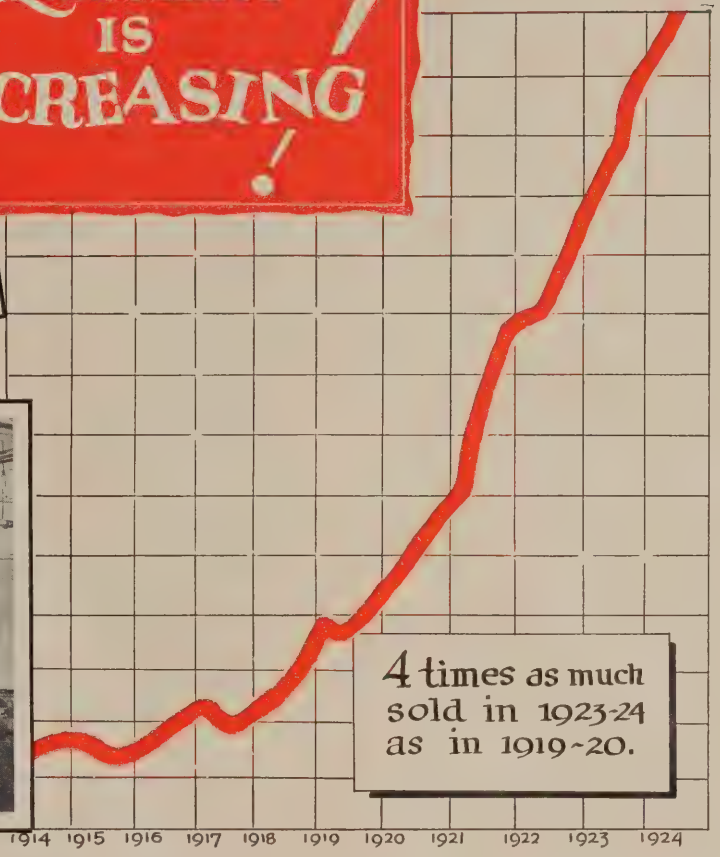
WE'RE GLAD THAT'S SETTLED.

An Ontario farmer caught a young woman doing a "Steptember Morn" on his property, and had her haled before the county magistrate.



"What's the charge?" asked his honor.

"Taking a bath in the spring, your wushipp," said the constable.



The aged dispenser of justice consulted a dog-eared copy of the statutes and buried himself in its pages for several minutes, then, closing the legal tome and stroking his beard, he said very solemnly:

"The charge is dismissed, and the miss is discharged. I find that she had jest as much right to take a bath in the spring as in the fall."—Boston Transcript.

THE USE OF GLASS LINED EQUIPMENT IS INCREASING!

Referring to above installations, both at Gridley Dairy Co., Milwaukee, Wis.: Top—Pfaudler Glass Lined Buttermilk Tanks (manufactured by Elyria Division). Bottom—Pfaudler Glass Lined Cream Pasteurizers.

In the Milwaukee District, within a radius of 50 miles, are located (among others) the following Pfaudler (or Elyria) installations:—

Gridley Dairy Co., Milwaukee
Luick Ice Cream Co., Milwaukee
Blue Valley Creamery Co., Milwaukee
Eline's, Inc., . . . Milwaukee
Trapp Bros., . . . Milwaukee
Blommer Ice Cream Co., Milwaukee
U. S. Gelatine Co., Carrollville
Cedarburg Dairy, . Cedarburg
Wisconsin Butter & Cheese Co., Elkhorn
Nestle's Food Co., Burlington
Fred Mansfield & Co., Johnson Creek
Waukesha Milk Co., Waukesha
August Westphal, . Hartford
Racine Pure Milk Co., Racine
Horlick's Malted Milk Co., Racine
Carnation Milk Products Co., Sullivan
Indiana Condensed Milk Co., Sullivan
Badger Condensed Milk Co., So. Germantown
Merton Dairy Products, Merton
Rico Milk Products, Lake Beulah

Today the cautious, planning dairyman who knows his costs and watches them, uses Glass Lined Equipment. It is evident from our records that the number of cautious dairymen in this country is growing—else why this unusual increase in the sale of glass lined equipment?

The comparison illustrated by the above graph is based on two typical years, June, 1919, to June, 1920, and June, 1923, to June, 1924. Even in 1920 and 1921, when the slump took the heart out of most machinery enterprises, the sale of Pfaudler Equipment continued.

For considerable of this business, we have to thank the State of Wisconsin in general—and the city of Milwaukee in particular. When you attend the Dairy Exposition this fall, make it a point to visit some of the show installations of Pfaudler Equipment—our customers will be glad to have you.

Sometime between now and the Show, send for literature covering any of our standard units — pasteurizers, storage tanks, truck tanks, weigh tanks, starter tanks, etc.

Early History in Illinois Ice Cream Industry

A Discussion of Olden Days in the Illinois Industry

*By HON. ROSS A. WOODHULL**

I RECALL how we used to assemble, small in number, but great in enthusiasm, how we contemplated the future, how we tried to prepare for it, how we recognized the need of organization, and I know it is not necessary for me to address myself to the past, because I think you are all quite familiar with many of the problems that confronted the industry, I won't say at its infancy, but I will say at one of the mileposts in its constant and onward progressive march.

The ice cream industry was little thought of and little noticed until by force of its importance in our life it gained recognition, and when it reached the proportions as to gain that recognition, it then received the attention of the legislators and of those charged with the official responsibility of safeguarding the food supply of our people.

The ice cream men, I think, up to that time, were absorbed in their idea of developing their business to a profitable stage. They were not unmindful of the safeguards that they might throw around their produce, but because of the lack of understanding and lack of appreciation of the problems that confronted those in the business, the progressive mind in shaping legislation and in drafting rules and regulatory measures were slightly in advance of the industry. The manufacturers found it difficult to adjust himself to their liking, and so, with no thought or idea of retarding that progressive movement, destroying it or opposing it, the manufacturers found themselves in this position: that out of reason they must have something to do with the shaping of legislation, not with the idea of fighting it, but with the idea of making it of such a nature that the industry could adjust itself to it.

As time went on, little by little, as science developed possibilities, we finally attained a point where we can measure up to all the requirements that are imposed upon us.

But I assure you, gentlemen, those of you who were not in this business twenty, twenty-five years ago, that at the time of the great revelation of possibilities, scientific and otherwise, many men in business, because of limited capital and perhaps limited understanding and limited organization were not in a position to readily and immediately adjust themselves and meet the requirements, and it was the force of necessity of the hour that gave birth to the organization.

YOU know they say we are all indifferent to the things around about us until they vitally affect us, and I think that is quite generally true. I think in the main we are all selfish. I think we are all occupied with our own ambitions and desires, and we don't lend our ear to a general movement until we ourselves become involved.

And when the industry reached that stage in development, then the recognition on the part of all as to the necessity of organization prompted such an organization. It was small, but as I say, those who were in that organization at that time realized very keenly the necessity of the hour.

That little nucleus has grown into this splendid organization, and you assemble here in Chicago for the purpose of exchanging ideas, taking advantage of the increased understanding.

Convention assembles are a splendid thing. Were it not for the combined thought of men in the respective activities we would not be as progressive a city or as progressive a nation as we are now. Many heads are better than one. The wise man can learn from the fool, and the fool sometimes receives an added inspiration from the wise man.

The first indication of knowledge is the realization on the part of the individual as to what little knowledge he possesses, and I say, when we know what we don't know, then we are beginning to learn. And I know it is a realization on the part of the men in the industry. They realized as individuals they could not gain information as readily, or have as practical a nature as they can in association with other men in the business.

Some men have contributed much in thought to the progress of the ice cream industry. Others perhaps not so much. But where the spirit prevails, I am sure that all men, thinking men, do appreciate the significance of organization and of association work.

Now you have assembled, as I have said, for the exchange of ideas. You are all going home richer because of your visit here, I believe.

(Continued on page 50)

The Illinois Association

The Illinois association is the oldest state association in the country. The original Illinois association became, after a very short existence, the Three-I association. This represented the states of Illinois, Indiana and Iowa. Then shortly thereafter that organization was merged and became the nucleus of the National association. Illinois manufacturers then immediately organized a new state association. After the new Illinois association was formed, and the necessity becoming apparent that co-operation between ice cream manufacturers was a benefit not only to the manufacturers themselves but to the consuming public at large, various states began to organize.

"The 25th annual convention, which is the Silver Jubilee Convention of this association, will be held in Chicago, Hotel Sherman, October 28-29.

Hon. Ross A. Woodhull, who is now chairman of the finance committee of the Chicago City Council, was the first president of the association. N. Loewenstein was the first secretary and has been secretary continuously since, with the exception of the years 1910-11-12, at which time other interests necessitated his giving up this position.

Illinois is the third largest state in the Union from the standpoint of ice cream produced, being exceeded only by the states of Pennsylvania and New York in the production of ice cream.

* First president Illinois Association of Ice Cream Manufacturers, now chairman of the finance committee, Chicago city council. An address before past Illinois convention.

The Biggest Nickel's Worth— The Best Seller!

A "Cremo" Cone is more than a mere container for the ice cream. From rim to tip the crisp, golden sweetness is a covering of real cake. The last bite is as good as the first and the customer never forgets it. The more you give for a nickel, the more nickels you make — and who knows it better than the

EARLY HISTORY IN ILLINOIS ICE CREAM INDUSTRY.

(Continued from page 48)

WHILE I am interested in the ice cream business not actively, I am still just as interested as I was when I was the head of this association. I am just as appreciative of the possibilities, and I believe I have just as keen an understanding of the problems that confront you day by day as when I was actively in the business, so that I want to reassure you of the possibilities of this occasion and other occasions when you come together.

Pres. Roszell: I am going to ask George Thompson, president of the Chicago Association of Ice Cream Manufacturers to acknowledge and respond to the very splendid and cordial address of welcome of Mr. Woodhull.

Mr. Thompson: It is indeed a pleasure for your association to be welcomed here by one of the leading members of our present city administration, a member that was our first president of this organization and a man who helped to organize the ice cream industry when it was a real infant.

We who have been long in the business have watched it grow, have watched its many activities, and have seen it grow from a real infant into a gigantic industry.

Gentlemen, the Ice Cream Manufacturers' Association have kept in touch and have promoted many good things that have been very beneficial to the ice cream industry in this whole country and the state of Illinois.

Among its many activities I have in mind one especially that was promoted by one of our former presidents, aided and abetted by our energetic secretary, to which I want to call attention for just one minute—the sectional district meetings, where we get the different manufacturers in the different localities together, and get them to co-operate. It has not only been beneficial, but profitable to the manufacturers throughout the state, and I understand that nearly every state in the Union has taken up that idea. Their ice cream associations have taken up that idea and have carried it out. That is one of the many benefits that we have derived from the ice cream association.

MILWAUKEE OFFICES OF THE NATIONAL DAIRY ASSOCIATION.

Dairy show time is advancing rapidly and within a few days the annual hegira of the National Dairy Association will be under way.

The offices of the association will be transferred to Milwaukee, the host to the dairy exposition this fall, on July 28, and all mail, telegrams and queries should be sent to that city, beginning with the above date. The complete address will be, Room 414, Carpenter Building, Grand Ave. and Sixth St., Milwaukee, Wis.

The association has been fortunate in securing rooms which meet the needs of its work very well. The offices are situated in the heart of the business section and will be readily accessible to all visitors. It is within a short distance of every large hotel in the city and is but two blocks from the Auditorium, which will house part of the activities of the exposition.

The Milwaukee road and Soo Line Union Station is but three blocks distant, and the Northwestern depot within ten minutes' walk. All three Milwaukee interurban roads pass nearby and car lines to the fair grounds pass within one and three squares, making the headquarters convenient from a transportation viewpoint.

You can get somebody to sell you anything you want, if you use "The Ice Cream Review" Want Department.

Photograph of installation of Frigidaire Ice Cream Cabinet. At left is shown the quiet Frigidaire mechanism installed either in the cabinet or basement of the store.

Quiet Operating Frigidaire Cabinets Make Better Tasting Ice Cream

Many ice cream manufacturers in all parts of the country now realize that the old-fashioned way of icing and re-icing ice cream can now be superseded by a far better method.

Through the installation of hundreds of Frigidaire ice cream cabinets for their dealers they have actually proved that the Frigidaire method is more profitable. They know that it will do away with expensive truck upkeep and ice delivery, and that once they make a good product, Frigidaire will keep it good and thus prevent retail sales going to competitive dealers.

There are no ups and downs to Frigidaire temperature—its electrical cooling provides a constant dry cold. The cream stays hard and lumps and ice crystals are eliminated.

There is no shrinkage to lessen the dealers' profits—no muss—no dirt—no ice—no salt. Dealers like Frigidaire ice cream cabinets.

A Glance Backward and a Look Ahead

A Discussion of the Ice Cream Situation in Illinois

*By F. W. HOLMES**

A GLANCE backward over such ground as we may have passed in the last twenty-five years, or in our early beginnings, might do no harm. Many of us remember the time when we may have had an old creamery or shack, perhaps with a one-tub freezer, dipping by hand out of that tub freezer into the packing can, and getting a good man at from $1.50 to $2.00 a day. Our mixing can was perhaps a ten-gallon can, some may have been a little larger. Some may have had hand power, some may have had horsepower, and others gas or steam. I remember the first ice breaker I ever saw —I believe the gentleman is present here this morning who was the inventor of that—was wagon tires set on edge in a frame, the tires cut in three-foot lengths. We used to put the cake of ice on that and pound it up with a sledge hammer. Then came the ice crusher, some by hand and slow at that, and our mixers, a few tubs and a few cans, perhaps an old-time delivery wagon—no trucks or limousines in those days—and we were in the ice cream business for good.

Raw material was cheap then to what it is now: good condensed milk 40c to 50c a gallon, milk 10c to 12c a gallon. Cream, there was no point of percentage, as far as measurement went, in those days. We had the thick and the thin cream, and I think there were times when we had it put over us in great shape in that cream game. Many of us did quite some business with those primitive utensils. We got good prices in those days. Indiana got 45c; in Illinois in the early nineties we got up as high as 65c. Thompson, Reed and Collins were the manufacturers out of Chicago, and we were following them up to see if we couldn't see a three during the week and possibly a five on Saturday.

Some changes have come. Even the telephone girl has become the wife of one of the most prominent ice cream manufacturers in northern Illinois, so says our trade review. We used to buy Vici kid shoes at $2.50 a pair. Now we pay $6 and $7. A ton of hard coal at Tidewater, N. Y., was $3.50 per ton. Last year the same coal was $13.35. Wilton velvet carpets were $1.90 per yard. Nowadays the same product is $4.85.

But everything has not changed so wonderfully. Why, axe handles and tallow candles and some grades, low grades of coffe are about the same, while dried apples are about holding their own. The purchasing power a dollar back in the nineties was $1.49, against $0.81 in 1922, according to the bureau of labor statistics.

But those were the good old days, when we had to work and we did work. We would not have missed it if we could. Those days were blessings to us in the school of hard knocks, and many of the manufacturers of the state of Illinois built up a constructive foundation that today is showing that they have built upon solid rock, and not upon the sands of uncertainty.

AND now looking back a few years, within the last ten, there have come to the ice cream manufacturers some very trying times. We all remember that 30c sugar, that $4 milk, and that $1 a pound gelatine, and many other things that were higher than a kite, which were largely influenced by the condition of our neighbors across the pond. We remember that France lost a million and a half, England and Canada another million, and we our own sad share—and the end is not yet. What to do? We are glad to know of a manufacturer or a corporation or an individual who has a minimum amount of debt. That was our condition at the beginning of the war. Our national debt was one billion. At the end of the war it was twenty-six billion, and it has been reduced within the last few years three billion, leaving us a debt of twenty-three billion.

Now if we could consider all of our bills receivable at par which the foreign countries are owing us, about seven billion, we would still have a debt or a tax of ten per cent on all the property that you may own. Now then, there are many other countries that carry a heavy debt. That is true of England, but we have usually prided ourselves upon the lowering of the national debt. But the one helpful thing is that we owe that debt to our own people.

NOW then, look ahead. That is what we are especially interested in. I am no prophet, nor will I attempt to prophesy, but I do want to be considered an optimist with perhaps a safety valve view. I am glad that is the stand that many of our manufacturers take—optimistic. We might look ahead and comment on some of the existing conditions that bear upon the future of their product and its sales.

What wonderful advancement the manufacturers have made in this state as well as other states. The great factory buildings, the splendid equipment, bat-

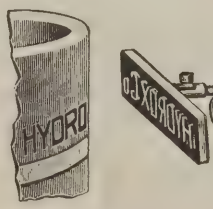
teries of freezers, holding tanks, mixers, homogenizers, viscolizers, the best of tubs and cans and cabinets. And say, those $4,000.00 to $6,000.00 apiece refrigerator trucks, that go up and down our cities, an honor to any business or any manufacturer. We, as manufacturers, have put the best wisdom of our experience over, say, 25 to 30 years.

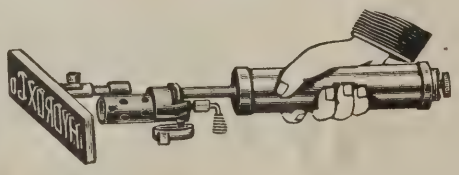
Some of us have put their all into this great business. Someone has said, and wisely, too, "don't put all your eggs in one basket"—but be sure to raise plenty of eggs. But we must continue this business on the best constructive policy possible, not "destructive." These great enterprises must have the best care and protection, and in the words of one of Chicago's greatest health commissioners, who said 8 years ago, "You don't need any more ice cream factories in Chicago and downstate, but you need butter ones," and today if he could be here and there, he would say, I am sure, with a great deal of satisfaction, "the ice cream manufacturers of this great state are striving for the best possible in production, service and quality."

Some of the real issues of the near at hand things we must consider, as to raw material, what about the tuberculin sentiment that is fast arising throughout the state for tuberculin tested milk. Raw material is plentiful.

Take the tuberculin tested milk. Many of us recall what happened in 1908, when there was an ordinance passed in this city that all milk should be tuberculin tested, and you remember, as they began to test the herds over the various parts of the state, that thousands of cattle went wrong, and they had to be taken to the tank and slaughtered; some were used for beef. But in the wisdom of that health commissioner, he saw we were liable to have a milk famine. He immediately got busy with the council and substituted the pasteurization ordinance.



NOW then, this public sentiment is coming up again, stronger than before, and it looks like the consumer is going to demand tuberculin tested products. In 42 counties of the state we already have the area test plan instituted, and there is $4,000 appropriated in each county to be used in this analysis of the cattle, and if this thing continues at the speed it has within the last few months, I predict that it will make a scarcer supply of the dairy products.



There are many towns and villages that are considering the advisability of demanding the tuberculin tested milk for their families. Out in DeKalb County a small village has already passed an ordinance that nothing but tuberculin tested milk can be sold in DeKalb County. It means something. Some think this will be a substitute for pasteurization. Our best authorities say, "No, it cannot take the place of pasteurization." Our universities hold that pasteurization must continue, that we must continue and improve upon pasteurization, and I am sure we, as manufacturers, are strictly with them.

THE raw material supply is a real issue for the manufacturer. Another phase of the ice cream business downstate that is perhaps a worry to some, is this: in many places of from two to three thousand people a little plant will start up. He will perhaps rent a building, get a freezer, a few tubs and cans—he may have a small refrigerator plant—and he will have a complete mix supplied to him, all ready to put into his freezer, at a nominal price. I know one plant where there is a very large investment. They had surrounding them seven smaller plants of this type. They surely did give that plant a trim. That is happening all over this land of ours. That is going to injure the larger concerns very much.

With Mr. Gassmann's permission I will add a thought to credit, that he may have overlooked. There used to be an unwritten rating that 90 per cent of the people paid their debts, 5 per cent were honest but too extravagant, and the other 5 per cent should be C. O. D. That was 90, 5 and 5. That scale has changed and now it is 80, 10 and 10.

There are many other things that I might consider that enter into the manufacture and sale of ice cream but I will not take your time for that. I want to say, one thing above all, we want to be wisely optimistic, believe in our country, believe in her industries, and put our heart into the business, believe in our people, back them with your best judgment and your persuasion, and the ice cream business will receive her fair share of prosperity.

1850 Carroll Avenue CHICAGO, ILLINOIS

Association of Ice Cream Manufacturers of Iowa

Constructive Work Has Been Carried Out in Last 14 Years

*By P. W. CROWLEY**

THE first annual meeting of the Association of Ice Cream Manufacturers of Ia. was held in Des Moines during February, 1910. The original members of the association who are still active in the business are: Hutchinson Ice Cream Co., Des Moines; Davidson Brothers, Des Moines; The Hutchinson Co., Cedar Rapids; C. H. Taylor, Algona; W. H. Kreger, Albia; Lagomarcino - Grupe Co., Burlington, and F. K. Underwood, Oskaloosa. The other members listed at the time the organization was formed are now now either out of business or have been absorbed by other companies.

P. W. CROWLEY.

At the present time there are about 125 wholesale establishments in the state and in addition to this the state department issues licenses to about 225 factories, but these factories do not do a wholesale business. Last year the factories in Iowa manufactured about 6,000,000 gallons of ice cream and it is estimated that the property holdings in the business is worth about $6,000,000.

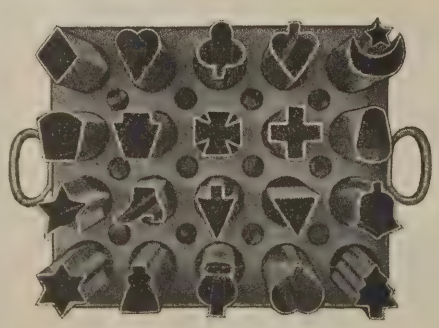
According to the records of the association one of the first matters given consideration was the matter of a standard for ice cream. This matter, I believe, at the present time every one will agree was satisfactorily adjusted from the standpoint of the consumer and the manufacturer. I do not believe, however, that it can be said that this matter was adjusted on the basis of the ideas which were originally presented to the association at the time of its early formation.

* Secretary, Association of Ice Cream Manufacturers of Iowa, Des Moines, Ia.

THE matter of securing the return of empty containers it seems was given consideration at the first meeting and we can all vouch for the fact that this subject is still one for serious consideration.

Pasteurization and standardization received their share of consideration and the results of these discussions have evidently brought about the following of a policy of pasteurizing by practically all in the business, and no one would think of making ice cream these days without standardizing.

In looking over the records of the association I cannot see but what the problems of the manufacturers today are quite the same as they were in the early days of the association but perhaps seem a little more serious because we are in closer contact with the present day problems than the early day problems.



MOTOR TRANSPORTATION SHOW.

The first National Motor Transportation Show in the history of the industry will be held in Chicago, October 21 to 27, at the American Exposition Palace on Lake Shore Drive, a building recently completed at a cost of $10,000,000. The show is to be held under the auspices of the Motor Truck Industries, Inc., an association which represents the leading truck manufacturers of the country.

Most member manufacturers have taken space and there is a gratifying demand for the remaining desirable locations. Busses, rail cars, trailers and all units essential to motor truck transportation will also be exhibited. Response has been such that officials say they are certain the show will be a great success.

The show is to be educational in scope and is intended to be of real practical value to those who attend, we are advised. A program of demonstration is to be held daily in a large field adjoining the exposition building. William Hallanger, general manager of Motor Truck Industries, is now at work planning the demonstration program. According to Mr. Hallanger, all phases of truck performance are to be thoroughly exhibited. Various makes of trucks will be used so that every branch of motor truck transportation will be included.

Above 33°

Food stuffs spoil rapidly in temperatures above 40°. The danger of freezing starts below 33°. Between these two temperatures lies the *"seven degree safety range."* The modern, economical and practical way of maintaining these safe temperatures for food is by Climax mechanical refrigeration instead of ice.

Outstanding Features of the Climax Model C Rotary Unit

1—Rotary compressor a marvel of simplicity—positive and efficient in operation.
2—Model C operated by 1½ H. P. motor. No power wasted in belts or other transmission.
3—No valves—no small frail parts.
4—Only 3 moving parts—all heavy, rugged and permanent.
5—Most compact—Model "C" size only 52" long and 21" wide, and 36" high. Weighs only 750 lbs.
6—Compressor direct connected to electric motor.
7—Continuous flow of gas through the compressor.
8—All lubricating oil confined to the high pressure side of compressor.
9—No oil can come in contact with liquid refrigerant.
10—No violent fluctuation of hands on pressure gauges.
11—Simplest starting. Just open water valve to start, close water valve to stop.
12—No throwing of electric switches—tightening of belts—or clattering of valves.
13—Nothing to forget. Shuts off automatically in case of failure of cooling water supply.
14—Particularly adapted to automatic control.
15—All parts made interchangeable.
16—Each unit factory tested before shipment to produce refrigeration in excess of its rated capacity.

Climax Refrigeration is absolutely certain.
Climax Refrigeration requires almost no attention.
Climax Refrigeration is always under your own control.
Climax Refrigeration is more sanitary.
Climax Refrigeration is dry—No water soaking of foods.
Climax Refrigeration is odorless—No tainted foods.
Climax Refrigeration is not interrupted by holidays.
Climax Refrigeration is never wasteful.
Climax Refrigeration enables you to store food stuffs and profit by market movements.
Climax Refrigeration protects you and builds trade.
Climax Refrigeration is surprisingly economical to install and maintain.

CLIMAX

MODEL C ROTARY **REFRIGERATION UNIT**

An ideal outfit for many types of businesses. More compact than any Refrigeration Unit has ever been before, we also believe it is more efficient. Surely it is simpler to install, to operate, to maintain. It will solve your refrigeration problem with minimum expense and care. Our nation-wide service organization backed by this $2,500,000 corporation insures the utmost in service and satisfaction.

Write us about your requirements, or send coupon. The services of our engineering and sales department are offered freely without expense or obligation to you.

We also make Climax Reciprocating Type Units for larger requirements.

Quality and What It Means to Kansas

Quality Must Be Weapon to Combat Breakers Ahead

*By H. M. JONES**

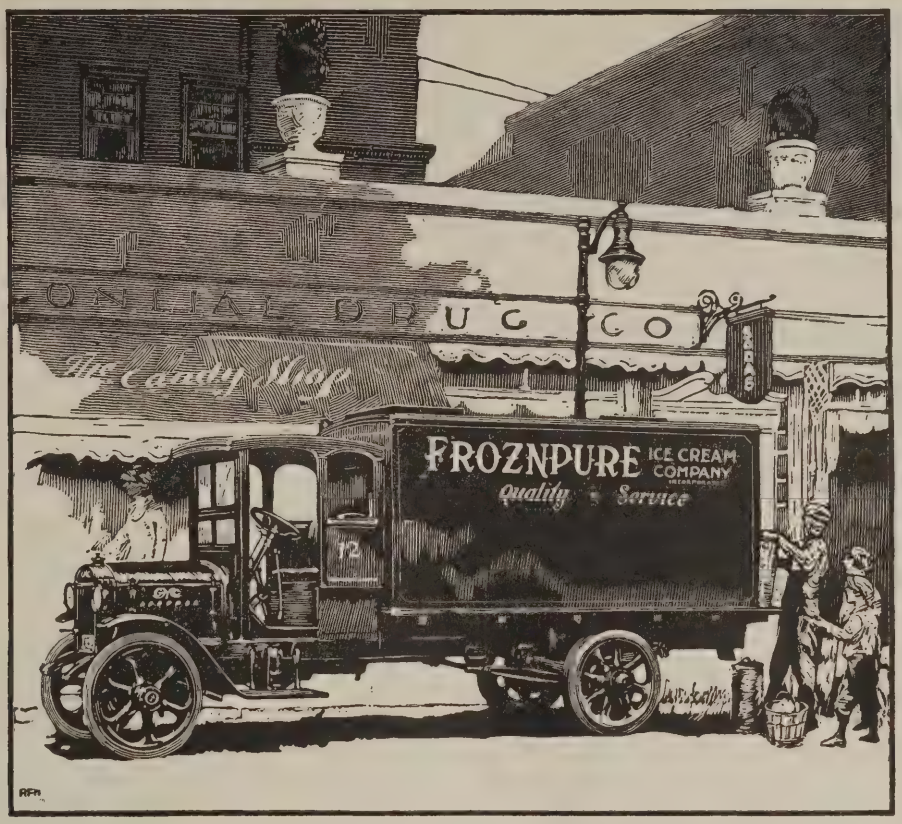
IN EVERY business things come up which affect it. Some of these things are for the best, while others are just the opposite. If it were not for these things coming up, some would soon think there were no breakers ahead and might soon sink into a rut and it would take a tremendous jolt to awaken them. This is true of the ice cream industry.

We have had a new ice cream law for three years and all of us feel that it is a good law. People well known in the ice cream world have pronounced it the best ice cream law in the United States. Such a statement sounds good, but it is up to each Kansas ice cream manufacturer to strive to make the best ice cream possible. It is up to each one to keep quality in mind and not think they can get by with any kind of ice cream, because the Kansas ice cream law has caused people to brag on Kansas ice cream.

There are breakers ahead and unless quality looms up in every gallon of ice cream manufactured we may find ourselves wondering how it happened. I mean by this that there are some who do not like our present ice cream law and they may get it changed at some session of the legislature.

This very thing was tried at the 1923 session of the legislature. When I first learned that a bill was introduced to change our present law, I was surprised and no doubt all of you were. I felt our new law was a good one and that Kansas ice cream manufacturers were endeavoring to make and were making better ice cream and the people of Kansas who ate it were getting better ice cream, so together with some manufacturers we began to investigate to see why and who wanted it changed and how.

It is not my intention to go into detail as to just what we did, but I want to bring before you what the trouble was, and why you must consider quality in order to combat any possible attempt to change the law at the next session of the legislature.



ALL of you, no doubt, are acquainted with our present ice cream law. Section one of it is as follows: Ice cream is a frozen product containing not less than 10 per cent milk fat and not less than a total of 20 per cent milk solids; said product consisting of a flavored, sugar sweetened mixture of cream or cream and milk, or the sweet, pure products of cream and milk, with or without the addition of gelatine, vegetable gums, or such other wholesome stabilizers as may be approved by the state dairy commissioner, to which mixture may be added pure, fresh, sweet, wholesome eggs, fruit or fruit juice, cocoa, chocolate, or nuts. House bill No. 266, which was introduced, changed section one as follows: Ice cream is a frozen product containing not less than 14 per cent milk fat, said product consisting of a flavored, sugar sweetened mixture of cream or cream and milk, with or without the addition of gelatine, vegetable gums, or such other wholesome stabilizers as may be approved by the state dairy commissioner, to which mixture may be added pure, fresh, sweet, wholesome eggs, fruit or fruit juice, cocoa, chocolate, or nuts. You will note the fat content would have been raised to 14 per cent, and there would have been no milk solid content. Also the use of homogenized or viscolized cream would have been prohibited.

Section 3 of our law is as follows: All milk, cream and milk products shall be pasteurized before used in the manufacture of ice cream. Pasteurization for the purpose of this act is defined to mean the heating of milk, cream or milk products used in the manufacture of ice cream to a temperature of at least 145 degrees F. and held at this temperature for thirty minutes, or the heating thereof to 180 degrees F. for thirty seconds. The proposed change was as follows: All milk, cream and milk products shall be pasteurized before using in the manufacture of ice cream, excepting where made in cities which have dairy inspection rules, including the tuberculin testing of all dairy cattle and limitation of number of bacteria provided by ordinance and in such cities pasteurization may be omitted where the milk, cream and milk products are passed by the inspector of said city as coming under the ordinance of said city.

I am glad to say that we were able to kill house bill No. 266 in the committee, and we are sure that we convinced the one who introduced it, that our present law is a good one. On request I attended a special meeting in Independence and discussed our present law with those who were back of the proposed change. In our discussion I soon learned that they wanted rich ice cream. Also they wanted nothing used but cream and

Buyers Turn To GMC

Because GMC Sturdiness, Reliability and Economy Reduce Delivery Costs.

Every truck in the service of the Froznpure Ice Cream Company of Louisville is a GMC because:

There is extra strength designed and built into every GMC part;

There is simplicity and accessibility to GMC design that cuts even the usual upkeep attention;

The economical size GMC engine develops maximum pulling power and maximum speed, working through the famous GMC Two-Range Transmission, using the minimum amount of gasoline and oil;

GMC Trucks are priced on a basis of actual value — production cost plus a fair profit. Their list price contains no added profit for excessive "trade-in" allowances.

milk. They did not want that starchy stuff used that does not taste like cream.

The starchy stuff referred to was skim milk powder. They did not know that a lot of it was made in Kansas and that Kansas farmers were receiving money for the skim milk. They thought all of it was shipped in and Kansas farmers as a result did not have a market for their skim milk. Also they wanted to modify the pasteurization clause. One man said if he sold his milk and cream to the ice cream manufacturer it had to be pasteurized, whereas if he sold it to the hotel in Independence it did not have to be pasteurized. No doubt this trouble all started because some small ice cream manufacturers told the farmers they must pasteurize the cream or they could not buy it. All of these points were discussed and I explained that pasteurization was one step forward and we did not want to go back.

WHILE we were working to defeat the bill in the house, another bill was introduced in the senate. This bill would have made only one change, namely, abolish the pasteurization clause. After discussing this proposed bill with the one who introduced it, I wrote a letter to the man who had it introduced. I received a reply from him and he criticized our present law, saying it was passed for the benefit of the large manufacturers. Since its passage he said he could not buy any home-made ice cream, nor could he buy any good ice cream. I answered this letter but it is doubtful if he was convinced that we had a good law. This bill was killed in the committee.

It is not my attention to tell you how to make ice cream of good quality, but I do want to emphasize the fact that you must make the best ice cream that it is possible for you to make. Those people at Independence and the man at Coldwater said they could not get good ice cream any more. No doubt there are other communities that we haven't heard from, and just as soon as a little more agitation is started, they will express their views.

Don't be satisfied until you have made the best ice cream it is possible for you to make. Don't try to make an inferior ice cream, and just because you got by once, keep on making that kind, because it means more money in your pocket. Don't go out and knock the other fellow's ice cream. The time for co-operation is at hand.

I feel sure that each member of this association is endeavoring to make the best ice cream which it is possible for him to make. There are some, who are not members, and who are not making as good ice cream as can be made. Hence, each of you have another duty, that is, try to get each and every one in your vicinity to make good ice cream.

ONE Kansas ice cream manufacturer says, "Don't kill the goose that lays the golden egg." That statement means a great deal and covers a lot of territory. Ice cream should taste like a mixture of sweet cream, sugar and flavor. Therefore, use good milk solids, and if homogenized or viscolized cream is used, use good butter. Just use the best ingredients possible. Standardize your mix and know what it contains. Watch your finished product and don't have a whipped up mass of air. Make sure it is good, then advertise it.

If you do not make good ice cream then we cannot truthfully back up our present law. This gives the dissatisfied one an opportunity to start something. Just as long as we have good ice cream each one of us can back it and work to see that some joker is not put in our present law and each one can keep what all of us consider one of the best ice cream laws, if not the best in the United States.

Pacific Slope Dairy Show

Joint Exposition to be Held in the Oakland Civic Auditorium, Oakland, California, December 10-16, Inclusive, 1924

THE Pacific Slope Dairy Show will be held in the Civic Auditorium at Oakland, Cal., again this year. The building is well fitted for the show and is in a most beautiful setting on the shore of Lake Merritt and facing the Piedmont hills. It is within walking distance of the Oakland hotel district and easily accessible by direct transportation from San Francisco.

Most important to the exhibitor, however, is the fact that the Pacific Slope Dairy Show is now recognized as the gathering place of people of the industry. The territory from which it draws is not that of the Pacific coast alone. Visitors are expected this year from the Orient, from Mexico and from Eastern states.

The 1924 show will be the meeting place of a dozen or more dairy organizations. The ice cream industry of the Pacific Slope will participate 100 per cent as evidenced by the fact that both the Pacific Ice Cream Manufacturers' Association and the California and Southwestern States Ice Cream Associations will hold their annual conventions at the show. All of the conventions will be housed in the same building as the show, for the Oakland Auditorium has several commodious convention halls.

The county exhibit department and the educational exhibit department will be repeated this year, as well as the commercial exhibit department. Plans for superior entertainment and educational features designed to attract all persons interested in the dairy industry are going forward on a more elaborate scale than ever before.

There are conditions aside from publicity and advertising which will bring a large attendance to the show this year. The show falls late in the year at a time when it is easy for farmers and dairy people generally to get away. It is a time when the wives of dairy farmers like to come to large cities to shop. Also, the cancellation of many local and county shows this year gives the dairy show added importance as a meeting place within the state of California as well as for the Pacific Slope in general.

The San Francisco Bay district is at the center of population for the Pacific coast. Within a radius of 10 miles of the Oakland Auditorium there are more than 1,200,000 people. At the time of the show the great flood of winter tourists from the East will be arriving. All these things are important to exhibitors.

Schedule of Prices For Booth Rentals.

A Sales Builder
—MAPLEINE

Throughout United States and Canada Mapleine is known for its quality and the unsurpassed flavor it brings out in ice cream.

More and more manufacturers are insisting upon it, and freely admit that Mapleine has no satisfactory substitute. The public likes Mapleine Ice Cream so well that in many sections it sells in a class with chocolate and strawberry. Repeat business is certain.

Mapleine is so superior because it is a vegetable flavoring—contains no ethers or volatile materials to evaporate out and change flavor. Mapleine will not freeze out and holds true through storing.

It is so concentrated that 2 ounces are all you need to color and flavor 10 gallons of finished ice cream.

Try Mapleine—
convince yourself

Beware of Imitations — for unvarying satisfaction insist upon Mapleine —look for the Crescent.

Information and Regulations.

1. Contract for Space—On receiving your contract for space, duly filled out and signed, the management will make a reservation for exhibitor.

2. Booth and Service—The price includes booths constructed of appropriate railings, uniform signs, lighting, general decorations, watchman and janitor service. Special electrical connections, current, counters and special work will not be included. For special electrical work, signs, decorative material and assistance, furniture, etc., apply to superintendent of exhibits.

3. Use of Space—No exhibitor shall assign, sublet, or apportion a whole or any part of the space allotted without the knowledge and consent of the management.

4. Signs—Uniform booth signs bearing the name of the exhibitor will be furnished without extra charge. For the sake of uniformity the management requests that no other signs be placed above the railing of the booth, except small card signs to be placed on individual exhibits, or except where the wall of the building serves as the rear wall of the booth.

5. Shipments—All shipments by express or freight should be prepaid and should be addressed to the exhibitor or his agent, care of Pacific Slope Dairy Show, Civic Auditorium, Oakland, California. Give number of booth when possible.

6. Arrangement of Exhibits—No exhibits, except those in wall booths, shall be of such a nature as to obstruct the general view or mar the uniformity of the show. This rule is for the sake of general attractiveness and the management will appreciate your co-operation in its observation.

7. Installation of Exhibits—Work of installation may begin at 8 a. m. Monday, December 8th, and must be completed by Wednesday, December 10th, at 8 a. m.

8. Hours—The show will be officially opened at 2 p. m., Wednesday, December 10th, and remain open until 10 p. m. It will open at 1 p. m. each succeeding day and remain continuously open until 10 p. m., closing Tuesday night, December 16th.

9. Dismantling—Exhibitors must agree not to dismantle booths or do any packing before the closing hour of the show.

10. Liability—The Pacific Slope Dairy Show Association or the manager will not be responsible for the safety or the property of exhibitors, their officers, agents, or employes from theft; damage by fire, accident, or other causes, but will use reasonable care to protect the exhibitor from such loss.

11. Circulars—Circulars or advertising matter of any description must not be distributed except from the exhibitor's booth.

12. Insurance—It is agreed that the exhibitor shall indemnify or hold harmless both the Pacific Slope Dairy Show Association and the show management from all liability which might ensue from any cause whatsoever.

13. Restrictions—For the good and comfort of all, the management reserves the right to restrict exhibits which because of noise or for any other reason, become objectionable.

14. Care of Building—Exhibitors must not injure or deface any part of the building.

These rules have been formulated for the best interests of the exhibitors and the show. All points not covered are subject to the decision of the management. Your cordial co-operation in the observance of these rules and regulations will be appreciated.

ICE CREAM MEN ADOPT THE BUDGET.

(Continued from page 10)

diagnosis of each locality and sales district with due consideration for general business conditions, population, and occupation. They take cognizance of climate and the number of ice cream retail enterprises.

Statistical information furnished by the United States Department of Labor and Commerce and the Harvard Statistical Service is valuable. In fact, the science of establishing the sales budget is a subject in itself, worthy of much more consideration than we are able to give it here. **

The sales budget when completed often becomes a promise by the general sales manager to the company that a certain volume of business will be obtained over a given period of time, usually a year. What is true of the sales manager is also true of the various district managers and so on down to the individual salesman. In other words, budgeting supplies a basis for enforcing accountability. Hey Brothers of Sterling, Ill., express their approval of this point by stating that budgeting is an excellent thing both, "for the large organization where work and authority is divided and for the small plant where the manager is an 'easy mark'."

The full development of the sales budget in the ice cream industry, especially on a monthly basis, requires time. A succession of warm days or a preponderance of cold days greatly affects sales. A Massachusetts manufacturer, for instance, is now budgeting his sales on an annual basis. However, he is keeping records of each month's sales so that a monthly forecast can be more accurately determined.

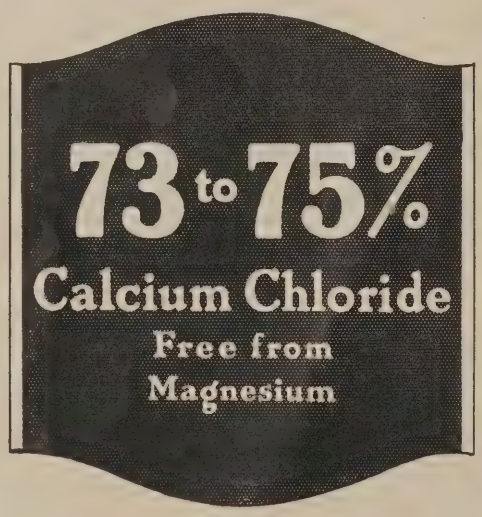
The sales budget becomes the basis for budgeting expenditures. Sales programs may necessitate additional advertising. They may require additional labor. They may call for new construction of production facilities. All of these contingencies will be foreseen, planned for, and, if necessary, such programs modified in a properly devised budget system.

A great many ice cream manufacturers are now using advertising budgets on a gallonage basis. In the vote taken by the Metropolitan Life Insurance Co. among ice cream manufacturers, fifty per cent stated that they were operating advertising budgets. One New England manufacturer allows three cents per gallon for advertising, while another manufacturer sets aside two and one-half cents per gallon on estimated sales.

Mr. E. Fischer, comptroller and assistant treasurer of the Crane Ice Cream Co. of Philadelphia, states:

"Our advertising is set up on a 'per gallon' basis for the year and then distributed over the various months. Each month, however, the amount of advertising bills are charged to 'deferred ledger'....that is, each month we estimate the per cent of the year's business done that month. That has the tendency to have our monthly costs on advertising remain close to uniform cents per gallon; whereas in spring, advertising is high, and sales low, in July and August advertising expenses are low, but sales high."

THE sales budget again becomes the basis for budgeting when the labor and overhead expenses are considered. These items depend upon the volume to be produced, and the efficiency with which the items are handled depends upon the accuracy of the forecast. In some plants, the overhead fluctuates so much from week to week, that it is almost impossible to strike an accurate monthly forecast. Under such conditions, it is by far advisable to establish an annual budget for the labor and overhead expenses. A "per gallon rate" can then be ascertained by dividing the estimated overhead and labor costs by the total estimated sales in gallons.



"A year ago," writes F. R. Merrill, vice-president of the Western Creamery Co. of Miles City, Mont., "we revised our method of bookkeeping and cost accounting, pro-rating on a per unit yearly basis expenses, such as office and manager's salary and expense, refrigerating expense, fuel and heating expense, selling and advertising expense, insurance, taxes, etc. The per unit charges were, of course, determined from past experiences and in the light of what we expected to acommplish for the coming season....I believe that it (the budget) has been of great value in giving us an insight into our business."

The United States Department of Agriculture reports that ice cream consumption is gradually being spread out more evenly over all the months of the year. With this improvement and with the use of advanced accounting procedure with which to study past experiences, the development of the monthly overhead and labor budgets should become easier.

A standard rate per gallon for budgeting delivery expenses can be determined by the same method. With the estimated volume of production and the estimated expense in hand, the rate per gallon can be determined by dividing the latter by the former. It must be borne in mind, however, that it costs just as much to operate an ice cream truck in the winter months when production is low, as it does to operate the same truck in the hot

(Continued on page 70)

** "The Sales Budget," Business Leaflet No. 3, published by the Policyholders' Service Bureau of the Metropolitan Life Insurance Company, sets forth the kind of information used by successful concerns on which to base accurate sales quotas. The Metropolitan will be glad to send a copy of this leaflet to any interested manufacturer upon request.

The full benefit of your large investment in refrigerating equipment is only possible when you use a refrigerant of the first order. Carbondale C-3 Calcium Chloride qualifies as such.

ICE CREAM MEN ADOPT THE BUDGET.

(Continued from page 66)

summer months when production is at its maximum. Thus the rate agreed upon, when considered from a gallonage standpoint, may be high in the winter, but low in the summer. However, the rate should be set on an annual basis, and at the end of the year, should balance.

AN HOURLY rate for delivery expenses is the latest development of budgeting by another manufacturer. After carefully studying their past costs, this firm determined an hourly rate for each class of ice cream truck. This manufacturer has several plants, so that the automobile division can rent out the trucks to the various plants and departments at the predetermined rate. This tends to fix responsibility and reduce the expenses of the automobile division to a minimum. After several months of trial, the company reports that the rate set is fair and that it has been of great assistance in controlling delivery costs.

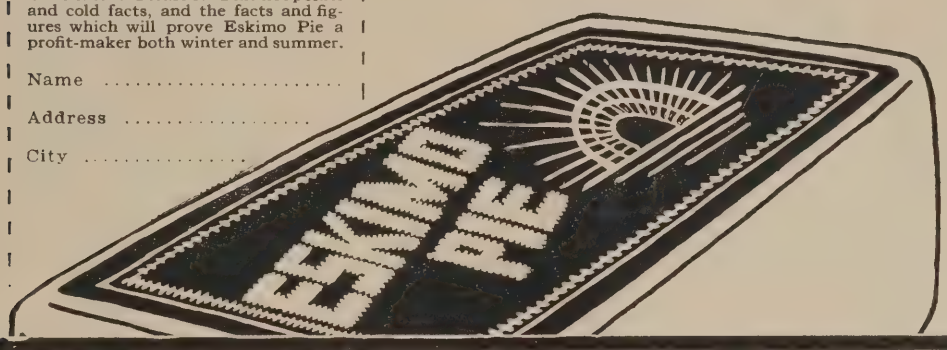
Accurate forecasting is by no means the only justification for budgeting. Results may be just as helpful should performances vary widely from expectations. This data immediately indicates the needed economy, or adjustment of the subsequent sales budgets. Hence, a manufacturer, whose selling expense exceeds his estimate by eight per cent can, through checking performances against estimates under a properly prepared budget system, determine the cause for the excessive expense.

Ice cream manufacturers are awakening to this system of forecasting. All agree that it can not be put into operation over night, but that it requires gradual development. A scientific forecast depends upon a careful study of past experiences. An Illinois manufacturer writes: "We are adopting a cost accounting system so that by next year we can know how to budget our business intelligently." An Ohio company writes: "For some time we have been working on a new system (a budget) as we feel that there are a number of advantages to be gained."

OTHER firms that have adopted a budget procedure report favorably of its use. "We are very well satisfied with this method of figuring and trying to forecast expenses," writes the Western Creamery Company of Miles City, Mont., "and I believe that it is much more reliable than endeavoring to charge to each month's business, the expenses incurred during that month." Smith and Clark Company of Scranton, Pa., report, "We have been operating for some time with a budget which parallels the system that you recommend in a good many respects. We do not see anything that is so appreciably different from the one you recommend to make any comment." A strong approval of budgeting comes from E. B. Geisel, secretary-treasurer and manager of the Anheuser-Busch Ice Cream and Beverage Co., Inc., who writes:

"We are frank to say that we would not undertake to operate our ice cream business without having a budget."

Budgeting indicates clearly defined goals and fixes responsibility thereon; it provides for the harmonious working of the various departments, and offers a procedure for checking results against expectations. This is one method of scientifically increasing profits, production, and efficiency, in serving this delicious and healthful food to the people.



Eskimo Pie Corporation,
5 North Wabash Avenue,
Chicago, Illinois.

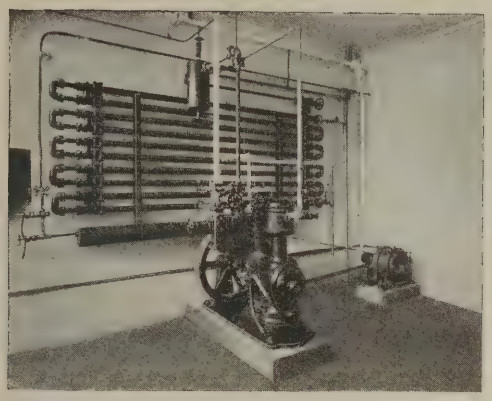
ALUMINUM FOIL

The Standard Wrapper

for



ESKIMO PIE

Be sure your Eskimo Pie is wrapped in Pure Aluminum Foil.

Aluminum Foil is especially suited for wrapping food products because it is absolutely hygienic and can form no poisonous compounds with any food.

The prime attraction of Aluminum Foil is its appearance. Bright silver-white aluminum foil — made of pure metal — keeps its luster and brilliance better than any commerical metal foil.

Aluminum Co. of America

Look carefully into details before you buy. The Frick machine has sub-base, outer pedestal bearing, extra long stuffing box with self-adjusting packing and automatic lubricator, forged steel crank shaft and connecting rods, force feed internal lubrication for piston pins, leak-proof piston rings, multiple cushioned valves, fully enclosed water jacket, safety relief valve, safety sight oil gauge, full size by-pass, and large external scale trap.

Mechanical Refrigeration

Has proved itself a necessity in the dairy business. The only question for you to answer is, "What refrigerating machine shall I buy?"

The answer is, "That machine which will give you the most reliable cooling service, at least cost, for the longest period of years."

Investigate for your information the Frick Enclosed Refrigerating Machine. Bulletins showing some of the 4,300 installations will be gladly sent.

A user says, "*Some three years ago, we, the Mindoro (Wis.) Creamery Association, installed one of your Frick Refrigerating plants at our creamery. This plant has given us entire satisfaction in every way.*"

Southern President Forecasts Record Convention

Sessions of Southern and National Associations at New Orleans in November to be South's Greatest Ice Cream Event, Declares W. J. Barritt, President of Southern Association of Ice Cream Manufacturers

ASSURANCE of a hearty welcome has been extended the ice cream manufacturers of the country in connection with the New Orleans convention next November, in a letter to The Ice Cream Review from W. J. Barritt, Tampa, Fla., president of the Southern Association of Ice Cream Manufacturers.

Mr. Barritt, whose association will hold its convention the latter part of the week preceding the opening of the national convention at New Orleans on November 17, points out that the decision of national officials to meet in the South has done much to cement the good feeling that already existed between the two organizations.

W. J. BARRITT.

"Immediately upon the announcement of the selection of this Southern city, the Southern Association of Ice Cream Manufacturers selected New Orleans for its next convention, thereby affording its members the opportunity of attending their own meeting, which will occur three days prior to the opening of the National Association of Ice Cream Manufacturers and showing their appreciation of the action of our Northern friends in coming South and mingling with us," states Mr. Barritt. "I am sure every Southern manufacturer who comes to New Orleans this year, attending first, the sessions of our own Southern Association, and second, the sessions of the National Association, will receive benefits therefrom and be amply repaid for the trip.

"I have noticed somewhere the statement that 'all eyes are turned toward New Orleans'—let us make this a reality. From advance information I have received I am confident the programs in both conventions this year will be, if possible, more beneficial and instructive than ever before."

For the Southern association's program committee Mr. Barritt has appointed Benjamin C. Brown, chairman, who with W. E. Drake and Harry Cuscaden assisting him will undoubtedly draw up a splendid program.

"We all know their ability along this line and will look forward with keen interest to what they will furnish us for discussion this year," the Southern president declares.

IT HAS been planned to hold the sessions of the Southern convention in the Winter Garden exhibit hall provided by the Dixie Flyers, similar to the arrangement in Little Rock last year, only on a larger scale. This will make it possible for the members to attend the business meetings and when dismissed turn to the various booths of the exhibitors and have a splendid opportunity to examine the display offered.

"And just a word right here about that exhibit," speaks up Mr. Barritt. "Who was it that said there would be no exhibit? Ask Harry Benners if there will be one, and you will see him pull out his handkerchief, mop his fevered brow and say, 'Oh, Boy! if I can only get it all crowded into the space I have got I will be happy.' We are getting applications for space every day and we are going to pull a 'real one.' If Harry succeeds in filling up the Winter Garden, and I believe he will, there will be plenty to see, and what we can't see will be left to the imagination. Pete Miller says, 'You don't have to leave anything to the imagination, because by the time I get around we are going to have it all there,' and you all know Pete.

"The Southern Association will owe these good fellows, members of the Dixie Flyers, and their several committees, a debt of gratitude that will be hard to repay for their efforts in providing the splendid exhibit they will have this year. They are leaving nothing undone to insure its being a hugh success, and in addition to that have planned a program of entertainment for the members and their wives between the business sessions

that is even superior to the many splendid programs they have provided in the past."

AFTER a day's rest and recreation, or breathing spell, the National Association will convene. Mr. Barritt is sure every member of his association is looking forward to the opportunity of attending these sessions.

"Here we can mingle with our friends, the 'big fellows' from all over the country," he says, "gaining much information and practical advice that will be of great benefit to us throughout the coming year.

"So I repeat, let's make it a reality that 'all eyes are turned toward New Orleans' in November. Make your plans now to attend these two splendid conventions, have a vacation that will contain both pleasure and profit, and when the session closes let it be said that we have had the largest attendance and the best meeting all around of the Southern Association of Ice Cream Manufacturers that has ever been held in our history."

THE SOUTHERN EXHIBITION-CONVENTION.

Editor The Ice Cream Review:

As you may know the Dixie Flyers contemplate putting on an exposition during the week of the Southern convention which will be held in New Orleans on November 14 and 15.

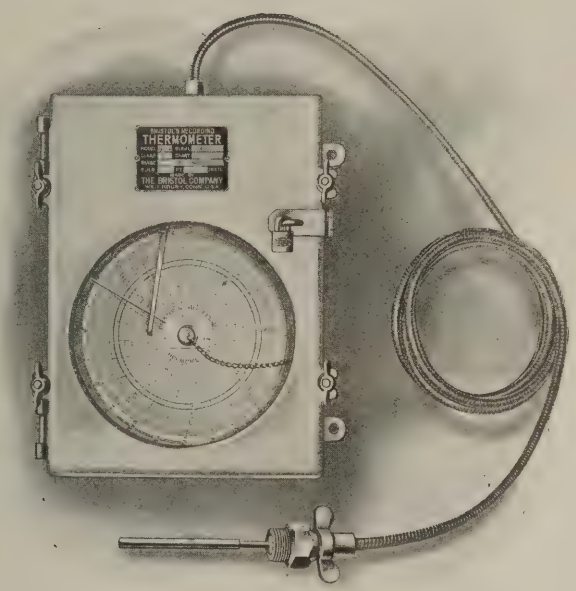
The Flyers have leased "The Winter Garden" which is only three blocks from the principal hotels and has a space of 198 by 99 feet. This space has been divided into booths of 8 by 8 feet, each one being decorated and equipped with chairs and table. The building is going to make a very attractive appearance and already thirty of the leading machinery and supplymen have applied for space.

I am greatly in favor of this exhibit, as I believe it will increase the attendance not only at the Southern, but also at the national meeting, and we of New Orleans are deeply interested in making this coming convention the best and most attractive that has ever been held.

This is the first time that the ice cream manufacturers from all over the American continent have seen fit to select New Orleans, "America's Most Interesting City," and we appreciate this compliment and we are going to do everything in our power to see that no visitor to this convention goes away feeling disappointed at not having had an interesting and profitable time.

Application for exhibition space should be made to H. A. Benners, president Dixie Flyers, United Fruit Bldg., New Orleans.

Yours very truly,
BENJAMIN C. BROWN.



MARYLAND'S NEW ICE CREAM LAW.

Notice has been sent by A. L. Sullivan, chief of the Bureau of Food and Drugs of the State Department of Health, Maryland, to all ice cream manufacturers in the state, informing them of the requirements of the new ice cream law which went into effect June 1.

A request was made for all manufacturers to examine their formulas very carefully and to see that sufficient cream was provided to meet the new law, which called for from 8 to 10 per cent butterfat in plain ice cream and of from 6 to 8 per cent in the fruit or nut ice cream.

Don't let that used machinery of yours stand in your way. Turn it into cash by advertising it for sale in the "Review" Want department.

Don't Blame the Wrong Man

Branch Plant Operation

*By C. E. FURICH**

TODAY, as never before, in the history of the world, business men, all men, are confronted with problems of such magnitude and consequence, that the solution thereof at times, seems beyond human wisdom; so that all people, and you and I, are reaching out for a way mark, a sign, something more tangible, something more real to guide us, than we have leaned upon in the past.

Conditions of communication being more advanced, and continually improving, are with greater rapidity bringing men closer in their business intercourse, which is fast reaching into all parts of the world. These conditions necessarily bringing about relative changes in the business world. So that what is now the center or home of a particular industry may be changed by such conditions. It does not however, essentially follow that because of these different conditions, the fundamental principles of doing business should change; but rather, more decisively emphasizes the fact, that by reason of these rapidly changing conditions, it is of paramount importance to adhere to such fundamental principles, so that the spirit of fairness, the spirit of that great saying, known as the Golden Rule, "Do unto others as you would have others do unto you," is not a mere play on words; but a real awakened ideal, expected to be realized and evidenced by an earnest desire to live it.

*Assistant treasurer J. M. Horton Ice Cream Co. of New York. An address before annual convention The Association of Ice Cream Manufacturers of New York state, December 5-6, 1923.

To change it from a mere play on words, to an actuality, it only needs to be practised and promoted.

While this is a statement of an ideal, it is nevertheless fundamentally a practical statement. The policy of your business, the ethics of the industry, are all ideals which each and every one collectively reflect in and about their business.

Is it not true, that the aim to promote your business, to be successful, and to be able to do this honestly and fairly, is an ideal?

Likewise then, is it also not true, that this desire being good, is a right and privilege for all, and cannot be claimed by just a few?

Admitting this, it is at once recognized that a benefit to the greatest number is the greatest good to all.

Can the aim, can he purpose to advance, or move into the territory of another member (whether he is a member of the association or not, he is at least a member of the industry) without considering if it is a benefit to the greatest number, and can in no way retard the progress of, or injure a co-member, be excused or justified? Unless this is the intention, is the aim, and the purpose a practical one? For bear in mind, and you all realize this, that to be really practical, it must be ideal, since the final result cannot be separated from the actuating motive that induced the enterprise or venture.

There are today, I do not believe, any employers—or if there are any, very few, who seek to hire help for the least that they expect to pay, but are attempting to compensate their employees on the basis of what they are justly entitled to receive. Is this not, not only an ideal, but when followed to its logical conclusion, likewise a practical proposition, and if so, and the reasoning correct, why should not the same reasoning be applicable to all business transactions?

There are at this time efforts being made to establish branch distributing stations, which from all indications are to serve as outposts or skirmish lines, in the hope possibly of keeping out some competitor, who has implied such a move, or to forestall such a contingency. When as a matter of fact no need for doing this exists. The territory no doubt, being in most cases, effectively and efficiently served by the local manufacturer or distributor, who is earning a fair reward for his labors. By moving into a territory such as this, the local manufacturer or distributor is quite likely required

to meet competition that is unjust, and often resulting in a loss to the one who has been making an honest return on his investment; and at the same time resulting in a loss to the in-coming competitor. And beyond and above all this usually invites retaliatory measures, which are detrimental, and if unchecked disastrous, not only to those directly interested but to the industry at large.

It must be seen by all, that a distributing station, no matter where it may be, or what the conditions are, carries with it certain duplication of charges, which add to the per gallon cost of ice cream. The cost of the investment, depreciation thereon, duplication of delivery, additional management and office help necessary, all add greatly to the cost of operating a distributing station.

While the output of the distributing station may result in an increased production for the manufacturing plant, the reduction in the per gallon cost by reason of this increase, is a great deal less, than the per gallon cost added for operating distributing stations.

The need for establishing branch manufacturing plants or branch distributing stations, which is brought about by the natural growth of the business, and which is justified, is not questioned.

Our experience so far, has taught us, that other than to protect our territorial boundaries, the venture in distributing stations has not added anything towards the payment of dividends.

An association such as this, formed and created, containing laws and rules, based upon a principle so broad, and its utility so practical, that the right of membership would embrace within it, an eagerness to become a member, a hope to maintain that membership, and a desire to achieve this privilege, as well as a feeling to support, continue and command their respect, would result in invaluable benefit to its members.

The association created, influenced and effected by such a purpose, will establish a plan of co-operation, insuring the greatest good to each individual, based upon his direct effort of industriousness, and of serving an association which serves him, If we expect to maintain and continue the success attained, and to uphold and promote the growth of the ice cream industry, can it be done in any other way, than by the association or the members of the industry, having an ideal, not only as a letter, but by the practical application of the spirit of this ideal? Which must have always been your aim, and is your aim. Then why not let us continue it?

With such men who constitute the business industry today, can it longer be said,—"We will" or "we shall" move into another's territory, but moreover are "we justified" in doing so.

"What Is Necessary to Make a Service Charge Operative"

*By E. L. TURNER**

FOR some time past, throughout the country, there has been waged a more or less heated discussion as to the advisability of applying a service charge to help curb the demand for excessive and unreasonable service, such as extra pots and extra delivery by ice cream retailers. The fact that wholesalers are themselves responsible for the conditions existing does not make it any easier to meet the expense incurred, as most of us know.

It seems to me that the form of the topic appearing on the program indicates that your committee believes that the majority of your association has reached the conclusion that a service charge is both fair and advisable and that our time and efforts, from now on, should be spent in finding the best system to use and the proper way to apply it.

Last winter (1922-23) an attempt was made to establish a system in Greater Boston. The majority of the manufacturers issued notice to the trade that after the date given in the notice they would assess an "icing" charge of $1.00 per week against each customer buying less than 20 gallons per week. That plan was not intended as a permanent system and had many serious defects. The name itself was wrong, since the customer says that if he is to pay an icing charge he wants plenty of ice. As a matter of fact the ice involved is only a small part of the expense which the service charge should cover. The "icing charge" of last winter was unjust, in that it assessed one class of customers and not another. It was applied at too high a limit. It did not lessen service but encouraged a demand for more. In spite of all this the system went into effect and became operative. It worked until it was discovered by the retailers that some manufacturers were not enforcing the collection of the announced charges.

Then—and not until then—trouble entered and the plan as a universal requirement failed. It is a strange thing that the manufacturer who fails to live up to his word in such cases is almost invariably the one who needs relief the most, as is shown by his frantic efforts to obtain new customers through price cutting. If such men could only be far-sighted and clear-sighted enough to realize that they would profit infinitely more in the end by holding to their word as published in their notices, the entire industry would be immeasureably benefited.

I suppose, however, when the time comes that all men do realize this truth, we shall be in Utopia, and won't have any more troubles to face.

In spite of this price cutting, however, this plan was kept in operation through the winter by the majority of the companies who had inaugurated it. One company in particular lived strictly up to their requirements of 20 gallons per week and deserve our sincere commendation for their steadfastness.

FOR ourselves, when we found that some competitors were soliciting our trade under promise of no service charge, we announced that we felt that 20 gallons was to high to require for the minimum, and dropped to 12 gallons. This requirement we enforced through the winter, although we lost a few customers as a result.

This certainly is not the way to make a service charge operative, and is enough to make one ask of what use is association work when members will not stick to their words.

I have spoken freely of local conditions because I know that the same thing is true in other places and that everywhere men are constantly admitting their inferiority by using unfair practices to bolster up their business, and, regardless of conditions here we know of no other locality in which we would prefer to be. We all know that conditions throughout the country would be improved if we stuck to our words more closely.

If all the Greater Boston manufacturers who sent notices out to their trade last winter had stuck to their words, the service charge would be fully operative in Boston now, and, instead of considering "**how**" to make it operative, we could be spending our time and energies on working out the best plan to be operated.

However, we felt in spite of this failure a service charge was fundamentally right. We all admit that now-a-days we sell service as well as ice cream. We also admit that service must be paid for somehow. It seems perfectly fair, then, that service should be paid for directly and in proportion to the service rendered. It should always be kept in mind, however, that the object of a service charge is not to raise the price of cream, but to curb unreasonable and excessive service by collecting the cost of service from the individual receiving it. Therefore, if the system does not levy an extra charge for extra service and decrease the charge when service is diminished it does not accomplish its object.

The method I shall outline has been used by the Frank E. Boyd Co. this past season, and, while we realize it is not perfect, it has been satisfactory enought to make us feel that it is a step in the right direction and to lead us to continue with it through another season.

I will not tire you with a lot of figures which apply only to our business. To make the method clear, however, I will give you the price list which we use:
Service charge, March 1 to Nov. 1, $1.50 per pot per week.
Service charge, Nov. 1 to March 1, 1.25 per pot per week.

	Price per Gallon	
	Bulk	Brick
	$1.10	$1.35
Special Delivery	1.20	1.45

The flat rate in Greater Boston was $1.30 and $1.55.

On the first of April instructions were issued to our men that all business for the coming year would be taken on the service basis. If prospects could not be shown that this was a fair and just price list we would not expect to receive their business. It was astonishing to find how large a number of retailers not only realized, but admitted, that the method was fair.

The combination of prices, of course, is subject to

*With the Frank E. Boyd Co. An address before the 1924 New England Convention.

variations to meet local conditions. Each manufacturer must figure his own cost of caring for a pot per week and the average amount of sales per pot per week necessary for paying business.

These two factors control the proper price per gallon. The daily sales sheets will tell you your average sales per pot per week. Suppose it is seven gallons and the flat price in your locality is $1.30 per gallon for bulk. A Combination of $2.45 per week service charge, plus 95 cents per gallon for cream would result in an average of $1.30 per gallon for the seven gallons sold which seems reasonable.

SUPPOSE, however, that the customer discontinues one pot and averages 10 gallons per pot instead of seven. At the above figure, his average cost would be $1.02½; and if he was a real customer and sold three gallons per day per pot—or 21 gallons per week per pot—his price would be $1.07 per gallon. This, of course, is too low and indicates that the service charge is too high, and the gallon price too low.

On the other hand, if we set our prices at $1.00 per pot per week, plus $1.20 per gallon, we find that the average cost to the retailer who sells five gallons per pot per week is $1.40. At ten gallons per pot per week he pays $1.30 and at 20 gallons per pot per week he pays $1.25. This combination, I think, is too high since we must expect to return part of our saving to the dealer who makes it for us. The proper price you must decide on the basis of your own figures.

One feature of our price list which should always be included in service charges is an extra charge per gallon of special delivery. It is useless to assess a service charge based on the pots used by the customer, and then to allow the customer to reduce his pots to the point where special delivery must be made, both useless and foolish, since we are only transferring our expense from one truck to another. We want the customer to maintain all the pots he can use to real advantage, but no more.

Another factor to be considered is the decrease in sales and decrease in cost of sales in the winter months. We have recognized this by a reduction of 25 cents per pot in service charge. This also is a figure which may vary with the individual manufacturer.

We believe that since this system has reduced the amount of service we render without reducing the volume of sales, and has brought in added revenue which covers the cost of caring for what might be termed inactive pots, that it has succeeded in doing what it was intended to do, and we plan to continue using it with whatever alterations we may feel from time to time will improve it, until we find something else which we like better.

I hope you will all keep in mind that this paper is a report of our experience for one season only. If you find any flaws in our reasoning or in applying the system we would appreciate receiving your criticism.

Jasper: Why don't you get out and hustle! Hard work never killed nobody.

Mose: Dat's an infernal lie, suh! Ah's lost four wives dat way.—Baltimore Times.

CERELOSE

CERELOSE is a pure white refined corn sugar which has been found to be of advantage to ice cream manufacturers for use in conjunction with cane sugar in the proportion of 25 to 50% Cerelose instead of 100% cane sugar, for the following reasons:

1.—Cerelose emphasizes the richness of the butter fat with the result that Cerelose develops the natural flavor of ice cream.

2.—Cerelose produces a smoother cream.

3.—Cerelose is the new solid builder for ice cream because it improves the body and texture. It will not crystallize nor form sandy cream.

4.—Ice cream made with Cerelose is more digestible than when made entirely with cane sugar because Cerelose is a dextrose sugar being directly assimilated by the blood, therefore, more ice cream may be consumed, particularly by infants and invalids.

5.—Cerelose is approximately 25% cheaper in price than cane sugar.

Cerelose should be used in the same manner as cane sugar, the amount depending upon the type of cream desired. 25 to 50% is recommended.

PROFITS COME OUT

REGARDLESS of the freezing equipment you purchase, there is one unchangeable fact. *You invest money in it!* After making the investment, do profits come out? Yes, profits come out of Emery Thompson Horizontal Machines whether your requirements demand 40, 60, 80 or 120 quart capacity. Such details as the 4″ cream valve, wide mouth slide gate, removable three-way yoke and spaddle, and the time-tested full open circulating brine back—all contribute to the profits that come out. If interested in boosting your profits, write for the Emery Thompson catalog.

Can You Double Your Sales?

Granted that you have sufficient money, it is easy for you to plan a way to double your output. But can you plan a way to double your sales at will or must you wait for the natural growth of your business?

While we do not claim that you can buy a copy of Mr. Tompkin's book "The Sale and Advertising of Dairy Products," and immediately double your sales, we challenge you to read this book and not learn of several ways in which you can substantially increase your business.

This book tells how you can organize your business to show a continuous growth in sales. It explains every step of the way and cites numerous examples of how ice cream makers, creameries, milk dealers and cheese makers have increased their sales volume.

This book tells how to get more results from your advertising dollars, how to organize an advertising and selling campaign, how to test out ideas without big expenditures.

Why experiment with a lot of "ideas" on advertising dairy products when for only two dollars you can get a whole book full of practical plans which have proved themselves successful through practical test.

For instance, it tells of an ice cream manufacturer in Indiana who trebled his sales of ice cream bricks with practically no advertising expense. It tells of a little and simple method by which a milk dealer has a continuous stream of new customers coming to him, etc., etc.

"The Sale and Advertising of Dairy Products" consists of over 100 pages with numerous illustrations of actual, successful advertisements for all kinds of dairy products. It has a number of valuable charts. It is handsomely bound in blue cloth with gold letters and its price of $2.00 each is absurdly low for the valuable ideas and vast amount of information it contains.

Putting Over Ice Cream Week in Georgia

The Kinnett-Odom Company of Macon, Ga., Follows Well-Studied Plan in Staging Quality Educational Campaigns

IN THE early part of January, at one of the executive sessions of the Kinnett-Odom Company, the idea was advanced to establish a trade name for the ice cream this company was manufacturing. After some deliberation, the matter was laid over for future consideration and more thought, and not until April was there any sign of reaching a decision.

M. J. Redmond, secretary of the company, struck the keynote when he placed together the four letters "KOC'O," which represented the initial letter of each word of the firm name. The word quality was later added, making "koco quality."

An extensive advertising campaign was planned for "koco quality," and with the assistance of S. R. Phillips, local advertising manager of the Macon Daily Telegraph, copy was started in the Telegraph on Sunday, May 30.

After several advertisements were published the idea of illustrating "koco quality" ice cream copy with local photographs in order to get more reader interest was decided upon. Young Stribling, "Uncrowned Light Heavyweight Champion of the World," had just returned from Newark, where he was awarded a newspaper decision over Mike McTigue, the world's champion. Young Stribling and "koco quality" being Macon products, the opportunity of a big feature was grasped and Young Stribling consumed a quart of ice cream while the photographer was making ready, and another quart had to be brought forward to complete the photograph. This combination was featured in the newspaper and comments were heard from all sides.

"Better Baby Week" was next, and to connect up, an illustration was used showing two Macon children eating "koco quality" ice cream with a statement (unsigned) from one of the leading baby specialists of the medical profession in Macon. This advertisement carried "koco quality" to the mothers and advised the use of this ice cream as a regular feeding.

"National Better Homes' Week" was also tied up with and went over in a big way. The Macon Daily Telegraph had two residences open for inspection and "koco quality" ice cream was served free to more than 5,000 visitors, an agreement having been made between the newspaper and the Kinnett-Odom Company.

THE idea of using in each advertisement an ice cream illustration in colors was next. As the fresh strawberries began to arrive, strawberry ice cream was advertised, the illustration showing bricks in combination with strawberry and vanilla, the color scheme being used. When the Georgia peaches began to ripen a peach advertisement announcing fresh peach ice cream was used. More peach ice cream was consumed in Macon, middle and south Georgia on this day than ever before in the twenty-six years of the Georgia Peach.

"Koco quality" was beginning to go over in a big way, eight weeks of advertising had already passed and the Kinnett-Odom Company dealers everywhere were watching with enthusiasm the "koco quality" advertisements.

THE idea of having an ice cream week originated in the mind of J. D. Kinnett, president of the company. Mayor Luther Williams of Macon, issued a proclamation and June 22 to 28 was designated as ice cream week. The Kinnett-Odom Company seeing an opportunity of cashing in on the previous "koco quality" advertising went into it in a big way.

A coupon which would entitle the holder to a free cone of "koco quality" ice cream would be published in the Macon Daily Telegraph on Tuesday, June 24, the Kinnett-Odom Company redeeming the coupons at five cents each in cash or as payment on bill.

More than 250 dealers in Georgia and Florida were sellink "koco quality" ice cream, and at the suggestion of Mr. Phillips, the old custom of advertising the dealers was abandoned and with the coupons as an inducement the advertising department of the Macon Daily Telegraph went to work on the dealers. Eight pages, in an individual section, of "koco quality" ice cream ad-

Three States Served by Georgia Plant

THE Kinnett-Odom Ice Cream Co., Macon, Ga., is one of the South's most up-to-date ice cream organizations. It is operated by two of the Southern industry's most advanced members—J. D. Kinnett and C. A. Odom.

Mr. Kinnett, who is a member of the National Association of Ice Cream Manufacturers, has been actively identified with association activities in the Southern states, being president of the Georgia association and a past president of the Southern Association of Ice Cream Manufacturers.

Mr. Kinnett entered the ice cream business in 1905. He established a plant in Macon. In 1911 he established a plant at Vineville, a suburb of Macon. A coal and ice business was conducted in connection with the ice cream business. In November, 1921, the present company came into being through the merger of the ice cream department of Kinnett Ice and Coal Corporation, the Odom Ice Cream Co. and the Purity Ice Cream and Dairy Co. The location chosen was the old plant of the Purity organization, this coming about on account of this company's having a factory already located in the city near an ice plant. The Southern Ice and Coal Co., which was located right next to the ice cream company, was taken over by the Kinnett-Odom Company and still is operated by this concern.

"Koco" ice cream is widely popular in middle and southern Georgia. This product was worked out immediately upon the merger of the firms by Mr. Kinnett and Mr. Odom. "Koco" ice cream is being shipped to consumers in three states and according to all available information, the Kinnett-Odom Co. is probably the largest shipper of ice cream in the South.

The plant has a capacity of 3,500 gallons of cream daily; railroad shipments alone total more than 800 gallons a day, the plant being operated both day and night.

AMONG THE BRIGHTEST THINGS IN THE REVIEW ARE THE ADS—READ THEM.

vertising appeared in the Macon Daily Telegraph on Sunday, June 22. Daily advertisements throughout Ice Cream Week ranging in size, from 30 inches to 100 inches were carried, giving the names and addresses of "koco quality" dealers. The country dealers outside of Macon paying their share.

One feature story on the front page of the ice cream section carried Mayor Williams' proclamation and the history of ice cream. The writer went back to the days of the ancients — millions of years ago and with his imagination brought out the fact that one of the men of those days milked a cow that left the stone basin of white fluid out in the cold atmosphere over night. A sudden freeze came and the next morning was found—ice cream. He continued through the ages with his imagination and brought out what science has done for the ice cream business with its modern machinery of today.

J. D. KINNETT,
President.

Another three-column story related the history of the Kinnett-Odom Company from that day back in 1905 when J. D. Kinnett manufactured his first gallon of ice cream. Nine different ways in which you can buy or serve "koco quality" ice cream colored in red, yellow and black surrounded the picture of J. D. Kinnett, while interior and exterior views of the factory were used.

C. A. ODOM,
Vice-President.

The other seven pages of the section were devoted to advertisements about "koco quality" ice cream from local dealers and several manufacturers of ice cream products, ranging in size from ten to eighty inches. Photographs of the officers and employees of the entire Kinnett-Odom Company were scattered through the news columns.

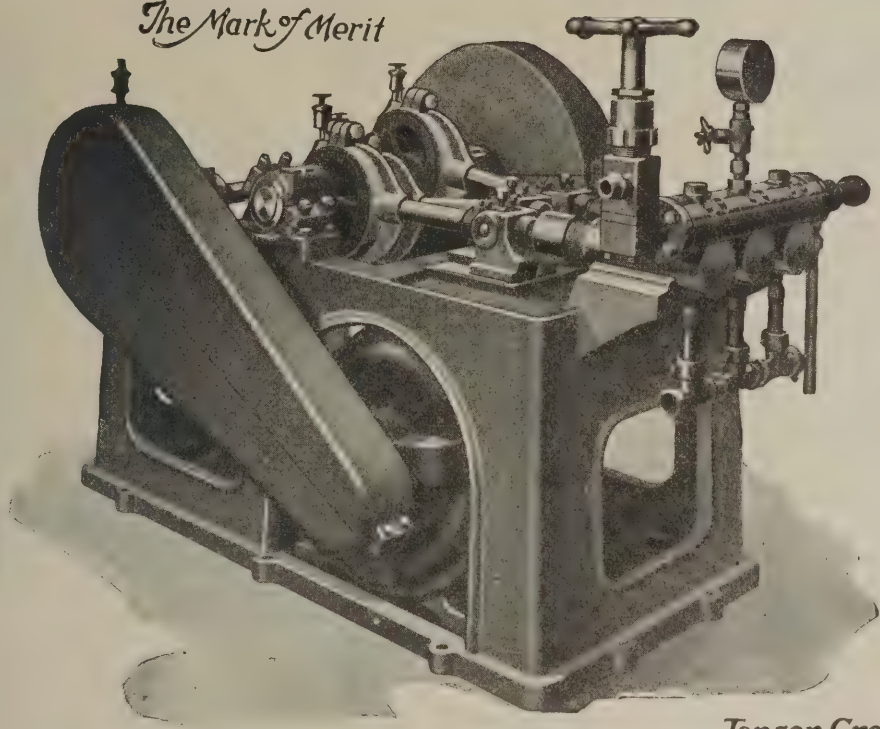
ON TUESDAY, June 24, the coupon was published in the Macon Daily Telegraph. The Telegraph gave wonderful co-operation, carrying on their front page a two-inch box on Monday and Tuesday, calling attention to clip the coupon.

Reports reaching the Kinnett-Odom Co. from dealers stated that mothers and nurses in the suburbs were at the drug stores with children as early as 8 a. m. to get a free cone of "koco quality" ice cream, while in the business section business and professional men, stenographers and office boys clipped coupons and enjoyed a free cone of ice cream.

A View of the Freezer Room.

Orders from the city and country dealers who had not laid in a supply of "koco quality" ice cream placed orders immediately in order that they could share in the coupon offer.

J. D. Kinnett, in speaking of Ice Cream Week, stated, "more ice cream was sold in Macon, middle and south Georgia during Ice Cream Week than ever before in the history of the industry. During the entire week



W. L. ("Young") Stribling, "uncrowned light-heavyweight champion of the world," eating "Koco Quality" ice cream at the Kinnett-Odom Co. plant.

GEORGIA MAYOR LAUDS ICE CREAM IN PROCLAMATION.

The mayor of Macon, Ga., has proper appreciation of the value of ice cream to public welfare. Following is a copy of the proclamation issued by the Macon mayor on June 21:

The week from June 22 to 28 has been set aside as a national ice cream week, and there is more in this than appears on the surface. Anything and everything that will benefit the health of our people should be heartily encouraged, and in these hot summer days ice cream is one of the items that go to make life more bearable and perhaps happier. This is a good, healthful food if used in moderation, and I, therefore, by request, proclaim the week above named as one to keep this matter especially in our minds and thus perhaps benefit our bodies also.

LUTHER WILLIAMS, Mayor.

DID YOU EVER STOP TO THINK
By E. R. Waite, Secretary, Shawnee, Okla., Board of Commerce.

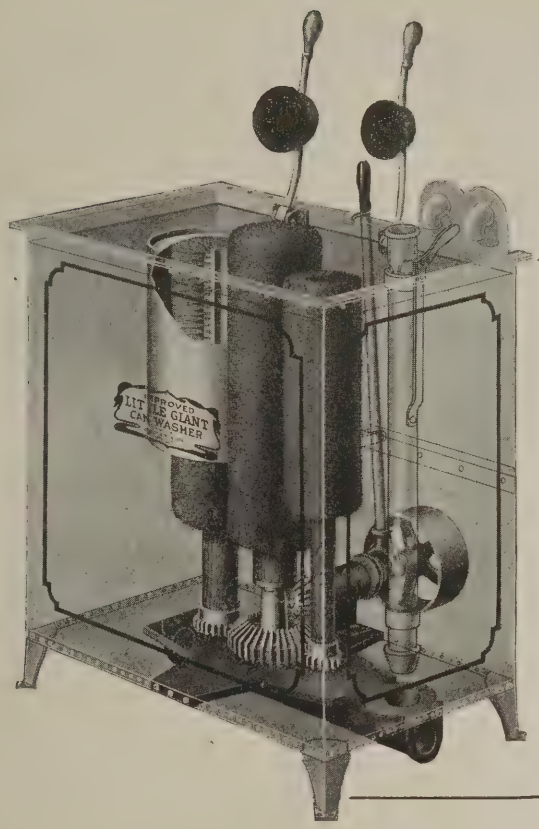
That the motive power of any business is truthful advertising.

That advertising should be the last item on which a business concern should retrench and the first on which they should seek to enlarge.

That persistent advertisers meet success by maintaining a close connection with both their customers and prospective customers. Advertising cements the link between the business and its customers.

That persistent advertisers always handle goods of the highest possible degree of constant quality.

That advertising gives assurance of an earnest spirit to give good value.



That advertised goods "ring true to a high standard" and are ever growing in popularity.

That advertising through the printed page has been proved the most satisfactory way of reaching the masses. It will meet the most exacting requirements and proves to the world that the advertiser wants to please.

CAREFUL SHOPPERS, WHO STUDY THE RELATIVE MERITS OF DIFFERENT MERCHANDISE AND SERVICE, MAKE SURE OF GETTING THE BEST QUALITY AND THE BEST FOR THEIR MONEY BY BUYING ONLY FROM THOSE CONCERNS WHO ADVERTISE.

IMPERIAL PLANT AT WAYNESBURG, PA.

Waynesburg, Pa., is the location for the largest branch plant of the Imperial Ice Cream Co., one of the largest of its kind in the East, the corporation having plants throughout West Virginia and five adjoining states. In the July issue of The Ice Cream Review it was stated that this company has opened a branch at Waynesboro, Pa., which was a typographical error.

The Improved

Little Giant Can Washer

SPECIAL DAIRY COURSES OFFERED BY THE IOWA STATE COLLEGE.

The six months' dairy course begins this year on September 22 and closes on March 19. This course is divided into two quarters, the fall quarter closing on December 19, and the winter quarter beginning on January 2, and closing March 19. Students who have had practical experience may find it satisfactory to take only one-quarter's work.

The work offered in this course is as follows:

Fall Quarter	Credits
Dairy Practice	6
Buttermaking	2
Milk Testing	2
Manufacture of ice cream & ices	2
Dairy Chemistry	2
Dairy Machinery	2
Dairy Cattle, Breeds, and Judging	2
Physical Training, (Required)	0
	19

Winter Quarter	
Dairy Practice	6
Buttermaking	1
Cheesemaking	1
Milk Testing	1
Factory Management	2
Judging Dairy Products	1
Market Milk	1
Dairy Bacteriology	2
Dairy Cattle, Feeding and Management	2
Farm Crops, Production	2
Physical Training (Required)	0
	19

Ten-Day Course.

The regular ten-day course offered to experienced operators and managers of dairy plants will be given from February 11 to 21. Detailed announcement of this course will be given later.

For further information, address Dairy Department, Iowa State College, Ames, Ia.

DIRECTORY OF DAIRY PRODUCTS INDUSTRIES.

"The Olsen Directory of the Dairy Products Industries" is the name of a new directory published by The Olsen Publishing Co., Milwaukee, Wis.

This directory contains a complete listing of all ice cream manufacturers, city milk dealers, butter manufacturers, cheese manufacturers, condenseries and powdered milk plants. The directory is subdivided by industries, states and cities.

Final Judgment

The verdict of the public is final when it comes to the judging of food products and from their decision there is no appeal.

Quality and flavor are the dominant factors in their judgment of ice cream products and these factors are due to careful selection of good ingredients, scientific manufacture and the maintenance of strictly sanitary cleanliness throughout the making processes.

These factors of quality and delicious taste are greatly assisted in hundreds of ice cream plants where the use of

Wyandotte Sanitary Cleaner and Cleanser

definitely protects the fine quality of ice cream products by the sweet, wholesome, sanitary cleanliness it provides throughout the plant.

Nor is this all, for experience is proving every day that the quality work of this cleaner is the most efficient and economical the ice cream manufacturer can use

LOWER R. R. RATES TO EXPOSITION.

The railroads, recognizing the great advantage to the country that the dairy industry affords through its annual exposition and conventions, have granted very splendid consideration in the way of reduced fares to the agricultural dairy forces of the larger section of country from which the heaviest travel to the National Dairy Exposition may be expected.

In order that those coming to the exposition from this section may be served with least inconvenience to themselves in the matter of purchase and use of their tickets, an open rate of a fare and one-third for the round trip, no certificate required, has been granted for the exposition by the lines of railway covering the following territory:

Points in Eastern Montana, Illinois, Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, Northern Peninsula of Michigan, South Dakota and Wisconsin, also from Julesburg, Colorado, dates of sale, September 26 to October 4, inclusive, except from points in North Dakota, South Dakota and Eastern Montana, September 25 to October 3, inclusive, with final return limit of October 6, 1924, except from North Dakota, South Dakota and Eastern Montana, October 7, 1924; no stopovers to be allowed.

For the conventions to be held during the exposition the same lines of railways have granted a rate of a fare and one-half under the certificate plan in practically the same territory, the only change being in the time of selling the tickets and the date of the return limit.

For the people farther away who desire to attend both show and convention the railways in the Central Passenger Association have granted a rate of a fare and one-half for the round trip, which is the usual rate for affairs of national interest and should encourage a larger number of people to take advantage of it for such personal service meetings as the show and conventions. Selling and return dates and territory are as follows:

Territory west of Buffalo, Niagara Falls, Salamanca, Pittsburgh, Wheeling, Parkersburg, and Kenova, to and including Chicago and St. Louis, and north of the Ohio River, including Cincinnati, Louisville and Cairo, selling dates, September 24-30, inclusive.

The rate of a fare and one-half, selling dates of September 23-29, or 24-30, depending on location, has also been granted on Southwestern lines from territory southwest of St. Louis, including Texas, Arkansas, Oklahoma, Missouri (south of Missouri River) and Louisiana (west of Mississippi River).

When action is advised as to what the railways will grant in other territory not covered by above, publicity will be given the rates. If the selling dates quoted here do not meet the convenience of the people in any section, the exposition management will be glad to be advised in sufficient time to see if better arrangements can be made.

Who is the fellow that is kicking so strenuously about a two-cent advance in the price of milk per quart?"

"He's the man that just paid $20 for a quart of wood-alcohol hootch."—The De Laval Monthly.

SAYS "REVIEW" HELPED HIS HOUSE DO RECORD BUSINESS.

Readers will recall an editorial in the July issue of The Ice Cream Review explaining this publication's stand on those trade news items that are termed "write-ups." It was felt certain all along that the reputable supply houses of the country are in perfect accord with this policy, and it was gratifying to receive from a member of one of the large supply houses of the East, a letter indicating this fact. He also gives credit to The Ice Cream Review for helping to bring about a larger volume of business for his house in the 1924 season.

A. T. SPONAR.

The writer is A. T. Sponar, sales manager of the can department of the John Wood Mfg. Co. His letter follows:

July 11, 1924.

Editor The Ice Cream Review:

Somehow The Ice Cream Review for July seems particularly interesting. This is probably due to the fact that the 4th of July rush is over, and I have more time to read.

When I read your editorial about how truthfulness and modesty are wanted in selling merchandise, I wondered if I am as careful as I should be.

However, I went on to the bottom of page five and I read about that trip you are going to take where the "muskies" jump into your boat if you don't feed them fast enough, and then I thought I was not so bad after all.

Where is that place, and what do you have in the boat that makes them jump in?

I am particularly interested in this, as I expect to take a vacation before long.

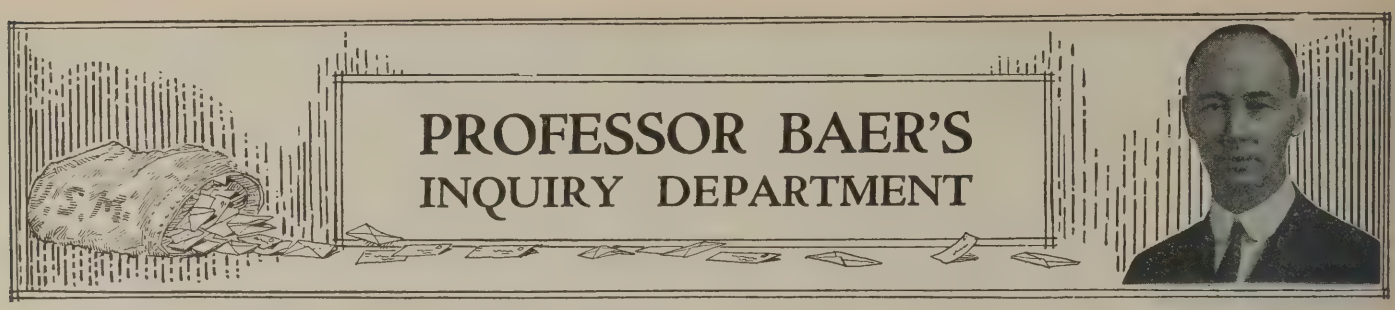
The peak of our can season has just ended, and we can report a larger volume than ever before, regardless of rainy weather.

You have helped to bring this about, and we want to thank you.

Very truly yours,
JOHN WOOD MFG. CO.,
(Signed) A. T. Sponar,
Sales Manager, Can Department.

NEW YORK ICE CREAM LAW AMENDED.

A new law going into effect in the state of New York on July 1, effecting ice cream, provided for 8 per cent milk fats and struck out provisions that ingredients of eggs, fruits and fruit juices may reduce the milk fat contents to 6 per cent.



This was enacted to amend section 50 of the farms and markets law.

LANDRETH SPEAKS.

Charles E. Landreth, manager of the Forsyth Dairy Co., Winston-Salem, N. C., went before people of his community with a story of milk and ice cream on June 9, when he was the principal speaker at the regular weekly meeting of the Winston-Salem Ad Club.

Replies to Inquiries

Dear sir:—Herewith is the formula of our mix but it does not give very good results. The flavor is O. K. but the texture is very poor and it does not look good. When being served from the disher it has a rough appearance, a tendency to pull and looks lumpy. We pasteurize our mix to 140 degrees F., and cool to 40 degrees F.; it is pasteurized in a Jensen 100-gallon vat and cooler over an aereator, run into ten gallon cans, and is put into the cooler for 48 hours. You will note we have no emulsifier and we have only a tub freezer with ice and salt. Now what we want is a nice flavor and velvet appearance. San you suggest anything to help us? Would it improve the mix if we cut out the powder and used condensed skimmilk which we can get delivered in ten gallon lots? The solids would be about 26. If so, would you give me a formula taking in this condensed sweet milk, or do you think the glucose has anything to do with our trouble?

Formula of mix: 53.5 pounds of 3.6 per cent milk; 28.5 pounds of 31 per cent milk; 3.0 pounds of skim milk powder; 12.0 pounds of sugar; 3.0 pounds of glucose and five pounds of gelatine. Total, 100.5 pounds.

Reply: You stated that the texture was poor and it has a rough appearance with a tendency to be a little sticky or lumpy.

It appears to me that your trouble is freezing your mix correctly. You are probably freezing the ice cream just a little too hard before pouring it from your freezer. It is also possible that the skimmilk powder is causing you a little trouble because you are not able to emulsify your mix. It may also be possible that your powder is not entirely soluble. As a rule, however, the milk powder will go into solution very nicely and you should have no trouble from that standpoint.

I would suggest, however, that you try some of the condensed milk for solids and also that you try a few batches using a larger amount of sugar rather than glucose.

Below in Table 1, I have analyzed your present formula and you will note in table 2, suggestions for a formula using condensed milk instead of milk powder.

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
53.5 lbs. 6% milk	3.2	4.47	7.67

Who Is Responsible?

We guarantee the high quality of Nonpareil Corkboard. But what about erection? Will *you* take the responsibility for that, or would you rather have the workmanship of the finished job guaranteed?

A contract with us for Nonpareil Corkboard *erected* puts the responsibility for workmanship on us. A competent and experienced man from our Erection Department will take charge of your job. He knows exactly what to do and how to do it without waste of time or material. He understands the importance of tight joints and the proper preparation of the building surfaces. He knows how to handle cement and asphalt, how to plaster on cork and how to set cold storage doors. He plans, oversees and inspects every foot of the work. He is responsible to us and we are responsible to you for the kind of workmanship that insures the maximum efficiency, durability and economy of your insulation.

A contract with us saves you time, worry and money, for in almost every case it costs you less than you could do it for yourself.

Ask the Armstrong Engineer to give you a price erected

NATIONAL CONVENTION—NEW ORLEANS—NOVEMBER 17-20, 1924.

cent, 4.0 per cent milk, skimmilk powder, 14 per cent sugar; also same with sweet butter?

Reply: I am glad to comply with your request for four ice cream formulas, made up according to your suggestions.

You will find these formulas given below in tables 1, 2, 3 and 4.

Table 1.—100 pound mix—15 per cent fat 14 per cent sugar.

Ingredients	Fat	Serum Sol.	Total Sol.
14.0 lbs. sugar	.....	.....	13.30
.5 lbs. gelatine	.....	.....	.47
3.0 lbs. skim powder	.....	2.85	2.85
32.5 lbs. 40% cream	13.00	6.09	21.09
50.0 lbs. 40% milk	2.00		
100.0 lbs. mix	15.00	8.94	37.71

Table 2.—100 pound mix—16% fat—14% sugar.

Ingredients	Fat	Serum Sol.	Total Sol.
14.0 lbs. sugar	.....	.....	13.30
.5 lbs. gelatine	.....	.....	.47
2.0 lbs. skim powder	.....	1.90	1.90
35.4 lbs. 40% cream	14.16	6.0	22.08
48.1 lbs. 4% milk	1.92		
100.0 lbs. mix	16.08	7.9	37.75

Table 3.

Ingredients	Fat	Serum Sol.	Total Sol.
14.0 lbs. sugar	.....	.....	13.30
.5 lbs. gelatine	.....	.....	.47
3.0 lbs. skim powder	.....	2.85	2.85
14.5 lbs. 84% butter	12.18	6.02	20.90
68.0 lbs. 4% milk	2.72		
100.0 lbs. mix	14.90	8.87	37.52

Table 4.

Ingredients	Fat	Serum Sol.	Total Sol.
14.0 lbs. sugar	.....	.....	13.30
.5 lbs. gelatine	.....	.....	.47
2.0 lbs. skim powder	.....	1.90	1.90
16.0 lbs. 84% butter	13.44	6.00	22.14
67.5 lbs. 4% milk	2.7		
100.0 lbs. mix	16.14	7.9	37.81

Dear sir:—We are imposing upon your kindness again to the extent of submitting the following formula which is used by us in the manufacture of ice cream and asking that you kindly let us know what per cent of butterfat and milk not fat the same produces. We are trying to produce a product of 10 per cent butterfat and 25 per cent milk not fat. The formula is as follows, viz:

230 pounds butter
30 gallons condensed skimmilk
50 gallons sweet milk (4%)
120 pounds skimmilk powder
91 gallons water
275 pounds sugar
10 pounds gelatine

Reply: You will notice that the total weight of your mix is 2,090 pounds and will give you an ice cream of 10 per cent butterfat and about 11 per cent serum solids. Your total solids you will notice, however, are a little low. That is due to the fact that you are using a little less sugar than you have noticed in some of the formulas published in the Review.

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
230.0 lbs. butter	193.2	.....	193.2
30 al. 270.0 lbs. cond. Skim 28%	.....	75.6	75.6
50 gal. 430.0 lbs. 4% milk	17.2	36.7	53.9
120.0 lbs. skim powder	.....	114.0	114.0
759.0 lbs. water	.....	.....	.....
275.0 lbs. sugar	.....	.....	261.2
10.0 lbs. gelatine	.....	.....	9.5
2094.0 lbs. mix	210.4	226.3	707.4
Per cent	10.04	10.89	33.78

You stated in your letter that you were trying to produce a product of 10 per cent butterfat and 25 per cent milk fat. You undoubtedly mean by the latter, 25 per cent total solids not fat.

* * *

Dear sir:—Will you please give me a formula for ice cream testing 14 per cent butterfat, 35 per cent solids and 14 per cent sugar, using the following ingredients: 189 pounds sweet butter, 80 per cent butterfat, skimmilk powder, sugar, gelatine and water.

We use three tubs of butter for a mix as our vat is small.

Reply: Am glad to suggest below in table 1, ice cream formula calculated according to your suggestions, to test 14 per cent butterfat, 14 per cent sugar and 35 per cent solids, using as your basis 189 pounds of sweet butter testing 80 per cent.

1080.0 lbs. mix	151.2	78.07	378.00
Per cent	14.0	7.2	35.00

You will note that the total weight of your mix according to your suggestions and as given below in table 1 is 1,080 pounds.

* * *

Dear sir:—We have an excellent product, we believe, but have been experiencing more or less trouble with icy condition since we have been using the formula below. Most of our icy trouble apparently develops when we are not freezing cream regularly and, when we only run refrigerating machine once each day to keep room cold. In running only once each day we reduce the hardening room temperature to about two degrees below zero, when ready to start machine again next day temperature is around 12 to 14 above; would this variation of temperature affect our ice cream?

Our formula:

531 pounds water
95 pounds skimmilk powder
40 pounds evaporated milk, 8 per cent
130 pounds sugar
90 pounds sweet butter, 85 per cent
5 pounds good gelatine

Water, milk and sugar are mixed cold in the pasteurizer, butter and gelatine added at 100 to 110 degrees F. Pasteurize at 145 degrees F. Cooled to 120 degrees F. and viscolized.

4 pounds Purity I C. powder (Warner Jenkinson)

3 pounds vanilla. These are added in holding vat when at 80 degrees F.

For our serum solids would you advise use of both skim milk powder and evaporated? Would you recommend we change to sweetened skim condensed? We have available a limited quantity of 4 per cent sweet milk, if advisable to use.

Reply: You are absolutely correct in your assumption that the icy condition of your ice cream is caused by the differences in temperatures in your hardening room. It is absolutely impossible to keep pure cream in good condition if you permit the temperature of your hardening room to vary from 2 below zero to 14 above. Undoubtedly the cream in your hardening room, due to the rising temperature, softens up somewhat and is again hardened. If this is repeated two or three times you are bound to get an icy condition.

There is nothing wrong with your formula which you will see by examining table one. You have just about the right amount of total milk solids for your 8 per cent ice cream. You are using plenty of gelatine and undoubtedly the purity powder is also of some assistance in keeping the cream in a smooth condition. I would advise you to use all the sweet milk you can get in your formula. You will make a better flavored ice

Relief
from hot weather troubles

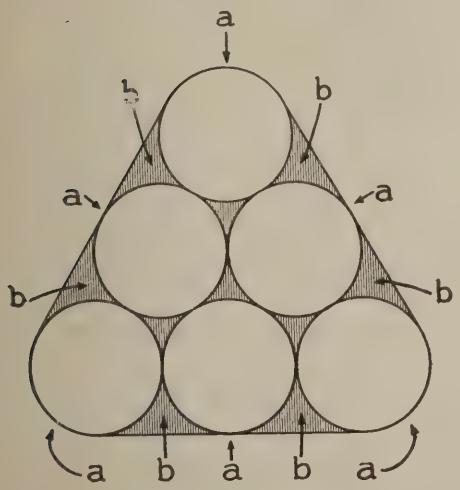
The O. & B. Triangular Packer serves as a container both in the shipping tub and in the cabinet. This saves much can-washing, re-icing and retinning of the containers.



In the diagram below, "A" indicates the direct contact of each Sealright container with the sides of the packer. "B" shows the cold air spaces between the containers.

This arrangement gives perfect refrigeration. It insures the cream reaching the user's hands in perfect condition.

The tub and cabinet illustrations show clearly the ample icing space surrounding the packer.

Each Triangular Packer holds 18 quarts, or combinations of quarts, pints, and half pints.

Increase Your Sales

With the O.& B. Triangular Packer

THERE is no question that *bulk ice cream* packed by the factory in air-tight packages that are also thoroughly cold will solve your problem of selling *the home trade.*

Successful factories everywhere are educating their trade to the use of fibre containers.

Users are *instantly served* and need not wait for cream to be packed by the dealer.

There is *no loss of cream* to dealer.

User *prefers* bulk ice cream, and that is what the dealer may now sell him *in the fibre package.*

When packed in *O. & B.* Triangular Containers, cream in fibre packages keeps *perfectly hard* even after user has them in his home.

The net result of the above is *more home sales;* and that, Mr. Ice Cream Manufacturer, is *important to you.*

Better order a sample dozen Triangular Containers *today.*

cream than making it entirely from butter, powder and water.

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
531.0 lbs. water	.....	.....	.....
95.0 lbs. skim powder	.....	90.25	90.25
40.0 lbs. 8% evaporated	3.20	6.40	9.60
130.0 lbs. sugar	.....	.....	123.50
90.0 lbs. butter 85%	76.50	.....	76.50
5.0 lbs. gelatine	.....	.....	3.80
4.0 lbs. purity powder	.....	.....	.45
3.0 lbs. vanilla	.....	.....	.....
898.0 lbs. mix	79.70	96.65	308.80
Per cent	8.8	10.74	34.3

I see no reason why you should change to sweetened skim condensed milk, especially if you can obtain a good fresh soluble milk powder along with the limited amount of evaporated milk which you are using.

* * *

Dear Sir:—Have been making ice cream with homogenized mix and find it so expensive that I can make little money on the product. How can I make ice cream out of farmers' cream and skim condensed and get a good product? Want 12 per cent fat. What powder can I use to get a better ice cream with farmers' cream? Is Meloine good? Is it necessary to run the freezer slower to prevent butter from forming?

Reply: I note that you seem to think you can not afford to make ice cream from a homogenized mix. I am wondering whether you are preparing your own mix or whether you are buying the mix from some other factory.

You can make a satisfactory product from cream and milk and skim condensed, buying the cream and milk from farmers. In fact it is possible that you could make a better quality of ice cream in this way providing you can get good raw material.

I suggest that you use the formula "A" given on page 26 of the Ice Cream Mix booklet. I am, however, indicating below in table one, this formula "A" on page 26.

Table 1.—12% fat—cream, milk, condensed skim milk (27%), 14% sugar.

Ingredients	Fat	Serum Sol	Total Sol.
14.0 lbs. sugar	.....	.....	13.30
.5 lbs. gelatine	.....	.....	.47
16.0 lbs. condensed	.....	4.32	4.32
35.5 lbs. 30% cream	10.65	2.25	12.90
34.0 lbs. 4% milk	1.36	2.90	4.26
100.0 lbs. mix	12.01	9.47	35.25

You indicated that you might have trouble in churning the ice cream mix in your freezer if the mix is not homogenized. This trouble occurs mostly during the spring of the year when the cows are on fresh grass. However, we used to make ice cream before we knew of homogenizers, and if you have your mix good and cold, at 40 degrees or lower when it enters the freezer, you probably will not have any trouble from churning. You should be very careful in pasteurizing the mix so that it will not be heated to too high a temperature. This will assist in preventing the churning in freezing. 132 degrees for thirty minutes will probably be sufficient heating to pasteurize the mix.

* * *

Dear Sir:—We are trying to make a mix based on 18 per cent fat and are experimenting along this line. Will you kindly furnish us formula complete, including both milk and serum solids. We intend to use some egg yolk in this cream and if you can furnish us any data along this line we will thank you.

Reply: I am suggesting below in table one the ingredients for such a product.

Table 1.

Ingredients	Fat	Serum Sol	Total Sol.
13.0 lbs. sugar	.....	.....	12.35
.2 lbs. gelatine	.....	.....	1.90
60.0 lbs. 30% cream	18.0	3.74	21.74
1.0 lbs. skim powder	.....	.95	1.90
25.8 lbs. skim milk	.....	2.30	2.30
100.0 lbs. mix	18.0	6.99	40.19

It would be perfectly possible to make up a formula using just ordinary milk and cream, or cream and skim milk without the use of any skim milk powder for extra solids. I also would know of no objection to the use of a small amount of egg yolk powder in this kind of cream.

Character Cartons are made of the highest grade sulphite *box-board*, produced in our own paper mill, finished with a coating of heavy wax, smooth as enamel, which *adds* to the good-looks and protective value of these higher grade ice cream cartons.

Character Cartons for Ice Cream

Dear sir:—Please send me a formula for a ten per cent butterfat ice cream mix, using the following ingredients:

14 pounds sugar.
1 pound gelatine and vanilla.
16 pounds Armour's condensed milk.
Butter 84 per cent butterfat.
Skim milk powder.
Water.

We stated 10 per cent butterfat, but we want 63 pounds of butter, 84 per cent fat to make 120 gallons of finished ice cream, and let the test be what it may as long as it goes 8 per cent or better.

Reply: You did not give me the composition of Armour's condensed milk, but I am assuming this is Armour's evaporated milk testing 8 per cent butterfat and 26 per cent total solids. If this is not correct, I shall be glad to have you advise me and I will be glad to assist you further in re-arranging the formula.

You will find below in table one, this formula figured out where you will notice that the total number of pounds of mix is 600 pounds, the per cent of fat being 10 per cent and the serum solids 10 per cent. This mix should, however, make at least 130 gallons of ice cream. Were we to reduce the butterfat to 8 per cent it would be necessary to use more skim milk powder and more water, making the total mix larger than 600 pounds.

Table 1.

Ingredients	Fat	Serum Sol	Total Sol.
63.0 lbs. 84% butter.....	52.92	.....	52.92
84.0 lbs. sugar	.....	.....	79.80
96.0 lbs. condensed 8%.....	7.68	17.28	24.96
3.0 lbs. gelatine	.....	.....	2.85
45.0 lbs. skim powder	.....	42.72	42.72
303.0 lbs. water	.....	.....	.....
600.0 lbs. mix	60.6	60.00	203.25
Per cent	10.01	10.0	33.16

Dear Sir:—We show below formula for making our ice cream, and would like to have you check over same, making criticism as well as suggestions for improving it. We have had one complaint, viz., that on account of using so much condensed it gives a cooked taste. Is this correct or is it imagination? Would the amount of condensed used cause such a taste? Our formula is as follows:

168 lbs. (20 gal.) 20% cream.
92 lbs. (10 gal.) 8% condensed.
43 lbs. (5 gal.) 4% milk.
52 lbs. sugar.
1¾ lbs. gelatine (Atlantic, $0.75 a lb.)
7 oz. lactoid.
56 oz. water.
2 oz. flavor.
2 oz. color.
4 oz. salt.

375.94 lbs. 11.3 butterfat. 36% solids.

Reply: You will find an analysis of your ice cream mix given below in table one, where you will notice that it tests almost 12 per cent fat and 9 per cent serum solids. You will also notice that it contains better than 14 per cent sugar:

Table 1.

Ingredients	Fat	Serum Sol	Total Sol.
168.0 lbs. 20% cream.....	33.60	11.96	45.56
92.0 lbs. 8% condensed	7.36	16.56	23.92
43.0 lbs. 4% milk.....	1.72	3.67	5.39
52.0 lbs. sugar	.....	.....	49.40
1.75 lbs. gelatine	.....	.....	1.66
.50 lbs. lactoid	.....	.....	.47
35.0 lbs. water	.....	.....	.....
.5 lbs. van., color & salt..	.....	.....	.15
361.25 lbs. mix	42.68	32.19	126.55
Per cent	11.8	9.0	35.0
Per cent sugar	14.4	.....	.....

I believe that your customer who complains tbout a cooked flavor has some reason for this as the large amount of condensed milk will undoubtedly give your cream this particular flavor. You could probably cut down the condensed milk to about half and use good fresh skim milk powder for some of the solids.

There is as far as I know no book or different formulas for week-end specials. Usually every ice cream factory works this out for itself and the way it is done is to use the regular vanilla stock mix and use different flavors or combinations of flavors for the special ice cream.

"HOOT MON" BUTTER SCOTCH ICE CREAM

Add Service Charge and Why

*By A. P. SCHNEIDER**

THE speaker had the honor of addressing the Pennsylvania ice cream manufacturers in convention last October, and was rewarded with a very general recognition by leaders in our industry, as having presented an idea which would prove of very great value. I also had the honor of addressing the Ohio Ice Cream Manufacturers' Association last January on this subject.

A. P. SCHNEIDER.

I am pleased to know that my invitation to address the National Association results from the fact that our industry, by this time, fully appreciates that our present method of charge is economically not sound and is established on an unscientific basis. The subject matter of this address will, therefore, be, in large measure, a restatement of facts, figures and theory supporting this new method of charge.

Before entering the ice cream business, the speaker served in the capacity of chief of the bureau of power sales for a large Eastern public service company, and, being an electrical engineer by profession, was called upon to calculate the rates for electric power, which were charged to the power consumer under the varying conditions of use.

As a result of the above experience the very close analogy of the costs entering into the supplying of a gallon of ice cream, as compared with the supplying of a unit of electric power was manifest. Following, I have made a set of calculations which are indeed interesting, to say the least.

It is very plain that the cost of service per cabinet hole per week, for the items of ice, salt, truck expense and cabinet costs, is practically a constant quantity. In order to arrive at intelligent cost data, we proceed as follows:

* President, Peters & Jacoby Company, Allentown, Pa. Address before 23rd annual convention National Association of Ice Cream Manufacturers, Cleveland, O., October 24, 1923.

First, we determine the cost of the ice and salt required to ice up one hole in a week, and find that it averages 53½ pounds of ice per hole per day, and 6.4 pounds of salt per hole per day.

It is estimated that the average is 140 holes served per 3½-ton truck per day. 140 holes require per week:

25 tons of ice @ $4.00	$100.00
3 tons of salt @ $10.50	31.50
Cost per week for 140 holes	$131.50
Cost per week for each hole, for ice and salt only	$0.94

The next item is the cost of truck service per hole per week:

Interest, 6%; depreciation, 25%; repairs, etc., on a $4,000 truck; total	$1,600.00
Chauffeur, helper, license, insurance, etc	3,380.00
60 miles × 365 days × 13½c (gas, oil and tires)	2,920.00
Cost for 52 weeks, or per year	$8,000.00
Cost per week—140 holes	153.50
Cost per week, per hole, for truck service	$1.10

The writer estimates that the items of cabinet investment, depreciation, etc., cost per year, per hole, $15.00. Cabinet cost per hole, per week, 28 cents.

From the above it is noted that the cost per hole per week divided into the three items of expense are as follows:

Ice and salt	$0.94
Truck service	1.10
Cabinet cost	.28
Total cost per hole per week	$2.32

The speaker will call your attention to the tabulation which has been prepared in connection with this address:

A careful analysis of the results set forth in this cost tabulation will convince any sane man immediately where the difficulty lies in making money in the ice cream business. You will note that when a dealer will average three gallons of ice cream **per week per hole,** that in that event it is costing the manufacturer 77c per gallon for ice, salt, service and cabinet costs. This cost is gradually reduced, depending, of course, upon the number of gallons used **per week per hole.** For instance, the dealer using ten gallons **per hole per week** will cost the ice cream manufacturer 23c per gallon, and so on up, to the dealer using twenty gallons **per hole per**

SPEND A WEEK IN DAIRYLAND — NATIONAL DAIRY EXPOSITION — MILWAUKEE, WIS., SEPT. 27 TO OCT. 4.

week, where the cost per gallon for ice, salt, service and cabinet costs, goes down to 12c.

The question immediately arises as to how it is possible to control this situation, which if allowed to continue will drive a great number of ice cream manufacturers onto the rocks of financial failure.

The answer is obvious. The solution is simple. From the analysis as above presented it is at once seen that the cost of doing business in the ice cream field is divided into two factors. First, the cost of maintaining in service each cabinet hole per week, and secondly, the cost per gallon at platform, the first being the cost per week per hole, for ice, salt, truck service and cabinet costs.

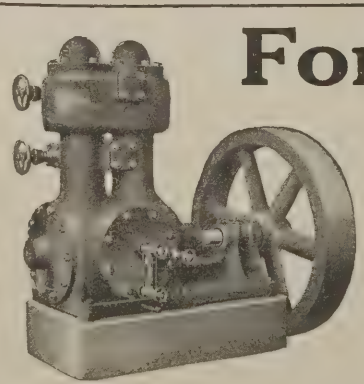
ulation, varying from $1.66 to $1.02 per gallon, depending upon whether or not he used three gallons per week per hole, or twenty gallons per week per hole, etc.

Where there used to be one confectionery store in a given block we have now five or six "places" where ice cream is sold. Now mark this, that no matter what the increased consumption has been, it has not increased so much for that block that it could be divided into six parts, each of which would equal the gallonage that the original single store sold.

As a result of this false expansion, manufacturers have had to buy more trucks, more cabinets; they have had more repairs, and more grief all around. Yesterday

TABLE I.

EXISTING METHOD				Returns per gallon by levying service charge
Column No. 1	Column No. 2	Column No. 3	Column No. 4	Column No. 5
Cost per week per hole for Ice, Salt, Truck Service and Cabinet Costs	Number of gallons used per week for each hole	Cost per gallon for ice, salt, service and cabinet costs	Amount now received per gallon for Ice Cream at platform. Dealer paying $1.20 per gallon, delivered and iced-up	Actual amount per gallon which would be received if a "per hole charge of $2.32 per week" were levied; and an additional charge of 90c per gallon for each gallon
$2.32	3	$0.77	($1.20 — $0.77) = $0.43	($0.90 + $0.77) = $1.67
$2.32	4	.58	($1.20 — $0.58) = $0.62	($0.90 + $0.58) = $1.48
$2.32	5	.46	($1.20 — $0.46) = $0.74	($0.90 + $0.46) = $1.36
$2.32	6	.39	($1.20 — $0.39) = $0.81	($0.90 + $0.39) = $1.29
$2.32	7½	.31	($1.20 — $0.31) = $0.89	($0.90 + $0.31) = $1.21
$2.32	10	.23	($1.20 — $0.23) = $0.97	($0.90 + $0.23) = $1.13
$2.32	12½	.19	($1.20 — $0.19) = $1.01	($0.90 + $0.19) = $1.09
$2.32	15	.16	($1.20 — $0.16) = $1.04	($0.90 + $0.16) = $1.06
$2.32	17½	.13	($1.20 — $0.13) = $1.07	($0.90 + $0.13) = $1.03
$2.32	20	.12	($1.20 — $0.12) = $1.08	($0.90 + $0.12) = $1.02



(In the expense assumed in this paper, which is a fair average, you have noted that this part of the cost figures at per hole per week to $2.32).

If the ice cream industry will establish a new system of charging, whereby the dealer pays a "cabinet and service charge," separate and apart from the cost of ice cream, it is self-evident that the number of holes would immediately become automatically controlled and kept at a minimum by the dealer himself, since it would be to his financial interest to keep the number of holes at a minimum. An additional cost to the dealer of a standard charge per gallon would, therefore, make each gallon of business profitable to the ice cream manufacturer.

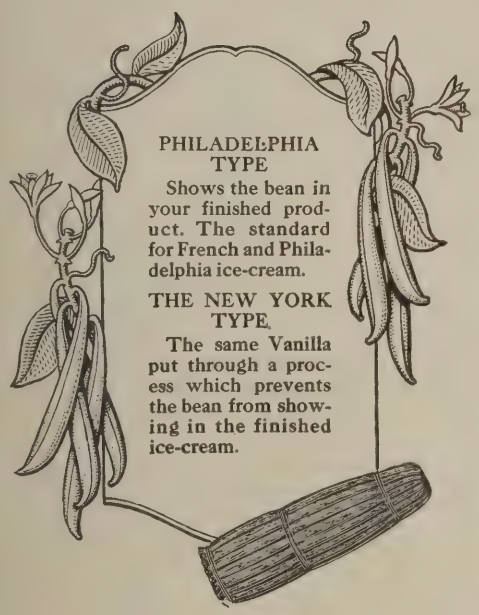
The result in net cost per gallon to the dealer would then be as is shown in the last column of the above tab-

in a given area they had a **one thousand gallon customer** with a three hole cabinet, today in the same area they have six six-hole customers selling not to exceed **two thousand gallons.** By dividing the three holes into the one thousand gallons, we have the result of 333 gallons per hole per year. By dividing the sixty-six-holes, or thirty-six holes, into the two thousand gallons, we have a result of a fraction over **fifty-five gallons per week per hole.** By now dividing the 333 gallons by the 55 gallons you will see that the **cost per hole has increased six and one-half times,** in proportion to the number of gallons of ice cream sold.

Do not fear the loss of these "ice customers," since they are the parasites of your profits. It is safe to say that on the average about 80 per cent of your gallonage

For Lasting Satisfaction

York
Refrigerating Equipment



One reason why there are so many installations of York Refrigerating Equipment is that its satisfactory working condition does not pass with the seasons. York Equipment does not mean satisfaction until the first signs of wear show up, but a year in year out dependable service that stands the strain of rush seasons without injury to its long life.

Let us show you just why York Equipment lasts longer.

The BEST Vanilla Sells the MOST Ice Cream

True Economy isn't always a matter of price

Shrewd manufacturers are learning to distinguish between "shaving" and saving. They find that the few pennies they pay extra for genuine

MICHAEL'S Mexican Vanilla Powder

"America's Flavorite"

are returned to them manyfold in increased sales. Dip your spoon into a dish of vanilla ice cream flavored with mellow-mild, true-bean Michael's Mexican, and you'll KNOW why we say we can increase your sales 25 per cent. The taste test tells.

DAVID MICHAEL & CO., Inc.
Front and Master Sts. Philadelphia, Pa.

Make This Test at Our Expense

Place a trial order. Use all you need to give it a full, fair trial. If MICHAEL'S Mexican Vanilla Powder does not produce the finest vanilla ice-cream you ever tasted, return the remainder at our expense, and we will cancel the charge. DO this, by all means.

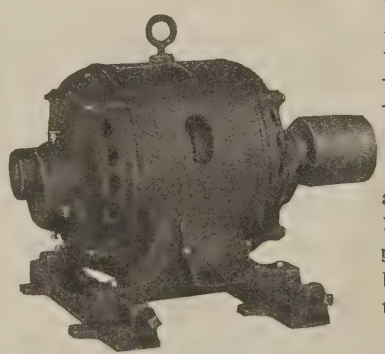
is sold by less than 50 per cent of your stops. Where is the profit? Is it had from the 50 per cent of your stops selling 80 per cent of your output? You know the answer. And furthermore, it is safe to assume that the gallonage formerly sold by the "ice customers" will pass through the cabinets which you continue in service, thereby increasing your ultimate sales since your ice cream will always be fresh, and therefore of better quality.

This subject is one of vital importance. It is a self-evident fact that something must be done to save the ice cream industry from being wrecked, and we should begin where the need is greatest. In the speaker's mind he can conceive of no more practical method than one as suggested in this paper, whereby the dealer pays a separate charge per week for the maintenance of each hole, and an additional cost per gallon for the product. You will find that the more you ponder the subject matter of this paper, the more practical it will seem. And remember there is nothing new about the idea. Most of us are now buying power from the public service corporation on an exactly similar basis. You pay so much per kilowatt of demand, and an additional charge for each kilowatt-hour of electric energy consumed. This also applies to gas companies, and in many other fields.

I want to take this opportunity to publicly compliment the ice cream publications for their interest in gathering together and publishing the thoughts of representative men in our industry, on this subject. I am gratified to note that quite generally the comments have been very favorable. I will reply to a few of those which are not favorable as follows:

One manufacturer is of the opinion that this new method of charge would (1) eliminate the small dealer on account of making each gallon cost him more than the cost of his competitor, (2) would tend to greatly reduce the sale of ice cream in the winter months, due to the higher cost to the dealer for his ice cream.

My reply is that this critic is absolutely wrong. (1) because the store handling ten gallons per week, would limit their cabinet holes to not more than one-third the number of holes as compared to the store selling thirty gallons per week. Thereby keeping the cost approximately the same for the small store as compared with the larger store; and in addition keeping the cost for service to the ice cream manufacturer in exact proportion to the gallonage sold; and (2) the store would pay the same in the cold season as it does in the hot season, since the stores would require less holes to be serviced in cold weather.



I notice a tendency in certain sections of the country to "bungle" this situation by levying a service charge of a stated sum per week per customer (regardless of the number of "cabinet holes.") By so doing the small dealer is being discriminated against to the manufacturers disadvantage. In other words it is saving at the spigot and wasting at the bung-hole.

The cost of service **per hole per week** varies from $2.00 to $3.50, and for that reason any flat charge which does not apply in direct proportion to the number of holes used by the store, is only a poor makeshift. Also the attempt to change the weekly service charge, for different seasons of the year, will in the end be very unpopular. The average cost, per service per hole per week, varies very little from season to season, and any charge that is based on a fair cost basis will always justify itself. Let us have no makeshifts, let us have a change which will thoroughly correct the abuses to which we have been subjected.

In conclusion allow me to impress upon you most earnestly the fact, that this method of charge is ultimately fair to the small dealer, the large dealer, the winter trade and the summer trade, and this economy of service will allow ice cream to be sold ultimately at a lesser figure, thereby increasing consumption, and at the same time provide a fair profit on each and every gallon sold.

MEMBER

A Fundamental Change in Service Policy

*By V. F. HOVEY**

A PERIOD of prosperity caused even the well informed ice cream manufacturers to become self-satisfied, and satisfied with their business policies. Prosperity brought competition, and competition has developed many ills.

It can be truthfully said that the policy of free service contributed, in a very large measure, to the growth and development of our industry, making our distribution more complete than it would otherwise have been, and making ice cream convenient to nearly every possible purchaser.

V. F. HOVEY.

There was a good reason to feel satisfied with the policy, which gave us maximum gross sales, and it is still probably true that it is good for the ice cream industry that there should be a retail dealer convenient to nearly every purchaser, but when competition has developed to the point where we have two or three retail dealers convenient to every purchaser, then we must admit that we have developed an ill that needs correction.

When we have six hundred stores selling no more ice cream than was formerly sold by four hundred stores, the expense of serving the two hundred extra stores is going to be paid either by the manufacturer, or the consumer. We have suffered from decreased sales per customer, meaning that the maintenance of a certain volume of business has required more service, more cabinets, more ice, more salt, more trucks and more labor.

We owe it to ourselves, to conduct our business economically and efficiently, otherwise, we are not deserving of public confidence, and we also cannot expect to retain the business of large retailers of ice cream, if we ask a price necessarily high, because of service costs which we cannot justify.

Our policy of free service had but few objectionable features, so long as we used reasonable judgment in determining the service we should give, but competition has, in most territories, made it difficult and often impossible to hold trade unless willing to give very unreasonable service, and service which our business will not afford.

There is always something wrong with any scheme that pretends to give something for nothing. Some of you will answer that our service cost has been included in our price for ice cream, however, you will have to agree that there has been no charge for service in any way related to the amount of service rendered. The demands for unreasonable service will disappear only if our retail customers are asked to pay for service in proportion to the service they require, and it does not seem that any other basis can be fundamentally sound.

In some territories, a discount schedule has been placed in effect, thereby penalizing the small dealer, and this, in some measure, has probably kept ice cream out of the stores that we should not serve, however, this policy has been lacking in one very great fundamental, in that it has not decreased the demands for service.

In some sections there has been an attempt to charge a certain sum, usually $1.00 per week, for service, when customers take less than a certain number of gallons, per week. Under this arrangement in most cases, the average customer was not asked to pay for service, and the charge was the same, whether little or much service was demanded. There could be no reduction in the price of ice cream, and the smaller dealers resented the charge, feeling they were being discriminated against, and, at the same time, figuring they were paying for service, demanded more service than ever before. All of this, in spite of the fact that the service charge was so small that the money collected amounted to very little. There seems to be nothing to commend the adoption of such a policy.

Theoretically, it would appear that we should have a proper base price for ice cream, when ready to leave our platforms, and then charge separately for every item of service we give, however, this would involve great detail, and probably considerable friction with our customers, and therefore, would be much less practical

* President National Association of Ice Cream Manufacturers. An address before 1923 annual convention, Cleveland, O., Oct. 23.

The Choicest Wood for Richmond Tubs

Only the choicest white cedar trees from this gigantic swamp of a hundred thousand acres are used in fashioning the Richmond White Cedar Tub. Only a wood with tremendous moisture resisting qualities could survive under conditions like these. It's this extraordinary quality of wood that makes Richmond White Cedar Tubs so economical.

Order a lot and you'll agree.

than some other system. . A service charge per cabinet hole, per week, seems to be fundamentally sound.

Service costs are usually spoken of as including ice, salt, cabinet expense, horse delivery and auto delivery. Usually a little less than one-half of our delivery equipment is given up to the carrying of ice cream, itself, and there seems to be no good reason why this part of our service should not be included in our service charge to be paid by our customers, as that part of our service cost which is applicable to the delivery of ice cream itself, would not be rduced by increased sales per cabinet hole. It would seem sound logic that our service charge should not exceed that part of our cost which covers cabinets, ice, salt and the delivery and packing thereof, in other words, it would seem that our service costs should cover those items, the cost of which would be reduced by the efficiency resulting from a service charge, and not that part which would cover the cost of delivery of ice cream, which would remain a fixed cost, per gallon.

One-Cabinet Hole Service Charge.

It is possible that others may give you what they consider a service cost of taking care of one cabinet hole per week. If this included the complete delivery cost including the delivery of ice cream, itself, then I think you should consider pretty carefully whether or not it would be advisable to make a service charge such as they give you, or if the service charge should, as I suggest, cover only that portion of our service cost which covers cabinets, ice, salt and the delivery and packing thereof, I am pretty sure that a serious error would be made if we attempted to collect a service charge covering the cost of the delivery of ice cream, as well as the items I have just mentioned.

Your total delivery and service cost may amount to $1.80—$2.00 per week per cabinet hole, but it is my impression that your actual service cost covering cabinets, ice, salt and the delivery and packing thereof, will cost you, during the summer months, about $1.25 per week, per cabinet hole, and your service cost per gallon will of course depend upon sales per cabinet hole.

I believe that a service charge in excess of $1.25 per cabinet hole per week, would be fundamentally unsound, unfairly penalizing the small dealers, whose business you would want on a basis giving you a profit, per gallon, which would be equal to, but not exceeding the profit per gallon you would make from larger customers.

It is much better to have a service charge that is too small rather than one that is too large. To make this clear, let us illustrate by assuming an excessive service charge of $4.00 per week per cabinet hole. If a customer sold five gallons per week, the charge would be 80 cents per gallon, whereas, if he sold 40 gallons, the service charge would only be 10 cents per gallon, making a difference of 70 cents a gallon between the cost to a dealer using 5 gallons and one using 40 gallons. You will of course agree that it will be impossible to make a saving of 70 cents a gallon in service costs. This is an exaggerated sample, but should bring home to you the fact that your service charge must be just about what your actual service cost is, or you will have a differential in costs to your dealers that will not be warranted and they will be harmful to you.

The tables, or examples, that I have prepared, and which I will endeavor to place before you on a blackboard, will indicate that a service charge of $1.25 per cabinet hole per week, should be the maximum to be considered.

Tables.

Service Charge.....	3.00	Service Charge.....	3.00
20 gals. @ $1.40 ..	28.00	40 gals. @ $1.235...	53.00

Total saving 13½ cents—passed on to dealers 7½ cents

I believe our interests would best be served by a service charge less than our service cost, but if there are those who think that the service charge should equal the service cost, then if my theory is correct, they should adopt such a change as will pass along to the dealer, exactly the same saving as is made by the manufacturer through increased sales per cabinet hole. If the tables given are of any value, they indicate that $1.25 per week per cabinet hole is just about the figure that will pass along to the dealer, a saving due to increased sales that will equal the decrease in cost to the manufacturer.

You can, of course, substitute your own figures, so that you will get results indicating just what your own operating costs permit you to do, but I am pretty well convinced that the examples shown illustrate a correct way of determining your saving, and you must have this information if you are to intelligently adjust your selling price..

I am quite strongly of the opinion that 10c a day, or 70c per week per cabinet hole would get just about as good results for you as a higher charge, and from the manufacturers viewpoint, has a very distinct advantage, in that you would find it necessary to make only a very small reduction in your base price and a good part of the saving in your cost, due to increased sales, per cabinet hole, would go back into your own pockets, for you might easily get a saving that would be double the differential saved by the dealers through increased sales.

Please get this point clearly, that a small service charge would probably be made effective with less friction, and at the same time leave the manufacturer a bigger part of the saving than would go to him with a larger service charge.

It has usually been my observation that a paper that tries to quote many figures is just about worthless, so far as getting across to any audience is concerned, however, this is a problem that cannot be analyzed by our members in a superficial manner, and if they want to dig out the facts, they have got to be willing to study figures and carefully analyze all that the figures mean, one of the most obvious results being that a lower service charge would be more serviceable than a higher service charge, if the manufacturer intends to pass along a reduction in price in any way consistent with the service charge he intends making and I, for one, do not believe any service charge can be made effective without an adjustment in prices fair to the dealer.

Those manufacturers having discount schedules are at a serious disadvantage in trying to start a service charge. This is due to the fact that they are already giving to the larger dealers a price differential similar to that which is established through the operation of a service charge, and it is therefore, quite hard to show the good dealers a saving. Those who have no discount schedule would, of course, find it mighty easy to show

ALL DIXIE IS LOOKING FORWARD TO 1924 NATIONAL CONVENTION AT NEW ORLEANS.

the larger dealers that a service charge gives them a substantial saving, and an advantage over the small dealers that they have never before enjoyed.

It must be admitted, of course, that a small service charge would not provide a sufficient or fair differential between large and small customers, consequently it would be pretty hard to do away with a discount schedule unless the service charge was sufficiently high to at least maintain any saving that had been given to the larger dealers.

Depends Upon Local Conditions.

All of this indicates that a decision as to a high service charge, or a low service charge, should depend very largely upon your own particular conditions, and regardless of of all the above, the proper net price can be obtained with either a high or low service charge, so long as the right base price is used, therefore, **be careful that the base price is right.**

To intelligently consider service charges, each manufacturer should begin to keep a record showing monthly average sales, per customer; sales per cabinet hole, ice per gallon and ice per cabinet hole. These figures can be obtained easily by every manufacturer in the business, and they are essential if we are to know what we are doing when we make a change in our service policy.

I cannot answer, in full, all the arguments presented against the service charge per cabinet hole. The statement made that a service charge will hurt the completeness of distribution, making ice cream convenient to possible purchasers and therefore, decreasing gross sales is refuted by our experience. When we started in Schenectady with a service charge of $1.25 per week per cabinet hole, we told our large dealers that we anticipated the ice cream business would be driven into their hands because it would be found unprofitable by the smaller dealers.

As a matter of fact, our number of dealers decreased only about 10 per cent, many of the smaller dealers continuing to handle ice cream at very excessive cost, it apparently being their conclusion that they would handle ice cream at a loss, if necessary, so long as they had demand for it.

The completeness of distribution was certainly not hurt one bit and ice cream has not been made inconvenient to any purchasers in our city, in fact, we have largely increased sales in Schenectady, this year, due quite probably to the f act that we have had unusually good industrial conditions.

There surely is a tendency to restrict the number of stores handling ice cream which will mean a bigger volume of sales per customer. This will mean that our butter dealers will pay more attention to the ice cream business, and that ice cream will be more largely sold from stores that will be a credit to us, and from stores where ice cream will be kept in better condition and sold to the public in a more cleanly and wholesome way.

If distribution is not being overdone, then a service charge is not very necessary, but if it is being overdone, there is but little to the argument that gross sales will be seriously decreased.

Different Conditions in Winter.

During the winter season, we have a different condition, as but few of us have had distribution too complete during the winter months. With this in mind, and mindful of the fact that ice consumption per cabinet hole is much less in the winter than in the summer, we have decreased our service charge in the winter months to 75 cents per week per cabinet hole and I would urge upon all of our members, the adoption of a policy wherein only a modest charge will be made for service from Oct. 1st to April 1st.

Our special delivery has been considerably increased during the past summer, due to the fact that the service charge prompted many of our customers to get along with less cabinet space than was really required. We intend, next season, to do considerable missionary work among our customers, urging them to use the cabinet space they require, and if special deliveries still remain a burden, we shall seriously consider an extra service charge on special deliveries. I am not very strong for placing a penalty upon the customer who requires extra ice cream, and it is possible the condition can be met by having our drivers leave ice cream in tubs wherever it is going to be needed within a few hours.

Why our Powdered Milk has that Good Flavor

ICE Cream Manufacturers are continually commenting upon the fact that Merrell-Soule Powdered Milk, when used in the production of ice cream, is found to possess all the delicious flavor of fresh milk. There is a definite reason for this—the special Merrell-Soule Continuous Evaporator! This evaporator, instead of boiling the milk (as is done in the ordinary condenser process) allows the fresh milk to run through a heat of 125° F. for a period of 80 seconds only. Thus, it does not destroy the flavor, vitamines, or enzymes. This truth can be readily understood by anyone who takes into consideration the fact that the old system requires from two to three hours in the evaporation process.

We believe the best test of the merits of this machine is in your own plant, actually doing your work; so we offer you the use of a machine for ten days' free trial—no obligation.

Write us to send on a machine.

The NATIONAL BUNDLE TYER COMPANY BLISSFIELD MICHIGAN

In actual operation, a service charge with us has meant that a single packing outfit could take care of an increased number of customers; that our cabinet space requirements have been only about two-thirds of that used in previous years, and that we have had a corresponding decrease in pounds of ice consumed. The small customer cannot argue that he is being discriminated against, as our large dealers pay exactly the same base price, and the same service charge per cabinet hole as the small dealers.

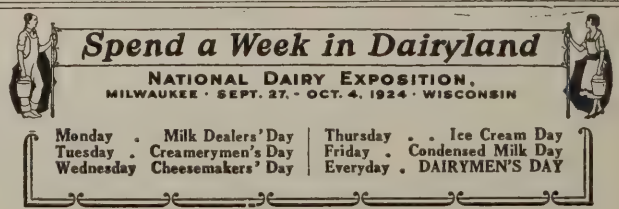
We are confident there will be a dealer in every locality where there is a demand for ice cream, for dealers show very great regard for the wants of their customers.

If you hesitate about a change in policy, just consider what will happen to you if some aggressive manufacturer starts in your territory with a service charge. His customers will demand less sevrice, and the saving through decreased service will be passed along to his customers, which means that he can undersell you and he will gradually get your better customers unless you adopt a discount schedule, providing a very wide differential.

Conservatism is to be commended within limits, but not when it refuses to let you make changes when your judgment tells you there are unhealthy conditions in your business. Let us be not only aggressive but progressive.

PENNSYLVANIA PLANT BEGINS OPERATIONS.

The Pennsylvania Cone & Baking Co., 22 W. South St., Uniontown, Pa., recently began the manufacture of ice cream which is being distributed under the trade name of "Carter's." H. M. Sheffer, superintendent of the ice cream division, advises that the company "is enjoying a splendid business and is finding a ready market for their quality product."



The newest and most modern machinery has been installed, according to reports, which makes possible the production of a high grade product. The company is equipped to manufacture 500 gallons of ice cream daily and the equipment is so arranged that additional units may be added as necessity demands.

A ten-ton ice machine was installed by a Pittsgurgh firm, and batch mixer and sixty-quart freezer were purchased from leading ice cream supply houses. The capacity of the hardening room is from 2,000 to 2,500 gallons. A large motor-driven ice crusher has been installed. Delivery service is handled by three trucks, one of which is equipped with a modern refrigerator body. Quality and service are the foundation on which the business is to be developed, according to officials of the company.

J. W. Abraham is president of the company; Robert J. Carter, manager and vice-president; Chas. L. Lewellyn, secretary, and Dr. A. O. Howard, treasurer. The manufacturing end of the business is under the management of H. M. Sheffer, who is a graduate of the Pennsylvania State College.

You'll make better ice cream if you subscribe for "The Ice Cream Review." It is a standard authority.

TEST PROVES ICE CREAM IS HEALTH FOOD.

(Continued from page 14)

SIXTY-EIGHT children from the first grade were given a fifth of a quart of ice cream every afternoon at 2. They were carefully weighed every two weeks. the last test taking place Monday afternoon.

Five-year-old Vivian Kramer gained the most, four pounds. From 44½ pounds, she went up to 48½. Lillian Glynn, 6, gained three pounds,and every child made some gain. Their cheeks were noticeably rosier, their eyes brighter. They were alert in their classes. Nobody played hookey for fear of missing "the party."

Two-year-old Elise Rita Maloney, having heard of the ice cream parties, slipped in at the last, hanging closely to her aunt, the first grade teacher.

"O, Auntie," she cried, beaming over her saucer, "I want to come to school every day."

FIFTY-ONE children gained a total of 69½ pounds by eating one-fifth of a quart of vanilla ice cream every school day for seven weeks.

Underweight is a common defect among children, and nutrition classes at which milk is served have been conducted at a group of schools, but the Dimitry school children were the first ones on which a systematic ice cream experiment was made.

By invitation, fifty-nine of them stood by their saucers and spoons to show of what stuff heroes and heroines are made. The weight of four remained stationary and four lost weight because of sickness, but the remaining fifty-one showed the effect of extra calories in sugar-coated and frozen form. The least gain was one-fourth pound, the greatest was 5½ pounds and the average gain was 1 and 7/39.

MOST of the children in this class were from the first and second grades. They were under weight from 1 pound to 15½ pounds. One 6-year-old featherweight wa only 34 pounds but she gained 2¾ pounds by the time the seven weeks were up. Weights were recorded at two weeks' intervals and Mrs. W. W. Clayton, home demonstration agent for Orleans Parish, considers that the gain from ice cream compares favorably with the gain made by children in the nutrition classes in which milk was served.

With one cup of vanilla ice cream rated at 400 calories, a one-fifth quart-serving represents 320 calories.

Naturally the school attendance of the picked fifty-nine was good. There was a group of willing substitutes, also underweight, subject to call when regulars were absent. There is no record of a case in which a substitute ruined his ice cream by salting it with tears shed for the absent one.

TENNESSEE ICE CREAM CONDITIONS DISCUSSED BY FORMER BADGER.

A good report of conditions in the Southern ice cream industry was made by N. A. Pahlke, manager of the Liberty Ice Cream Co., Inc., Memphis, Tenn., while visiting in Milwaukee during the latter part of July. Mr. Pahlke, who formerly resided in Milwaukee, believes in the future of the South and its ice cream industry.

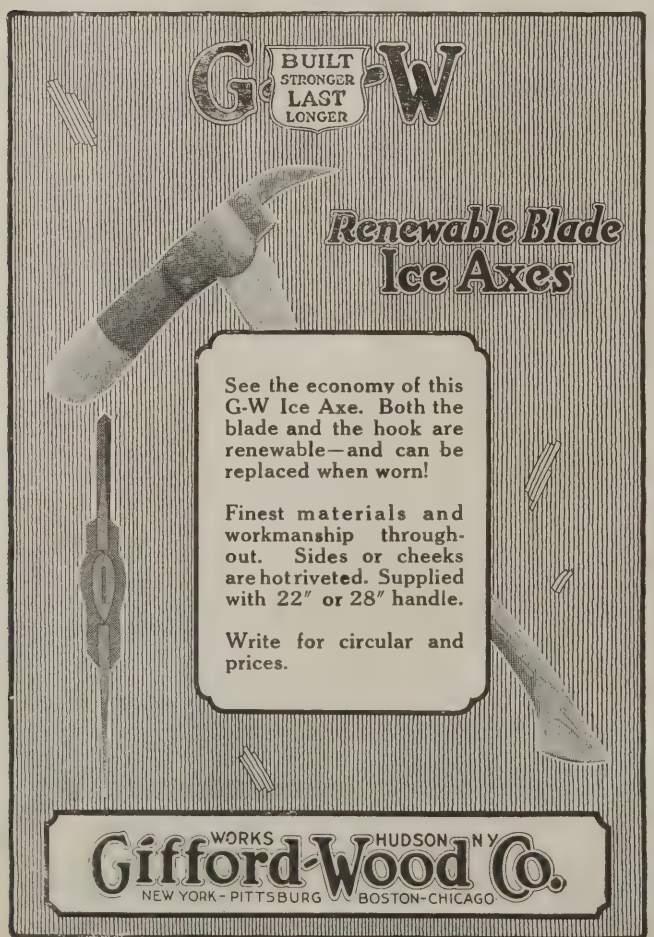
"Memphis is in an important strategic position to become one of America's greatest trade centers," he said on a visit at the offices of The Ice Cream Review.

He says Tennessee manufacturers are making a good quality of ice cream, having a good ice cream law and a condition of competition which makes quality ice cream imperative. Mr. Pahlke's organization, the Liberty Ice Cream Co., distributes only in the city of Memphis, not bothering with a shipping business.

Commenting upon the failure some months ago of one of the largest ice cream plants in Tennessee, Mr. Pahlke said, "Too much shipping. They reached too far without knowing what it was costing them to handle the distant business. The firm was making a good quality of ice cream, but instead of intensifying efforts in a safe radius of its plant, the management tried to stretch distribution too far. It reached the breaking point."

Mr. Pahlke has been located in Memphis for five years. He formerly operated a dairy farm near Milwaukee. He says the South is "a wonderful country in which to live and do business."

STEFFEN CO. WINS SCORING CONTEST.



The Steffen Ice & Ice Cream Company's plant, Wichita, Kan., is where only quality ice cream is produced, as is indicated in the story appearing on page 30 of this issue of The Ice Cream Review. This is verified by the award of the Kansas State Agricultural College in a recent contest. The Steffen Ice & Ice Cream Co. made

the highest score of several samples submitted, its product scoring 98 points, while the nearest was 96, and others ranged as low as 71. Fifty-two manufacturers were represented from all over the state, says John W. McEwen, secretary of the Wichita firm.

This scoring contest was held to analyze ice cream on the following points: flavor, body, fat, solids, bacteria count, color and package. The bacteria count reflects the purity of ice cream and the Steffen company's product showed a count of only 3,000, while some samples counted as high as 1,000,000, it was reported.

If you want a Manager, Superintendent, Expert, Chemist, Bacteriologist, Operator, Pasteurizer man or help of any kind, "The Ice Cream Review" can help you find the best available man. If you want a position, "The Ice Cream Review" can help you as it has helped hundreds of others to secure a good position.

(See Gifford-Wood Co. advertisement on page 15)

KANSAS ICE CREAM MAN ADMITTED TO BAR.

Friends in the ice cream industry will be glad to hear of the double celebration that fell to the lot of Joe Morrissey of the DeCoursey Creamery Co., Kansas City, on July 13. On that day, which happened to be Mr. Morrissey's birthday, he was notified that he had passed the Missouri state bar examination. "Thirteen" seems to play an important part in this man's life, for his admission to the bar follows thirteen years of service with the DeCoursey creamery. He started as a bookkeeper when he was the only man employed in the office. Now he is assistant manager.

JOE MORRISSEY.

Mr. Morrissey attended to his duties at the DeCoursey creamery and found time to study law at the Kansas City School of Law. Among the friends in the industry who have extended congratulations are many ice cream men who saw him qualify as a 100 per cent candidate for the National Order of White Caps at the Texas convention several years ago. One of them notified Mr. Morrissey that he was willing to believe him "qualified to stand before any kind of bar."

⚜

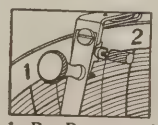
MORRIS GIVES ROTARIANS "COOL" RECEPTION.

A "cool reception" was extended to the members of the Rotary Club by Charles G. Morris, president of the New Haven Dairy Company, when he conducted them through the company's new and modern ice cream plant, and acted host at luncheon served in the assembly hall of the plant. Although the weather was stifling hot, the guests were generally cooled off after leaving the hardening room where the temperature is kept at from five to seven below zero at all times.

President Morris and Howard Smith took great pleasure in explaining their latest type machinery and equipment to the visitors, initiating them into secrets of "America's greatest food dessert."

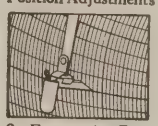
The visitors' enthusiasm for the sanitation and science exhibited was not even chilled by a visit to the final freezing station of the finished product, and officials were given a vote of thanks for the warm reception, even though it was "chilled."

⚜

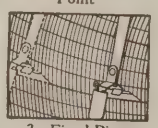


NEW YORK PLANT CHANGES HANDS.

Announcement was made recently of the formal transfer of the plant and business of the Sanitary Ice Cream and Milk Co. to the Ithaca Ice Cream-Valley Dairy Co., Inc., Ithaca, N. Y. Frank R. Anderson of New York City was made president of the new firm.



It was stated that engineers have visited the plant and made plans for extensive alterations and additions which will be made soon. The plant will then take its place as one of the best in that section of New York state, it was announced.



for TEMPERATURE
The FACTS in the CASE

1—Pen Pressure and Position Adjustments

2—Fountain Pen Point

3—Fixed Pivot

4—One Size Chart

5—One Turn Chart Holder

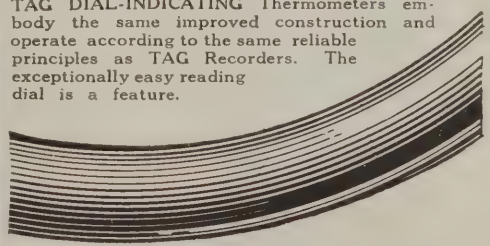
6—Improved Case

Inside the case you will find the reason for the extraordinary ruggedness and accuracy of TAG Recorders. By reason of a patented cam arrangement, the TAG is the ONLY Recorder with uniform chart graduations for ALL ranges. A special seasoning process prevents "setting" of the spiral spring. The development of a single-piece welded bulb and of a capillary tube of exceptionally fine bore are other TAG achievements. The following distinctive structural features also contribute to TAG superiority.

1—Pen pressure adjustment and pen position adjustment, the latter providing an exact and convenient means for correcting accidental bending of pen arm.

2—Fountain pen point writes a clean sharp record line and requires less frequent filling. The non-corrodible pen arm is inverted so that ink cannot run down into operating mechanism.

3—Accuracy of time indications is assured by mounting pen arm on a FIXED pivot so that pen point will always follow radial lines of chart (with clock stopped). Positive pen-arm stops, specially designed clock, convenient clock starter-lever are other features.



4—By standardizing on one best size of chart, manufacturing costs have been reduced making possible unusual refinement of construction at the usual price.

5—Improved chart holder, secured to case by light chain, is attached and removed with a single turn. Charts are printed in green ink on specially seasoned high quality ledger paper.

6—Improved case construction incorporating moisture-proof feature, if desired.

TAG DIAL-INDICATING Thermometers embody the same improved construction and operate according to the same reliable principles as TAG Recorders. The exceptionally easy reading dial is a feature.

News of Interest Concerning What Our Readers and Advertisers are Doing to Develop the Industry. We Invite Correspondence Relative to New Products and New Equipment.

CONDITIONS IN THE CONE INDUSTRY.

"What are conditions in the ice cream cone business?" The question was asked Max Goldberg, vice-president and general manager of the Consolidated Wafer Company, one of the largest manufacturers of ice cream cones in the country. Mr. Goldberg pointed out some things about this business.

"Up until June 30," he said, "business was much below normal. The reason is known to every one—cool weather. But just how cool it has been is not generally appreciated. In the first six months of 1924, there was a total temperature deficit of 383 degrees. The weather man had no spring in his step at all this year. Many dealers wondered when they were going to sell their cones, but the first few hot days made them forget to wonder.

"It is when the real warm days come that the nation changes its diet and the ice cream cone comes into its own as a cooling confection of wonderful nutritive value. Hot dinners give way to cold suppers. The wife of Mr. Business Man meets him at the office with the car and a luncheon kit that has been quickly packed. A few miles out in the country and they make a last stop at the little general store or the roadside stand for a dessert that requires no preparation—ice cream cones.

"In every city and hamlet through the country, the little folks—and the big folks, too—think first and most frequently about ice cream cones when they want refreshment. Sales that were missed in May and June are going to be crowded into August and the fine, clear days of September. When records are closed for the year, 1924 will equal 1923 in cone sales."

Small Sized Vacuum Pans

and Milk Condensing Equipment for the Laboratory, Colleges and Ice Cream Mix Manufacturers

Vacuum Pan.

Write for Prices.

We can furnish these small size equipments in vacuum pan sizes ranging from 8″ diameter to 36″ diameter, with suitable forewarmers and pump. These small compact outfits require but little space, are provided with suitable heating and condensing capacity and prove a valuable addition for experimental and study purposes as well as for the condensing of small batches.

REDUCED RATES TO DAIRY EXPOSITION.

Railroads throughout the country have announced special rates to the National Dairy Exposition. Announcement recently was made of the granting of fare and one-half of the current one-way fares on the certificate plan by the Southwestern Passenger Association. The dates of sales are given as follows:

September 23-29, inclusive, from Oklahoma and Texas.

September 24-30, inclusive, from Arkansas, Kansas, Louisiana and Missouri.

Final honoring date: October 8, 1924.

Territory:

Reduction will apply from all points in Southwestern Passenger Association territory.

Railway secretary:
H. H. Anderson, 910 So. Michigan Ave., Chicago.

Joint Agent:

A special agent will validate certificates on September 29 to October 4, inclusive.

ICE CREAM FOR THE KIDDIES.

It was a grand and glorious Fourth of July for the children in Lawrence, Mass., when the Jersey Ice Cream Co. of that city donated many gallons of their delicious ice cream so that every girl and boy received an ample portion of ice cream, free of charge.

Arrangements were made for the kiddies to fall in line to receive their refreshments, but it is needless to say that there were many "repeaters," especially after getting a taste of that "wonderful ice cream," using the term of those who had received their first portion of the frozen Jersey product. The Jersey Ice Cream Co. manufactures a high grade product, it is said, and the sanitary conditions at their plant assure a pure and clean product, which is one of the best possible foods to build strong, healthy bodies in the young.

NEED ANY HELP?

An advertisement placed in "The Review" Want Department will put you in touch with just the kind of help you are looking for. Give "The Review" a trial—it's the best way to get results.

This is the Huntington, W. Va., plant of the Imperial Ice Cream Co. The members, managers and superintendents of this company, by the way, read every issue of The Ice Cream Review.

C. W. SMITH BECOMES ICE CREAM MANUFACTURER AGAIN.

Readers of The Ice Cream Review in many sections of the country will be much interested to know that C. W. Smith, formerly Southwestern representative of the Hudson Mfg. Co. of Chicago, has returned to the ice cream manufacturing business. It is well known that Mr. Smith was for several years engaged in the manufacture of ice cream in Texas before joining the Hudson Co. He was widely known, not only in Texas and other Southern states, but in many parts of the country where he traveled.

C. W. SMITH.

After an absence of two years and eight months, he has returned to Dallas and opened an up-to-date plant of 1,000 gallons capacity, doing business under the firm style of Smith Ice Cream Company, manufacturers of pure ice creams and fruit ices, 912 South Harwood St., Dallas. He advises The Ice Cream Review that "everything is the best that I could buy." His freezers, pasteurizer, holding vats and viscolizer were bought from leading supply houses in the country. His hardening room has a capacity of 5,000 gallons.

Mr. Smith's plant is built adjoining the Pure Ice and Cold Storage Co., from which he gets refrigeration, power, steam, water and light, on a gallon manufactured basis. He reports he is making only a high grade product and only soliciting the better accounts. A number of his old customers and friends are "coming back" to do business with him, he says. He began production on July 2, having been held up for 45 days on building.

Mr. Smith has not altogether quit the brokerage business that he has been working on for the past two years, still representing the Hudson Mfg. Co., the Grand Rapids Cabinet Co., and the Atlantic Gelatine Co.

"You may tell the Texas Longhorns, Kansas Jack Rabbits, Oklahoma Wolfhounds and Dixie Flyers that I will still be a member and do all in my power to make the meetings a success by attending each one and helping in my feeble way to promote the industry to further success.

"You know after a man has had his feet wet for 25 years in the ice cream factory they will get kind of crusty if he stays out, so my feet had begun to dry out and as I didn't want them to go back on me, I decided to return to the game again. If I can sell the people that have moved to Dallas in the last two and one-half years, I will have a wonderful business, as Dallas is growing fast, about 2,500 families a month, so you see I have lots to work on."

BRANCH OFFICE MOVES.

The Armstrong Cork & Insulation Company, Pittsburgh, Pa., announced the removal of their Omaha, Neb., branch to new and enlarged offices at 532 Peters Trust Building.

Plain design cones are out of style. They are fast being discarded for the newer design having the Breakage Protection Nesting Ring. THIS VALUABLE FEATURE IS PATENTED BY McLAREN

McLaren's "Real Cake" (Double Ring) Cones are a big improvement over other brands, not only in practical design, but in taste and flavor as well. They're packed in a strikingly attractive three-color carton.

Ice Cream Engineering

Sanitation Has Good Advertising Value in its Protection Against Epidemics

*By R. SWARTS**

MR. CLIFFORD IVES attended a convention at Chicago not very long ago, where he heard one of the vice-presidents of General Motors give a talk. This man gave the following definitions.

"**Research**"—When you want some money, and do not want anyone to know what you want it for, you say it is for research.

"**Scientific**"—Something you can talk about that you do not want anyone else to know about. You may or may not know anything about it yourself.

"**Technical**"—Something you know very well no one else knows about, and you know nothing about it yourself.

"**Expert**"—An expert is an ordinary man away from home.

These definitions coming from a man like that rather dishearten a chemist or engineer, for they are four of his pet words. Let us look over a business man's terms and, maybe, we shall find some that are just as funny.

"**Overhead**" might be called bookkeeping research; "**credit**" might be called scientific honesty or dishonesty; "**incorporating,**" technical organization, and an **auditor** an expert bookkeeper away from home.

No, vice presidents must not throw stones at the House of Science; it may be made of crystal quartz and the rocks may bounce back and break their own glass house. Rather let managers and scientists overlook each other's peculiar ways and build together, the manager with his control of money, men and markets, and the chemist and engineer with their knowledge of machinery, materials and methods.

We will consider the latter three: machinery, materials and methods with respect to ice cream making, the engineering or scientific control of which means benefits to the owners in the shape of a high quality ice cream and a good profit from the sale of it.

IN THE buying and using of machinery, there are many factors to be taken into consideration. A few of these, I will discuss briefly.

1. Can the machine pay dividends in your plant?
2. Has it the most economical capacity?
3. Is it of proper materials and design?
4. Is it easy to keep in a clean and sanitary condition?

Figuring profits on a machine is a relative proposition. You figure the cost of operating the machine per gallon of finished cream and compare it with the cost of another method of performing the work and the difference is called profit. Of course, there are factors like convenience and appearance which are hard to estimate in terms of costs per gallon, so experience and common sense may alter the figures somewhat.

Machinery is most economical when it is run near the capacity for which it was designed, and is in operation a considerable part of the time. However, in actual practice, it is often more economical to use a larger capacity machine, so that the labor cost on the

INTERNATIONAL FITTINGS

operation is lowered. Every combination is different and requires its own solution, but economy and efficiency are always the result of accurate study of details.

Ice cream machinery is still in the "hand-me-down" stage. We hope it will soon arrive at the "tailor-made" stage, as is the case in a good many other industries. For example, the Mesabi Iron Company, a large, new mining company, designs and installs practically all its own machinery. That means they pay only the manufacturing cost of the machine, and save the selling and guaranteeing costs, besides getting a machine which fits their plant like a $150 tailor-made suit of clothes.

DAIRY machinery manufacturers and producers are realizing the high cost of keeping machinery clean and sanitary and the necessity for simple design.

Sanitation has good advertising value; it is a protection against epidemics traced to your plant and is essential to a clean tasting ice cream.

You know the appeal that a bright, clean-smelling machine has to the public. You, also, probably know that to the average visitors to your plant, sanitation is only skin deep and if a pipe is polished real bright on the outside, they are satisfied. But the manufacturer should not be satisfied with a sparkling exterior.

A big war is waging between bacteria and the ice cream makers. It is a long, hard war, too, with no quarter given. The bacteria live in cracks and corners and want to invade the lactose and proteins of ice cream. If they succeed, the lactose becomes sour lactic acid, and the proteins become putrid or poisonous compounds. To oppose these enemies, the ice cream maker must do one or all of three things:

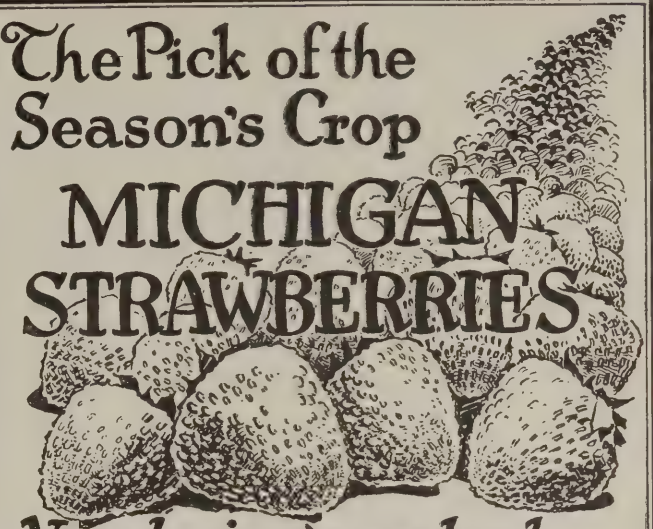
1. Keep out as many as possible.
2. Kill all he can.
3. Stop the rest from growing.

The scope of materials used in ice cream is widening every day. Professor Washburn told me the other day about a firm making condensed milk with very little lactose in it. The quality of raw materials is also improving as we gain knowledge as to what constitutes quality.

You have probably seen the score card for ice cream in the recent issue of a trade publication. It recommends:

Flavor and palatability	45 to 50 points
Body and texture	20 to 25 points
Composition	15 to 20 points
Package and color	0 to 5 points

This score card is based on the way the buying public prefers ice cream. It means that by far the most desirable quality of ice cream is its flavor and palatability. To get 50 points on this score means having good, clean flavored raw materials. This means watching sources. Here laboratory methods are helpful.



The laboratory tests not only raw materials, but produces uniformity of product. Uniformity is very necessary. If you are putting out a 14 per cent product, an occasional batch of 15 per cent cream not only costs much more, but the trade is no better satisfied. If you have 1000 pounds of mix, 14 per cent fat means 140 pounds and 15 per cent 150 pounds. The difference of 10 pounds would have made 83 pounds of mix, or 9 gallons. This extra 9 gallons of mix would have made about 16 or 17 gallons of ice cream.

Uniformity is important, but not as important as choosing your formula. Briefly, the effect of each ingredient on the finished product is:

Butterfat gives a richness of flavor and smoothness

The Pick of the Season's Crop

MICHIGAN STRAWBERRIES

Now being packed by CONNOR'S

COMPARE Michigan Strawberries with any others grown and you will discover extra deliciousness that you will want to impart to your *Strawberry SPECIALS.*

CONNOR'S provides the opportunity for you to secure the very pick of the season's crop. Located right in the heart of the famous Michigan fruit belt, CONNOR'S has access to an almost unlimited supply of these luscious, full-flavored, temptingly delicious berries.

Special Offer

Send for a trial 10-gallon keg at $2.65 per gallon. Try a gallon in a sample batch and if you don't agree that they surpass in quality any you have before used, we will cheerfully take the balance off your hands at our own expense.

Last year we packed several times the quantity packed the year before—and hadn't enough to supply the demand. This year we are again increasing our volume immensely in the endeavor to meet the tremendously growing demand.

Try CONNOR'S Michigan Strawberries once and you will insist upon them always.

Connor Fountain Supply Co.

112 North Ball Street

OWASSO - MICHIGAN

CONNOR'S QUALITY FRUITS

of texture not duplicated by any other ingredient. Too much makes a greasy, tallowy product.

Milk solids not fat give body, texture and food value up to about 12 or 13 per cent, when the ice cream tastes more like a custard, and there is danger of sandiness.

Sugar is a cheap solid, but too much makes the cream harder to freeze and pack, because it lowers the freezing point.

Gelatine acts as a protective colloid and emulsifying agent, tending to increase viscosity and retards ice crystalization. It makes the milk solids more easily digested.

What, then, are the correct proportions of these ingredients to use? Opinions differ widely, just as tastes do. I will mention two extremes. Mojonnier and Troy, in their book on "Technical Control of Dairy Products," say a composition of 8 per cent fat, 12.50 per cent MSNF, 13 per cent sugar, and 5 per cent gelatine makes a good cream. O. E. Williams and G. R. Campbell of the department of agriculture at Washington made an interesting experiment. They placed ice cream of varying proportions on the market where over fifty daily purchasers had an opportunity to choose between three different kinds without knowing anything about the composition. Each combination of three was sold for several days in order to get the true preference. They found: 82 per cent of the purchasers preferred 18 per cent fat, 10 per cent of the purchasers preferred 15 per cent fat, 7.6 per cent of the purchasers preferred 12 per cent fat, More than 60 per cent of the purchasers preferred 19 per cent sugar, more than 30 per cent of the purchasers preferred 16 per cent sugar, more than 50 per cent of the purchasers preferred 12 per cent MSNF, and more than 60 per cent of the purchasers preferred 1 per cent gelatine.

Here are two extremes, one low and the other very high. Averages are much more interesting than extremes. In a survey of thirty-one of the largest and most up-to-date manufacturers in the country, the average composition was found to be:

Fat	11.52 per cent
MSNF	10.55 per cent
Sugar	13.95 per cent
Gelatine	.453 per cent

To do this as the average successful manufacturer does is pretty safe. Each one is making a good ice cream which will sell at a profit. Each one is avoiding the mistakes of the unsuccessful, and some of them are copying the methods of the big leaders. These leaders study the public's wants, and try to fill them. What does the public want? They want ice cream which will please their palate and their purse. Then, the most successful manufacturer is the one who pleases the purse and palate of the largest number of people.

NO PRODUCE quality ice cream requires attention to methods, as well as the kind and amount of materials. The physical formation of ice cream is an excellent problem for research in colloidal chemistry. Ice cream is a complex frozen structure—a fat emulsified in milk serum solids with air held in mechanical suspension. Like most emulsions, it is smoother when the fat and air globules are small. There are some things we know from experience will give us this combination, but we do not understand why. It is not like the process for whipping cream, by which air is incorporated at room temperatures and is held for a long time. A peculiar circumstance is that homogenization practically destroys the whipping quality of cream and yet it increases the whipping quality of ice cream mix.

BAKER
System Refrigeration

Are you still using ice and salt in manufacturing ice cream? If so we can show you how a Baker System Refrigeration will do the work more effectively at a fraction of the cost. Besides, with a Baker you can make your packing ice cheaper than it can be bought.

Personal Survey of Your Plant

Baker System Refrigeration is built to order —"tailor-made" to your individual conditions. No order is accepted until one of our refrigerating engineers has made a personal survey of your needs. This guarantees to you an efficient plant which should pay for itself in a very short time.

One southern ice cream manufacturer said he could buy a Baker plant every 16 months out of the savings made over the ice and salt method.

Get Your Copy Bulletin 65 D It's chuck full of useful information you will value. It explains the Baker System Refrigeration in detail and gives you the reason why over 5,000 Baker plants are in successful operation.

Baker Ice Machine Co.
Omaha, Neb.

So the issue stands. Ice cream manufacturers know how to get a high overrun, a cream of good standing-up qualities, a fast freezing cream, a very smooth cream, or a nice clean melting cream, but they do not understand why, and cannot get all these qualities into one mix. If they want a clean melting cream, they get it at the expense of good standing-up qualities, and a fast freezing mix is apt not to have the fresh, clean flavor they desire. The unfortunate requirement is having to make a cream which will stand up under abuse. I hope the coming of the mechanically refrigerated cabinet will make this a by-gone worry, like sandy ice cream.

Pasteurization and homogenization of the whole mix have come to stay. Those of you who keep records will know that it pays. Low bacteria counts and no lactose crystals to start sandiness are worth while. We are realizing the importance of accurate temperature and pressure control.

WHEN we think about aging, we wish someone would come to the front with information on the kinds of enzymes and their actions. We knew aging is an enzymatic proposition, for cream ages best without any perceptible bacteria growth. We know that with enzyme actions, the temperature, time and enzyme strength are all very important. Now, in aging mix, we can control temperature and time, but enzyme strength is a mystery. The ripener and improver manufacturers claim to know something about this, but they are so afraid of giving secrets away, that we suspect they are in the same boat with us—they know **how,** but not **why.**

So our methods need some **whys** now. The gelatine men needed some **whys** and they went together and hired Professor Downey to find out for them, and I believe already the gelatine industry is reaping the benefits of this research work.

I have spoken of the engineering side of the ice cream industry, the careful selection and operation of machinery, the vigilant watching of raw materials and accurate control of standardization, lastly that elusive question of methods.

All of this requires study and observation, which will be rewarded by a high quality ice cream and a profit to its producer.

⚜

NEW QUARTERS FOR WHEAT'S BRANCH PLANT.

The Wheat Ice Cream Co. of Buffalo, N. Y., has established new quarters in West Second St., Dunkirk, N. Y., to facilitate the handling of the growing business in that vicinity. Joseph Sappelt is the agent of the company and manager of the branch plant.

The ice cream handled by the Dunkirk plant is made in Buffalo and brought there daily by big trucks belonging to the Dunkirk plant. One of them is a refrigerator truck and the others contain compartments for ice cream and for chopped ice. A refrigeration plant has been installed, with a capacity of 7,000 tons of ice a day.

Mr. Sappelt has managed the agency for the Wheat Ice Cream Co. in Dunkirk for thirteen years, his equipment at that time consisting of one horse and wagon for delivering the frozen cream. Now a big business is handled by modern efficiency.

⚜

ADULTERATED MILK.

A school boy, writing an essay on the importance of a safe milk supply, had this to say:

"If you are a milkman and to the milk you deliver you added water or some other substance, you would be committing adultery." And the Bible says: "Thou Shalt not commit adultery."

Make and sell packaged sundaes—

Ice cream manufacturers everywhere, are cashing in on the Packaged Sundae Idea. You, too, can build up a worthwhile increased business with handsome

"Ice Cream as an Essential in Infant Feeding"

Test Shows That Frozen Beverage is in Every Sense a Health Food.
An Address Before 1924 Ohio Convention
By DR. LUTHER P. HOWELL

AS MANUFACTURERS of the commodity commonly called ice cream you have not only gone beyond your early-day predecessors, who had little idea of its food value, but you have by homogenizing your product builded wiser than you knew.

When one takes into consideration that butterfat of cow's milk contains the necessary vitamines in an available form for the baby of the cow, and furthermore, that homogenized olive-oil-milk has been successfully used for years it is logical to conclude that the generally accepted opinion that whole milk is deficient in fat-soluble vitamine in infant feeding may be erroneous, and that the mechanical process of homogenization may make it possible for the infant to emulsify and assimilate an adequate content of the necessary vitamine.

Research workers announced 20 years ago that untreated olive oil was not a food—that an ounce could be fed to a dog and an equal quantity abstracted from the foeces. Simply added to skimmed milk it has likewise proved valueless—yet when homogenized in the Walker Gordon Lab. at Boston, I witnessed for many successive weeks as a student of Maynard Ladd at Harvard in 1919 its functioning in "feeble-feeders" that would not gain an ounce on milk containing butterfat even as low as one-half of one per cent, regardless of percentage of sugar in the formula. In 127 feeding cases containing about the average of 25 per cent difficult to feed not one of the latter failed to gain each week on olive-oil-milk and not one death occurred in the summer of 1919 fed in this way. With homogenization as an essential factor in the above method it occurred to me in 1923 that butterfat in cases where it was not at all tolerated might be digested in the form of ice cream. A case weaned at six months when the mother supply totally failed developed a skin trouble and gained no weight. The butterfat was reduced by degrees to one-half of one per cent and finally skim milk and high sugar was tried but the weight was stationary and the child always fretful.

ICE cream equalling two per cent of butterfat was then begun. There was a gain the first and each succeeding week and the skin trouble disappeared in about three weeks. To make sure the skin disease was not due to milk proteins, scratch skin-tests were made for casein and lactalbumen and to guard against an upset from gelatine in the cream, tests were made of beef, pork and lamb-proteins. All proved negative and the subsequent feeding showed the tissues non-sensitive to any of said proteins. Five other cases were then given ice cream and skim milk plus malt sugar and none failed to gain and none had any untoward symptoms. These cases were all aged from 6 to 9 months.

Cod liver oil was not given and no deficiency disease developed.

(Since writing the above I started a baby of seven weeks at White Cross Hospital on ice cream and he gained from 6-6 to 7-4 or 14 ounces in six days. His birth weight was 6-2 and at six weeks when I first saw him it was 6-1, a total gain of "**minue one**" ounce. At the Presbyterian Clinic we tried a baby of 6 months on non-homogenized ice cream of known good quality and it was repeatedly vomited. Yesterday I started it on homogenized ice cream but have had no report of results.)

In the above method we conform to the principle that multiple carbohydrates and proteins are better tolerated by the body tissues. We have the milk sugar, malt sugar, cane sugar and in the orange juice used every second day still another variety. Likewise in the protein group we have the two milk proteins and in the gelatine that of beef, pork and as a rule mutton.

Furthermore, the hygiene of ice cream manufacture by modern methods, its aftercare, transportation and

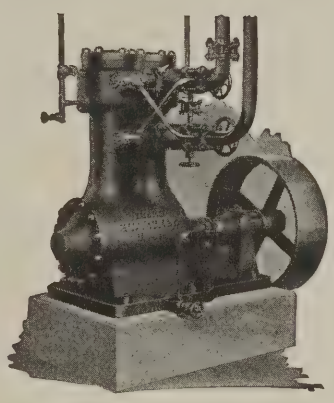
dispensing prevent decomposition in any way not to be accomplished in the dispensing of fresh milk to the ultimate consumer. Several factors destroy the vitamines in other dairy products: Growth of bacteria, over-heating in pasteurization, too long storage and aging in tin cans. The French research workers have lately shown that after two weeks in the can milk contains no protective vitamine for animals used in their experiments. In ice cream and certified skim milk the vitamine has not been destroyed, and combined with a proper proportion of malt sugar, we have a balanced ration easily modified to suit the individual case. Science and art have made a strenuous effort to put into one sealed container a balanced ration, that would keep indefinitely at ordinary temperatures and only required the addition of water at time of use.

THE most calamitous failure of all of them has reaped the greatest financial reward. Protein milk is a valuable article in many feeding cases, the condensed creams through two wars made our coffee taste something like the home-grown cup, but **condensed milk,** 66 per cent of which by analysis is sugar of vegetable origin, is waging a greater war in infant mortality than all the bacterial organisms in the universe. The deaths from the eruptive fevers of childhood are by comparison but a drop in the bucket. It functions not to sustain life in a physiological manner. It is deficient in all the **known** vitamines and no doubt all the others we are trying so hard to discover. It induces nutritional deficiency diseases and in the last battle overwhelms its victim with a fatal acidosis, wearing the borrowed uniform commonly called pneumonia.

To sustain life in the adult we must have fresh foods. We must have fresh fruits and raw vegetables. The infant likewise must have raw foods when we feed him artificially. Neither we nor he can live out of a can for more than a short period of time. It was recently stated before our local Rotary Club that the "Army and Navy" bean could not be digested because it contained both protein and carbohydrate. You all know what the famous general said the Army travelled on—and it has always been partially filled with beans.



Personally I tried them in 3 years of one war and 15 months in another as far west as Hong Kong, as far east as the Riviera and sunny Italy and they aided and abetted in increasing my weight 25 pounds. I feel reasonably sure that in Toledo they educate their Rotary Club speakers in an Oratorical Laboratory far removed from schools of science and 1924 methods of selection of diet based on our knowledge of nutritional diseases ranging from rickets in the new-born to beri beri in the adult. As a nation we are just "beginning to commence to start to learn how to feed the human animal."

HOPKINS GOES TO EUROPE.

Andrew W. Hopkins, editor of the Wisconsin College of Agriculture, has gone to Europe as the editorial representative of a Wisconsin farm paper. With a number of other farm paper editors he left New York recently on the steamship Leviathan. He will visit the British Isles, the Isle of Jersey, the Isle of Guernsey, and will probably spend some time on the continent.

Hopkins plans to attend the British Empire Exposition at Wimberly, England, and the British Royal Live Stock Show. He will visit the world's oldest and best known experiment station at Rothamstedt, England, and he plans to visit Brittany and probably Perche, the home of the Percheron horse. In the course of his trip he will call on Sir Horace Plunkett, the great Irish authority on co-operation, who was a recent visitor of Wisconsin.

News From Far and Near

CALIFORNIA — FLORIDA

Fayetteville, Ark.—The Crystal Ice and Ice Cream Co. has plans for a new ice cream plant to cost $80,000 with equipment. A power house will be installed, with oil-burning engines and auxiliary apparatus.

Fayetteville, Ark.—The Crystal Ice & Ice Cream Co. is erecting a new ice cream factory at a cost of $75,000.

Little Rock, Ark.—The National Ice Cream Co. is planning improvements to its plant at 301 Rock St., F. T. Watson, treasurer of the company, recently announced.

Little Rock, Ark.—F. T. Watson, treasurer of the National Ice Cream Co., announced that improvements would be made at their plant at 301 Rock St. A deed of trust for $50,000 has been filed in Circuit Court by the Southern Trust Co., but plans for improvements have not been completed, but will be definitely announced in a couple of weeks.

McGehee, Ark.—The Velvet Ice Cream Co. of Pine Bluff began operations in the new plant erected by the McGehee Ice Co.

Jacksonville, Fla.—The new home of the Lake County Ice Cream Co. on Clifford Ave. is nearing completion.

Peoria, Ill.—The J. D. Roszell Ice Cream Co. is erecting a $35,000 two-story ice cream factory at Oak and Washington Sts.

Shreveport, La.—The Dickenson Ice Cream Co. was recently incorporated. Capital is $25,000.

New Bedford, Mass.—The Made-Rite Ice Cream Co., with capital of $100,000, was incorporated with Homer J. Messier, Mae R. Messier and Bertha Rocheleau.

Grand Ledge, Mich.—Fire recently destroyed the local condensary of the Arctic Ice Cream Co. The loss is estimated at $100,000 and officials stated that reconstruction would start without delay.

Jackson, Miss.—The Morris Ice Cream Co. is installing machinery in their new plant.

Kansas City, Mo.—Peerless Ice & Cream Products Co. was incorporated by Clyde Leavengood, vice-president, and others. The principal agent is W. R. Torbert, 1038 New York Life Bldg. The capital of the new company is $50,000.

Kansas City, Mo.—The Franklin Ice Cream Co. recently purchased seventy-five feet of ground fronting on Charlotte St. The company plans to remodel the building already on the property.

Springfield, Mo.—A second cold storage room has just been added to the new plant of the Tracy Creamery Co. on West McDaniel St., giving a total storage capacity of about 2,000 gallons of ice cream.

Springfield, Mo.—The Tracy Creamery Company, at 600 West McDaniel, has just completed its plant by adding a second cold storage room, which will give them a storage capacity of 2,000 gallons of ice cream.

Kearney, Nebr.—The Kearney Creamery, under the management of B. E. Bowersox, is now equipped to make all of the ice cream consumed in that city and surrounding territory.

Buffalo, N. Y.—Martins was incorporated for $25,000 by F. B. Martin, J. Baynes and R. Martin. C. F. Cutting of Buffalo is the attorney.

New York, N. Y.—The Marchiony Spumoni Co. was organized with a capital of $20,000. Weschler & Weschler, 150 Nassau St., are the attorneys.

Cincinnati, O.—The Julia Roth Ice Cream Co. recently leased store No. 2 in the Fehr Bldg., Madison and Edwards Roads, and will begin the manufacture of ice cream without delay. The ice cream company was incorporated a few months ago for $10,000. B. H. Shartsman is president and Lester V. Ryan is secretary.

Columbus, O.—More than 1,000 Boy Scouts made an inspection tour through the plant of the Furnas Ice Cream Co. as guests of Everett Antrim. During the inspection they were given samples of the frozen sweets and souvenirs were distributed.

Lebanon, Tenn.—J. C. Anderson is installing a small ice cream manufacturing plant on S. Maple St.

San Benito, Tex.—W. B. Hinkley contemplates the erection of a modern two-story creamery and ice cream plant on Roberts St., at an estimated cost of $25,000.

Danville, Va.—The Chapin-Sacks Corp. will establish a plant here on North Union and Springs St.

Arcadia, Wis.—George J. Glanzer of the Arcadia Bottling Works, will begin the manufacture of ice cream soon. Necessary machinery and equipment is being installed.

Sheboygan Falls, Wis.—August Mallmoun recently installed a modern ice cream making outfit in his creamery on Leavens Ave.

TEXAS ASSOCIATION TO MEET DEC 3, 4 AND 5.

Officers of the Texas Ice Cream Manufacturers' Association have definitely decided upon the dates of december 3, 4 and 5 for the 1924 convention. Dallas will be the scene of the convention. Program announcement will be made later.

You can find the person who will be glad to buy what you wish to sell, by letting your desires be known through an advertisement in The Ice Cream Review.

Bang! and it wont rebound

Before you do anything else—send for our catalog Number 11. It should be in your file as exclusive reference for every cold storage door problem.

Kindly Address Desk 6

WITH Jamison Doors, the harder the slam the tighter the seal, and the automatic self-tightening fastener gets tighter with age. That's the foundation of cold storage door satisfaction. A door may be well constructed from a wood worker's standpoint but it ceases to be a cold storage door if the hardware isn't effective.

Besides the 100% efficient fastener on the Jamison Door, consider the multiple seal between frame and door where others have but one; the adjustable spring hinges extending over half the width of the door, making it possible to regulate the pressure and renewing the seat against the multiple seals of contact, and the material weight of Jamison Hardware is three times greater than that on any other cold storage door. That's why they invite long, hard usage and measure up to better than the refrigerating engineers' specifications.

Jamison Doors

for better refrigeration

JAMISON COLD STORAGE DOOR COMPANY, Hagerstown, Md., U. S. A.

Function of the State College in the Ice Cream Industry

*By PROF. A. A. BORLAND**

PENNSYLVANIA is a great dairy state. It ranks seventh among all the states in the union in number of cows according to the 1920 census, fourth in milk production, third in the consumption of market milk, third in the value of its dairy products, third in condensed and evaporated milk, third in factory cheese, second in farm cheese, second in farm butter, and first in the manufacture of ice cream with a production in 1922 of 30,250,000 gallons, outstripping its nearest competitor, New York, by over nine and one-half millions of gallons, and producing nearly one-fifth of all the ice cream manufactured in the United States.

PROF. A. A. BORLAND.

One may well raise the question as to the function of the Pennsylvania State College in the ice cream industry. The first duty of such an institution owned and supported by the state and inaugurated for the express purpose of teaching agriculture and the mechanical arts, is to teach ice cream making to students.

Pennsylvania was the first state in the union to offer a course of instruction in the manufacture of ice cream. This course was first given in 1892. The next state agricultural college to offer such instruction was Iowa, but not until 1901, nine years after Pennsylvania had inaugurated the movement. Today thirty state colleges are giving instruction in ice cream manufacture to from 600 to 700 students annually, but Pennsylvania is still the leader with 68 students enrolled in ice cream courses. This is a greater number than in any other state and is about one-ninth of all the students receiving ice cream instruction in the United States.

Courses covering eighteen weeks instruction in ice cream manufacture are offered to the four year students and the two year students, and intensive training for ice cream making is given for eight weeks to the winter course students in dairy manufacturing during January and February, the next course starting January 3, and ending on March 1. These courses cover the principles involved in the manufacture of commercial ice cream and ices and include practice work in actual manufacture of the product. Graduate courses involving investigational and research work are also offered to the students who are taking advanced work. These courses are (except the short course) preceded or accompanied by a thorough foundation of chemistry, bacteriology, English, mathematics and economics. No tuition charges are made in any of these courses.

The facilities for the teaching of the manufacture of ice cream are unusually good at the Pennsylvania State College, since a college dairy manufacturing plant is operated by the dairy department for the purpose of giving instruction to students in dairy courses. This plant is patronized by over 300 farmers and manufactures approximately 200,000 pounds of butter annually, 70,000 pounds of cheese and 10,000 gallons of ice cream, besides conducting a retail and wholesale market milk business.

The equipment for practical instruction in ice cream making includes twenty, forty and fifty quart freezers, filler, overrun tester, viscolizer, 500 gallon hardening room and a 17 ton refrigerator plant. Practical and closely related courses include power and refrigeration, creamery mechanics, and dairy plant management, market milk, butter and cheese making, testing and judging dairy products. At least one summer's experience in practical work in a commercial plant is required previous to graduation.

It is not the expectation that those who graduate in the dairy manufacturing course are fitted to assume positions of large responsibility, but rather that they have a substantial foundation upon which to build when beginning at the bottom. With this fundamental education later followed by technical training in a commercial plant, the graduates are likely to be in a position to render the greatest service to their employers and to make the greatest success in life.

The dairy department of the college maintains an employment bureau and has been able to supply many ice cream manufacturers with suitable men for positions ranging from can washers to chemists, bacteriologists and plant superintendents.

Research Work in the Manufacture of Ice Cream.

The dairy department of the Pennsylvania State College has under progress investigations regarding the relation of viscosity and acidity to the quality of ice cream. Professor W. B. Combs will discuss some of the results of this work at the meeting to be held on Wednesday morning.

Direct Assistance to Ice Cream Manufacturers.

The extension service of the Pennsylvania State College provides a man with special training in dairy manufacturing to render assistance to the dairy manufacturing interests of the state. The regular instructors in ice cream making have also been sent directly to ice cream plants from time to time to make suggestions regarding arrangement of equipment, standardizing the mixture, overcoming sandiness, improving sanitaton, etc.

To Encourage Consumption of Ice Cream.

The home economics extension workers from the state college are placing special emphasis upon the food value of dairy products. Fourteen of these young women are entirely engaged in nutritional work throughout the state and are holding regular nutritional classes with forty different groups of women and children in addition to numerous special meetings. Their work is of especial importance in bringing to the attention of mothers the importance of dairy products in the diet of growing children.

Six dairy extension specialists are adding their efforts in spreading the knowledge of the food value of ice cream and other dairy products. The average consumption of ice cream daily per capita in the United States is one-half ounce, but in Pennsylvania the daily consumption per capita exceeds one ounce, a higher consumption per capita than in any other state in the union.

(Continued on next page)

* Dairy Department, State College, Pa. An address before the annual convention of the Association of Ice Cream Manufacturers of Pennsylvania and New Jersey, Altoona, Pa., Nov. 14, 1923.

To Assist in Lowering the Cost of Producing Raw Materials.

The thoughtful ice cream manufacturer will agree that the welfare of his business is in no small measure dependent upon the producer. The relations of the two are so dependent upon each other that whatever affects one adversely also affects the other. It is vital that the dairy farmer be able to produce milk and cream at low enough cost that he has a reasonable reward for his labor and interest on his investment. Financial loss breeds discontent; discontent fosters suspicion; and suspicion ends in open antagonism. A reasonable financial return to the producer is without doubt one of the important factors in maintaining harmony in the industry and in assuring an adequate supply of the raw material.

Pennsylvania produces good ice cream, high in food value, but estimating the butterfat content at the minimum allowed by law, 8 per cent in vanilla or chocolate ice cream, there is required 21,780,000 pounds of butterfat to supply the ice cream manufacturers one year. This is the equivalent of 121,000,000 pounds of 18 per cent cream or 544,000,000 pounds of 4 per cent milk. To produce this amount of milk 131,125 cows are needed at the average yield of cows for Pennsylvania, which according to census figures is 4,000 pounds. Since there are in Pennsylvania 885,858 cows on farms, it is evident that the cream from over one-seventh of the cows in the state is needed for ice cream purposes. The interests therefore of the ice cream manufacturer and the milk producer are closely interwoven. Sometimes, however, the fact that the producers balance is on the wrong side of the ledger is due to certain methods of production which he himself could improve through the advice and assistance of the county agricultural agent.

The extension service of the Pennsylvania State College has accomplished remarkable results in aiding dairy farmers to lessen the cost of producing milk and cream. Through the dairy specialists and the county agricultural agents, cow testing associations have been formed; "bull associations" have been organized; balanced ration campaigns have been held; and pure bred cattle have been introduced in considerable numbers.

The cow testing association has been especially useful in lowering the cost of production by ridding the herds of unprofitable animals. The average production per cow in Pennsylvania, according to the last census, is about 4,000 pounds of milk containing approximately 160 pounds of butterfat. The average production of many thousands of cows in testing associations last year, however, was 6,870 pounds of milk and 269.7 pounds of butterfat, an increase of 2,870 pounds of milk and 109.7 pounds of butterfat over the yield of the average cow of the state. Translated into terms of dollars and cents, this means over a 50 per cent increase in production.

In other words, the same amount of milk that is now being produced could be secured with two-thirds as many cows if there were all on the average of testing association cows. The value of dairy cattle in Pennsylvania is over $106,000,000. We could dispense with $35,000,000 worth of cattle and put the money in the bank, if all cows were brought to equal test as association cows. Increased yields are almost invariably accompanied by a decreased cost of production, hence these associations are fulfilling a real need in lowering production costs. Pennsylvania is now the second state in the union for numbers of cow testing associations with fifty organizations in active operation.

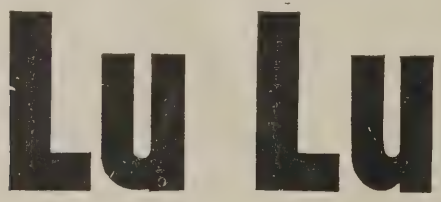
Trade Marks Department

Conducted by National Trade Mark Co., Washington, D. C.

The following are trade-mark applications pertinent to ice cream pending in the United States Patent Office which have been passed for publication and are in line for early registration unless opposition is filed promptly. For further information address National Trade-Mark Company, Barrister Building, Washington, D. C., trade-mark specialists.

As an additional service feature to its readers. The Ice Cream Review gladly offers to them an advance search free of charge, on any mark they may contemplate adopting or registering.



Ser. No. 185,106. (CLASS 2. RECEPTACLES.) H. P. Chandlee Sons Co., Baltimore, Md. Filed Aug. 29, 1923.

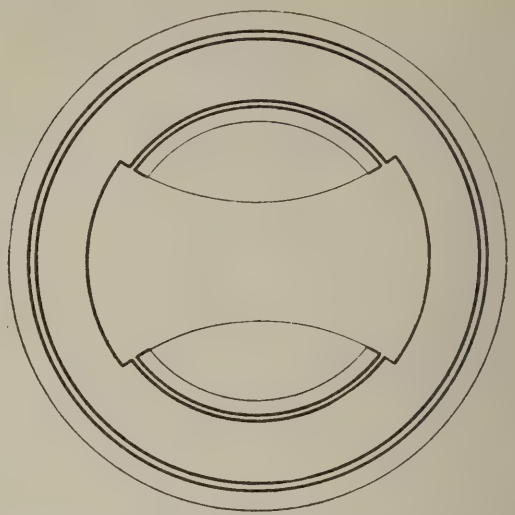
Particular description of goods.—Ash Cans, Garbage Cans, Oil Cans; Trash Burners, Ash Sifters, Water Coolers, Bread Boxes. Cake Boxes, Water Pails, Milk Pails, and Milk Cans.
Claims use since Jan. 16, 1914.

* * *

Ser. No. 183,852. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) John Ravizza, New Britain, Conn. Filed July 30, 1923.

Particular description of goods.—Confections in the form of Frozen Banana Coated with Chocolate.
Claims use since July 30, 1923.

PENNSYLVANIA-NEW JERSEY MANUFACTURERS TO MEET AT NEWARK IN OCTOBER.



The Association of Ice Cream Manufacturers of Pennsylvania and New Jersey will hold its 1924 convention October 14, 15 and 16 at Newark, N. J., according to announcement late in July by J. W. Neuman, secretary of the association, from York, Pa.

This will be the Pennsylvanians first convention on New Jersey soil, the consolidation of the two associations having only come about in recent years. This will be the eighteenth convention for the Pennsylvania members and the second for the amalgamated body.

The Robert Treat Hotel will be convention headquarters. The secretary announces that garage space will be available for members who motor to the convention.

The decision as to convention dates was reached at a regular meeting of the board of directors at Harrisburg on July 8. The place of meeting had been decided upon at the 1923 convention. The secretary believes the convention this year should be of exceptional interest.

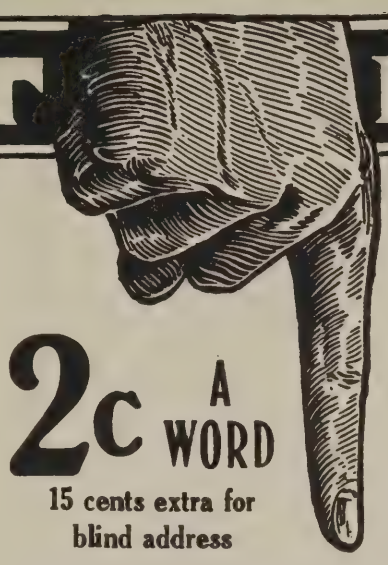
Ser. No. 169,669. (CLASS 2. RECEPTACLES.) Dover Stamping & Manufacturing Company, Cambridge, Mass. Filed Sept. 19, 1922.

Particular description of goods.—Milk and Dairy Pails, Tin Pails, Covered Buckets, Milk Cans, Oilers, Ash Barrels, Coal Hods, Garbage Cans, Sink Pails, Water Sprinklers, Waste Cans, Oil Cans, Water and Fire Pails, Chamber Pails, Cake and Bread Boxes, Sugar Boxes and Trays, Cake and Pastry Closets, Tea and Coffee Cans, Cash Boxes, Lunch Boxes, Radiator Fillers, Electric-Light-Bulb Boxes, Garage Fillers, Tire Tanks, and Emergency Gasoline Oil Tanks and Kits.
Claims use since Mar. 15, 1920.

* * *

Ser. No. 182,694. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) Abbott's Alderney Dairies, Inc., Philadelphia, Pa. Filed July 2, 1923.

No claim is made to the words "Sealed by Nature" and "Special" apart from the mark as shown in the drawing.
Particular description of goods.—Ice Cream in Brick Form.
Claims use since April 1, 1923.



* * *

Ser. No. 188,640. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) Rio Grande Valley Dairy Association, El Paso, Tex. Filed Nov. 21, 1923.

Particular description of goods.—Milk.
Claims use since Aug. 1, 1923.

It Pays to Advertise

Orders for this Department must reach our Office not later than the 25th of the month. Orders received after that date will be carried over to the following month's issue.

NOTE: Names and addresses of advertisers using blind addresses cannot be furnished direct from this office.. The advertiser can be reached only by using the key number and addressing your reply care of "The Ice Cream Review."

NOTICE.

The Ice Cream Review disclaims any responsibility for the reliability of parties advertising in the Want and For Sale Department, nor for the truthfulness of statements made in such advertisements. In answering such ads, ask for references if parties are unknown personally, before sending money. Our subscribers are requested to assist us in keeping unreliable parties from advertising by reporting any suspicious dealings.

HELP WANTED

WANTED — Young man not over 40 years of age as assistant to general manager of one of the largest ice cream plants in the country. We prefer a man who has had some experience in the ice cream business, although a record of successful accomplishment in other lines would warrant consideration. The position requires hard work, long hours, 7 days a week during the summer months. We want a man who knows how to work and can show others how; who will be loyal and instill it in others; who is looking for an opportunity—not just a job. This is a real opportunity for a wide awake, aggressive and forceful man, with an understanding of the human element which is so absolutely essential to success. If interested please give all particulars of yourself, positions held and salary desired. Applications held in strict confidence. Address: R-414, The Ice Cream Review. 9-24

WANTED—One of the largest ice cream plants in the Middle West is in need of a real man to act as assistant production superintendent. The man we want must not only know how to make good ice cream theoretically but practically. He must be a leader, a man who is active and alert and who can pep up the entire organization; who will be aggressive and forceful and still command the respect of the employees through his education and guidance. There is no better or more progressive firm in the country than the advertiser and the position offers exceptional opportunity, therefore we want an exceptional man. Position will be open any time, until we find the right man, either now or in the fall. If you think you can fill our requirements please state in reply your personal history, positions held and salary expected. All applications will be held in strict confidence. Address R-413, The Ice Cream Review. 9-24

WANTED — Old established ice cream company will have opening in near future for branch manager. He must be prepared to invest four or five thousand dollars, understand the ice cream and butter business from A to Z and have made good in past positions. Do not waste your time writing unless you have the money. Give full information in first letter. Address: R-432, The Ice Cream Review. 8-24

POSITION WANTED

POSITION WANTED—As first ice cream maker with 15 years experience. Can come at once. Address H. F. Clark, Medford, Wis. 9-24

POSITION WANTED—Young man, high school graduate, with seven years practical experience, and four months college short course training, desires position in ice cream plant or creamery. At present employed, but would like to change in fall or early winter for position with good future. Can furnish references from three sources. Kansas state preferred. Address: R-430, The Ice Cream Review. 8-24

FOR SALE BARGAINS

BUSINESS

FOR SALE—Ice and ice cream plant, ready sale for the entire product of the plant. Everything in the way of equipment almost new and up-to-date. No competition within twenty-five miles. Will invoice or sell to suit purchaser. This plant has paid me $5,000.00 a year for five years, I am ready to quit, who wants it? Address Chas. B. Porter, Greenwood, Delaware. 8-24

FOR SALE—Ice cream and cold storage, about 300 gallon capacity. Louisiana town 6,000 population. Good proposition in a good lumber manufacturing town; ten lumber mills pay roll every week. No opposition; splendid shipping facilities; good roads to surrounding towns. Lots of dairies, but no creameries. Must sell on account settling with heirs. Address: R-375, Ice Cream Review. 9-24

FOR SALE—Small Oklahoma creamery and ice cream plant, well located, now operating, increasing each year, pay $1500.00 cash balance on time. Address: R-340, The Ice Cream Review. 10-24

FOR SALE—A small but modern creamery and ice cream plant doing a fine business, in Kansas town of 3,000. $10,000.00 plus stock will handle business, and $12,000.00 for building. Will sell business with long lease on building. This is an opportunity for two good experienced men with the cash to handle it. I have no time to write to information seekers, but if you mean business, investigate this at once. Address: R-437, The Ice Cream Review. 8-24

GREAT OPPORTUNITY.

FOR SALE—EASY TERMS—An old established, fully equipped, up-to-date, wholesale ice cream plant in one of the largest cities in the East. Only reason for selling, other interests. Conveniently located in the heart of the city. Modern and up-to-date equipment. Good business all the year around. 1923 business about five hundred thousand gallons. None but principals considered. References exchanged and strictly confidential. Apply to R. J. Decy Sales Corp., Marbridge Bldg., 34th St. and Broadway, New York City. 8-24tf

FOR SALE — A prosperous ice cream, butter and produce business, located in Iowa. Equipped with refrigerating machine, ice making tank, and all necessary equipment for turning out 400 gallons ice cream and 1,000 lbs. butter daily. All in A No. 1 condition. Also 2-story brick building and new ice house. This is not trading stock, but an old established business. No traders or agent need answer. Ill health reason for selling. Address: R-391, The Ice Cream Review. 8-24

Don't let that used machinery of yours stand in your way. Turn it into cash by advertising it for sale in the "Review" Want Department.

FOR SALE—Small ice cream and ice plant, splendidly located in an Ohio town, making twelve thousand gallons of ice cream and about a thousand tons of ice a season. Business well established and making money. Address: R-380, The Ice Cream Review. 10-24

MACHINERY AND SUPPLIES AND BOILERS, NEW AND SECOND HAND

Electric Motors, Engines, Pumps, Pipes and fittings, Valves, Belting, Shafting, Bearings and Pulleys. Money Saving Prices. Harris Machinery Co., Minneapolis, Minn. 8-24tf

FOR SALE—Refrigeration Machine—Used. We have several used and new machines of nationally known make, which we can sell at a big saving to you. Will erect and guarantee the plants fully. Erecting Engineers Company, 4421 Carroll Ave., Chicago, Ill. 8-24tf

FOR SALE—New, never been used, 3 ft. Rogers vacuum pan complete with 4 ft. hot well and steam driven pump. Price $1,750.00. Address Crane Co., St. Paul, Minn. 8-24tf

FOR SALE—Ft. Atkinson 40 and 100 qt., Miller 40 and 80 qt., Thompson horizontal and vertical machines, never used, and other belt and motor drive freezers at very attractive prices; also 100, 200, 400 and 800 gal. homogenizers and viscolizers, vats, cans, cabinets, etc. Send for complete list. Philadelphia Retinning Co., N. Philadelphia, Pa. 8-24tf

FOR SALE—2 ton Clinton—2 ton York—4 ton Brunswick—4 ton Baker—4 ton Remington—6 ton Continental—6 ton Vilter—8 ton Brunswick—8 ton Remington—35 ton Wolfe Linde—50 ton Vilter—50 ton Penna. All with high sides. Belt or steam. Address Berryman, Bourse, Philadelphia, Pa. 8-24tf

FOR SALE—50 ton refg. horizontal D.A. compressor direct connected to 125 h. p. Corliss engine; $1,250.00 net f. o. b. Philadelphia.

35 ton refg. horizontal D.A. compressor direct connected to 75 h. p. Poppet valve engine; $1,450.00 f. o. b. Atlantic City, N. J. New compressor.

All types and sizes refrigerating machines and supplies. Address Berryman, Bourse, Philadelphia, Pa. 8-24tf

FOR SALE—One model D Mojonnier milk tester equipped for 110 volt direct current. This machine has been used only a few months, is in perfect condition, and will sell at a bargain. Address Hershey Creamery Co., Harrisburg, Pa. 8-24

FOR SALE—Horizontal steam engine 30 horse-power, best of condition, cheap for quick disposal as we are changing to oil engine. Address Herman A. Woodfield, Galloways, Md. 8-24

Sent postpaid anywhere on Receipt of $2.00.

The Olsen Publishing Company,
5th & Cherry Sts., Milwaukee, Wis.

FOR SALE—York 12 ton refrigerating plant, complete. York 3 ton refrigerating plant, complete. Remington 4 ton refrigerating plant, complete. The above plants are all of the latest type twin cylinders, single acting, enclosed, vertical, belt drive and are complete with high side. Huetteman & Cramer 50 ton refrigerating machine, horizontal, double acting, belt driven. Attractive price if moved at once. York brine coolers, 5 stands, 18 in. long, 12 pipe high, made up of 3 x 2 in. E. H. pipe. Each stand will do 15 tons refrigeration. Address Berryman Bros., 305 Drexel Building, Philadelphia, Pa. 8-24tf

FOR SALE—York refrigerating plant, latest type, three tons, twin cylinders, enclosed, belt drive with high side complete. Berryman Bros., 305 Drexel Bldg., Philadelphia, Pa. 8-24tf

FOR SALE — Cheap. A new 40-can double ice cream storage tank made of heavy galvanized iron. Address H. J. Heard, tinner, Croswell, Mich. 8-24

FOR SALE—One 40-ton Safety compressor, belt driven horizontal, double acting, complete high pressure side and in first class condition—reasonable price.

One 5x5 York, vertical enclosed, double cylinder and belt driven, with high side.

One 2-ton Brunswick, vertical enclosed and complete with high side, reasonable price.

One 15-ton Baker compressor, vertical enclosed, double cylinder, belt driven and in good condition. Write W. C. Hardy, 1215 Filbert St., Philadelphia, Pa. 8-24

FOR SALE — Complete equipment for small pasteurizing and homogenizing plant consisting of mixing tank, 200-gal. pasteurizer with cooler, 200-gal. per hour viscolizer, 400-gal. holding tank, all in perfect condition, price less than one-third cost new. Also have 8-ton York refrigerating machine with condenser, coils, etc., in perfect condition, which will be sold for best offer. Address: R-411, The Ice Cream Review. 8-24

FOR SALE — One 6-disc 20th Century milk heater with pump attached. One 200-gal. skeleton vat. This machinery has only been used one week. Will sell at a bargain. Address: R-402, The Ice Cream Review. 9-24

Tell us what you want, or what you have that you don't want, and we'll fix up a little Ad. for you and insert it in the next issue of The Ice Cream Review. You just stay at home and wait for results. You'll soon have your hands full.

10-24

FOR SALE—1 56-case milk sterilizer; 1 10-case milk shaker; 1 motor driven Burks can labeler; 1 Mojonnier sugar cooler (new); 1 12-h.p. gas engine; 1 50-h.p. steam engine; 1 No. 6 Jensen milk pasteurizer; 1 1,300-gal. glass lined milk tank; 1 1,400-gal. glass lined milk tank with brine jacket; 1 No. 41 De Laval cream separator; 1 motor driven milk pump; 1 motor driven water pump; 1 10x14x16 Wethington vacuum pump; 1 1x4 hydraulic milk pump; 1 steam brine pump; 2 400-gal. milk agitators with new coils; 1 5-foot Herman Stier condensing pan; 2 400-gal. copper forewarmer; 1 600-pound Toledo scales, new; 1 500-pound weigh can. Address Garnet Ice & Milk Co., Garnett, Kan. 11-24

FOR SALE—One Northey refrigerator in first class condition, 6x10x8 feet high. $550 value. Will sell for $100 f. o. b. Ironwood. Address Cloverland Creamery, Ironwood, Mich. 8-24

Send news items and personal notices to the "Review" and see how well they look in print.

FOR SALE—Combination store, confectionery, bakery, ice cream, soda and tea room, all doing a fine business, located on one of main streets of central Penna. city. Candy and bake shops in rear. Ammonia refrigerating plant for manufacturing ice cream, wholesale and retail. All first class equipment. Best selling price, $30,000 to quick buyer. Address: R-410, The Ice Cream Review. 8-24

FOR SALE — One Creamery Package concentrator, size 3x3, with Farrington disc preheater and cooler, complete with stack, steam guage and pressure regulating valve. This machinery is in first class condition. Priced right. Address: R-401, The Ice Cream Review. 9-24

FOR SALE — Meyer patented anti-rust direct packing ice cream wagon for sale, size No. 493, overhauled, repainted and put in good condition, painted to suit customer. Address Meyer Wagon Works, 216 Elms St., Buffalo, N. Y. 10-24

WANTED TO BUY

WANTED—Second hand viscolizer, 200 gallons per hour capacity. Address The Schuster Company, Cleveland, O. 8-24

Every Shipper of Dairy Products Should Have a Copy of the

Dairy Produce Year Book

1923 Edition, Just Out

Contains 160 pages of market statistics. Tells how to dress and ship poultry. Gives legal holidays for 1924 and list of commodities in greatest demand. Has a big "buyers' guide" and tells a lot about the markets you ship to and how to get the most out of it.

Price only 75c.

The Michigan Dairy Manufacturers Plan 1925 Convention-Exhibition

Officers Elected and Tentative Convention Arrangements Made at July 16 Meeting of Directors—Summer Outing and Another Meeting Set for August 21 and 22

THE next annual convention of the Michigan Allied Dairy Association will be held at Lansing, Mich. This was decided at a meeting of the executive committee at Lansing on July 16, at which time officers of the association were elected as follows:

President, W. A. Ross, Detroit; vice-president, LeRoy Wilson, Port Huron; secretary, R. F. Frary, Lapeer.

Dates for the convention, which will be held in connection with the usual exhibit of the Michigan Dairy Boosters, will be announced through the next issue of The Ice Cream Review, officials promise.

The meeting at Lansing next year will follow two highly successful conventions and exhibits at Kalamazoo. C. J. Yuncker, president of the Michigan Dairy Boosters, announces that although little planning has been given the matter yet, every effort will be made to make the Lansing gathering in 1925 the greatest of all the Michigan trade carnivals held thus far.

THE annual summer meeting of the association will be held at Bay City at 10 o'clock on the morning of August 21 at the Winona Hotel. The usual sport features will be included—footraces, ball games, jumping, etc. The annual banquet will be held at the beach. Then the frolickers will proceed to Lansing for another meeting of officers and directors in that city the following day, to be held at the dairy building on the Michigan Agricultural College campus at 10 A. M.

Complete details of the 1925 convention then will be worked out at that time. All officers and directors have been requested to attend the meeting—"without fail."

The 1925 convention will be in connection with Michigan Farmers' Week, tentative dates for which have been set at February 4 to 8. Definite dates, however, will be decided upon at the next directors' meeting in August. Exhibits will be held in the Armory Building on the Michigan Agricultural College campus.

SEPTEMBER 1924

HERE it is. Here is the special National Dairy Exposition number of The Ice Cream Review which we have promised advertisers and subscribers.

It is the largest and most complete issue ever published and probably the largest of any dairy trade publication ever printed. For months our artists, engravers and printers have been working on these pages, and our editorial writers and advertising lay-out men have had their part to do. No expenditure of effort and money has been spared. It is the best that we are able to produce.

Our readers have learned to expect something different each year in connection with the National Dairy Exposition. This year the big dairy event will be held in our home town. Naturally we have tried to "spread ourselves" and we hope the result will please you.

There are many features in this issue which merit the interest of every reader. A brief history of the dairy industry of our country, along with special articles on dairying in the various states, together with the history of various trade associations, are of special interest. You will want to save the issue for future reference.

We sincerely hope that you will find as much pleasure in carefully reading this number of The Ice Cream Review as we enjoy in mailing it to you. If it meets with your approval we shall be abundantly rewarded for our efforts.

ICE cream manufacturers of the nation, who accept the invitation issued by the ice cream manufacturers of Wisconsin, backed up by the management, to visit the National Dairy Exposition in Milwaukee the latter part of this month, will find their time and money well invested. They will find much of interest, not only pertaining to the entire dairy industry, but to their particular branch of it.

The man in the ice cream business who does not appreciate the importance of the dairy industry, and the relation of his business to it, is making a serious mistake. The ice cream manufacturers of Wisconsin have the right viewpoint. They know what dairying has done, and is doing, for the state. They know its relation to general business conditions. They know that more money in the hands of all the people means more money spent for delicacies, including ice cream. They know that dairying not only promotes general prosperity, but it also stabilizes prosperity. Wisconsin people and Wisconsin business institutions know no hard times.

These are the reasons why they are back of the National Dairy Exposition to a man. These are the reasons they want their brother ice cream manufacturers in other states to join with them in making their industry a big feature of the general yearly round-up. We urge our readers everywhere to make real sacrifices, if necessary, to attend the National Dairy Exposition in Milwaukee, Sept. 27 to Oct. 4. Spend as many days as you can at the big show, but keep in mind that Thursday, Oct. 2, is Ice Cream Day.

IT'S pretty hard for a business man who is progressive in his methods and courteous in his dealings to fail. The reverse is also true and seems to prove that courtesy pays in dollars and cents even in this strenuous age of dollar worship and political uncertainty.

A few weeks ago we mailed out a return postal card to ice cream manufacturers all over the country. We explained that we were correcting our lists and asked but four questions, two of which could be answered "yes" or "no." It is perhaps needless to add that these cards were returned to us by practically all who received them, proving again to us that ice cream manufacturers are, as a rule, courteous business men.

A few did not return these cards. We are not condemning the men who failed us, but one of the cards returned the other day in a most unexpected way. It

was mailed to an ice cream manufacturer in Newman, Calif., and apparently found its way into a street gutter.

An unknown friend returned it to us with the following comments:

"It was only a postal card with an unused return card attached lying at the curb and I picked it up. The information and inquiries printed on the cards were very courteously worded and should have gained the attention of the party to whom addressed for his own self-interest if nothing more, instead of being thrown into the street. And it reminds me—

"I have a habit of taking a late evening lunch. In the summer season it is mainly ice cream. I had been served at a popular grill with ice cream that was very nice and I enjoyed it immensely. Then, one evening, and the next following, the cream was noticeably inferior and I "kicked" about it. The grill owner frankly admitted that he had made a change. The cream that I had enjoyed came from a quarter of a million dollar plant where every modern facility for producing a superior article and keeping abreast of the times was employed. The ice cream I have quit eating is made in a factory handicapped in many ways and not suited for turning out so dainty a food as ice cream.

"The name of this last factory was on the card thrown into the gutter. Seems as if there was a plain and useful moral in this incident of just a postal card with a self-addressed card attached, which was picked up and returned to The Ice Cream Review by the writer of this story."

The successful business man always has time to be courteous, either face to face or "by mail." Our unknown friend, evidently a lover of good ice cream, has rendered a distinct service to every reader of this story. He has emphasized the relationship between business success and courteous, progressive methods. We can all profit by giving earnest thought to this incident.

⚜

IT WAS our privilege to sit in at a conference of the owners and department managers of a big ice cream concern recently, said conference having been called to discuss the question of the firm's policy relative to a standard for ice cream. Nothing else was considered at that conference except the advisability of producing better ice cream.

They have always made good ice cream but not the best they can make. They have manufactured what they are pleased to term "commercial ice cream," which was made to sell at a certain price. In other words, they aimed to produce a product to meet competition on price and still make a profit.

After discussing all sides of the proposition they unanimously voted to make the best ice cream they can produce, and with their splendid equipment and experience this means as good ice cream as can be made. The manager, at the close of the conference, remarked, "This means, boys, that from now on we will forget that we have any competition in our territory. In the future we will ask a fair price for the best ice cream that money and brains can produce and we will stand or fall on that proposition."

Everyone present at that little meeting realized the seriousness of the step they took, but they took it with a determination to make the new policy win. They mean business.

We have no misgivings about their future. They will dominate their territory because we happen to know that all the other manufacturers in that section are making "commercial ice cream," which, by the way, is apparently a trade name founded on a big excuse.

Other manufacturers will undoubtedly follow the lead of this enterprising concern but they will be several jumps in the rear. Others will keep on in the old way, making a product to fit a price. The latter should not complain if they see their best trade eventually get away from them.

⚜

A VERY good friend from the East breezed into this shop one day recently and said, "I want you to give me all the ideas you can. I need them." He had in mind a certain big event in which he was one of the leading spirits. We reminded him that we are in the business of **selling** ideas and it is mighty hard to keep a stock on hand. We are sure our friend would not go into a clothing store and ask for a gift of a suit of clothes.

Ideas are probably on the "free list" because so many of them are expensive even at that price. Newspaper folks are supposed to be full of them in spite of the fact that there is "nothing new under the sun." If editors, as a class, have more ideas than other folks it is because they have better opportunities for stealing them.

The business world is clamoring for ideas and is willing to pay high prices for them in spite of the fact that they are generally second-hand products. And our friend expected us to **give** him some. No wonder newspaper men never get rich.

⚜

COMES a time in every ice cream manufacturer's career when the seeming indifference of the public to merit leads him to throw up his hands with a "what's the use?" gesture of despair. This is especially true of the conscientious manufacturer who earnestly strives to please the consumer instead of work the wires of trade politics in "hooking up" dealers.

The complaint often is raised that the manufacturer who seeks to give the public what the public wants, seldom profits from his efforts. He feels that the man who concentrates his efforts upon getting dealer representation horns in on most of the business. Unconscious exaggeration is a part of human nature. This is a good example of it. If you are making a product of unusually good quality, careful examination of the facts will show that, while men making poorer ice cream seem to have picked up a large number of dealers, those dealers probably are not selling as much ice cream as yours. Look at the matter in this way before pulling your hair and throwing up the fight.

Nothing can be more disappointing than for a manufacturer who is offering superior ice cream to see people streaming into a store selling ice cream that is not up to the best standard. It seems to him the public simply has no taste. The situation appears to be absolutely discouraging. There he is doing the best he can to give the public the safest, purest, most delectable and whole-

some kind of ice cream, paying the price for the best of ingredients, and then the other fellow sits back and smiles and pockets the coin without bothering himself to any great extent. So it seems. Yes, many of us have been over that ground.

But if you will take time off some of these days and look straight into this matter, you will find that some members of the public—a surprisingly large number—really are discriminating about the ice cream they buy. Stop in front of one of your dealers and you'll find that many people do know the way to your ice cream, and go out of their way to get it.

But why do so many of them spend their money for that terrible conglomeration that Blank manufactures? you ask. Suppose you go in and see. Order a dish of it yourself. The chances are you'll find out, if you really are honest with yourself, that Blank makes pretty good ice cream himself, even though he does seem to be spending so much of his time getting more dealers!

Most of us can make good ice cream, you know. No one man can make it all. Let's get that thought well lodged in our heads.

⚜

THE man who considers a contract, written or implied, an almost sacred obligation will, sooner or later, learn that he profits from such an attitude. He may see a temporary advantage in violating a contract, but the time is sure to come when "chickens come home to roost" and he will see the error of his ways.

There should be no distinction made between a written and a verbal contract. The man who can't or will not live up to a verbal agreement is not worth much under the other kind. There are also certain obligations imposed upon both parties to a contract which are never included in the contract. The text of the Golden Rule is never inserted, at least not to our knowledge, but it is implied just the same. The party to a contract who treats the other party "on the square" is going to see the day when he will be abundantly recompensed in some way or another. The older men in the business don't have to be reminded of this fact, but it is good advice for the younger fellows. Men, take it to heart and don't forget it.

⚜

PROPONENTS of the proposition to sell ice cream by weight seem to lose sight of the fact that the value of ice cream can't be measured that way. The housewife buys a peck of potatoes and expects to get 15 pounds of the Irishman's "favorite fruit." The same is true with most food products that she purchases. She keeps in mind food values.

When she buys a quart of ice cream, however, she is not thinking of food values. She buys it as a dessert —a delicacy that is measured by taste alone. She and those who sit at her table are the jury and they determine whether there shall be repeat orders. They are not worrying over food values.

Good ice cream is a good food, no question about that, but there is comparatively little of it purchased because of its food value. If it were necessary to sell ice cream by weight in order to protect the purchaser against fraud we would surely be in favor of it, but we sincerely believe that the interests of the consumer are better served by letting the ice cream manufacturer establish his own weight standard. Let him use his knowledge and skill to produce an ice cream to please the palates of his customers, unfettered by unnecessary and impractical rules. In other words, do away with everything that stands in the way of furnishing the consumer with high quality ice cream—the kind he likes best—at the lowest possible cost. We don't like to see unnecessary manufacturing and operating expenses added. The consumer must eventually pay for all of them, and we believe one of the best ways to encourage a bigger consumption of ice cream is to keep down the cost of good ice cream.

BULLETIN OF EVENTS

National Dairy Exposition—Wisconsin State Fair Grounds and the City Auditorium, Milwaukee, September 27 to October 4. Secretary, W. E. Skinner, 414 Carpenter Bldg., Milwaukee, Wis.

Association of Ice Cream Manufacturers of Pennsylvania and New Jersey—Eighteenth annual convention, Newark, N. J., October 14, 15 and 16, 1924. Convention headquarters, Robert Treat Hotel. Secretary, J. W. Neuman, York, Pa.

Southern Association of Ice Cream Manufacturers—Twelfth Annual Convention, New Orleans, November 14 and 15, 1924. Secretary, J. W. Clopton, Decatur Ice Cream & Creamery Co., Decatur, Ala.

Metropolitan Ice Cream Manufacturers Association—Annual convention, Newark, N. J., October 14, 15 and 16. (Tentative dates.) Secretary, W. H. List, 596 Market St., Newark.

Illinois Association of Ice Cream Manufacturers—Silver Jubilee Convention, Chicago, October 28-29, 1924. Hotel headquarters, Hotel Sherman. Secretary, N. Loewenstein, 155 N. Clark St., Chicago.

National Association of Ice Cream Manufacturers — Twenty-fourth Annual Convention, New Orleans, La., November 17, 18, 19 and 20, 1924. Convention headquarters, Hotel Roosevelt. Secretary, L. Loewenstein, 155 N. Clark St., Chicago.

Louisiana Association of Ice Cream Manufacturers—Annual convention, November 21, 1924. New Orleans, La. Secretary, N. F. Manning, Monroe.

Texas Ice Cream Manufacturers' Association—Annual Convention, Dallas, December 3, 4, 5, 1924. Secretary, A. J. White, San Antonio.

Georgia Ice Cream Manufacturers' Association—Annual Convention, Augusta, Ga., December 2, 1924. Convention headquarters, Richmond Hotel. Secretary, Sam Marshall, Marshall Ice Cream Co., Albany, Ga.

Oklahoma Association of Ice Cream Manufacturers—Annual Convention, Tulsa, December 8-9-10. Secretary, W. M. Hawk, Tulsa.

The Association of Ice Cream Manufacturers of West Virginia—Annual Convention, Clarksburg, December 9 and 10. Convention headquarters, Hotel Waldo. Secretary, C. F. Jamison, Huntington, W. Va.

Pacific Slope Dairy Show—Exposition under the auspices of the California Dairy Council with co-operation of dairy councils of the Western states and dairy divisions of the agricultural colleges and departments of the Pacific Coast states, Oakland, Cal., December 10 and 16 inclusive. Secretary-manager, Sam H. Greene, 216 Pine St., San Francisco.

Pacific Ice Cream Manufacturers' Association—Annual convention, Oakland, Cal., December 10, 11 and 12. Secretary, Bert H. Walker, Tacoma, Wash.

California & Southwestern States Ice Cream Manufacturers' Association—Annual convention, Oakland, December 10, 11 and 12. Secretary, Jay Kugler, 57 Post St., San Francisco.

Supply Men of the Pacific Coast Ice Cream Manufacturers' Association—Exhibition in connection with joint convention of Pacific Northwest, Pacific Coast and Southwestern States, City Auditorium, Oakland, Cal., December 10, 11 and 12.

Kansas Association of Ice Cream Manufacturers—Annual convention, Topeka, Kansas., December 16, 17 and 18. Convention headquarters, Hotel Kansas. Secretary, B. T. Perkins, Pittsburgh, Kans.

Arkansas Ice Cream Manufacturers' Association—Annual Convention, Little Rock, some time in December, 1924. Convention headquarters, Hotel Marion. Secretary, Charles Hooberry, Pine Bluff.

North Carolina Ice Cream Manufacturers' Association—Seventh Annual Convention, Charlotte, January 13-14, 1925. Secretary A. E. Dixon, Fayetteville.

New England Association of Ice Cream Manufacturers—Annual convention, January 21-22, Hartford, Conn. Secretary, W. P. B. Lockwood, 51 Cornhill, Room 401, Boston, Mass.

Michigan Dairy Boosters—Exhibition in connection with convention of the Michigan Allied Dairy Association, Lansing, February 2, 3, 4, 5 and 6, 1925. Exhibition headquarters, Kerns Hotel. Secretary, C. J. W. Smith, 502 Lenox Ave., Detroit.

Michigan Allied Dairy Association—Annual convention, Lansing, February 2, 3, 4, 5 and 6, 1925. Convention headquarters, Michigan Agricultural College. Secretary, R. F. Frary, Lapeer.

Comparison is Convincing

JUST compare the original Electric Weld can with other makes and see for yourself the difference.

Today there are over 1,000,000 "Electric Weld" cans in use, and we believe our success is due to the fact that we have not been compelled to bring out a new can each year, for the original "Electric Weld" idea was right and we have held to it.

Since the "Electric Weld" came out with the basic idea of "No Solder" and "No Rivets" others have tried to develop welded cans, but their experiments and changes have cost the ice cream man much money and dissatisfaction.

Demand the genuine "Electric Weld", it is still in a class by itself.

If you are coming to Milwaukee we hope you will visit the

"Welcome Sign" Hung Out at Milwaukee for Ice Cream Manufacturers by Dairy Show Officials

Record Ice Cream Features Promised for 1924 Exposition, as Officials Make Ready for Grand Opening of Dairy Classic.

Message of Welcome Issued

THE National Dairy Exposition's broad appeal to the ice cream industry, among all other branches of dairy manufacturing, was set forth in a message of welcome issued to readers of The Ice Cream Review on the eve of the exposition by officials of the National Dairy Association.

The spirit of the message was expressed in one sentence—

"We shall welcome heartily all those ice cream people who come to us, and we promise them something worth their while."

That the exposition will, indeed, be something well "worth the while" of every ice cream manufacturer is the conclusion reached by all thoughtful observers who have been studying the advance preparations from the ice cream industry's viewpoint.

There is no doubt that the dairy association this year has a full grasp of this industry's viewpoint. Leading ice cream machinery and equipment houses of the country are to exhibit. Ice cream supplies of every nature will be displayed. This will be the only thing approaching a national ice cream exposition to be held this year. Ice cream men of the nation have been invited to attend the exposition and be the guests of the members of the Wisconsin Association of Ice Cream Manufacturers.

The National Dairy Association's message of welcome to the ice cream manufacturers expresses confidence that the exposition will "surpass its predecessors in every single phase."

The part the ice cream men will play in the exposition is summed up as follows in the association's statement to The Ice Cream Review:

"The entire industry (ice cream industry) will be represented at the national exposition this year. The part that the ice cream men will play in the big show will be significant. The National Dairy Association is highly appreciative of the splendid efforts made by the Milwaukee and Wisconsin manufacturers and dealers, under the able leadership of George D. Mansfield and his associates, and trusts very sincerely that the ice cream men of the nation will respond to the committee's invitation to be present.

"In the exhibits, in the programs, and the details of the show as planned and prepared, it has been borne in mind that the ice cream men are one of the most prominent factors in the dairy industry. We should be delighted to see ice cream manufacturers from all over the country interesting people of the dairy industry in the exposition, and in getting up parties of their own to pay a visit to the show we consider the greatest of its kind in the world."

The welcome sign will hang high and wide for visitors, for, as the association's statement points out—

"Milwaukee is a city of unbounded hospitality, with a spirit of welcome that pervades all of its citizens. It has spacious hotels to house its guests during the exposition. There is a fine bunch in the industry itself here, and they will, each and every one of them, be on the job with a hearty welcome and a firm handshake for the visiting manufacturers and dealers.

"The ice cream men of Milwaukee and Wisconsin have taken this big exposition of their industry seriously. They have worked hard to make it a success, not only from their own particular standpoint, but from a general standpoint, and from the 'other fellow's' standpoint.

"A special ice cream brick has been devised for the week of the exposition, to be known as the 'Dairy Show Special Brick,' and other means of 'putting their section on the map' have been devised by the committee.

"The exposition will have much of interest, in general, and more of vital importance, in particular, for the ice cream manufacturers. The machinery exhibits alone will be of immense value, and worthy of close study.

"On the towering spire of Milwaukee's city hall, which rises to a height of over 400 feet, is a huge electric sign which says 'Welcome.' This sign will blaze forth during the week of the National Dairy Exposition, and it is emblematical of the spirit with which both the exposition and the city of Milwaukee will receive the ice cream men of the nation who wend their way to the 1924 show."

Ice cream manufacturers who feel they are more of "businessmen" than dairy manufacturers will be interested in what the association has done toward making the 1924 exposition one of broad appeal to the businessman, as indicated by the following:

"The exposition is of great importance to the industry in general. It is of prime importance that as many phases as possible of the industry come and see what is to be offered. Even to the ice cream man, or the butter man, the work of the cheese or condensery departments may prove of great interest. The family feeding exhibit is of particular im-

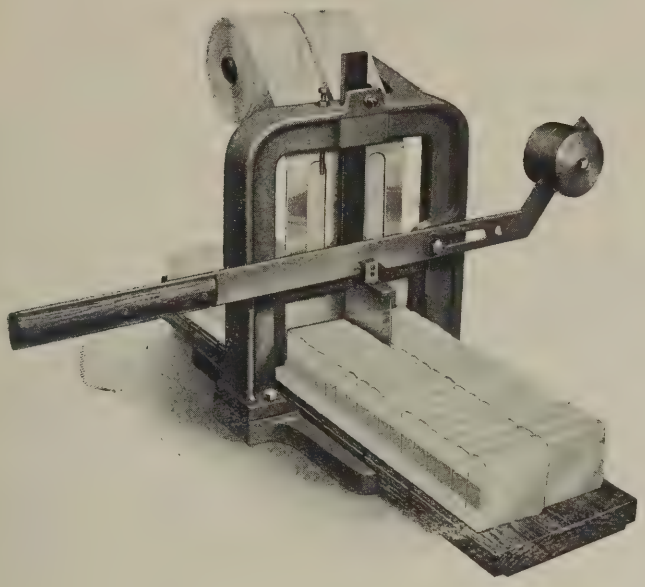
To Ice Cream Manufacturers Everywhere

Thursday, October 2, will be ICE CREAM DAY at the National Dairy Exposition.

We, manufacturers of Wisconsin and Milwaukee, are anticipating the pleasure of seeing you and your wife in Milwaukee on ICE CREAM DAY. We will have a reception booth at the Milwaukee Auditorium, where the ice cream machinery and supplies will be on display, and we will also have a reception booth in the Consumers' Department of the Exposition at the State Fair Park.

This Consumers' Department is a new feature, organized under the heading of FEEDING THE FAMILY, where an interesting collection of exhibits helpful to the housewife in the solving of her food problems will be found—Prenatal Feeding, Correcting Undernourishment and Overweight, etc. The U. S. Children's Bureau, the University of Wisconsin, Wisconsin Board of Health, Welfare and Maternity Section, scores of Milwaukee organizations interested in health and diet.



We, Milwaukee manufacturers, will have an interesting booth, showing new and attractive ways of serving ice cream. Everyone will be interested in seeing this.

Bring the wife. Write your friends from other states, and make a date to meet them at the reception booth of either department of the Show and look the exhibits over with them.

Yours truly,

WISCONSIN ASSN. OF ICE CREAM MFRS.

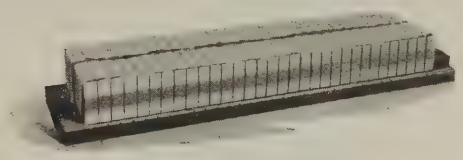
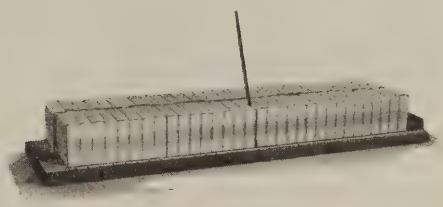
Anderson "CUT-WRAP" MACHINE

"It Wraps as it Cuts"



Simple—Practical—Fast—Low Priced

IN designing and experimenting on the Cut-Wrap idea, it was the desire to perfect a faster machine that would quickly cut ice cream slices wrapped on three sides. Our final accomplishment was greater than this, because while it does this rapidly, yet it as capably cuts quarts and pints. This wrapped idea is a good one for every Ice Cream Manufacturer — large or small.



Send to-day for Literature and Price.

The Dairy Exposition and the Ice Cream Industry

A Discussion of the Importance of the 1924 Dairy Exposition in Milwaukee and the New Orleans Convention to the Ice Cream Industry

*By O. S. JORDAN**

A STRONG, constantly developing milk producing industry in the United States and strong, healthily developing "milk converting" industries, that is, industries preparing for public consumption products composed of milk and other ingredients, are, I believe, requisites in the future economic development of the country.

As an outlet for milk, the ice cream industry's health and growth is of direct importance to the milk producers of the country. The interest of The Association of Ice Cream Supply Men is, of course, strictly in the development of the ice cream industry. It is true, however, that those whose activities relate chiefly or solely to ice cream are interested, in at least a general way also, in the progress of the butter, cheese and creamery industries as well as in the progress of the milk producers. It is also true that a percentage of the membership of The Association of Ice Cream Supply Men is interested to as great an extent in the butter, cheese and creamery industries as in the ice cream industry.

O. S. JORDAN.

The National Dairy Exposition undoubtedly is one of the great expositional events of American industry. It has been of great importance to the interests directly depending on the production of milk and will continue to have an increasing importance in that direction, undoubtedly, as milk production increases and becomes a still larger factor in America's total production of basic commodities. From the information that has reached me, I understand that this year's dairy exposition will, moreover, by the new arrangement that is to be in effect in the distinctive separation of the cattle show displays and displays of machinery and equipment for the industries using milk and cream as an important ingredient, afford the equipment and machinery manufacturers a medium more advantageous to their interests also.

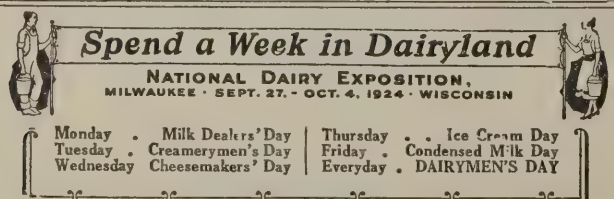
The Asociation of Ice Cream Supply Men has always felt and exercised a hearty good-will toward the National Dairy Exposition as an institution designed to serve and advance the interests of those groups of businesses dependent directly and chiefly on that animal that might almost be termed the most remarkable productive "plant" known to mankind, the cow, and that hearty good-will is, if anything, stronger now than in the past.

*President, The Association of Ice Cream Supply Men.

Schedule of Days — National Dairy Exposition

Monday, Sept. 29	-	Milk Dealers' Day
Tuesday, Sept. 30	-	Creamerymen's Day
Wednesday, Oct. 1	-	Cheesemakers' Day
THURSDAY, OCT. 2	-	ICE CREAM DAY
Friday, Oct. 3	-	Evaporated and Powdered Milk Day

The work of The Association of Ice Cream Supply Men, of course, always has been consciously confined to the one field of ice cream. In that field, the event of chief consideration of the year is the annual convention of the National Association of Ice Cream Manufacturers, to be held in New Orleans in November. The Association of Ice Cream Supply Men as an organization is naturally impressed with the importance and necessity of the activities of the National Asociation of Ice Cream manufacturers. It believes that there can be no question of the exceptional importance of this year's convention of the national asociation. Conditions of extreme importance to the ice cream industry are current this year and will be discussed and analyzed and to some degree, undoubtedly, measures will be taken properly to meet them, by the ice cream manufacturers of the country at New Orleans. Many ice cream manufacturers undoubtedly will attend the National Dairy Show, but the prime interest of the ic ecream manufacturers this year, it is probably accurate to state—and the statement is made in no attempt to speak for the ice cream men of the country but only as a summing up of the views and sentiments that are generally to be encountered— is in the convention of their national association and in the consideration of matters there that directly and more exclusively concern their particular industry and their individual businesses.



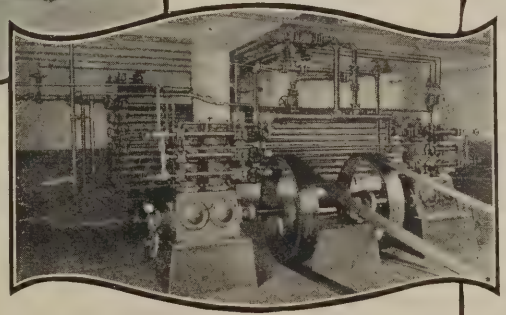
The Association of Ice Cream Supply Men is co-operating with the National Association of Ice Cream Manufacturers in many of the preparations for the New Orleans convention.

SUPPLYMEN TO ISSUE A CONVENTION EXTRA.

Announcement has been made by officials of the Association of Ice Cream Supply Men that that association will issue during the national convention at New Orleans, November 17 to 20, a publication to be called "Convention Extra."

This publication will be similar to the "Exposition Extra" issued by the association last year in connection with the Cleveland exposition. There will be three issues of the "Convention Extra," and all who wish can secure copies of these "Extras" in advance to be distributed by mail among friends of the trade.

Can You Say of *Your* Plant What *This* Ice Cream Maker Said?

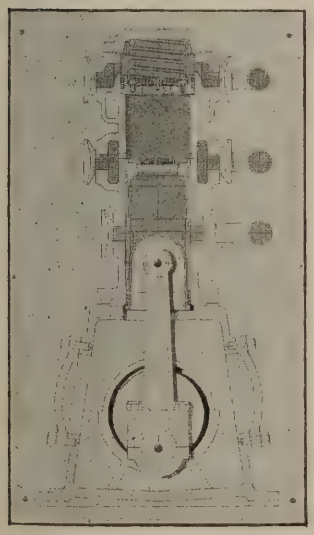


Do not fail to see our exhibit at the National Dairy Exposition, Booth 226, Machinery Hall.

SANGAMON DAIRY PRODUCTS PLANT

Springfield, Illinois

Two views of the two fifteen-ton HOWE Multiple effect Compressors installed in the Sangamon Dairy.



SANGAMON DAIRY PRODUCTS COMPANY
SPRINGFIELD, ILLINOIS

Howe Ice Machine Co.
Chicago, Ill.
Gentlemen:

Referring to the two Multiple Effect Refrigerating Machines which you furnished us, we have found them very satisfactory, and we have not had a minute's trouble with them since the plant was started.

We believe that we have the best and most economical refrigerating plant in the world of its size. The material furnished, the workmanship, and the manner in which the plant was erected, all exceeded our expectations.

Yours very truly,
Sangamon Dairy Products Company,
By L. W. Southard, Pres.

HOWE
That's Why

Mr. Southard speaks from experience—**he knows.** Will **you** be content with less when such supreme satisfaction is available? Neither are we. Then write, wire or phone us to send you the sectional working model shown at the left, which clearly reveals the interior working of the Howe Multiple-effect Compressor. A competent engineer will accompany it to answer any questions that may occur to you. Work it yourself—it's interesting as well as instructive—**it's fun.** Send the word. We assume all obligation.

N. B.—Ice Manufacturers: The same advanced engineering principles (embodied exclusively in Howe Compressors) that make the Sangamon Dairy "the best and most economical in the world," will effect similar savings in ice making and all other plants using mechanical refrigeration.

SOUTHERN CONVENTION—NEW ORLEANS, NOVEMBER 14-15, 1924.

Consumption is Higher in States with Low Standard

Statistical Survey Shows Per Capita Consumption is Less Where Fat Standards are High

*By PROF. A. D. BURKE**

FOR the year 1920 the U. S. dairy division estimates the production of ice cream at 260,000,000 gallons, a certain trade magazine at 251,000,000 gallons, while the U. S. bureau of markets and crops figures about 281,866,282 gallons, based on the assumption of the reported production being about 50 per cent complete. From this it would appear that while "figures don't lie" they may sometimes "play hob" with conclusions. Accordingly I make no claim for the accurracy of figures and conclusions. Indeed I have learned better, having been duly censored by at least one state authority for taking government estimates which showed that the folks in his state apparently did not consume sufficient ice cream. Suffice it to say the production figures in this article are obtained from two reliable sources:

1. From the U. S. department of agriculture, bureau of dairying and bureau of markets and crop estimates, listed in the column "Figures by Government."
2. By writing directly to various state agricultural dairy bureaus or to the president or secretary of the state ice cream association and listed in the column labeled "figures obtained by the writer." Obviously the latter is incomplete for records in some states were unobtainable and such are left blank.

The government figures are assumed to be about 60 per cent complete, although they represent the actual production reports of ice cream factories received for the year 1923. As for the other figures I may say that the standards for ice cream listed in the first column are the latest obtainable from the U. S. department of agriculture.

THE population figures are those published in the 1920 census reports. To be sure our population has increased and present estimates can be obtained but too many estimates may vitiate conclusions. Hence for comparative purposes and the sake of accuracy the 1920 census figures are used. The last columns of the table are self explanatory. The average production and consumption figures are obtained by dividing the total production by the total population.

What the Figures Show.

From a study of Table 1 we may observe the following:

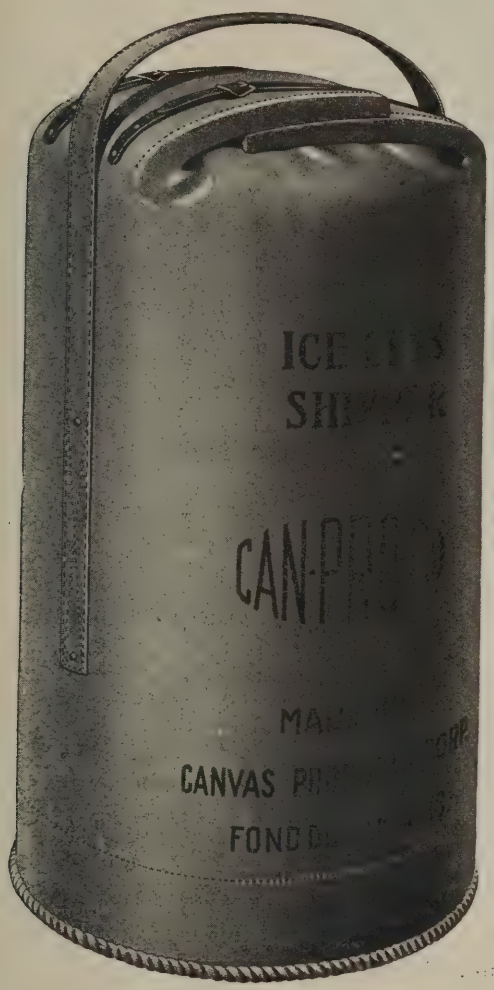
1. More ice cream is produced and consumed in those states with a low standard (8 per cent fat) than in those with a higher standard. Evidently our tastes favor a relatively "thinner" ice cream.
2. The higher the fat standard, exclusive of states with no reported standard, the less the per capita production and consumption of ice cream.
3. The production and consumption of ice cream is 2.35 pounds greater per capita in states with an 8 per cent standard than in those with a 12 and 14 per cent standard.
4. The production and consumption in states with no reported standard is exceedingly low. Some of the attributing causes may be
   1. Neighboring states with a relatively high standard.
   2. The majority are southern states and production in the South is less than in the North.
   3. A low quality of ice cream may be produced.
5. The average per capita production of ice cream in the United States
   1. Figured on the basis of 183,412,000 gallons as reported by the U. S. bureau of dairying and bureau of markets and crops, is about 1.73 gallons.
   2. Figured on the basis of the above estimate being 60 per cent of the total production,—is 2.78 gallons.
   3. Figured on the basis of 294,900,000 gallons as reported by the U. S. bureau of agricultural economics,—is 2.78 gallons.

These figures are based on the 1920 census reports. Assuming an estimated present population of 110,663,501 the above figures would be correspondingly less i. e.

1. 1.65 gallons.
2. 2.66 gallons.
3. 2.66 gallons.

From table 2 the following facts are apparent.

1. There is a great variation in fat requirements of ice cream in the different states, all of which tends to indicate that if a party from Wisconsin wished to market ice cream in Michigan and Illinois it would be necessary for him to manufacture three different grades or take a loss on his product in the two states, both of which require a lower fat standard than Wisconsin. The same variation may be observed in other states. Apparently a little more standardization of ice cream laws would not be out of place.
2. The greatest uniformity in fat standards is found among the middle Atlantic, south Atlantic and Pacific states.
3. The greatest production and consumption of ice cream takes place in the northern and upper Mississippi valley states and the least production in the South. Climatic conditions, quality of the product, population, markets and numerous other factors may be contributing causes for the noticeable variation.
4. The greatest per capita consumption and production occurs in the middle Atlantic states and the least in the East South central group. Noticeable variations in production and consumption may also be observed in mountainous and flat localities.



Undoubtedly much information can be gained by a study of statistics and although somewhat uninteresting and difficult to discuss, it is hoped that the above may prove of some value to readers of The Ice Cream Review.

(Tabulated Tables of Statistical Survey appear on pages 188, 190 and 192)

The New CAN-PRO-CO ICE-LESS SHIPPER

$5.50 EACH

20-Quart Size

NO ICE
NO SALT
NO PACKING

Weighs 1/5 of other Shippers (less than 8 lbs.)
Saves ½ the Delivery Charges
Increases Your Delivery Truck Capacity 500%
Preserves Ice Cream Eight to Fourteen Hours

PATENT APPL. FOR

The Can-Pro-Co Ice-less Shipper is constructed with insulating materials having a hard canvas inner lining, and hardened outer waterproof covering of heavy duck. Double bottoms and reinforcements where the greatest wear comes, gives the container long life.

There is nothing on the Can-Pro-Co Container and Shipper to get out of order. Nothing can break. Drop them—toss them around—up-side-down—any way. Lay them flat, all while holding can full of Ice Cream. This container is the **lightest—cheapest—strongest** Ice Cream Jacket yet devised.

The Can-Pro-Co Ice-less Shipper weighs less than eight pounds. The height of this container is less than 24" and the diameter is 12", made for regular twenty-quart cans. You can ship Ice Cream to your customers at less than half the former express charges. Think of this tremendous saving. Think of the ease of the delivery. No salt or Ice. No packing. Just drop the cans of cream into the container, buckle it up and you're ready. Load your truck. Any truck will do. Pile them up like cord wood, and you'll be surprised how many you can load. One man does the work of three. One truck carries the load of four as formerly.

FREE TRIAL OFFER We will ship this new container for free trial and examination, prepaid, to any Ice Cream Manufacturer. You will be convinced, and astonished at the ease and economy of this jacket, as well as the efficiency demonstrated. We will bill you in the regular way at $5.50, price of same, and if you do not find it the greatest little shipper you ever had—return it for full credit.

Plans Go Forward for National Convention at New Orleans

Officials Moving for Highly Interesting Features at Twenty-fourth Convention
Ice Cream Special to Carry Many from Chicago and Surrounding Points

THE National Association of Ice Cream Manufacturers is shaping up its plans for the 1924 annual convention, which will be held in New Orleans November 17, 18 and 19, just at the close of the Southern convention in that city.

Assurance already comes from the South that much interest is being taken in the convention this year, and there is little doubt that the 1924 convention will find Southern ice cream manufacturers taking more interest in the affairs of the National Association than at any previous time in the history of the body.

Secretary N. Loewenstein recently issued a bulletin telling of the plans of the 1924 national convention, stating that the program committee is putting forth every effort to make this convention surpass all previous ones. He requested members to advise the nature of any subjects which they feel should be discussed, suggesting that they send in names of speakers that they would like to hear at the convention.

As previously stated in The Ice Cream Review, the Association of Ice Cream Supply Men is in charge of entertainment in connection with the national convention, and it is promised that some very novel and interesting features will be provided. Special entertainment features are being prepared for the benefit of the ladies expected to attend the convention, it being expected that there will be more ladies in attendance this year than at any past convention.

IT IS around the special train that is to go to the convention that much interest centers. An "ice cream special," made up of all-steel Pullman cars, with two diners and observation car, will leave Chicago over the Illinois Central railroad at noon Saturday, Nov. 15. This train will convey manufacturers residing in and about Chicago, or coming through Chicago. Arrangements will also be made for special sleepers out of St. Louis and other intermediate points for connecting with this train.

The secretary requests members to make this convention their vacation. He spoke as follows on this subject:

"Let your vacation be a trip for yourself and family to the convention. It will mean recreation and enjoyment for you, as well as putting you in touch with many men who have spent the greater part of their lives in the ice cream industry, and who are thoroughly conversant with the various problems the ice cream manufacturer has to meet. By this personal contact many of your problems may be solved for you.

"Do not miss this convention. Mark the dates on your calendar, if you have not already done so, make hotel reservations at once.

ARRANGEMENTS have been made with the United Fruit Company for the sailing of one of their finest boats from New Orleans on Saturday, Nov. 22, for a seventeen-day trip to Cuba and the Panama Canal Zone and return to New Orleans. The enclosed pamphlet will give you information in detail, indicating the wonderful trip which has been mapped out at a minimum of expense.

"Rates for the 17-day trip—'All Expense Cruise'—including side trips as well as hotel accommodations on the Isthmus, $250.00 and $285.00 per person for staterooms with running water. Each stateroom is provided with two beds instead of upper and lower berths.

"Cabin rooms, with bath, $680.00 for two passengers.

"Parlor cabin rooms, with bath, dressing table, etc., $800.00 for two passengers.

"Cabin and parlor rooms will also accommodate a third passenger for $250.00.

"In addition to the foregoing a government tax of $5.00 per passenger is charged.

"In view of the fact that a number of reservations have already been made it will be necessary, in order to secure desirable accommodations, that you communicate at once with B. J. Schilling, Transportation Manager, 620 Marquette Bldg., Chicago, Ill., who will also furnish you with full information and details regarding this trip."

Dixie Flyers Adopt Definite Exposition Plans

Officials and Committeemen Arrange for Record Exhibition and Elaborate Entertainment Features at New Orleans in November

FINAL approval was given the plans thus far formed for the exposition of the Dixie Flyers and the entertainment to be provided by the Dixie Flyers for the convention of the Southern Association of Ice Cream Manufacturers, at a meeting of the general committee at Roosevelt Hotel in New Orleans on Saturday, August 9. The committee took up in earnest the part the Dixie Flyers will play in the Southern convention to be held in New Orleans, November 14 and 15, which will be followed by the annual convention of the association of ice cream manufacturers, on November 18, 19 and 20.

The stamp of approval placed upon the entertainment plans of the Dixie Flyers gives assurance of what is expected to be the most elaborate entertainment program yet provided for an association that is famous for the social features of its convention. Elsewhere in this issue appears an announcement by The Association of Ice Cream Supply Men of the splendid entertainment features to be provided for the National Association of Ice Cream Manufacturers, the supply association having an understanding with the Dixie Flyers that the former will provide for the fun and frolic of the national delegates.

The general committee was attended by H. A. Benners, president of the Dixie Flyers; F. W. Hooton, vice-president; P. N. Miller, Jr., secretary; J. G. Moore, chair-

National Advertising is Recommended At New York Meeting of Ice Cream Officials

SUPPORT OF ADVERTISING CAMPAIGN TO BE ASKED AT NATIONAL CONVENTION

ONE of the important matters that probably will face the 1924 convention of the National Association of Ice Cream Manufacturers is that of national advertising. Action in this direction was started at a meeting in New York City on August 28, called by the committee on national advertising from the National Association of Ice Cream Manufacturers. The meeting was attended by officials of The Association of Ice Cream Supply Men, the president, Oliver S. Jordan, acting as chairman. Secretary-Manager Roberts Everett filled the role of secretary of the meeting.

Full endorsement of the attempt on the part of the national association's advertising committee and officers of the supply association was given in a resolution adopted at the meeting. The resolution, which is to be referred to the national convention in November, recommends that definite support be given for carrying out the advertising plan for one year on the following basis:

"One-half of one per cent of gross annual sales contributed by such members of supply companies as, in approximate figures, have total annual sales equivalent to 40 per cent of the estimated gross annual sales to the ice cream industry by members of The Association of Ice Cream Supply Men."

ICE cream men who have closely followed activities looking to a national ice cream advertising campaign are impressed with possibilities in this direction. Developments at the national convention will be watched with great interest.

Among those attending the New York meeting last month, which was held at the McAlpin Hotel, were:

W. A. Schwindeler, Carpenter Ice Cream Co., St. Louis, chairman; G. W. Kenison, Jersey Ice Cream Co., Lawrence, Mass.; A. E. Dixon, secretary North Carolina Ice Cream Manufacturers' Association, Fayetteville, N. C.; E. K. Finneran and F. W. Gentleman, Gardner Advertising Agency, New York City; O. S. Jordan, Brown & Shaw, New York City, president, The Association of Ice Cream Supply Men; H. H. Miller, H. H. Miller Industries Co., Canton, O., vice-president The Associatin of Ice Cream Supply Men; Thos. D. Cutler, The Ice Cream Trade Journal, New York City, treasurer The Association of Ice Cream Supply Men; B. B. Scott, Providence, R. I., director, The Association of Ice Cream Supply Men; E. W. Skinner, Sealright Co., Fulton, N. Y.; O. O. Lund, Eskimo Pie Corp., Chicago, Ill.; Roberts Everett, secretary-manager The Association of Ice Cream Supply Men, and Charles W. Caldwell, assistant secretary-manager The Association of Ice Cream Supply Men.

Dixie Flyers Adopt Definite Exposition Plans

(Continued from page 14)

man of the entertainment committee; E. K. Strahan, member of the entertainment committee, and O. E. Schupp, chairman of the boat-ride committee.

Benjamin C. Brown and E. B. Geisel of New Orleans represented the Southern Association of Ice Cream Manufacturers at the meeting, which was marked by the reading of detailed reports for the approval of the various committees. The program unanimously decided upon is virtually the same as outlined in previous issues of The Ice Cream Review.

The committee visited the Winter Gardens and made a thorough inspection of all facilities as well as conveniences for handling the visitors at the convention; finding conditions to be ideal, the committee instructed officers of the Dixie Flyers to proceed with final arrangements.

Heavy application for exhibit space in connection with the Southern convention has made it necessary to increase the number of booths.

The entertainment program formally approved at the meeting follows:

Friday, November 14, 9 A. M.—Opening of Exposition at Winter Garden.

Friday, November 14, 12 M.—Buffet Luncheon served at Winter Garden.

Friday, November 14—Luncheon by Ladies' Auxiliary. Place to be announced later.

Friday, November 14, 9 P. M. to 1 A. M.—Louisiana Jambalaya, Vaudeville, Dancing and

Saturday, November 15, 12 M.—Buffet Luncheon, Winter Garden.

Saturday, November 15, 2 P. M.—Matinee Party to Ladies' Auxiliary, Orpheum.

Saturday, November 15, 8 P. M.—Banquet Southern Association Ice Cream Manufacturers.

Sunday, November 16, 10 A. M.—All Day Boat Ride, Steamer Capitol, to Ellington Plantation.
Boat leaves New Orleans 10 A. M.
Arrives Ellington Plantation 1 P. M.
Leaves Ellington Plantation 3 P. M.
Arrives New Orleans 7 P. M.

In connection with the entertainment program, President Benners has made the following announcement concerning features. "The Famous Gold Jazzers" of the Steamer Capitol will furnish music throughout the entire day. Refreshments will be served on board.

"The Steamer Capitol is one of the largest and finest boats on the Mississippi River and will accommodate 3,500 persons.

"The Dixie Flyers now extend a most cordial invitation to the members and ladies of the Southern Association of Ice Cream Manufacturers and visiting ice cream manufacturers to join them in the biggest convention of ice cream manufacturers ever held in the South. We have provided a program which we are sure will provide a continuous and most delightful entertainment during your visit to New Orleans and as each and every member of the Dixie Flyers have appointed themselves a committee of one to look after your welfare, you are assured of a most enjoyable visit."

The traditional spirit of Southern ice cream men toward their ladies was shown in the following urgent request by President Benners:

"And most important of all, 'BRING THE LADIES,' as they will be our special guests."

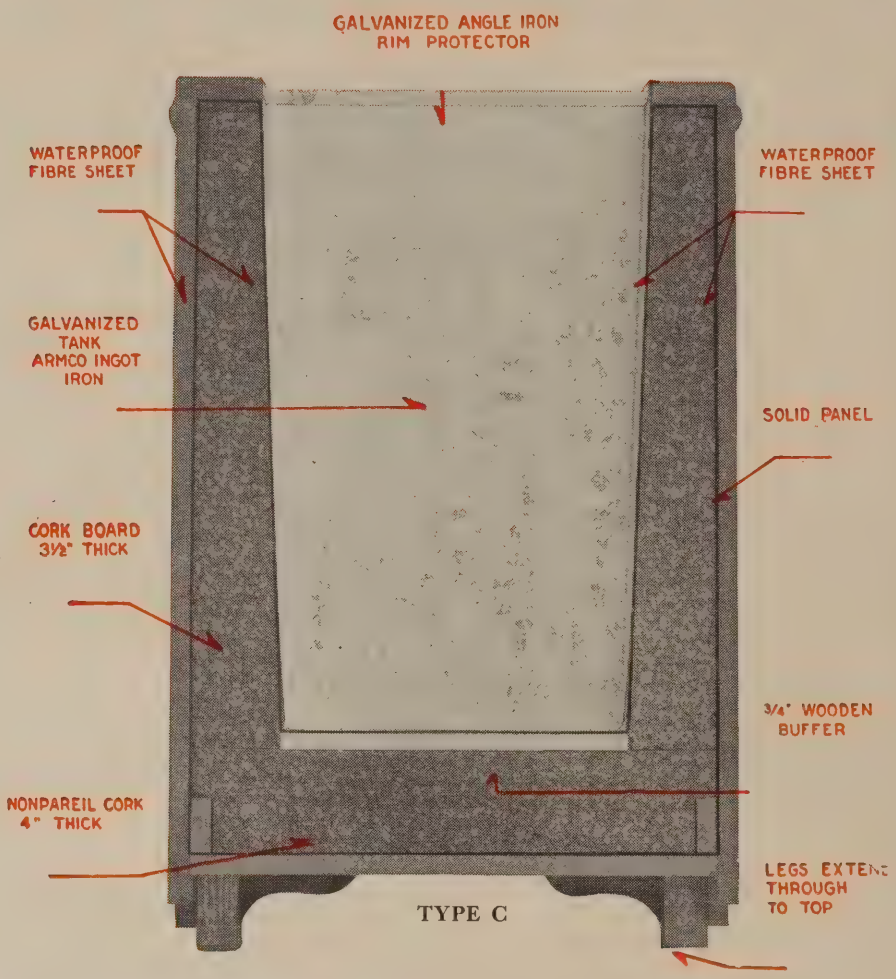
BUTTER SCOTCH ICE CREAM

originated with SCOTCH BOB

Butter Scotch Ice Cream owes its amazing success to SCOTCH BOB, for this Kay-White product gives it the rich, distinctive taste of Old-fashioned Butter Scotch candy and pie.

With SCOTCH BOB you are *certain* to produce that same rapid-selling Butter Scotch Ice Cream that other manufacturers are running day in and day out.

SCOTCH BOB, not being a liquid or an extract — but *real Butter Scotch* — develops unusual smoothness.



All these qualities: NEWNESS, TASTY FLAVOR and SMOOTHNESS, are what the Public wants. SCOTCH BOB is reasonable in cost and within the reach of every manufacturer. Send for trial keg at $10, and *try it!*

MOST ECONOMICAL OF
ECONOMY CABINETS

TYPE C

This ECONOMY CORKBOARD CABINET has created a sensation among the ICE CREAM MANUFACTURERS who have come to realize that superior insulation means money saved in ice consumption.

In addition to having superior insulation this cabinet has a tapered trough, conserving the ice and at the same time giving more insulation where the brine accumulates. This cabinet is equipped with cylinders, making it easy to replace a can of cream at any time.

Every MANUFACTURER owes it to himself to give this cabinet a thorough trial. Place your order now, increase your sales, by having your ice cream kept in the best condition with the least possible ice consumption, and INCREASE YOUR PROFITS.

This tapered cabinet has an average of 3" corkboard on the side and 4" on the bottom, lined on both sides by water-proofing paper. Equipped with ⅞" buffer board to protect bottom of cabinet, making a cabinet that is far superior to ordinary styles.

Tub Cabinets. This separate compartment is especially designed for rural trade, as one compartment alone can be used without being compelled to ice the entire cabinet. The tubs of the cabinets are especially treated to prevent leakage.

Dry Package Cabinets. Most efficient dispenser of Brick carton, dry bulk package, or Eskimo Pies. Each package goes to the customer in perfect condition, having had superior refrigeration in a container totally surrounded by ice, in a cabinet heavily insulated with cork.

Ice Cream Carbonated Beverages

Price, $2.00

Written and Published by the

Warner-Jenkinson Co.

ST. LOUIS

A complete treatise, written in the fewest possible words covering ice-cream making in all its phases. No ice-cream maker can afford to be without a copy. The following subjects, among others, are amply covered:

Composition of milk and cream.
Standardization of the mix.
Standardized formulas.
Simplified methods of calculating any mix.
Laboratory testing methods.
Bacterial count.
Nature of Vanilla Extracts.
Certified Food Colors.

A copy of this work will be mailed free to any customer on our books who applies for one. Any ice-cream maker not listed as a customer can obtain a free copy by sending in the following coupon (trial order) with money order for any *one* of the items specified.

If you do not require any goods, send us $2.00 for our book anyway and if you do not think it worth the money, mail it back in five days and we will refund.

To the Warner-Jenkinson Co.,
St. Louis.

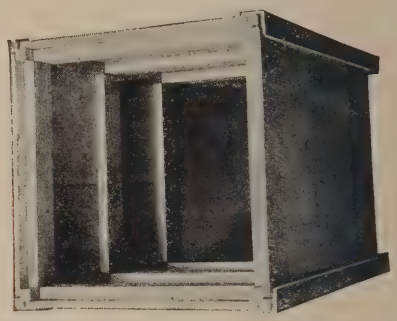
Price and Quality

Featuring a One-Piece Insulation and A Non-Leak, Metal-Lined Cabinet

Give us a trial on your fill-in orders and we will convince you that your troubles as to leaky Cabinets are at an end.

OUR 30-DAY GUARANTEE PROTECTS YOU AND MAKES A *Satisfied* CUSTOMER FOR THE



Stryker Cabinet

We are prepared to make immediate shipments.

THE STRYKER KOT-N-WOOD PRODUCTS CO.

Box 2307 Dept. C.

MEMPHIS, TENNESSEE

The super-structure of our Cabinets are made with 2x2" hardwood posts full length of Cabinet (note interlock of sides into posts), with three cross beams, and onto this is put our clear cypress panels.

Armco Ingot Galvanized Iron Can—Highest quality galvanized metal made. Note double thickness of top and brass valve with lock nut on both sides of the can. This prevents it from ever leaking.

This shows one-piece insulation. Its insulating qualities far surpass anything else you have ever used, and being in one piece it naturally strengthens the entire Cabinet—in other words, it makes the Cabinet a one-piece proposition. In putting our Cabinets together we first make our frame, then nail our panels to same, then our can with double top is nailed into frame, after which the Cabinet is turned upside down and our one-piece insulation is put in under pressure, after which the bottom is nailed on. This prevents the Cabinet from ever giving under the strain of packing same.

No *Reason* for Low Overrun on this Account

—Says Professor Baer in his book "Ice Cream Mix":

"Many times a factory reports a low overrun and cannot locate the difficulty. **Too much mix in the freezer, overloading** or taxing the freezer beyond capacity is often the cause of an unsatisfactory yield."

(Page 50)

Patented

Let the WEIBATCH Measure Your Mix to each Freezer.

100%** Accurate by **Weight.

You wouldn't grab into your cash drawer and give a customer a handful for his change "estimating" that the amount is correct.

No:—you COUNT OUT each bit of change to KNOW you are **exactly** right so that you do not cheat the customer or yourself.

Just so with your ice cream mix.

It takes change from your cash drawer to buy it and it should be just as carefully counted out for handing to customers as ice cream.

Too much mix in a freezer cuts down the overrun and cheats you out of your profits. Too little mix encourages a quality of ice cream that cheats the customer and dissatisfied customers ruin business. So chances are you cheat yourself both ways by not having each batch of mix **accurately** weighed.

GET A WEIBATCH AND **KNOW** WHAT YOU GIVE YOUR CUSTOMERS THROUGH YOUR FREEZERS.

Each and every batch Pulled by a Weibatch is exactly the same by Weight.

Put Your Freezing on a Business Basis. It costs nothing to convince yourself of the benefit of a Weibatch. Sold under a 30-day guarantee trial. Prices on request.

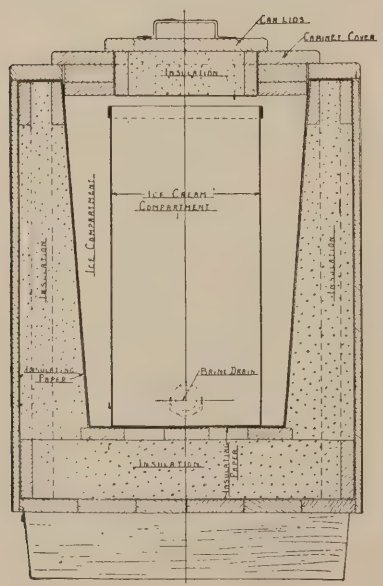
Grand Rapids, Michigan



Perfect Insulation

Keeps Cold Air In

Saves Ice and Salt for Ice Cream Manufacturers

This diagram shows why A-B Ice Cream Cabinets cut your ice and salt bills to the lowest possible figure. Notice how cream compartments and ice and salt chamber are fully protected against warm outside air. No wonder the A-B Cabinet saves ice and salt!

A-B Ice Cream Cabinets are designed and built to save ice, save salt and save money for ice cream manufacturers. Fifty to 100 A-B Cabinets will actually save thousands of dollars for the average ice cream manufacturer every year.

Cream compartments and ice and salt chamber are fully protected against outside air by an unusually efficient insulating material which surrounds the ice, salt and cream compartments on all four sides. Even the lid is fully insulated, and fits tight. There is no chance for cold air to get out nor warm air in—consequently, each icing gives maximum service and economy. A single icing will give 48 hours' service should emergency require.

Cream compartments are square and perfectly dry. All sizes of bulk ice cream containers are inserted with greatest ease—square pockets permit carrying all package cream in compact facility.

A-B Ice Cream Cabinets cost less *by the year* than any other pack cabinet you can buy. They weigh 10% to 15% less than ordinary pack cabinets, hence place no strain on your floors.

Full details and prices gladly furnished on request. Write

SOUTH CALLS LADIES TO SERVICE.

To the Ladies' Auxiliary of Southern Ice Cream Association and Dixie Flyers:

Ladies, do you realize that convention time is drawing very near and there are so many who have not registered nor paid dues for 1924? This, I know, is an oversight on the part of many of our members.

But, this year is to be the largest convention we have ever had, so I am sending an appeal to all members who have not done so to send their application for 1924 membership as soon as possible.

MRS. E. B. GEISEL.

To the ladies who have never joined our auxiliary, we extend a most sincere and hearty invitation to join. Anyone whose husband, brother or friend is a member of the Southern Ice Cream Manufacturers' Association or Dixie Flyers is eligible for membership.

The dues are only two dollars a year. These dues are to pay for a luncheon the first day of the convention, which will be this year, Friday, November 14. In this way, you meet the local ladies, who will take you in hand and guarantee to see that you are entertained and taken care of for the balance of the convention.

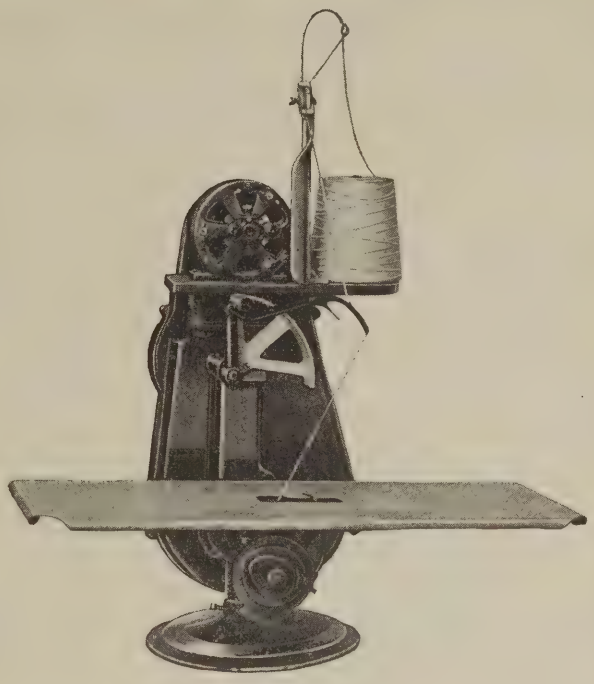
If you have never attended a convention before, make the men bring you this year. We will relieve them of all responsibility from the time you arrive in New Orleans until you leave.

The Dixie Flyers and Southern Ice Cream Manufacturers' members are planning wonderful things for the ladies this year. Our auxiliary must not be out-classed—come to our aid by attending the convention and making the auxiliary luncheon the largest and best we have ever known.

Only three months from today; so get busy and by an early reply make it possible for us to entertain you in a way that will make you all realize that you had one of the best times of your lives at the New Orleans convention of the Southern Ice Cream Manufacturers' Association and Dixie Flyers!

The program for the ladies is as follows:

Friday Noon:
Ladies' Auxiliary Luncheon—De Soto Hotel.
Friday Night:
"Jambalaya"—"A Dixie Treat of the Dixie Flyers."
Saturday:
Luncheon and Matinee.
Saturday Night:
Banquet.
Sunday:
All day Boat Trip.



Send applications and dues to: Mrs. E. B. Geisel, secretary, P. O. Box 257, New Orleans, La.

I hope you will keep me busy from now on, and I shall be happy to give any information in regard to the auxiliary or convention that I can.

Any and all suggestions which the ladies may have which will add pleasure or convenience to their stay in New Orleans will be gratefully received by your secretary.

Trusting I shall have the pleasure of seeing all our old members and greeting many new ones, I remain,

MRS. E. B. GEISEL, Secretary.

Nearly 100% Popular in Chicago

Practically all the brick ice cream in Chicago passes over the platforms of "Saxmayer" Bundle Tyers.

These clever little machines have been almost universally adopted by Chicago ice cream manufacturers, who save thousands of dollars annually through their use.

Every knot is neat and uniform.

There is no waste string.

Operator needs no experience.

Does the work of several hand tyers.

Practically nothing to get out of order.

Automatically adjusts to various size packages.

Free Trial If You Wish

We would like you to try a machine for ten days, in your own plant, on your own work.

You may return it without question, if you are not convinced that you need it, and that it will pay for itself in a short time.

BLISSFIELD, MICH.

Progress of Ice Cream Industry Features America's Dairy Development

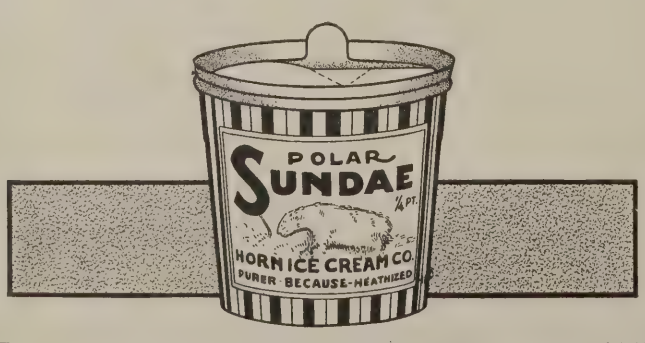
Approaching National Dairy Exposition Emphasizes Ice Cream Trade's Relation With Dairy Industry, and Their Interdependence

A REVIEW OF DAIRY HISTORY

DEVELOPMENT of the dairy industry in America, covering virtually the entire course of this country's history from early colonial days to the present age of mechanical magic, is featured by the extraordinary strides of the ice cream industry. The ice cream manufacturing business has set the pace for dairy production in America, its operations extending from coast to coast and daily growing in magnitude.

Dairy manufacturing is built on the solid foundation of the business of milking cows. This is hard to realize today. The present magnificent temples of industry in which the manufacture of ice cream is conducted have little to suggest the farmer and the milk pail. This only goes to show how far dairy manufacturing has developed from its early beginning as a "backyard industry." It has grown from a field of milkmaid romance to a mighty industry of highly colorful romantic achievement.

The milkmaids, like the poor, we shall always have with us, but commercial dairying has reached such great heights of development today that our modest lady of the dairy pail has been pushed far, far into the background.



The Perfect Package for Packaged Sundaes—

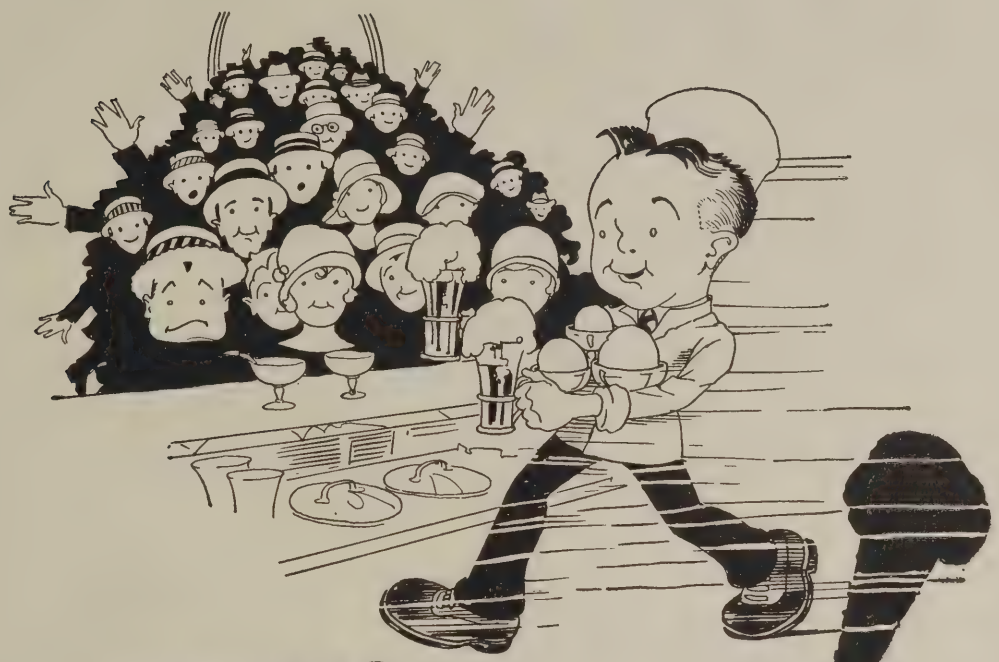
This attractive paper package will increase your sales volume—bring added profits. Used extensively by Ice Cream Manufacturers everywhere. Made of pure white paper—unwaxed. Nest when empty. Furnished printed in one or more colors with your own label.

PERFECT PACKAGE
TRADE MARK

Send for samples and quotations. Ask for the "Perfect Sundae Package." Your request in no way obligates you.

PERFECT PACKAGE CO.
NEWARK, NEW JERSEY.

But instead of departing, the days of dairy romance are in their ascendency. Every line of dairy history in this country fairly pulsates with romance of high achievements, records of adventurous heroes along the pathways of trade enterprise; bold knights of battle who have strode forward in industrial development with a spirit of do and dare such as might be envied by any ancient hero that ever shied a lance at Lancelot, lowered the gage of battle to Camelot, or stole a kiss in a far corner of his maiden's cowlot.



THE dairy cow is the cornerstone of one of the most remarkable passages of industrial romance ever recorded in this nation of magnificent trade achievements. Dairying in America has been carried to far heights of progress on the magic wings of commercial development. Intensified commerce is the story behind America's dairying progress. The farmer, formerly producer, manufacturer and merchant, now has had the greater part of his activities taken over by men who have gone far into manufacturing and merchandising sciences. This has given the farmer the opportunity to concentrate his efforts upon one thing—the production of good milk and cream. It has resulted in the breeding of better cows, the establishing of more efficient and sanitary methods of production. And the manufacturers and merchandisers of dairy products have been allowed to devote themselves entirely to their business of getting dairy products before the people on the largest scale possible at minimum cost and with due regard to public welfare.

Dairy commerce has enabled the farmer to get more for his efforts than ever could have been the case through methods of the olden days; it is this which is responsible for the great industries that today revolve around the gentle cow of the meadowlands.

THE most salient point in connection with America's dairy history and the relations of the ice cream manufacturer with the milk cows is the fact that as the ice cream industry continues in advancement, ice cream manufacturers themselves are drifting far from their base; we are getting away from fundamentals. Dairy observers are generally agreed that the modern tendency is too much toward industrial principles, with the ice cream men drifting away from the fact that the cow, after all, is the industry's great anchor, the fountain of supply.

This particularly comes to mind as we see the ice cream industry today at close grips with the matter of boosting consumption. The average ice cream manufacturer often finds himself forgetting the importance of the cow. Whereas, other branches of dairy manufacturing are giving their attention to the matter of spreading and intensifying dairy farming in America, some ice cream manufacturers show little interest in this line of endeavor. This is a tendency that must be corrected, many believe, if the advancement of the ice cream industry is to be as rapid as its champions wish.

It is highly significant that ice cream is being more

more business!

GOOD Ice Cream properly advertised will get more business. You know your Ice Cream, we know how to advertise it.

We've studied the advertising and selling of Ice Cream exclusively for fifteen years; worked with many of the largest manufacturers from coast to coast and are still working with them. Helped them to determine how much to spend and how and where to spend it. Supplied them with window displays, posters, direct mail pieces and newspaper campaigns; helped to build profitable business and, equally important, *saved them from frittering away good money.*

We serve one manufacturer in a territory and if your business does not conflict with someone we are now serving we should like to discuss advertising and selling with you. Write now, while you are thinking about it.

Barker Duff & Morris

Union Trust Building
Pittsburgh, Pa.

generally consumed, all other things considered, in those states where dairying is farthest in advancement—Pennsylvania, New England, Michigan, Illinois, Wisconsin, Iowa, Minnesota, Michigan, Ohio, Indiana and others. Love for ice cream is a part of the dairy appetite, an appetite that grows among the boys and girls who are brought up among dairy products—milk, butter and cheese.

The origin of ice cream, the subject of unsettled disputes among dairy historians, has no place in this discussion. It is not important to say when ice cream was first made in this country. While it is generally agreed that that charming Virginia belle, Dolly Madison, first introduced ice cream at a social at the White House (an extremely appropriate place for the introduction of a product that has become so firmly established as typically an American product, it might be said in passing), a survey of dairy records show that the production of ice cream on the wholesale principles now in vogue began about the time of the war between the states. Utah is supposed to have had an ice cream manufacturer in the form of a man named John R. Clausen of Salt Lake City in 1860. Ohioans were toasting the health of future republican presidents in ice cream at about the same time. It seems that J. T. Rausley of Cincinnati was the pioneer in that state.

JACOB FUSSELL is commonly hailed as the father of the ice cream manufacturing industry. It is recorded that he was making and distributing ice cream at Baltimore, Md., in 1851. In the year 1862, we find him plying his trade at Boston, Mass., while in 1864, this restless gentleman was in the same line of business in New York City.

Perry Brazelton of Mt. Pleasant, Ia., studied the wholesale ice cream business with Mr. Fussell in his Washington plant and later returned West and established a factory in St. Louis, and a few years later plants in Cincinnati and Chicago. Mr. Brazelton was the most successful of the earlier wholesale ice cream dealers.

The most rapid developments in the ice cream industry has taken place in the past twenty years, due largely to the great improvement in machinery and the increased use of mechanical refrigeration, principally the ammonia expansion system. The first real progress in artificial refrigeration was made in Germany in 1867, when it was used to a limited extent in breweries. Ice making soon followed and its use in ice making was discovered largely by chance, by a large ice manufacturing plant installing an ice cream department to utilize broken or waste ice.

Kansas did not have an ice cream manufacturer until 1882, according to one eminent chronicler of dairy history, Prof. M. Mortensen, instructor in dairying at the Iowa State University, whose speech on the "Early Development of the Ice Cream Industry," delivered befor the World's Dairy Congress at Syracuse in October, 1923, was published in the October 15 issue of The Ice Cream Review. But the investigation of the editorial staff of The Ice Cream Review brings to light the information that the Jack Rabbit state was one of the very earliest pioneers in the industry. It is recorded that ice cream was being manufactured in that state as early as 1866.

THE strangest kind of a paradox is encountered in compiling a history of the American ice cream industry when we get to the point where one part of the country, the cold and wintry North, begins rapidly to draw away from the mild and temperate South, where the art of manufacturing ice cream actually was introduced, according to what seems to be the most acceptable source of information. More than one reason is found when the matter is considered. It was at the time that the grim, black wings of war were hanging heavily over the Southern states that the development of the ice cream industry began.

People in that state were singing, "Maryland, My Maryland," and urging their legislators to take part in the rebellion at the time that Jacob Fussell was manufacturing his tempting frozen dessert in Baltimore. The close of the war found the Southern states in a state of complete financial collapse, with absolutely no currency. And while the rest of the nation was going forward with the exploitation of the industry, the Southerners were swapping potatoes for beans, wood for clothes, and were desperately working to re-establish a semblance of economy and industry.

It was due more to the resultant depression that gripped the Southern states than anything else that the manufacture of ice cream did not assume any important proportions until the early part of the twentieth century, a brief quarter of a century ago, and due to the aggressive competition offered by the soft drink manufacturers of the South, where that industry is in its greatest stage of development, the Southern ice cream men have been delayed in their efforts to boost consumption until the last two or three years.

A DEVELOPMENT that is expected to do more than anything else toward promoting ice cream consumption in the South has come about since the 1922 convention of the Southern Association of Ice Cream Manufacturers at New Orleans, when the association set forth with a highly laudable program of standardization to guarantee quality production in the South. plan would require every member of the association to maintain a certain standard of quality, and in so doing be entitled to display on the windows of his dealers and on the ice cream packers from his factories the "Seal of Quality" adopted by the association. The seal stands as a guarantee of merit, the public's mark of protection. The association's plan further calls for the extensive advertising of this seal to impress upon the public that members are producing a product of the safest and most wholesome nature.

THERE never have been accurate figures given as to the exact output of ice cream in gallons, due to the fact that much of it has been produced by foreigners who refused to give any figures for the government reports for fear of disclosing their methods and receipts," according to J. L. Swager, in a speech before the West Virginia convention last winter. "The last ten years have seen much improvement along this line.

"The figures available in 1913 indicated the gallonage in 1913 was one hundred fifty-five million gallons. E. C. Sutton of the Wheat Ice Cream Co. estimated the value of ice cream manufactured in the U. S. in 1922 at about one hundred sixty million dollars.

"Estimates made by L. O. Thayer for 1920, were two hundred fifty-seven million, eight hundred thousand gallons at a value of three hundred thirty-seven million, seven hundred forty-four thousand dollars."

Last year's production was in the neighborhood of 275,000,000 gallons.

THE ice cream industry really did not begin upon any important program of expansion until the introduction of scientific machinery, supplies and equipment with which to expedite and safeguard production and distribution of the product. The industry owes much to the supply houses of the early days which brought mechanical aid to the rescue of hands highly practiced but limited in their operations. It was about 1861, that the mechanical system of refrigeration was introduced on a practical commercial scale, this, incidentally, being introduced in the South. About the same time there came about the method of hardening ice cream with brine, and this made it possible for the ice cream man to turn to mechanical refrigeration. This served to bring about a great saving in labor and was more sanitary. The hardening of ice cream with brine came about at the same time.

At the present time, the fall of 1924, we find the industry fairly well along in its testing of what many believe will be the most remarkable agent of progress yet introduced to the industry—automatic refrigeration. While the principles of automatic refrigeration were being worked over for several years, it was not until the 1923 National Ice Cream Exposition at Cleveland, that cabinets providing iceless refrigeration were formally introduced to the trade. Thoroughly to treat upon this new-comer to the industry would require a separate article. It is sufficient to say that while it is probably necessary for much more work to be done toward perfecting the present system of iceless refrigeration to meet all practical demands, the champions of this commodity seem to be well justified in their belief that it is "here to stay," and that it will have an important bearing upon the future expansion of the industry seems to be clearly indicated.

The fall of 1924, finds iceless refrigeration rendering more or less satisfactory service in every state in the Union, with manufacturers of that type of equipment proceeding with enthusiastic plans for the coming spring.

WHAT seems to be a worthy ally of the iceless cabinets is the dry packer. Just as the iceless cabinet enables the dealers to keep ice cream in good condition at all times, with never any softening of the product from falling temperature with the opening of the cabinet from time to time, the dry packer enables the manufacturers to get the ice cream to the dealers in the best possible condition, proving of particular value in distance shipments.

Another development in the pathways of progress is promised in the form of a container that is expected to make it possible for ice cream to be delivered from the stores to the homes in the best possible condition, enabling the housewife to keep the ice cream hard until time to serve, either at the end of the meal or at the point in a social gathering that she deems best suited to her plans.

IT IS through iceless refrigeration, the dry packer and the promised container that some ice cream manufacturers see opportunities for the industry to make progress in the most promising field now open to the industry—the American home. It has long been recognized that the failure of ice cream consumption to be far more greatly developed than now is the case is due largely to the fact that the industry has encountered so many difficulties in getting the product into the home. Unlike milk, it cannot be delivered in bottles at the housewife's door every morning.

The present methods of delivering ice cream into the homes came about in the last decade, and it is since the coming of these containers that consumption has so steadily increased. The ice cream cone was an important introduction, making its appearance about 20 years ago.

The BEST Vanilla Sells the MOST Ice Cream

"But it doesn't mean anything"

You appear to save a few pennies by using "cheap" vanilla or vanilla substitute. But, as a famous cartoonist says, "It doesn't mean anything."

MICHAEL'S Mexican Vanilla Powder

"America's Flavorite"

saves you more in the end. Because your customers instinctively eat more ice cream when it is flavored with mellow-mild, true-bean Michael's Mexican. 25% more, as a matter of record. Would you like a 25% sales-increase? Then MAKE THE TEST!

DAVID MICHAEL & CO., Inc.
Front and Master Sts. Philadelphia, Pa.

Make This Test at Our Expense

Place a trial order. Use all you need to give it a full, fair trial. If MICHAEL'S Mexican Vanilla Powder does not produce the finest vanilla ice-cream you ever tasted, return the remainder at our expense, and we will cancel the charge. DO this, by all means.

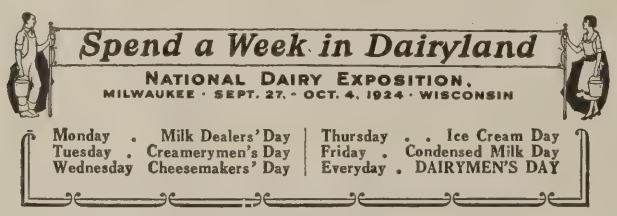
This does not touch upon all of the important supplies and equipment introduced to the industry in recent years, but simply covers a few of those that have or promise to have a material influence upon the industry's future.

THE ice cream industry has had developed a degree of personal contact that has served to solidify the industry and stimulate its march of progress since the organization of the National Association of Ice Cream Manufacturers. Few understand the great work the national association has accomplished for the trade's best interests. Only those manufacturers who have been identified with the industry for many years, and who have faithfully followed the work of the association, can appreciate what has been done to correct old trade abuses, to discourage unwise and unworthy trade practices and in general to lift the plane of this business.

The ice cream industry was little known to the American people at large until shortly after a far-seeing band of men met at Chicago in 1907, organized the national association and launched forth upon a constructive line of action that has resulted in calling widespread public attention to the scientific, sanitary business of producing the frozen beverage. Today the ice cream industry ranks among the nation's greatest.

Just as the dairy industry has emerged from a backyard, over-the-fence system of commerce, just so has the ice cream industry emerged from a back-alley, turn-the-crank business to its present magnificent structures equipped with machinery and supplies of the most advanced thought.

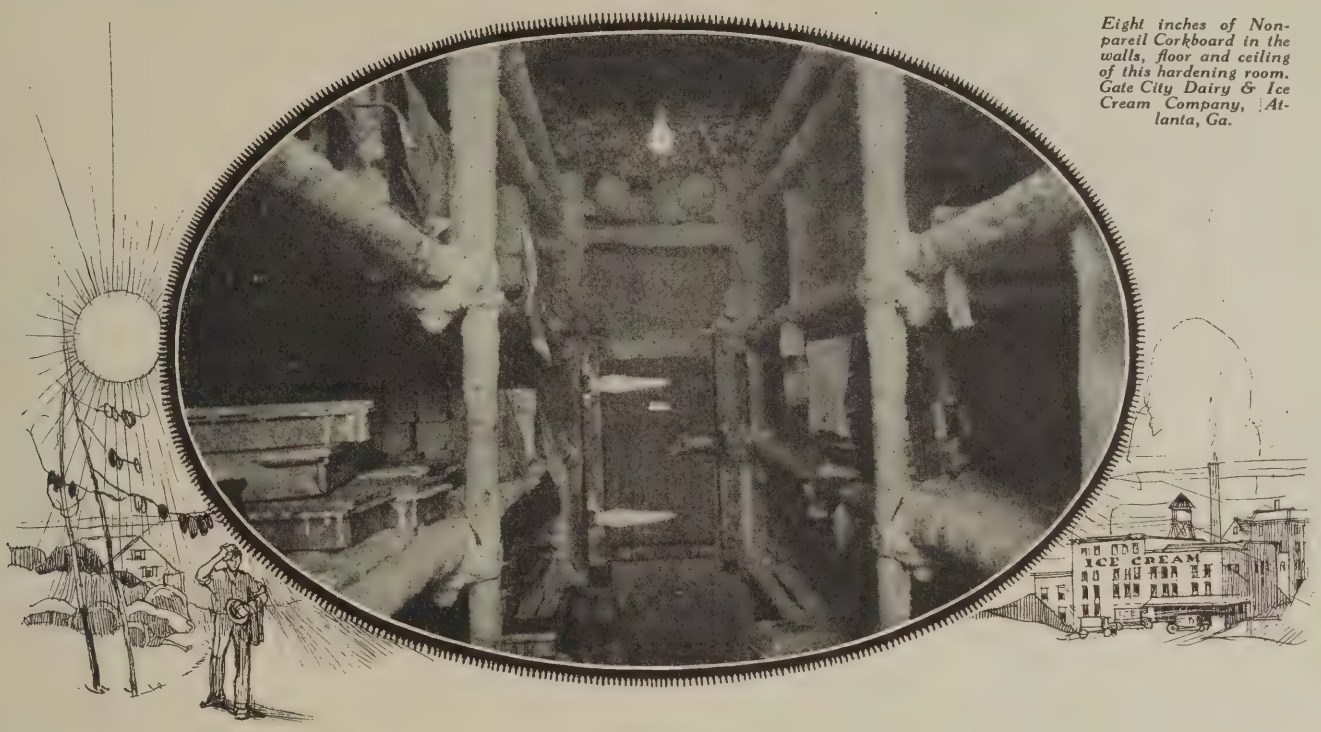
A DISCUSSION of the growth of the ice cream and dairy industry in this country would not be complete without mentioning The Ice Cream Review and the other dairy publications of The Olsen Publishing Co. The Ice Cream Review made its appearance eight years ago.



This publication immediately began to establish itself as the ice cream industry's foremost journal, spreading in popularity to all parts of the country, particularly being an influence for good in the ice cream industry of the Middle West and the South. It gradually extended its influence until today it is recognized from coast to coast, and in foreign countries where the industry is getting a foothold, as the ice cream manufacturer's silent partner. It is steadily going forward every day, leading in circulation, volume of advertising, general coverage of the industry, the presentation of helpful, informative and constructive articles, and is the unfailing friend of the men who wish to advance this industry through the medium of quality production.

It was shortly after the appearance of The Ice Cream Review that the Western and Southern states began to assume important proportions in ice cream production. The Ice Cream Review was the trade pioneer, the discoverer of the ice cream West and the ice cream South. Today it is read with equal popularity in the New England states and along the Atlantic seaboard.

The progress of ice cream production in America has been accelerated by the colleges of the country. Scientific methods for the production of wholesome ice cream are being taught in leading state universities.



The ice cream manufacturers, through their state and regional associations, and particularly through the national association, have remained a step ahead of the legislative bodies, repeatedly calling in the food officials to co-operate in getting over constructive legislation.

AT THIS time the National Association of Ice Cream Manufacturers is engaged in two very important matters. One is the matter of ice cream standards, which is expected to be settled at an early date. The other is the matter of national advertising. Readers of The Ice Cream Review are familiar with the slogan campaign conducted by the slogan committee of the National Association of Ice Cream Manufacturers, under the direction of E. C. Sutton of Buffalo, chairman

Eight inches of Nonpareil Corkboard in the walls, floor and ceiling of this hardening room. Gate City Dairy & Ice Cream Company, Atlanta, Ga.

Eight Inches from Summer

Arctic cold in this room—zero or below—and only eight inches away is the blaze of Summer.

The explanation of how two such extremes can exist almost side by side is that the eight inches is Nonpareil Corkboard. Its insulating efficiency is the barrier that makes it possible to hold hardening room temperatures in the hottest weather with very little refrigeration, or with an overnight rise of only a few degrees when the refrigeration is off.

The days of experimenting with insulation are over. Costly failures of "cheap" insulation and of incompetent and careless workmanship in erection have had their effect. Every year that goes by piles up more evidence of the superiority of Nonpareil Corkboard and justifies the farsighted policy of this Company in building up an engineering and erection service that is the standard of dependability with the dairy products industry.

Summer heat and arctic cold—it is Nonpareil that stands between them in plants that are designed for efficiency, operated for economy, and built for permanence.

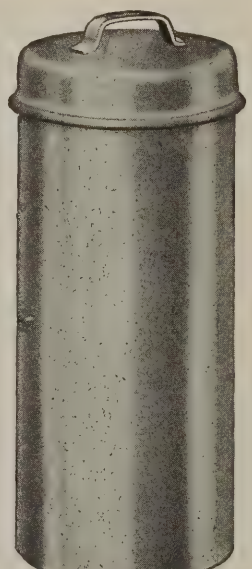
Carry Out Pail *Cedar Tub*



Better Packing

YOU cannot meet competition with poorly packed cream —

And you can't do good packing with poor tubs and cans.

Our Ice Cream Packing Tubs and Carry Out Pails are extra-heavy, seasoned, everlasting, Virginia White Cedar, painted inside and out. Heavy galvanized hoops and stamped steel handles. Illustration shows the regular Western Style Tubs.

Our Ice Cream Packing Cans embody all sanitary and retinning features claimed for seamless cans. Leakproof. There are no seams, and they are easy to clean and keep clean. Electric-welded inserted bottom — roll top edge.

Rolled Top Edge. Wire Ribbed Bottom.

It will pay you to examine your stock of tubs and let us have your order *now* before you run short. Always in stock for prompt shipment out of Syracuse.

Department B

"The HOUSE with the GOODS and the SERVICE"

GOWING DIETRICH COMPANY INCORPORATED Syracuse N.Y. U.S.A.

"Everything for the Handling of Milk and its Products"

of the committee. The winning slogan, according to plans worked out at the 1923 national convention, will be advertised to the public in all parts of the country. It is expected, through this slogan, to make ice cream as familiar a household word as flowers and flour, phones and phonographs, pies and pills.

Thousands of people are reminded of their pocketbooks every time they hear such slogans as "Say it with Flowers," "Drink Coca-cola, Delicious and Refreshing," "I'd Walk a Mile for a Camel;" and every housewife is familiar with the flour manufacturer who repeatedly tells people that his is the flour they will buy some day—"Eventually—Why Not Now?" Every housewife is familiar with the slogan of the bakers of America—"Bread is your Best Food, Eat More of It." Every schoolchild and grownup has been made familiar with the candymen's admonition—"Remember, Everybody Likes Candy."

The national ice cream slogan is expected to have the same wholesome influence upon the increased sale of ice cream that these other slogans have had for flour, flowers, candy and bread.

It has been said that the ice cream industry is in its infancy. After a half century's progress, this is strikingly evident to this day. In this discussion it has been shown how this industry has gone far in development, particularly in recent years. But in looking back over the progress that has been made in the past and giving thought to the virgin field yet unexplored, we are reminded that the greatest development of the industry lies in the future.

The time has come when we can truly refer to the manufacture of ice cream as a national industry. It is being consumed on an increasingly large scale in every state in the Union.

But the day of real achievements lies ahead for another historian.

ARCTIC COMPANY HOLDS SLOGAN CONTEST.

Ice cream men, who are thinking about a slogan for their products, will be interested in a slogan just adopted by the Arctic Ice Cream Co., Detroit, Mich., which was announced in the July number of The Arctic Circle, the company's house organ.

Walter F. Luebkert submitted the winning slogan in the Arctic Company's $100 prize contest. This slogan was, "Satisfying, Delicious, Always Nutritious."

Other slogans that won honorable mention:

"Morning, Noon or Nightfall Always Delightful." This was submitted by Charlotte Helwig, Detroit.

Arctic Brand Creates Demand"—Frank J. Bedell.

"Eat Ice Cream Always, All Ways"—Charlotte Helwig.

"It's Frozen Sunshine"—Gerald Von Kolken.

"More Ice Cream, Better Health"—Frank L. Laurence.

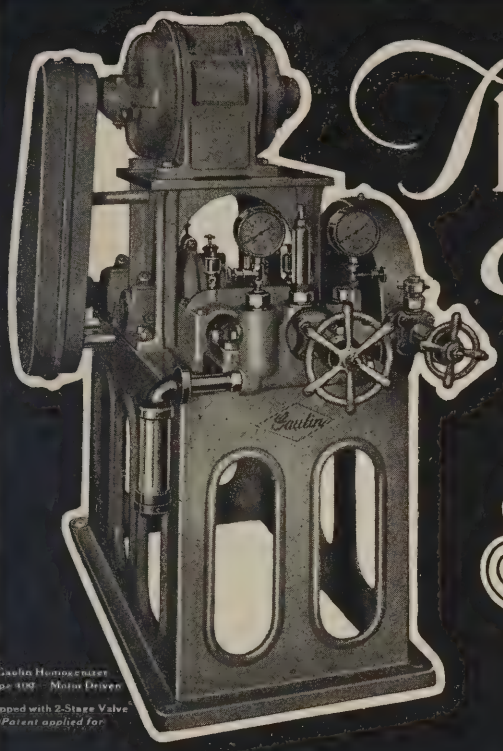
"Cone or Dish Fills the Wish"—W. T. Fripp.

"Ice Cream, the Food Supreme"—Floyd C. Feasal.

"A Food For All"—Robert G. Loomis.

"Treat Yourself to Arctic Cream"—Ben Perski.

"Arctic Best By Every Test"—Marie Vintner.



"Better Health By Eating Ice Cream"—Milton Shier.

"Eat Ice Cream, The Perfect Food"—Mrs. Hattie Vaillancourt.

"Oh, Boy, What a Scream, Ice Cream"—Orlo Swathwood.

"Right Now—Ice Cream"—George M. Matthews.

"North, South, East, West, Arctic Best"—Baby Vintner.

Gaulin Homogenizer
Type 10M Motor Driven
Equipped with 2-Stage Valve
Patent applied for

The Dependable Gaulin

The Dependable Gaulin

THE Gaulin Homogenizer is scientifically designed and built by Gaulin engineering experts who have spared no effort in producing a machine to meet every requirement essential to the manufacture of a quality product.

The "Gaulin" is a *Dependable Homogenizer*, and has no equal in quality or performance. Years of constant use by the leading ice-cream manufacturers the country over have proven its superiority over every other machine of its kind manufactured—they find the "Gaulin" *practically indispensable*. In length of service the "Gaulin" leads the field—*it is built to last.*

All Gaulin Homogenizers are now equipped with the Standard 2-Stage Valve, a recent development which insures a more thorough homogenization of the product than with the Original Gaulin Spring Valve. The dual valve feature not only increases the homogenizing efficiency over 100%, but is the only device manufactured that *positively controls viscosity.*

The results obtained by users of the 2-Stage Valve equipment have been very gratifying, and its many advantages over the single valve have resulted in its adoption as *standard equipment* in many prominent manufacturing plants where previously the single valve had been in use.

When the 2-Stage Valve was adopted as standard equipment, we had on hand a supply of Gaulin single valves, and to those who may wish to take advantage of special prices we are offering *Genuine* Gaulins equipped with the Original Gaulin Spring Valve at substantial reductions. Prices for the various sizes will be submitted upon request.

Gaulin Homogenizers will be on exhibition at the National Dairy Exposition in Milwaukee (Booths Nos. 116-117).
We invite your inspection.

Activities of The National Dairy Council

How the Council is Spreading the Gospel of Dairy Health

*By M. D. MUNN**

THE request sent me was for a "History of the National Dairy Council." History relates to a finished act or a closed period of human activity. The National Dairy Council is very much of the present and tremendously potential for the future, and for that reason what I shall say is merely a brief summary of council organization and present activities, and not a history.

In 1912, a round table conference was held at the National Dairy Exposition in Chicago, out of which was finally developed the formation of a National Dairy Council. Dr. Henry Favill was the first president of the organization, and its board of directors consisted of leaders in the organization of the National Dairy Association.

During 1914-15 certain sums were contributed, purely for advertising in certain national magazines, and two or three pages of national advertising were carried in such publications as the Saturday Evening Post. No effort was made during that period to conduct or carry on direct educational work, beyond such as might be involved in newspaper and magazine advertising.

During the world war, however, all activities of the National Dairy Council were abandoned, and in 1919 the council was re-organized and the present National Dairy Council created. On July 10 of that year an office was rented and opened up for business. This re-organization provided for a board of fifteen directors, upon which were some of the members of the former organization and many new members.

The office force at this time consisted of the president, who was in active charge of the office, and one stenographer—this comprised the entire working force of the National Dairy Council in July, 1919.

The work of building the present National Dairy Council with its affiliated and co-ordinated units was thus begun. The great fundamental question confronting those who were thus organizing the work, was "What plan of procedure would be most effective in increasing the consumption of milk and dairy products —namely, whether to continue as purely an advertising organization, or whether to abandon that theory and begin to build an educational organization?" The latter plan, strongly urged by the president, was finally adopted, and has been followed ever since. It was urged that, by making the National Dairy Council an educational organization, rather than making it a commercial advertising organization, support could be secured from various educational and welfare organizations and agencies. As a result of this plan, we have been able to secure the hearty co-operation and support of all welfare organizations and are welcomed by educational and health associations in all cities where we are carrying on our work, through the schools, women's clubs and other civic associations.

In adopting this policy or plan of educational work, it was deemed wise to advocate the observance of other essential health reqquirements, and we took as our basis the eight health rules for the reason that milk and dairy products, while indispensable in the human dietary, are most effective as foods when these other health requirements are observed. For instance, children who have the necessary amount of rest, with plenty of exercise and fresh air, and who eat frealy of leafy vegetables and fruits, in addition to drinking a quart of milk a day, will show far better results in growth and health than they will if they do not observe these added health requirements.

THE purpose of this whole program as laid out and strictly adhered to by the natonal and affiliated council units, is to place milk and dairy products in their proper relationship as fundamental and vital in any health program or health educational work. By thus teaching health and the importance of milk in a general health program, we are creating in the mind of the child, as well as the parent, the idea that milk and health are inseparable, so that when they think of the one, they necessarily associate it with the other.

The scientific conclusions of Dr. E. V. McCollum of Johns Hopkins University were receiving much public attention when the present council was organized, and we determined to build the work of the council around and on the published results and conclusions of Dr. McCollum, and this we have always endeavored to do. This necessitates the changing of food habits in adults, and building correct food habits in children. This is not an easy thing to do and requires continuous educational effort. But great progress has been made along this line and unquestionably the people of this country are

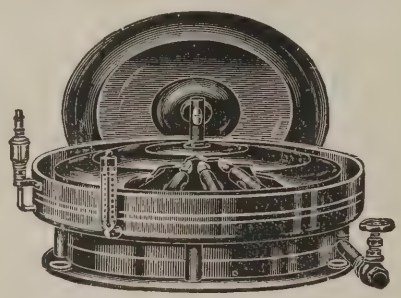
NORTH, EAST, SOUTH AND WEST—"REVIEW" IS LIKED THE BEST.

gradually but certainly changing their habits of diet by more carefully selecting foods, and are coming to realize that health depends very largely upon proper food selection.

In the past people have thought of foods only as a means of sustaining life, rather than as a means of building and sustaining health. The National Dairy Council does not claim to be responsible for all that has been accomplished in changing food habits and teaching proper health observance and requirements; but that the councils have exerted a far-reaching and stimulating influence in this work cannot be denied.

THAT this method of developing increased consumption of milk and dairy products as a fundamental essential in the growth of children and the health of both the child and the adult, has been successful, is shown by the enormous increase in the consumption of these products which has actually taken place since 1920. During 1920 there was produced in this country in round numbers 89,000,000,000 pounds of milk; in 1923 this had been increased to 109,000,000,000 pounds, and substantially all of this milk was consumed in this country in the form of milk and dairy products. This gives some idea of the far-reaching effect of this educational work. Less than four years ago the total amount of milk produced in this country, if put in ten-gallon cans standing side by side, would have reached nine times around the world; while the amount of milk produced in 1923 if placed in similar size cans standing side by side, would have encircled the earth eleven times.



The per capita consumption of milk during that time increased from forty to fifty-four gallons per year.

Write for Illustrated Circulars

THE consumption of butter has increased nearly three pounds per capita per year in the same time. And yet at the present time we are consuming but little more than half the amount of milk and dairy products that should be consumed for best results in health, as well as in mental and physical efficiency.

While less than five years ago two persons were engaged in the work, we now have more than one hundred forty people carrying on this great educational work of spreading the knowledge of the food value of milk and dairy products and their importance in the human dietary. During the past four years there have been printed and distributed by the national and local dairy councils more than 10,000,000 booklets, pamphlets, leaflets, and posters, and more than 5,000,000 children, parents, and adults have been reached through lectures, stories, cooking demonstrations, plays, and food budget lessons. In carrying on this educational work, we have developed in the national and regional council units, very definite programs and plans of procedure. We have a department for food budget meal planning and nutritional work; a department for dramatics and play work; a department carrying on story telling, which stories always carry the message of what can be gained by observing the health rules and using a quart of milk a day for each child and a liberal quantity of dairy products.

In the department of food budget and food demonstrations are well-trained women who give demonstrations before mothers' clubs, parent-teacher organizations, supper clubs, and various other groups, on how to use milk and dairy products in various forms—in the kitchen, as well as by direct consumption. In this department meal-plinning is carried on, and hundreds of thousands of cards are distributed, outlining how to plan meals, and how to use dairy products in various forms.

WE HOLD periodical conferences of our workers at different points in the United States, which are always attended by many of those interested in the industry in the locality where the conferences are held. All of our material, methods of work, together with new plans, policies and forms of procedure are thoroughly considered at these conferences and agreed upon, so that our work throughout the United States is uniform and closely co-ordinated.

The value of the work being done through the council organizations is extending far beyond the boundaries of this country. The material which we have prepared has been translated into five different languages and is used in as many different countries.

We have been earnestly requested to and have sent three of our young women members of the working staff of the council to England and Scotland, for the purpose of demonstrating how we carry on our educational work, and to train and teach a group of women in those countries so that they will be able to carry on similar work there.

The requests for this assistance have come from educators, welfare workers, and especially leaders in the dairy industry in those countries where councils similar to the National Dairy Council have been, or are being organized. The expenses of these assistants are borne by the countries where they are rendering assistance.

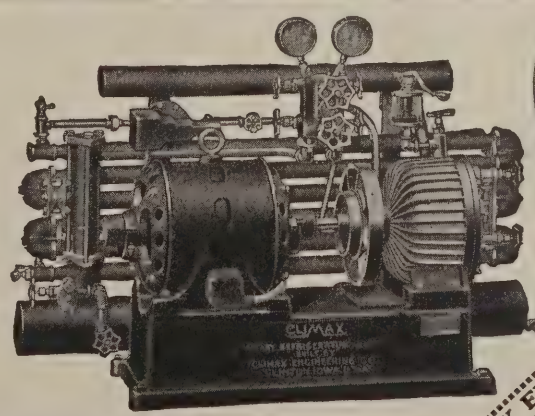
Educators, welfare workers, and representatives of the dairy industry from six different countries have visited the council offices in Chicago during the past six months for the purpose of studying our methods of work, familiarizing themselves with our material and our methods of carrying on this educational work, with the idea of establishing similar educational work in their countries. These representatives were from Japan,

Large Savings On Your *Refrigeration* —NOW POSSIBLE

Climax Model C Rotary solves one of the biggest problems you have—refrigeration. And it does it in a surprisingly economical, easy way. Here *mechanical refrigeration* is most nearly perfected. Troublesome valves are eliminated. Frail working parts are unnecessary—only 3 moving parts are required, all rugged and durable. Opening the water valve and turning a switch starts it. Closing a water valve and turning a switch stops it.

CLIMAX MODEL C ROTARY

Is simple, compact, efficient and absolutely dependable. You must see this most radical and valuable forward step in refrigeration engineering. You will find it a real achievement—an invention that means more to you and your business than any other mechanical improvement of the decade, because it solves your biggest problem—the safe keeping of foods. You ought to know all about it for your own sake. Use the coupon now to get complete information.



The fact that Climax Refrigerating Units are built and backed by a $2,500,000 corporation, having 22 coast to coast service stations, with sales offices in principal cities, insures safety as well as profit from any investment you make in this equipment. Send the coupon today.

Outstanding Features of the Climax Model C Rotary Unit

1—Rotary compressor a marvel of simplicity—positive and efficient in operation.
2—Model C operated by 1½ H. P. motor. No power wasted in belts or other transmission.
3—No valves—no small frail parts.
4—Only 3 moving parts—all heavy, rugged and permanent.
5—Most compact—Model "C" size only 52" long and 21" wide, and 36" high. Weighs only 750 lbs.
6—Compressor direct connected to electric motor.
7—Continuous flow of gas through the compressor.
8—All lubricating oil confined to the high pressure side of compressor.
9—No oil can come in contact with liquid refrigerant.
10—No violent fluctuation of hands on pressure gauges.
11—Simplest starting. Just open water valve to start, close water valve to stop.
12—No throwing of electric switches—tightening of belts—or clattering of valves.
13—Nothing to forget. Shuts off automatically in case of failure of cooling water supply.
14—Particularly adapted to automatic control.
15—All parts made interchangeable.
16—Each unit factory tested before shipment to produce refrigeration in excess of its rated capacity.

Worth More!
—yet it costs less

Atlantic Super-Clarified Gelatine costs as much as any gelatine should cost. Its comparatively lower price is the result of manufacturing efficiency, of skilled workmanship and volume buying of materials.

The same painstaking care in manufacturing that makes possible the low price, produces the gelatine of consistent high quality on which our reputation has been built.

Atlantic Super-Clarified Gelatine meets every pure food law squarely—and passes with flying colors. Its clarity, purity and high viscosity have stood for years as the standard by which all gelatines are judged.

Know that the gelatine on which you base your product is the best. Make a substantial yearly saving by using Atlantic Super-Clarified Gelatine.

The foregoing relates largely to the present. What of the future? Do we of the industry realize and recognize the obligations resting upon us?

Scientists and economists have said that the human race cannot exist without the products of the dairy cow. There is a tremendous "All for Health" movement under way. Health teaching is being made a part of the school curriculum. Milk and dairy products are indispensable to health and growth of children, and consequently are fundamental in any health work. Does not this very fact impose an obligation on those engaged in this industry that we are not fully recognizing?

A VERY large majority of the people, probably 80 per cent, know very little if anything about food values. Price and palate, rather than food values, control their selection of foods. This industry is obligated, by reason of these very facts, to tell and re-tell continuously to the public the vital importance of dairy products to child health and life and to adult health and efficiency. We have the products and the indisputable scientific facts supporting the food value of these products, and yet the industry as a whole seems to lack the vision and business acumen to recognize the obligation or take advantage of the unparalleled opportunities as rapidly as it should. It is true, great strides have been made by and through the council organizations, and many in the industry do see the vision. But everyone in this industry, from the owners of the cows, clear down through the line to the final distributors of the finished product, should each bear his proportion of the obligation of spreading the information and knowledge relating to these wonderful foods.

There are two potential moving factors that should prompt each one to do this, namely, human welfare and personal interest. This nation of ours is a great dairy nation, the leading dairy nation of the world. We own nearly one-fourth of all the dairy cows in the world, and yet in reality this industry has just begun to develop. Hundreds of millions of people will be brought some day to realize the facts relating to the food value of dairy products, and when this time comes, as it certainly will, there will be a world demand for these products. We, by the very force of circumstances, will be the dominant nation, in supplying these products.

Dietary scientists say that, for best results both in health and efficiency, we should double the consumption of these products among our own people. Just think what that means in the development of this industry! What a vision this gives of the future prosperity of this industry!

I have said nothing here as to the importance of this industry in the economics of agriculture. Time and space will not permit. Suffice it to say that this industry is vital to successful and stabilized agriculture, and this in turn only increases the obligations above referred to.

Let us awaken to the call of opportunity and close our ears to the cry of calamity!

The resume of the dairy history of America is continued on page 44.

MINNESOTA MANUFACTURERS VINDICATED.

Health officials recently brought action against ice cream manufacturers of Twin Cities. The case was dismissed after a hearing. We asked W. W. Dunn, Jr., president of the Minnesota State Association of Ice Cream Manufacturers, to write us about this case. This is what he had to say:

"In the latter part of June the city health department of St. Paul caused the publication of an article stating that complaints had been filed by the city prosecutor against three companies, accusing us of willfully manufacturing ice cream containing less butterfat than the law requires. On the individual counts the city chemist's tests indicated as low as 6 per cent butterfat in samples which were tested. The state law requires 12 per cent butterfat.

"We all pleaded not guilty and our case was set for trial July 23rd. As our only opportunity for acquittal on the charges placed against us lay in our ability to impung the methods and technique of the city chemist in running these tests, it was necessary to obtain depositions from leading chemists in the country and acquire the services of a number of local authorities to testify in our behalf concerning advanced methods for the determination of butterfat.

"All ice cream manufacturers involved were able to procure samples of their product manufactured and sold before the tests were taken by the city chemist and these samples were taken under affidavit by a private chemist, the results of tests made by this chemist indicating that our product was up to standard.

"The first witness called by the prosecutor, the city chemist, stated that he determined the amount of butterfat in the samples taken by the health department representatives by volume rather than by weight as is required by law, and immediately following this statement the presiding judge dismissed the case.

"From the small amount of space devoted to this case by the newspapers it seemed incredible the extent of interest that was shown by the public in our industry, and if any of the readers of this article find themselves in a similar predicament, it will be well for them to use every precaution to keep the distorted facts from the public. A facetious incident occurred shortly before our trial which gives some idea of the notoriety we received at the hands of the public. The wife of the presiding judge, a person of conspicuously large proportions, was a guest at a social function at which the hostess served ice cream. This portly judge's wife asked the hostess whose ice cream she was serving and upon being told, made this remark: 'Oh, that's fine, I can eat all I want because it contains no butterfat!' "

ENTERTAINMENT PLANS FOR NEW ORLEANS WILL INCLUDE NOVEL FEATURES.

Announcements issued from the office of The Association of Ice Cream Supply Men in the last month indicate that extensive entertainment plans are being worked out with gradual thoroughness for the period of the National Association of Ice Cream Manufacturers' convention in New Orleans, Nov. 17-20.

One or two well-considered departures in the provision and conduct of various entertainment features are being planned which will add noticeably, it is believed, to the individual comfort and enjoyment of both the ladies and men who attend the convention.

An altogether novel feature will signalize a general reception to be tendered to all ice cream manufacturers of the country, their wives, families, friends and associates, by the association on the evening of Nov. 17, it has been intimated. The details of this feature will not be announced until the evening of Nov. 17.

The Salesmen's Club of the association is co-operating in the preparations for the effective handling of the entertainment program.

The Dixie Flyers, an organization of Southern supply salesmen affiliated with the Southern Association of Ice Cream Manufacturers, will be in charge of entertainment for all the representatives of the industry who will be in New Orleans prior to Monday, Nov. 17.

Plain design cones are out of style. They are fast being discarded for the newer design having the Breakage Protection Nesting Ring. THIS VALUABLE FEATURE IS PATENTED BY McLAREN

McLaren's "Real Cake" (Double Ring) Cones are a big improvement over other brands, not only in practical design, but in taste and flavor as well. They're packed in a strikingly attractive three-color carton.

National Dairy Association

A Resume of Past History

THE original charter of the National Dairy Show was issued in 1905 by James A. Rose, then secretary of state of Illinois, to J. A. Walker, W. W. Marple and L. C. Hamilton as commissioners to open books for the subscription of the capital stock of the National Dairy Show Association. On the charter it is shown that the object for which the association was formed was "to advance and promote the cause of dairying in an enlarged and general way, to inculcate the science of butter making through lectures and exhibits and the use of modern appliances by an exchange of approved means and methods and to increase the quality of the finished product." The location of the offices were to be in Chicago and the original stockholders were Huston Wyeth, L. C. Hamilton, J. A. Walker, E. Sudendorf and W. W. Marple. They in turn disposed of the stock held by them as commissioners to all of the different stockholders then of date and which list grew finally to number about 250.

There does not seem to be any record of the meetings covering the first show held in 1906, but in the 1906 show catalog J A. Walker is listed as president, L. C. Hamilton, treasurer and E. Sudendorf, secretary. The first minutes of record are of a stockholders' meeting held March 2, 1907, at the Briggs House in Chicago and we find those good old dairy names as being present: J. A. Walker, W. D. Collyer, W. W. Marple, H. E. Schucknecht, S. B. Shilling, E. Sudendorf, H. B. Gurler of DeKalb, Ill., A. O. Auten of Jerseyville, A. J. Glover, F. H. Schribner, F. B. Fulmer, Colon C. Lillie, W. B. Barney and D. H. Jenkins, represented by his son, Harry Jenkins. The minutes show that Mr. Lillie was elected temporary chairman to preside over the meeting and Mr. Glover was elected temporary secretary. A set of by-laws was adopted at this meeting in which it is stated that the object of the association shall be to create a greater interest in and appreciation of the dairy cow and dairy products, and after the adoption of the by-laws the following officers were unanimously elected: H. B. Gurler, president; Prof. H. E. Van Norman, vice-president; Granger Farwell, treasurer; E. Sudendorf, secretary and manager, and A. J. Glover, general superintendent of the live stock department. On the resignation of Mr. Auten from the board of directors on April 23, J. J. Farrell was appointed as a member of the board.

All the way through until 1908 these names stick in the different offices and on the board of the show. Then we find the coming in of E. K. Slater, J. D. Nichols, and J. G. Hickcox in the directorate with a list of the same people as stockholders and the same additional names such as George Haskell, E. M. Barton and Grace Durand, and the college men who have stuck clear through the entire time to date, with very few exceptions. By 1915 when the original charter expired, all of the old war horses of the dairy industry had become identified with the show, bringing in such men as R. B. Swift, J. B. Irwin, F. J. Macnish, Charles D. Ettinger and W. W. Marsh, in 1910, 1911 and 1912.

In 1912 a manager was employed and the show was taken from the columns of a more or less voluntary organization into a fully organized paid proposition. In 1916 it was determined to take the show to Springfield, Mass., and the shows of 1917 and 1918 were held at Columbus, Ohio. The place and dates of all shows are as follows:

Coliseum, Chicago, Feb. 15-24, 1906.
International Amphitheater, Chicago, Oct. 10-19, 1907.
Coliseum, Chicago, Dec. 2-10, 1908.
Auditorium, Milwaukee, Oct. 14-24, 1909.
Coliseum, Chicago, Oct. 20-29, 1910.
International Amphitheater, Chicago, Oct. 26-Nov. 4, 1911.
International Amphitheater, Chicago, Oct. 24-Nov. 2, 1912.

(Continued on page 46)

What Does the National Dairy Exposition mean to the Dairy Industry?

When we asked Mr. Skinner for information on the National Dairy Association, he said see the editorial published in the September 26, 1923, issue of the Butter, Cheese & Egg Journal on the subject. We did. We are reprinting it as follows:

"Year after year that question is being answered more fully. As dairy shows come and go they take on a deeper significance. The National Dairy Exposition has been graduated from the point of being good-naturedly accepted as an event to be tolerated because of its social, good-fellowship features.

"Sociability and good fellowship are important, but members of the industry are beginning to realize that where there is no vision neither people nor industry can survive. The dairy show enlarges vision.

"Dairying is going forward under full speed because of fuller understanding of this industry's possibilities. Inspiration is the compelling urge. It is an inspiration that comes of a larger vision of things to be accomplished and the means of accomplishing them. It is an inspiration which lifts producers, operators and supplymen from the hum-drum, every-day tasks and animates them with an overwhelming feeling that the dawn of a day of real, worth-while triumph for dairying is just at hand.

"Men engaged in the dairy industry merely as a way to make a living, going through their daily work in a matter-of-fact sort of way, begin to get a real vision of the industry's magnitude and future possibilities for growth when they look at the National Dairy Exposition.

"By taking a full view of the dairy scheme such as the dairy show affords, we can get a clear picture of the complete dairy cycle. A man peers from his own windows and his eyes roam over an expanse of ground to where the horizon falls. To the man who stays not far from these windows a great part of his time, it seems that his eyes take in a broad sweep of things. Yet, comparatively speaking, he has seen no more than an ant crawling over the surface of an apple. The most of the great, wide, wonderful world stretches out beyond his vision, far over the rim where his vision stops.

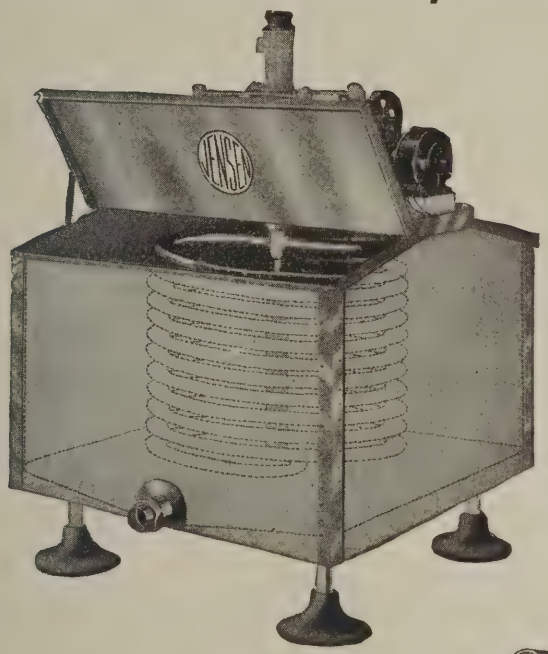
"In the dairy industry we see just our small part of the scheme. Just over the horizon the rest of the cycle stretches out beyond our ordinary vision. We can only see the other phases of the industry at the points where they touch our daily lives. The dairy show impresses us with how little is the progress we have made compared with what we can make.

"It would be difficult to measure the full value of such a show. It brings the different branches of the industry together to get a full view of the industry. It gives the members of the different branches a better understanding of their importance in the work of building for a bigger industry.

"It gives dairying a new meaning to the farmer. It gives him a new vision and a new faith. It makes more firm the industry's foundation. It takes us over the horizon of our every-day lives and unfolds the wonder-and splendor of the great, wide fields that otherwise we would know so little about.

"It gives to all of us a broader understanding of the part dairying plays in national prosperity and human satisfaction.

"It inspires greater and more intelligent effort.



"The National Dairy Exposition is important not so much because it shows us what has BEEN done but because of the realization it creates of how much more there is we CAN do."

In 1915 at the expiration of the original charter, the association was re-incorporated under the laws of the state of Illinois and no particular changes made in the make up of the organization. It was, however, at this time discussed as to the continuation of the organization as a stock concern, but not until 1917 were steps taken to remove all criticism that could be leveled against the show as being a money-making proposition instead of an educational exposition. On December 27, 1917, it was changed from a stock proposition to a membership organization under the name of the National Dairy Association. Most of the old stockholders have transferred their stock to memberships and new members have joined, making a membership of about 500. The desire is to establish a fund in perpetuity for the show in the hope that at some time in the near future before those great men who built the show shall have passed, there shall be a headquarters established and owned by the association itself. I think wherever you get an opportunity something should be said about every dairyman in the United States becoming a member of this association.

It is rather difficult to sit down in cold blood and write an article about this great show, because there is a deep, underlying sentiment, stronger than man is capable of portraying to his fellows except by word of mouth when the warmth of association brings up those things which are near and dear in the treatment of such a great work.

Management of the show during its existence has been as follows:

E. Sudendorf, secretary, 1906 and 1907.

E. Sudendorf, secretary, and A. J. Glover, general manager, 1908.

H. E. Van Norman, secretary and general manager, 1909 and 1910.

Wm. Hill, secretary; A. A. Auten, general manager, 1911.

C. D. Ettinger, secretary; W. E. Skinner, general manager, 1912-1916.

W. E. Skinner, secretary and general manager, 1917-1924.

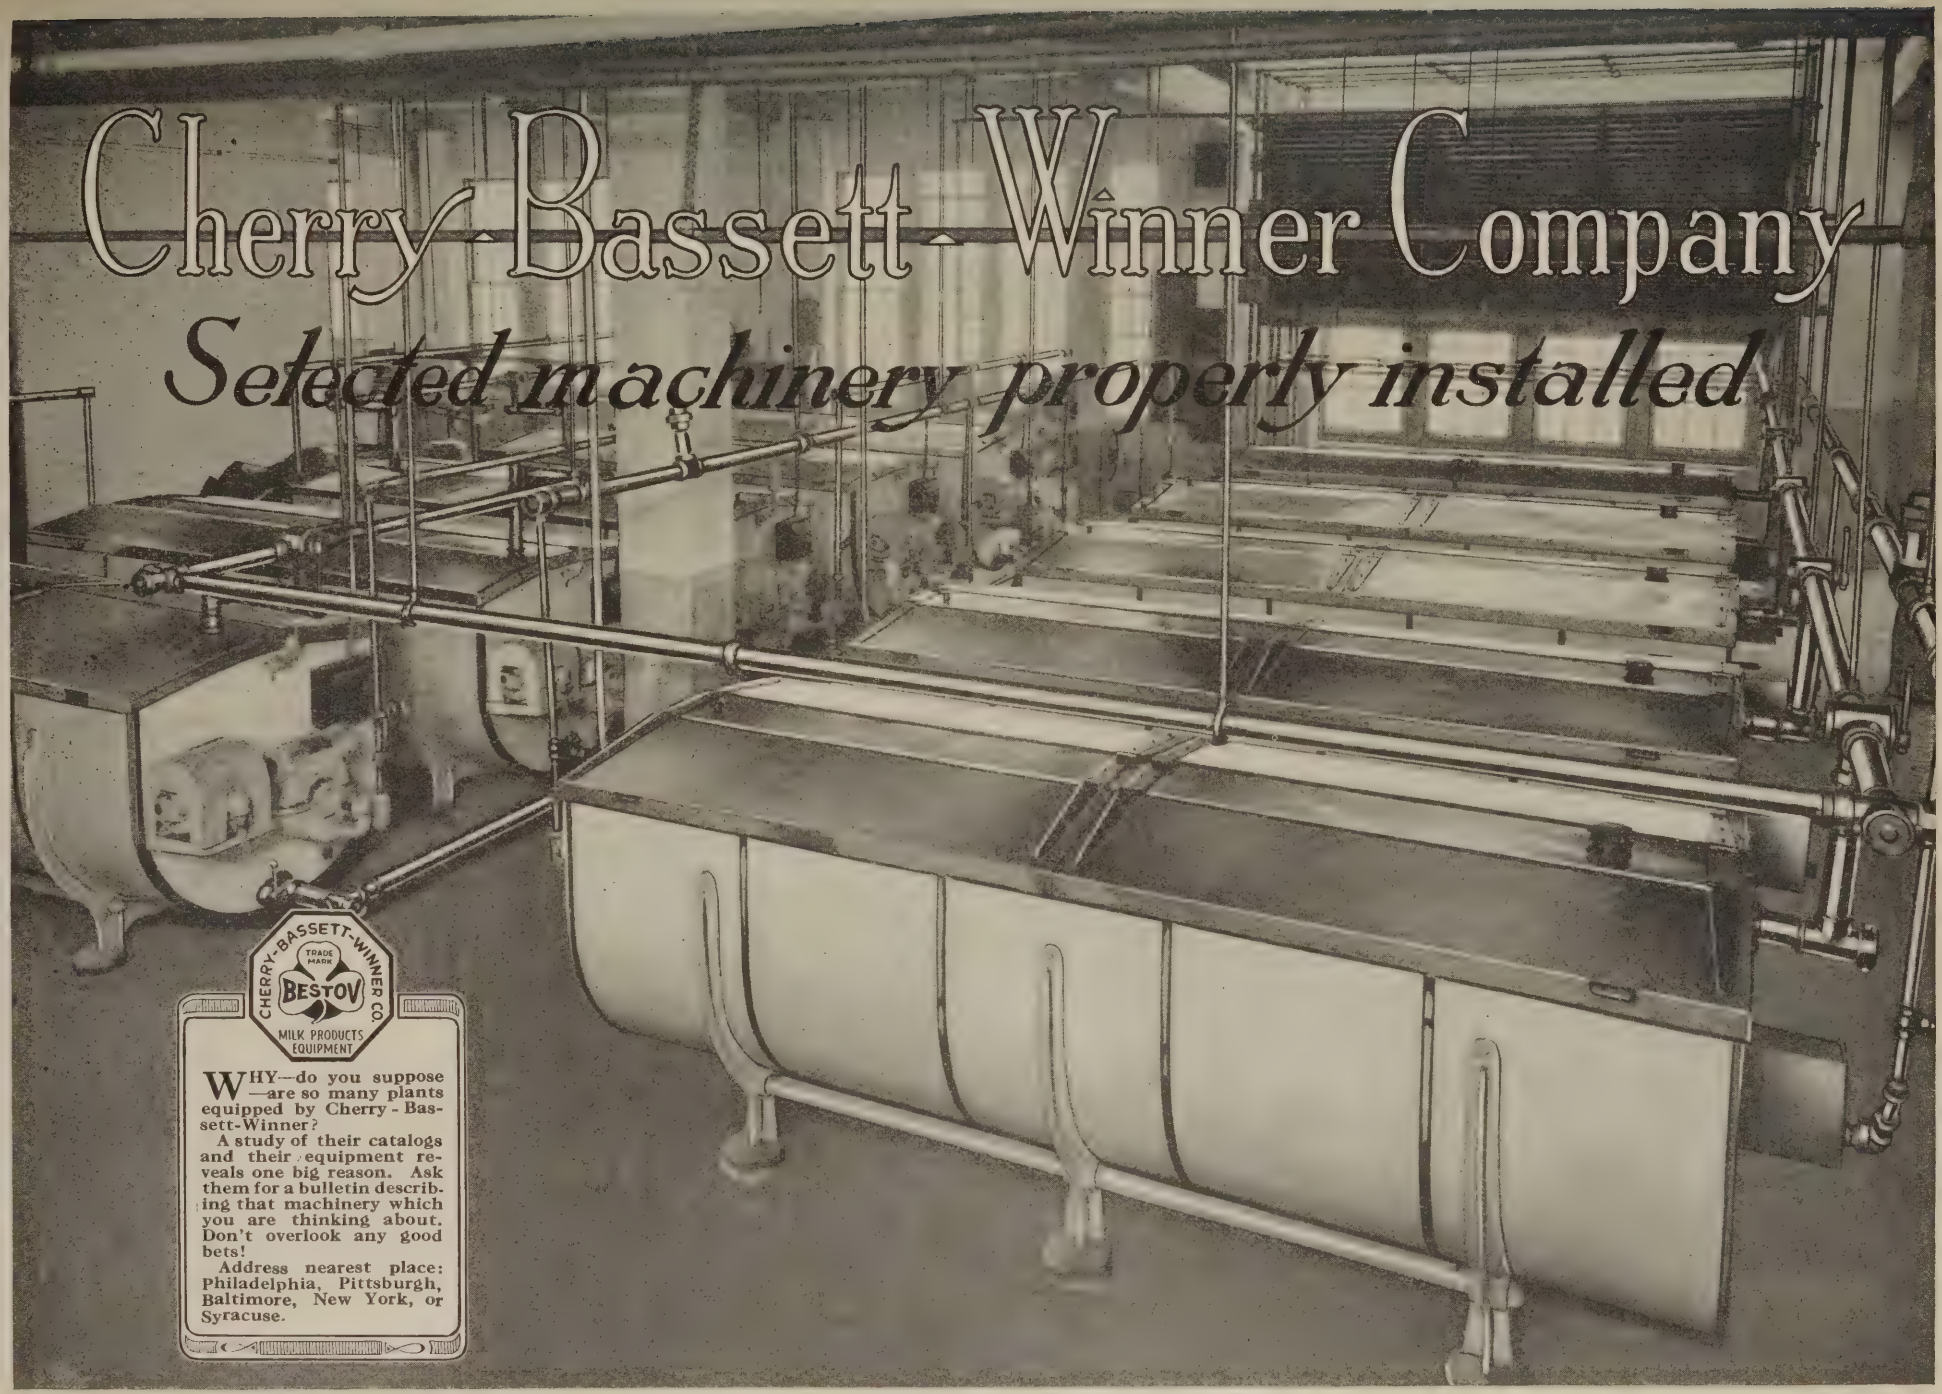
DRAISS RE-ENTERS ICE CREAM BUSINESS.



Phil. Draiss, former president of the Texas Ice Cream Manufacturers' Association, who sold his interest in the Shreveport Ice Cream Factory to Watson & Aven of Little Rock five years ago, has returned to the ice cream industry by buying back this interest and resuming active management. Mr. Draiss succeeds A. M. Thornton, who had managed the plant at Little Rock since Mr. Draiss withdrew. Mr. Thornton for many years has been active in association matters in the Southern states

The money involved in Mr. Draiss' return to the industry is said to be around $150,000. The factory was built by him in 1909 and 1912. It consists of two buildings. Mr. Draiss announces extensive plans for remodeling the building. The offices and retail departments will be rearranged, and he says the power system will be changed from steam to electricity, making this the first electrically operated ice cream factory in Shreveport.

SPEND A WEEK IN DAIRYLAND — NATIONAL DAIRY EXPOSITION — MILWAUKEE, WIS., SEPT. 27 TO OCT. 4.

Michigan Allied Dairy Association

*By R. F. FRARY**

IT WAS Edward A. Stowe, who 40 years ago was publishing in Grand Rapids a paper called the American Cheese Manufacturer, who conceived the idea of the importance of Michigan dairymen meeting in annual convention for the purpose of discussing ways and means of improving their products and developing the dairy industry by more efficient means and methods.

Mr. Stowe, after considerable correspondence with E. N. Bates, H. W. Horton, Governor Bliss and others called a meeting in Grand Rapids in February, 1884, and an organization was perfected, of which Mr. Wiggins was elected president and Mr. Stowe, secretary.

The association met for its second annual convention in Kalamazoo the following year, and through resolution, requested an appropriation from the state legislature with which said association was to publish its records and execute the purpose of its organization, namely, the furtherance of dairy development. This request was granted and the appropriation made.

Last February, again at Kalamazoo, the sons and devotees of the industry held their 40th annual convention. The spirit of interest manifested in Michigan dairymen speaks aloud each year through the show and convention conducted by those who still believe that the greatest growth and greatest improvement can come only through concentrated effort and a mingling of those who have made breeding, feeding, and manufacturing a scientific and life study.

*Secretary Michigan Allied Dairy Association.

THROUGH the last four decades, there have been many men who have sacrificed time and effort and expense, not alone that their coffers might be replenished, but that dairying as an industry and that Michigan as a great dairy state might enjoy the prosperity that is evident in every community where intensive dairying is conducted.

A list of the men who have been eminent during the last half century in helping to hold Michigan in prominence among the states in point of value of her dairy products would be long and interesting indeed, but among them, perhaps those worthy of especial mention are such men as H. W. Horton, E. A. Stowe, E. N. Bates, S. J. Wilson, Colon C. Lilley, and Ex-Governor Fred N. Warner.

To those as to many others, present-day dairy prosperity within the peninsular state owes a debt of gratitude which can never be paid, and as the progress of time constantly brings to the front new problems and perplexities, so organized dairying in this state under the banner of the Michigan Allied Dairy Association is valiently trying to keep abreast with the demands that the fast revolving years impose.

SPEAKING OF APPROPRIATE THINGS.

A very odd occurence took place at the 1923 convention of the National Association of Ice Cream Manufacturers. It will be recalled that in the November, 1923, issue of The Ice Cream Review there appeared a photograph showing three distinguished ice cream men at the convention—Chas. G. Norris of New Haven, Conn., president of the National Association of Ice Cream Manufacturers; Morden Neilson of Toronto, Can., vice-president of the National Association of Ice Cream Manufacturers, and H. L. Edwards, one of Great Britain's prominent ice cream manufacturers.

When a cameraman for The Ice Cream Review asked these gentlemen to pose for a photo he picked out what he thought to be an appropriate spot. Unconsciously, he picked out a spot more appropriate than he would have thought possible, had he really planned out the matter.

Note the lettering just over these gentlemen's heads —"America—Europe—Canada—Europe Mediterranean Cruises."

PLANT IMPROVEMENTS.

Tipton Ice Cream Co., Tipton, Ind., has made another addition to its building, besides improvements in the plant. The proprietors are Adderman & Marine and they are hustlers and making good.

WORLD'S LARGEST MANUFACTURERS OF ICE CREAM CABINETS

History of Indiana Manufacturers of Dairy Products Association

*By R. L. HAMMOND**

IN 1915 R. F. Miller of Topeaka, Ind., a man of much foresight and vision, believing that much could be accomplished for the dairy industry within the state by a permanent organization of all interested in the industry, set forth to bring about such an organization. The result of his labors during that year was the organizing of the Indiana Manufacturers of Dairy Products Association. The first meeting of the association was held at Vincennes, Ind., on June 8, 1916, and work was started which would eventually elevate the dairy industry of the state to that high position of which it is so deserving.

Among the manufacturers of dairy products who took an active part in the association in its early days were: John Risch, Tip Top Creamery, Vincennes; E. A. Marple, Tip Top Creamery, Vincennes; Bert G. Moore, Clover Leaf Creamery, Marion; George Weber, Weber Milk Co., Indianapolis; Ed. C. Nance, Nance's Creamery, Brazil; Paul Barnett, Barnett Bros., Logansport; Henry Schlosser, Schlosser Bros., Indianapolis; George Fosdick, Fosdick Ice Cream Co., Crawfordsville; Charles Field, Ballard Ice Cream Co., Indianapolis; and C. W. Hale, Indianapolis. Mr. Miller served as the association's first president and Mr. Hale was the first secretary. To these men, the majority of whom still take an active interest in the affairs of the association, too much credit cannot be given for the time and effort which they have spent in the interest of the association.

From a small and obscure beginning, the Indiana Manufacturers of Dairy Products Association has now reached the place where it is recognized as the most stabilizing factor within the industry in the state. The accomplishments of the association in its work to build up the dairy industry of the state, while they have not been heralded by brass band methods, have proven to the manufacturers of dairy products that much can be accomplished through the proper kind of an organization and co-operation.

The object of the Indiana Manufacturers of Dairy Products Association is to bring together all persons interested in the industry in order that they may follow one common avenue of progress in developing the industry.

THE association has, since its beginning, sought to raise the standard of the dairy products manufactured by upholding and aiding in the enforcement of all state laws as such laws relate to dairies and dairy products. A friendly relationship has been established between the pure food and drug department and the association and each helps the other wherever possible. Also the association has always taken an active part in legislative matters as they relate to the industry and has sought to protect its members from unfair legislation.

Believing that research and scientific methods should be substituted for previous uncertainty and ignorance, the association has always co-operated with the dairy department of Purdue University. A research committee is maintained within the association, of which the chief of the dairy department is chairman. Each year this committee selects certain problems, one for each branch of the industry, relating to methods of manufacture and so forth and after thoroughly studying these problems reports its findings. The work of this committee to date has been of great value.

The association seeks to protect its members in the transaction of their business by discouraging all forms of commercial bribery, unfair advertising and business practices which are in any sense uneconomical and unethical. Instead it encourages methods of purchase,

*Secretary Indiana Manufacturers of Dairy Products Association.

An X-Ray Would Reveal the Hidden Weakness in Corkboard

If you could apply the X-Ray to Corkboard, it would show why some makes have so little structural strength and why the sheets begin to disintegrate soon after installation. For you could then **see** that the millions of little cork granules in the **center** of the sheet were **not** cemented together — simply held in like pills in a bottle.

The reason for this is that the sheets were not baked long enough or at the right temperature to release the natural gum in the cork to bind the particles together. Or perhaps dirty, wet cork was used.

You don't have to use an X-Ray to satisfy yourself that

NOVOID Corkboard

is thoroughly baked. **You can see the very center of every sheet.**

Every two-inch sheet of this corkboard is a four-inch sheet cut **through the center.** It is also cut twelve inches wide from a twenty-four-inch sheet. Hence, one side of sheet represents the center of the original sheet. And as both sides of the two-inch sheet are uniform in color and texture, it stands to reason that the baking process has been thorough and complete from surface to surface. Naturally, if a four-inch sheet shows no green center, the thinner three-inch sheets also must be properly baked. Moreover, they are cut 12 inches wide from 24-inch sheets, exposing the center in every case.

No other corkboard is made this way. Therefore no other corkboard has the same strength and durability as Novoid.

Let us send you a sample and booklet. A postal card will bring them.

CORK IMPORT CORP.
345-9 W. 40th St., New York City
Branches in large cities

manufacture and distribution of dairy products and business practices which are economical and ethical.

PLANS and methods are devised by the association to promote the advertising of dairy products, to increase the consumption of dairy products by educating the consuming public as to the true food value of these products and their necessity in the human diet. Likewise, plans and methods are devised to encourage the producer of milk and cream to keep better cows, to improve his methods of feeding and breeding and to take better care of his product on the farm. Inasmuch as the manufacturer, the producer of milk and cream and the consumer form the equilateral sides of an economic triangle, it is important that their interests do not conflict and the association endeavors to protect the interest of all so far as possible.

Of late much time has been devoted to a campaign known as a cream grading campaign, the purpose of which is to improve the quality of cream produced on the farm. Certain sections of the state are now purchasing cream on a grade basis. The plan of grading being used is known as the "Four-Day-Plan" and was worked out by P. P. Triller, of the Wadley Co., Indianapolis. In the sections where this plan is being operated a marked improvement in the quality of the cream has been noted and plans are now being laid to start grading in other sections.

Meeting of the association are held from time to time for the purpose of spreading trade information and exchanging ideas relating to the industry. These meetings are of incalculable value to those who attend. A bulletin service is maintained by the association by which the members are kept informed concerning all important subjects relating to their industry.

The association has accomplished a great deal for the industry within the state in that it has been an important factor in promoting high standards, not only in the products bought, manufactured and sold, but in business practices generally. There is, however, much work yet to be done. The association, by working as it has in the past and by adding new projects from time to time, as the industry demands them, will continue its upbuilding work and be of great service not only to its members but to the general public.

MAKES WATER TANK ADVERTISE ICE CREAM.

As an advertising feature the Christopher Ice Cream Co., Los Angeles, Cal., has its water tank designed after an ice cream freezer tub, the shape being just the opposite of the usual tank in that it tapers toward the bottom instead of toward the top.

Constant care guarantees purity and flavor

With Golden State Powdered Skim Milk plus Golden State Pure Milk Fat or a high grade of pure unsalted butter, the Ice Cream Manufacturer can produce re-constructed cream that is identical, one day with the next—cream *that he can depend upon* both as to quality and flavor.

Think what that means! A *dependable cream supply!!*

Golden State Powdered Skim Milk is made from finest sweet milk, in model plants located in the heart of the country's best dairying sections.

The Dairy Products Association of Kentucky

*By CARLTON BALL**

THE Dairy Products Association of Kentucky dates back to the spring of 1920, according to its available records which show the usual successes and lapses of interest that accompany the birth of such an organization.

Persistent demands for a permanent organization brought about a reorganization in July, 1923, to embrace three groups of dairy products manufacturers, butter, milk and ice cream, each as an auxiliary division. Then, with a stipulation that a full time general secretary be employed, the association was underwriteen by a number of the leading manufacturers, and a general secretary was put to work on the following October 1. In addition, supply houses were included as associate members.

While much credit is due other members of the association who worked for its reorganization, Chas. H. Vahlkamp, president at that time, immediately sounded quality improvement as the keynote for future projects and this policy has been religiously upheld by his successor, Harry A. Cuscaden. The association's activities have also been directed to important problems of legislation, taxation, transportation, publicity, trade practices and dairy development, principally through a friendly and hearty co-operation with outside agencies.

This co-operation from other sources has been of such a liberal and fair minded nature that it should inspire the whole dairy industry with faith in the possibilities that surround a trade association.

AS EXAMPLES of unbiased support: The college of agriculture put a man in the field to establish the four-day grading plan, and appointed the general secretary as an advisory member of the creamery license board; the state board of health commissioned the general secretary as a special investigator and has maintained an unselfish attitude in its educational efforts as well as in its steps for law enforcement; the Kentucky Bankers' Association, through its agricultural committee, unhesitatingly endorsed quality improvement projects and lent unlimited publicity to the necessity of cream grading in their official publication and by having individual letters sent to thousands of cream producers from the local banks, and some of the individual banks in the larger cities are preparing to publish a series of advertisements of milk, butter, ice cream, cottage cheese and cultured buttermilk with a view of increasing the consumption of dairy products; the railroads, through their baggage and development departments, have quickly appreciated the thought of mutual progress and have participated in every move for the betterment of the conditions effecting the industry, the Kentucky Live Stock Improvement Association earnestly solicited, from the manufacturers, the needs of the industry and as a result of suggestions received have placed more than 30 Jersey and Holstein bull calves, of excellent breeding, in the more backward dairy sections of the state.

Most of the creameries in the state operate on the centralizer plan, while the milk distributing plants and ice cream factories are either local to communities or else confine their business to naturally defined sections. Aside from the general meetings of the association, sub-organizations, such as the Dairy Club of Louisville, The Blue Grass Dairy Club and the Cumberland Ice Cream Manufacturers' Association, afford a means of serving the smaller manufacturers whom it would be difficult to otherwise reach.

Those who took part in the organization of this association are:

April, 1920.

Members.

Beatrice Creamery Co., Cincinnati, O.
City Consumers Co., Paducah, Ky.
Cuscaden's Ice Cream Works, Louisville, Ky.
Dixie Butter Co., Louisville, Ky.
Evansville Pure Milk Co., Evansville, Ind.

WIRFS' "AIRTITE" CUSHION GASKET

No. 25 WIRFS' "ANTI-FREEZ" GASKET
For Sharp Freezer and Hardening-Room Doors.
Has special heavy web covering and is impregnated with cold-test oil compound. Prevents frozen doors. Cut shows actual Size.

No. 40 WIRFS' "WIPER" GASKET
For bottom of Cold-Store Doors having bevel sill or no sill and angle iron set in concrete. Has very tough web covering. Cut shows actual size.
Prices on these "Special Gaskets" quoted on application; state quantity required, in lineal feet.

E. J. WIRFS 105 S. 17th Street, St. Louis, Mo.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

Proving it to Yourself!

Harden a thermos bottle or jug of your ice cream in your own hardening room and take it home to satisfy yourself cream will last—hard until eaten or sold.

Our Five-Gallon Vacuum Insulated Canisters are just as iceless, and turn your gross profits into net profits available for dividends — all the money you are now dumping so generously into electric or salted ice cabinets and their attendant expenses.

We can sell your dealers our idea of keeping hard their own cream by revacuum insulation and Fridgeration and we are prepared to operate a display and service station in your community to display, demonstrate, and maintain full iceless efficiency.

We will do everything except the local financing. You can make money doing this as resident limited silent partner; $5,000 starts a station; minimum profit, $12,000 a year, plus a dollar per day per iceless stop. Does this interest you?

ICE DEVICES SERVICE, INC.

Reorganization, July 26, 1923.

The members who formed a nucleus for the reorganization were:

City Consumers Co., Paducah.
D. H. Ewing's Sons, Louisville.
Sugar Creek Creamery Co., Louisville.
Tip Top Creamery Co., Vincennes, Ind.
Dixie Ice Cream Co., Lexington.
Standard Milk Machinery Co., Louisville.
Hughes & Company, Lexington.

These members were immediately followed by sixteen others in underwriting the association. The attendance at the meeting was 31, Chas. G. Vahlkamp acting as chairman.

At this meeting the following officers and directors were elected:

Chas. G. Vahlkamp, City Consumers Co., president.
C. O. Ewing, D. H. Ewing's Sons, treasurer.
P. E. Bacon, College of Agriculture, acting general secretary.
E. Yoder, Swift & Co., Chr. Butter Div., vice-president.
W. A. Horneman, Sugar Creek Creamery Co., sec. Butter Division, vice-president.
John Klocker, Dixie Ice Cream Co., Chr. Ice Cream Division, vice-president.
W. A. Heuser, National Ice Cream Co., sec. Ice Cream Division, vice-president.
Geo. W. Schneider, Gray-Von Allmen S. M. Co., Chr. Milk Division, vice-president.
Harold Neel, D. H. Ewing's Sons, sec. Milk Division, vice-president.

J. O. Barkman, College of Agriculture, was later appointed by the Dean as the college's representative on the board of directors.

GERMANY'S FIRST ICE CREAM PLANT OPENED.

Ernest Lindewirth & Company have opened Germany's first ice cream manufacturing plant at Lubeck, according to information received early in August. Plans at that time were being perfected to have a larger factory in operation sometime in August, this plant to be equipped with the most modern American machinery to make ice cream in bulk, brick and Eskimo Pie. This company also expects to establish further factories at Hamburg, Dresden and other large cities.

BOTTLED ICE CREAM SODA.

A device that will make possible the bottling of ice cream sodas has been patented by E. E. Hills, according to a news item reaching The Ice Cream Review.

This device is said to be made of aluminum. It is described as being about seven inches long and five-eighths of an inch in diameter, with three curved fins projecting from the center. The whole thing is cast at one time from aluminum. Loaded with ice cream, the device is stuck into a bottle of pop, where the ice cream melts slightly and mixes with the pop to form an ice cream soda. It is to be consumed through a straw.

It is believed to be the most attractive device to make possible the serving of ice cream sodas without investing in an expensive fountain. Elimination of washing soda glasses is another feature.

A want ad for an office boy brought a job. He used his head.

Put It Up to a GMC!

PUT it up to a GMC Truck to save you some real money on your deliveries.

After you get a line on the economy of the first General Motors Truck that swings into your service, let anyone try to sell you any other truck.

GMC price is lower than that of other high grade trucks. Participation in the vast purchasing resources of General Motors Corporation and long, uninterrupted years of truck building experience keep GMC production costs way down.

GMC upkeep is very low. Extra strength is designed into every GMC part. Simplicity and accessibility of all parts minimize the attention necessary to keep a GMC fit and ready to go.

These are only a couple of the high spots of the low cost of GMC Trucks. Put the burden of proof right square on GMC — and learn the whole story from your profit sheet.

Minnesota, The Dairy State

*By CHRIS HEEN**

THE growth of the dairy industry in Minnesota has been quite remarkable. From a small beginning it has grown into a giant industry. It now brings more money annually into the state than that of any other industry. As recently as 1890, it would have been a bold statement to predict that Minnesota would gain pre-eminence as a dairy state. We were then noted principally as a grain raising state, and lumbering was an important industry. The pines were considered "inexhaustible," and Minnesota was foremost among the states known as the granary of the world.

CHRIS HEEN.

We have since then witnessed a wonderful transformation on the farms of Minnesota. In place of the large fields of waving wheat, we now see more corn, oats, and barley fields; also large herds of cows on thousands of farms. It was being discovered that in nutritive quality and abundance of its grasses, these could be grown not only on the rich soils in the southern part of the state, but just as abundantly on soils in the northern cutover areas. During these years varieties of corn have been developed that will ripen in nearly all the counties of the state. As a result, we now find thousands of silos which can be seen from all highways, standing as a testimony that Minnesota is now a dairy state. In spite of these natural resources, Minnesota might have remained dormant, and not made such rapid progress in dairying. This state was especially fortunate in having a heavy inflow of European racial migrations from the northern countries from whence came good farmers, Scandinavians in the majority, but almost as many Germans.

Competent leadership in the pioneering stages of dairying was another fundamental factor that carried us over many obstacles, which otherwise would have slackened progress. The state was fortunate in securing Professor T. L. Haecker to take charge of, and to establish the dairy school. Upon his arrival in 1891, he immediately made a survey of dairy conditions in the state, and such as he found them were not satisfactory. Most of the butter was churned on the farms under varied conditions. The butter was traded to the grocery stores, and brought from six to twelve cents per pound in trade for groceries. This was not satisfactory to the farmer who did not receive enough to pay for the feed for his cows. There were only a few butter plants in operation. The managers of these plants had but a meager knowledge as to sanitation, and the product turned out was not satisfactory to the consumer. The price paid to the producer was on a par with that paid for butter at the stores.

AT THAT time co-operative creameries were being organized in the state. They were fortunate in being put in charge of competent management, and proved to be successful from the start. Much higher prices were paid to the producer than he was accustomed to receiving for his butter at the corner grocery. Professor Haecker quickly sensed the situation. He had found that the secret for successful dairying was the co-operative creamery. Under this form of organization each farmer had but one vote, and all abided by the wish of the majority. The news of the higher prices paid by these co-operative creameries was quickly flashed over the state.

From far and near came requests for aid in organizing co-operative creameries and in furnishing competent buttermakers. Classes in practical buttermaking were started at the dairy school to supply the want for competent operators. Thus was started a co-operative movement in Minnesota that has not been equalled by any other state. This new system brought cash payment at the stores every month, more money in the banks, better roads, and better homes. Dairying also brought needed fertility to the soil and an increased yield of crops.

The income from butter has increased from $8,700,000.00 in 1890, to $90,291,766.00 in 1923. It is estimated that the total income for all dairy products for 1923 will be about two hundred million dollars. Thus, the income from the dairy cow today surpasses that of all other industries in the state.

History of the Dairy Industry of Pennsylvania

*By W. H. MARTIN**

THE dairy industry of Pennsylvania was born when the Swedes and the Dutch, bringing their cattle with them from Europe, settled in the eastern part of the state in the early part of the seventeenth century. Little did they realize that Pennsylvania was to become one of the leading dairy states. Ranking third in the total value of all dairy products, leading all other states in the manufacture of ice cream, its market milk industry only excelled by New York, rating second in the amount of cottage cheese, second for farm butter, third for condensed milk, seventh for all varieties of cheese and nineteenth for creamery butter, the Keystone state today occupies an enviable place in the dairy world.

W. H. MARTIN.

Very little is known of the early history of dairying in the state. Dairy cows were kept by the settlers primarily to furnish milk for their own needs, but with the growth of the cities they began to furnish them with dairy products. As early as the Civil War times, Jared Darlington, located in Delaware county, had gained a wide reputation as a dairyman. He had the distinction of furnishing butter for General Grant, the Vanderbilts and Astors at one dollar per pound. The second centrifugal cream separator to come to the United States was installed in a creamery owned by John I. Carter at Catham, Chester county, Pa.

THE real rapid growth in the development of dairying in eastern Pennsylvania began when the demand for liquid milk became general. Borden's of New York opened up many milk receiving plants, absorbing many of the smaller co-operative creameries; Supplee's and Abbot's became large buyers of milk for Philadelphia consumption. In spite of the outlet for liquid milk, there are still a great many butter making plants in existence.

Today Pennsylvania is primarily a market milk and ice cream state. With Philadelphia in the east, Pittsburgh in the west, New York near by, and a large number of smaller cities located within its borders, an excellent outlet for dairy products is afforded. A survey of figures will show how the industry has shifted from butter and cheese to fluid milk and ice cream. During the period from 1849 to 1879 butter made on farms increased from 39,878,418 pounds to 79,336,012. Since then production has decreased to 32,909,640 pounds in 1923. Creamery butter production has taken the same trend, 453,020 pounds ranking fifth with the other states was produced in the creameries of the state in 1879 and the amount continued to swell until it reached its peak in 1899 with a production of 37,137,161 pounds. Since then the yearly production has diminished to about 12,803,000 pounds.

WHILE the butter industry was diminishing in size, other lines of manufactured dairy products were gaining. The condensed milk made in the state has increased from 2,862,000 pounds in 1899 to 159,079,000 pounds in 1923. The ice cream industry has also prospered. The first commercial ice cream was made in Philadelphia about 1880. Robert Crane was one of the pioneers of the business. Figures showing the growth are not available, but starting from almost nothing in 1880 the production has mounted by leaps and bounds to 34,100,000 gallons in 1923. Taking the industry as a whole, the value of milk, cream, butterfat, farm butter and cheese has increased in value from $42,808,802 in 1909 to $99,617,373 in 1919.

This remarkable growth in the industry has created more interest in dairying. The Pennsylvania State College as early as 1893 offered the first dairy short course; at the same time instruction was given in ice cream making. The dairy department since then has grown

Why Milk Proteins Vitally Affect Ice Cream Quality!

A SERIES of extensive experiments that we have just completed in the Gumpert Research Laboratories are of tremendous value to YOU. They show conclusively how you can make better ice cream. As you know, milk composition varies from 84% to 90% water and 10% to 16% "solids." Of the solids 20% to 45% consists of *Casein.* This protein is a vital factor in ice cream production as these tests with milk prove.

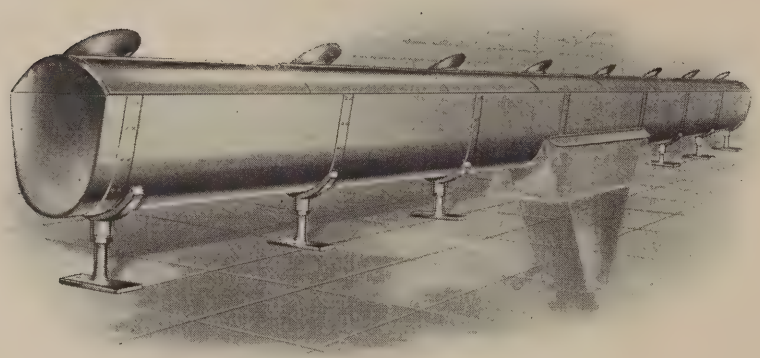
Note these two test tubes. The milk used in them is identical. Observe in the test tube on the left how Gumpert's Ice Cream Improver has worked on the *Casein, so that when it is precipitated it is soft, flocculent and easily digested. But note especially in the other test tube what happens when Gumpert's is absent—the Casein is tough, stringy and indigestible.

(*Casein precipitated by Van Slyke Method)

You realize that ice cream quality can differ widely even when identical materials are used. Why is it that it so often lacks the full, smooth rich taste that creates large demand? The answer is the hidden factor in ice cream production—the soluble proteins.

But note what happens to the protein when Gumpert's Ice Cream Improver is added. Consider its effect on the Casein (Protein). Just as Gumpert's Ice Cream Improver softens the Casein in milk when precipitated by the Van Slyke Method, so when Gumpert's is added to your mix it *softens the milk solids.* That's why you make ice cream which is smoother and more velvety—ice cream with a wonderfully delicious richness of taste—with Gumpert's Ice Cream Improver.

Some 2000 progressive ice cream manufacturers now make better ice cream the Gumpert way. They sell more ice cream, win preference for their product because of its finer quality. YOU can do likewise. You can impart a richness of taste to ice cream by the use of Gumpert's Ice Cream Improver.



If You *are not now using Gumpert's Ice Cream Improver, we will gladly send you a generous sample.*

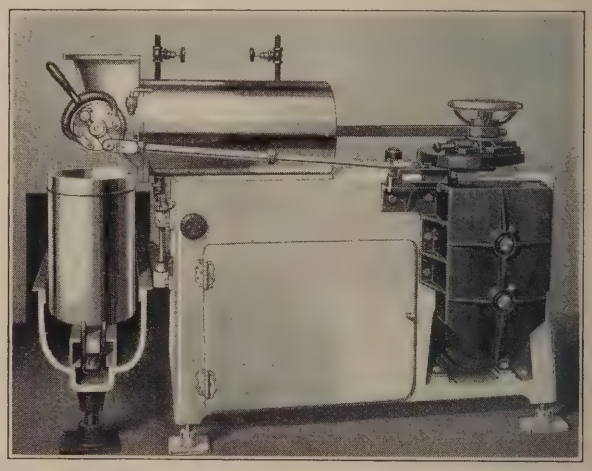
MOJONNIER ADDS
for eliminating waste in the

Mojonnier Ice Cream Hopper, refrigerated and insulated for keeping ice cream in perfect condition. (Patented.)

Eliminating Waste



Mojonnier method of handling ice cream automatically from the freezer to the delivery truck makes "peak loads" easy and helps solve labor problems. It shortens route from freezer to hardening room from ten minutes to two and one-half minutes. It eliminates waste of overfilling the cans.

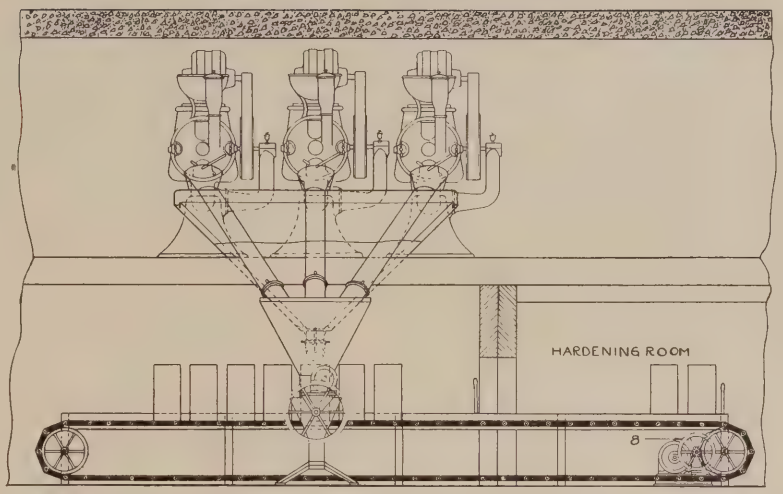
Hopper System

This hopper system may be applied to any size ice cream plant. It guarantees a minimum loss in overrun and shrinkage. It eliminates melting after the freezing process. It saves labor. It increases the output of the freezers, making it unnecessary to use freezers as filling machines.

Can Filling

Mojonnier Can Filler accomplishes two things making it an absolute necessity in every modern ice cream plant. Fills cans uniformly and prevents overfilling, so common when cans are filled by hand method. Substitutes mathematical precision for "guesswork." *Insures placing of frozen ice cream into the hardening room in a minimum amount of time.*

Mojonnier Automatic Ice Cream Can Filler. Fills ice cream cans with exact predetermined volume of ice cream. (Patented.)

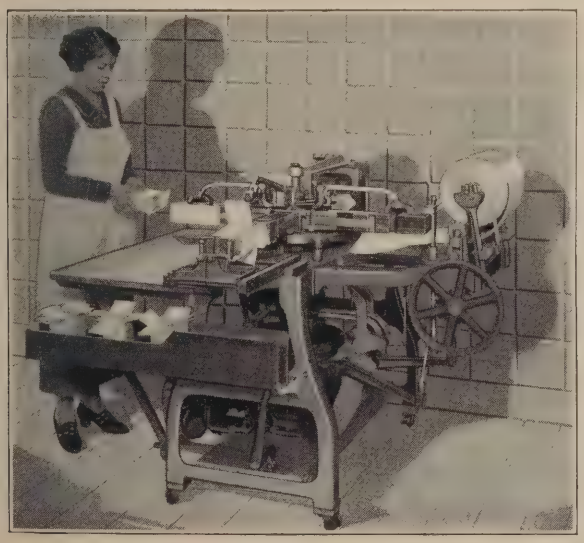


EFFICIENCY PRODUCTS Mojonnier

Mojonnier Bros. Co.
MILK ENGINEERS

4 MORE SERVANTS manufacture of Ice Cream

Ice Cream Conveyor



This is an entirely new, simple and inexpensive conveyor for handling either empty or filled ice cream cans. It eliminates trucks completely. It greatly increases hardening room capacity; saves refrigeration. Necessary in any size ice cream plant, enabling the smaller plants to operate with same degree of efficiency as the larger plant.

Typical installation of Mojonnier Ice Cream Handling System for three-freezer plant. Mojonnier Ice Cream Can Conveyor shown at bottom for conveying cans into or out of coolers. (Patents Pending.)

Automatic Carton Liner

This machine, with the Mojonnier Ice Cream Packaging Machine, has completely revolutionized the making of packaged ice cream. With these machines working together, packaged ice cream may be made at a cost a trifle more than bulk ice cream. Either 30-lb. or 40-lb. parchment or wax paper may be used. Parchment is fed off a roll, automatically slotted, folded and formed ready to be inserted into carton. The lined carton is delivered directly to the packaging machine at the rate of 1500 an hour, or as fast as the cartons are filled by packaging machine. In moderate sized plant, machine pays for itself the first year.

Mojonnier Automatic Ice Cream Carton Lining Machine for automatically lining "tuck end" cartons with parchment or wax paper. (Patents Pending.)

The other Mojonnier Servants:—

Milk Tester,
Vacuum Condensing Unit,
Overrun Tester, and
Packaging Machine

are well-known to the Ice Cream Industry. They, too, have been a means of greatly reducing waste in the ice cream industry.

Let a Mojonnier Engineer determine the possibility of eliminating waste in your factory.

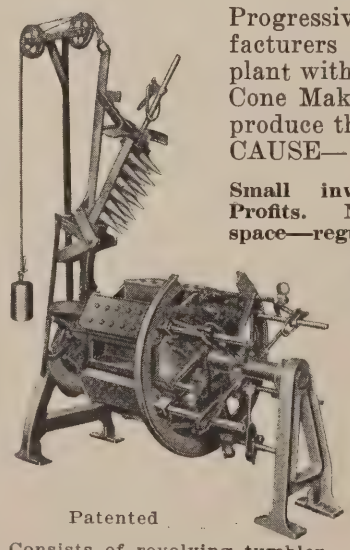
EFFICIENCY PRODUCTS Mojonnier

4601 W. OHIO STREET

SPEND A WEEK IN DAIRYLAND — NATIONAL DAIRY EXPOSITION — MILWAUKEE, WIS., SEPT. 27 TO OCT. 4.

and each year turns out 25 to 30 trained men for the dairying industry of the state.



DAIRY organizations have also been an important factor in advancing the industry. The Pennsylvania Dairy Association started in 1874. It was an outgrowth of the Crawford County Dairy Association which started in 1871. In 1898 the name was changed to the Dairy Union, and later merged with the Live Stock Breeders' Association. The purpose of this organization was to improve the quality of dairy products, by holding meetings and having talks on subjects of interest.

As the state gradually shifted from dairy products to a market milk state, dairy farmers found it advisable to have marketing organizations. The state naturally divides itself into three important market centers, Philadelphia, Pittsburgh and New York Territory. The Dairymen's League, Philadelphia Interstate Milk Producers' Association and Dairymen's Co-operative Sales Company at Pitttsburgh are three of the large marketing organizations operating in the state. It is through their agencies that milk and dairy products are being advertised in an attempt to insure their consumption.

REGARDING the outlook for dairying in the future it can safely be said that for years to come Pennsylvania will be a great dairy state. Conditions are especially favorable for the dairy industry in the state. The fact that most sections have good pastures and are well adapted to forage crops make the state well suited for dairy cows. The great demand for milk, cream and ice cream greatly stimulates the interest in dairying. The dairy industry of the state has gone through a transition period, not only regarding methods used on farms and in milk plants and factories but the whole industry is becoming adjusted to business and economic laws. The future of the industry depends on the quality of dairy products produced in our plants and on our farms, together with more economical production of milk and dairy products. Farmers and plant operators realize that the present state-wide campaign to moderate tuberculosis among dairy cattle, that college and scientifically trained men in their plants, that assistance in solving feeding and breeding problems given by the extension department of the college, and that organized effort in marketing dairy products are some of the things that will make for a more prosperous dairy industry in Pennsylvania.

(The writer wishes to acknowledge the information furnished by F. A. Doyle of the Sharples Milker Company, West Chester, Pa., Bruce S. Griffis of the Gowing Dietrick Company, New York City, P. M. Sharples, West Chester, Pa., T. I. Mairs, State College, Pa. Statistics and data were taken from the 14th Census Report and Crop and Live Stock Report, Department of Agriculture, Harrisburg, Pa.)

NEW FIELD Opens for Ice Cream Manufacturers

Progressive ice cream manufacturers should equip their plant with the "Philadelphia Cone Making Machine" and produce their own cones BECAUSE—

Small investments net big Profits. No extra labor or space—regular salesmen solicit orders — helpers bake cones. Fresh, Crisp, Delicious Cones increase ice cream consumption.

Patented

Consists of revolving tumbler containing six sets of moulds of 12 cones each baking 72 cones each revolution.

This machine saves time, space and positively produces a better cone at less cost than any other machine on the market — Write for details today.

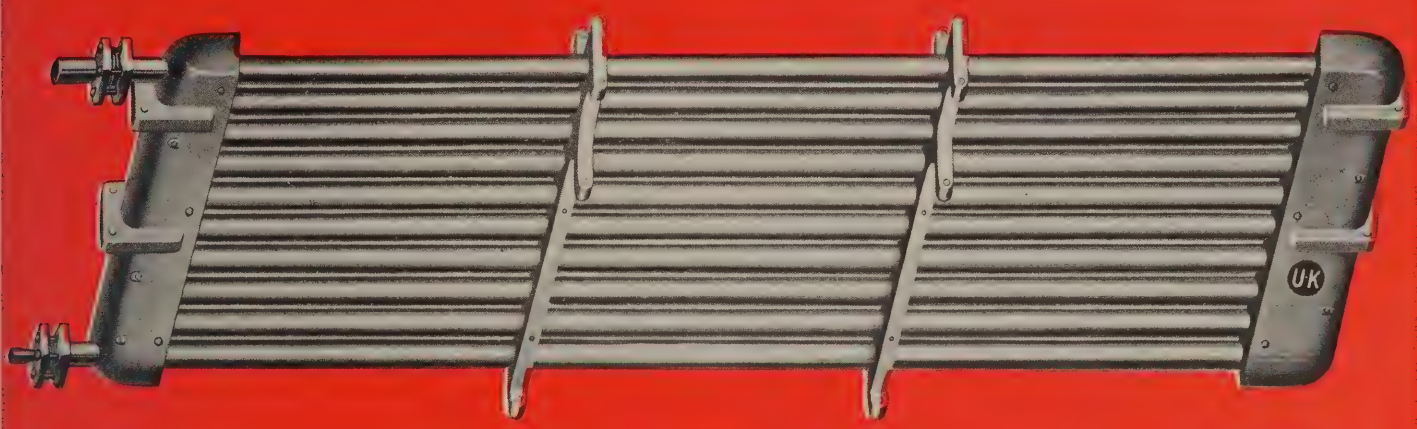
A Review of American Dairy Science Association

*By J. B. FITCH**

THE present American Dairy Science Association was organized in 1906, as the National Association of Dairy Instructors and Investigators. After a few years the name of this association was changed to the Official Dairy Instructors' Association. The membership includes dairy instructors and investigators connected with colleges, research institutions and with dairy companies. In fact anybody interested in the dairy industry who has had technical training is eligible for membership. In 1918 the name of the association was changed to the American Dairy Science Association and in that year they started the Journal of Dairy Science.



THIS journal is published bi-monthly and is used as the official organ of the American Dairy Science Association. In 1922 the American Dairy Science Association was divided into four sections, Section I having to do with the production side of dairy husbandry; Section II dairy manufactures; Section III extension; Section IV official testing.

By dividing the association in this way those interested in the above subjects can associate themselves with other persons interested in the same things. After a short general meeting of the association the members adjourn to their respective sections, which also have a chairman and secretary, and proceed with their discussions. In 1923 the eastern division of the American Dairy Science Association was formed.

This was followed by the southern division and last year the western division of the American Dairy Science Association was formed. This gives an opportunity for the members of the association to get together oftener than is possible with the one large association. It is the hope of the officers of the association that we can enroll all who are interested in a technical way in dairying and have frequent opportunities of getting together and discussing subjects of importance to the dairy industry.

*Secretary American Dairy Science Association.

You can find the person who will be glad to buy what you wish to sell, by letting your desires be known through an advertisement in The Ice Cream Review.

The Last Word in
Direct-Expansion Coolers

U-K Direct Expansion Sections have been pioneers in the development of this phase of milk cooling. A direct expansion section on a tubular cooler utilizes ammonia gas direct from the refrigerating machine, requiring no brine, brine tank and pump, etc. If operated with reasonable attention such a section is distinctly economical.

For ice cream plants direct expansion sections are quite easy to install and prove more satisfactory, everything considered, than increased capacity in brine sections, whenever it's necessary to add cooling capacity to the present equipment.

U-K Direct Expansion Sections are made of 2 inch steel tubes **with a nickel silver tube drawn over them.** All U-K Direct Expansion Tubes are made with them. Such construction is far superior to the tinned steel tubes or tinned copper drawn over steel commonly used. Frost on the pipes is reduced to a minimum. Nickel silver will not wear off, nor rust.

These Coolers are made of the solid surface type, and the joints are all welded and are guaranteed against any leakage whatever. The ends are covered tight with a U-shaped casting of brass, as well as supporting yokes in center of Cooler.

Summing up we do not hesitate to state that this Cooler is the finest and highest grade Cooler that has ever been made—being complete in efficiency, durability, (will last forever) and everything that is required to enable us to present the highest quality Cooler that has every been offered.

The Wonderful Story of Wisconsin's Dairy Industry

Fifty Years of Dairying Achievement in World's Greatest Dairy State

By J. Q. EMERY, Dairy and Food Commissioner

THE editor requests a communication from me for a special edition, concerning the early development and progress of the dairy industry in Wisconsin, and he indicates the scope of his request by specifying just how dairying came to be established in Wisconsin, who were some of the early pioneers, where our good breed cows came from, who I believe has done most for the development of dairying in our state, what has contributed most to its progress, who opened the first dairy plants, how much butter, cheese and ice cream were produced in the earliest years of which I have a record, what the status is of the industry at this time and what I think of the future.

J. Q. EMERY.

Causes are very elusive things with which to deal, and especially is this statement true as to first causes. Fundamentally, the splendid fertility of Wisconsin soils, her geographical location as to latitude and in the embrace of Lakes Michigan and Superior, that give to Wisconsin's climate an average of temperature and degree of moisture that united with her crystal pure waters, are highly conducive to an abundant yield of excellent grasses, the maize plant and cereals, for the feeding of legions of dairy cattle for the production in great abundance and variety of dairy products of superb quality, are natural conditions that have been contributory to the great Wisconsin dairy industry.

These favoring and assured soil and climatic conditions, coupled with the security furnished by the laws, liberties, free and safe democratic institutions guaranteed by Wisconsin's constitution, allured to these munificent opportunities b ainy men and women from New England and other eastern states, well versed in dairy knowledge and well established in good dairy habits, among their number those possessed of intellectual endowments and vision, qualifying them for brilliant, capable and reliable leadership; and they also allured sturdy, industrious and frugal Scandinavian, German, Swiss, Dutch, English, Irish and other immigrants from the Old World, who, impelled by the habits acquired in their Fatherland, contributed to that splendid body of pioneers who laid the firm foundations for the 185,000 dairy farms, with their many modern dairy barns, modern equipment and greatly improved dairy herds, the 2,500 cheese factories, 611 creameries 67 condenseries, and the Niagara of market milk, the stupendous dairy manufacturing plants, the premier dairy press, the world's pioneer practical dairy school, constituents all of the colossal present-day dairy industry of Wisconsin.

THE beginnings of dairying in Wisconsin were individualistic and empyrical. The time was the pioneer stage until about 1873. The place was the pioneer farms. The personalities were the pioneer farm woman and her husband. The cow was the ordinary native. The dairy barn was the straw stack. The feed was straw and marsh hay in winter and the wild grasses in summer. The dairy house, creamery, cheese factory, condensery or receiving station was the pioneer farm kitchen, well and cellar. The buttermaker or cheesemaker was the pioneer farmer's wife. Her helpers were her children. Her dairy implements were tin milk pans, tin skimmers, the old-fashioned dasher churn, wooden bowl and ladle, for buttermaking and a like meager primitive outfit for cheesemaking. The market was the grocery store, and that often far away and glutted. There butter was "swapped" for groceries, paying twenty-five cents a pound for sugar and similar prices for other groceries. The transportation was by "foot and walker's line," or per chance by ox-team. The cows freshened in March or April, ran at large during the summer, and were dried off in November and December. There was no winter dairying. Indeed, during this primitive period, dairying was merely incidental to the great paramount industry of growing wheat.

Some evolutionary changes occurred in this primitive period, when there was the "first" this, and the "first" that, and the "first" some other isolated unit, thing or practice, but it was not until the year 1873 that any revolutionary changes occurred.

The humble chinch bug performed no insignificant part in initiating the great dairy movement in Wisconsin; for it was when Wisconsin farmers had become panic stricken by the destructive ravages of the chinch bugs, following the continual cropping of the land with wheat, ravages equal in their destructiveness to the plagues of Egypt, that a few seers organized in 1873 the Wisconsin Dairymen's Association, the third of its kind, which proved to be a Moses that was to lead the disheartened farmers out of the bondage of soil robbery, across the Jordan and through the Dead Sea of their despair, into the promised land of Dairy Husbandry, howbeit after wanderings many in the forest of doubt and ignorance, where, contrary to the voice of wisdom and warning from the intellectual Pisgah of their seers, they at times bowed in adoration of beefy, dual purpose idols, they had made unto themselves.

IN THE year 1873, under the superb leadership of that "inspiring genius of the dairy movement, and the subsequent prophet and seer of Wisconsin dairying —nay, of American dairying, if not world dairying," former Governor W. D. Hoard, the Wisconsin Dairymen's Association was organized at Watertown, Jefferson county, and Wisconsin entered upon its since world famous career of organized effort in promoting the dairy industry.

For at least three decades that association, filled to overflowing with missionary zeal, held its annual meetings in different parts of Wisconsin, criss-crossing the state at every angle. Beyond cavil, the Wisconsin Dairymen's Association was for at least a third of a century subsequent to its organization, the most potent single

RITCHIE ICE CREAM CANS

Convenient and Time Saving

DO YOU remember how naturally your customers took to packaged goods? They liked them from the start, for many reasons. They were convenient and time-saving. It seemed logical to have goods all measured out and nicely prepared. They were attractive, too.

You also liked them because they saved your time and prevented waste for one thing, but principally because they appealed to your trade.

Perhaps both you and your customers would prefer if everything in your store could be so handled—packaged and ready on the shelf or counter to be picked up and carried away.

Ritchie Cans printed with your trade-mark or advertisement have great sales value. Both top and side can be printed—the top in one or two colors, the side in one. This is an exclusive RITCHIE feature.

But all goods cannot be treated in this way. A large number of sales must be "put-up" when the purchase is made or a short time before.

The RITCHIE Can has been originated so that the put-ups in your store can be in a class with the finest packaged goods you sell; so that time can be saved—yours as well as the customer's; so that losses are avoided; so that trade may be genuinely pleased and brought back again.

Old-fashioned paper bags and buckets could never do all this. In their time they have wasted more goods, spoiled more clothes, and made more housewives peevish than any other occurrence incident to housekeeping.

But RITCHIE Cans will do everything that you would expect the right container to do. They are compact and substantial, so made and crimped at the bottom that they hold liquids perfectly. They prevent waste of time in filling and handling.

USE RITCHIE NO. 21 CANS FOR ICE CREAM AND SAVE MONEY

A special can has been designed for ice cream—the RITCHIE No. 21. This can is not recommended or sold regularly for liquids, but for ice cream it is not equalled as a carry-home container. Costing less than the regular can, and serving ideally, it is just what you've been seeking.

With RITCHIE No. 21 Cans, selling ice cream is made simple and more profitable.

Use RITCHIE Cans. You'll find them convenient and time-saving.

If you haven't already seen them or don't already know how they would build good-will and promote business, ask your jobber or write us on the enclosed card and we will see that you get attention at once.

W. C. RITCHIE and COMPANY

831 W. Van Buren Street CHICAGO, ILL.

force in the state for the advancement of the dairy industry.

Under the secretaryships successively of former Governor W. D. Hoard, D. W. Curtis and General George W. Burchard, model programs were prepared for the annual meetings for the carying out of which the most competent, experienced talent was employed, much reliable information and experience was given, great enthusiasm was aroused in the localities where the meetings were held, and everywhere dairying sprung into life in the wake of these meetings.

W. D. Hoard, Stephen Favill, W. S. Green, Chester Hazen, H. F. Dousman, A. D. Favill and H. C. Drake, the organizers of the Wisconsin Dairymen's Association, and others of like splendid personalities who joined them along the tide of years, conspicuous among whom were, Hiram Smith, the "Nestor" of Wisconsin dairymen; Chas. R. Beach, "rugged as the Berkshire Hills;" White of Kenosha, "preacher of the gospel of kindness;" Uncle Perry Goodrich, pre-eminently competent and self-effacing; General George W. Burchard, A. D. Deland, Dean Henry, D. W. Curtis, H. C. Adams, H. C. Thom, C. H. Everett, Fanny Morley, Mrs. Kelly, Mrs. Howie, H. C. Taylor, Fred Scribner, the Hills, W. J. Gillette, H. D. Griswold, the Elmers, the Stauffachers, the Martys, the Luchsingers, were among the pioneer workers and promoters of the dairy industry in Wisconsin,

> "Who wrought in deep sincerity;
> And builded better than they knew."

The term, "Old Guard," was commonly applied to this group of sturdy pioneers.

IN THE feeble beginnings of the Wisconsin dairy industry, the adaptability of Wisconsin's climate, soils, grasses, water and dairymen to the production of high-class dairy products was yet to be determined. Our surplus dairy products had to compete in the Eastern and European markets with the products of New York and Canada, which already had a reputation established for high quality in the markets of the world. Speaking of conditions as they were at that time, Hiram Smith once said that the manufacturers of Wisconsin cheese had to leave it to be sold at the country stores, one or two at a place, and replenish as sold; and mail carriers and peddlers disposed of all they could. At one time it was feared that the lightning rod man and the insurance agent would hav to be called in to dispose of the accumulating stock.

To overcome this prejudice, to solve the market problem of their day, these pioneers sought, first to produce cheese and butter honestly worthy of the best markets of the world. Having done this, they conceived and executed the plan of making exhibits of Wisconsin cheese and butter at the Centennial Exposition in Philadelphia in 1876, where Wisconsin received a larger percentage of the medals than was awarded any other state or country. With these victories and others gained at the great International Dairy Show in New York, Wisconsin gained recognition in home and English markets as a dairy state. Like victories followed at the Chicago World's Fair and at the New Orleans Cotton Centennial. They were leading the way from the making of cheese and butter exclusively on the farms and were erecting cheese factories and creameries where they manufactured the choicest of dairy products, attested by their having gained the highest awards in the world's competitive contests.

They lacked transportation facilities for reaching the world markets, such as refrigerator cars and reasonable

Now they use MAPLEINE *and save money!*

Ice Cream Manufacturers now find they can use Mapleine in their chocolate flavored ice cream—get better results than with a vanilla mix—and save considerable money. Mapleine is a natural ally to chocolate flavor—try this formula and prove it to yourself:

Take 20 pounds powdered cocoa, 10 pounds sugar, 10 gallons milk. Thoroughly mix in steam kettle till this comes to a boil. Turn off steam and add 16 ounces Mapleine. Cool. Add one gallon this solution to each 4½ gallons plain mix.

MAPLEINE ICE CREAM, plain or with nuts, also sells well—in many places it ranks with chocolate and strawberry. Two ounces Mapleine will color and flavor each 10 gallons finished ice cream. Mapleine will not freeze out—the flavor holds true through any storing.

Try Mapleine—convince yourself

Battery of U. S. Heavy Duty Freezers in Plant of Tauber Absopure Ice Cream Co., Chicago

The U. S. Heavy Duty Brine Freezer

THE Tauber installation is typical of many that we have made in large plants throughout the Middle West — and hundreds of smaller plants are using one, two or three U. S. Freezers, with equal satisfaction and profit. Here are some of the featurs that will give you a better product — and a better profit — with U. S. Freezers:

1—Automatic batch weigher that regulates mix and helps you to produce a uniform cream.

2—Patented removable bronze bearing for front end of dasher, which eliminates wear on cover and keeps whipping device in correct alignment.

3—Substantial brass hopper which simplifies the filling in of fruits and flavors.

4—Convenient hinged cylinder cover — always out of the way.

5—Rotary brine control valve which gives complete control of the rapidity of the freezing process.

6—Rapid vertical discharge for quick emptying.

There are seven sizes of U. S. Brine Freezers, ranging in capacity from 40 to 160 quarts. Ask for complete information and prices.

Everything for the Dairy Industry

One 800-gallon Viscolizer and Motor Drive Glass Lined Ageing Tanks in the Plant of Ives Ice Cream Co., Minneapolis, Minn.

The Viscolizer

THE Viscolizer will give you a smoother, richer feeling ice cream, by dividing the butterfat finely and uniting it firmly with the filler, sugar and gelatine. It develops a fine quality cream from sweet butter and skim milk, or skim milk powder. The Viscolizer unites the solid ingredients so that the butterfat will not separate while standing in can or bottle.

Furnished for either motor or belt drive, in five sizes, to meet the needs of any plant, large or small — capacities 100 to 800 gallons per hour.

The Viscolizer will pay you a handsome dividend upon your investment; we shall be glad to help you select the size best suited to your needs.

SOUTHERN CONVENTION—NEW ORLEANS, NOVEMBER 14-15, 1924.

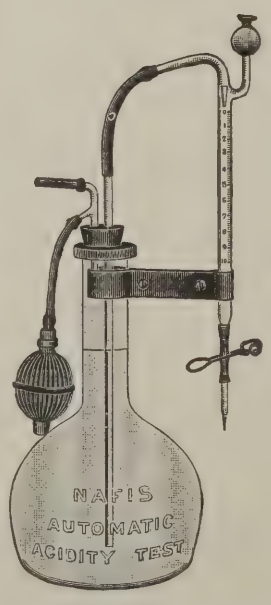
rates. They waved the magic wand of their influence over railroad officials and in response refrigerator cars were placed at Wisconsin dairy centers to be loaded with Wisconsin cheese and butter, to be borne at satisfactory rates to the best dairy markets of the continent, or to the seaboard and thence to the great dairy markets of the world, there, by their merits, to command the highest prices.

Their thoughts and experiences gained in the evolution of the dairy industry of the state were chronicled in the dairy press, to which their own necessities and their own genius gave birth, which has led the march of dairy progress across the continent and influenced for good the dairy thought of the world.

IN THEIR need and extremity in the beginnings of their co-operative efforts in dairying in cheese factory and creamery, they called for some easy and accurate means for measuring the butterfat content of milk and cream, and the response came in the test which immortalizes the name of Dr. Babcock.

In their own eager struggles for knowledge and light, and the best practices to follow, they conceived the necessity of a dairy school that should, like the lofty mountain peaks, catch the earliest gleams of scientific dairy knowledge and in its teaching and practice make application of that knowledge, and the Wisconsin Dairy School —the first dairy school on the continent—became a reality.

They inspired and aided in bringing into existence great institutions that have made discoveries and inventions which have revolutionized not only their own thought and practice but that of the dairy world. In 1900, at the meeting of the Wisconsin Dairymen's Association in Watertown, Dean Henry said: "This dairy association is the parent of the Wisconsin College of Agriculture. What that college is today, and what its ambitions are, rests largely in the backing and help it receives from this association; as a child, we are loyal to our parent."



AND it was Dean Henry who organized, directed and developed the pioneer activities of that great institution, the Wisconsin College of Agriculture and Agricultural Experiment Station, and who in so doing called into the service of the state the renowned Dr. Babcock, whose original scientific investigations brought into existence great well known contributions to the dairy industry, and whose contribution of his own lofty ideals and personality is a matchless model for all dairy scientists who follow him. It was Dean Henry who also called into the service of the state Prof. H. L. Russell, to devote his energies to the then uncultivated field of dairy bacteriology, and whose original discoveries in that field and their publication, were not only of incalculable value to the dairy industry, but in token of which, later the mantle of Dean Henry fell upon his shoulders, and his activities widened to include those of Dean of the College of Agriculture and the directorship of the Experiment Station; Dean Henry it was who called into the service of the state Prof. King, whose original investigations in agricultural physics and publication of the same, became the rock of safety in the solution of many dairy problems, notably among these, silo construction and the King system of barn ventilation. Dean Henry it was who called into the service of the College of Agriculture and the Experiment Station Prof. R. A. Moore, who, by his industry and almost miraculous genius in organization, has brought about results that have not only safeguarded the dairymen of the state from many crop failures, but has been the direct or indirect means of robbing the miller of large profits by promoting home grown protein feeds and increasing the yield of crops, at certain times and in certain places, essential to the prosperity of the dairy industry.

This great institution it was that called into its service Doctors Hart and McCollum, whose marvelous discoveries as the result of long continued investigations and experimentations, are such as almost to stagger estimate as to their influences and benefits not only to the dairy industry but to the civilized world at large.

The list of other luminaries in the service of this great institution, whose lives have been a reliable guide to the dairy industry is too long to be given here. However, the pioneer farmers' institutes, conducted under the auspices of the Board of Regents of the University of Wisconsin and the Wisconsin College of Agriculture, must not be omitted from the list of potent agencies which have developed the stupendous Wisconsin dairy industry.

RESPONDING to the repeatedly urgent requests of the Wisconsin Dairymen's Association, as expressed in its resolutions at its 15th, 16th and 17th annual sessions, 1887, 1888 and 1889, that the legislature enact a law to prevent the manufacture and sale of any form of adulterated cheese for the pure article, and to provide for a dairy and food commissioner whose duty it should be to ferret out and prosecute all adulterations of butter and cheese and the sale of the same as well as of other foods, declaring that imitations of butter were being sold in Wisconsin in violation of laws to the in large quantities, robbed of its natural fat, filled with lard and other foreign fats and not stamped as required by law, that adulterated and impure milk flooded the prejudice of honest goods, that cheese was being made

MORSE SILENT CHAIN DRIVES

75 H. P. Morse Chains driving ice machine.

The power drive that improves the freezer

After all, the overall economy that can be secured from any ice cream freezer, depends in large measure on the drive transmitting the power from the motor to the freezer.

Morse Silent Chain Drives continuously transmit, year after year, 98.6% of the developed horse power. They cannot slip, operate on short or long center distances as desired, permit a convenient arrangement of machinery. They run slack without excessive journal friction, and are sufficiently flexible and elastic to cushion or absorb all jars and shocks, thereby safely protecting the motor armature and other rotating parts.

The outstanding characteristic of the Morse Silent Chain is the rocker-joint which substitutes rolling or rocking friction for sliding friction at the joint, insuring long life and negligible wear.

Morse Engineers are at all times glad to advise with those desiring to improve their freezer drives the 98.6% efficient Morse way.

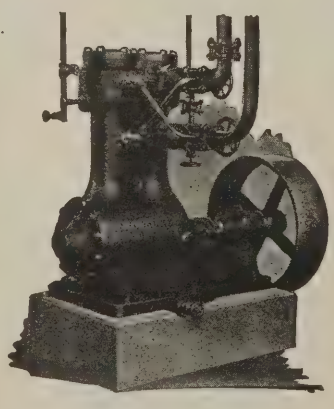
markets of the towns and cities, that drugs were made useless, drinks were made poisonous and nearly all the articles of human food were diminished in value by adulteration, Governor W. D. Hoard, in his message to the legislature in 1889, urged the establishment by the legislature of a commission clothed with the necessary power and means for the suppression of the fraudulent manufacture and sale of imitation butter and cheese as well as the sale of adulterated, impure or diluted milk, and the widespread and rapidly increasing adulteration of the food of the people, pointing out that the then existing laws on this subject were practically inoperative, because there was no well established agency for their enforcement.



In that year, the legislature created the office of dairy and food commissioner and prescribed as one of his duties, to enforce all laws that then existed or that might thereafter be enacted, regarding the production, manufacture or sale of dairy products and the fraudulent imitations or adulterations thereof, by prosecuting or causing to be prosecuted violators of those laws.

WHAT the organized dairymen of the state asked and what the state granted was not mere special privilege, but a law providing a square deal, protection against fraud and deception, a thing of incalculable value to the upbuilding of the dairy industry and the general prosperity of the state. For be it said that the constitution guarantees to no person or corporation the right to defraud the public.

That Wisconsin is the premier dairy state in the Union, that the high quality of her dairy products has been so outstanding that she has outstripped all other states in total volume, is due in no small measure to the service of the Wisconsin dairy and food commission and its championship of high quality.

Vilter

Enclosed Type Ammonia Compressor

An ideal ice machine for the moderate size plant. Modern in design, made of high grade materials and thoroughly inspected and tested. Let us send a copy of our Bulletin No. 29R to you. It tells of the force feed lubrication to the piston pins, the easily operated Vilter plate valves, the oil sealed stuffing box and gives other information of value.

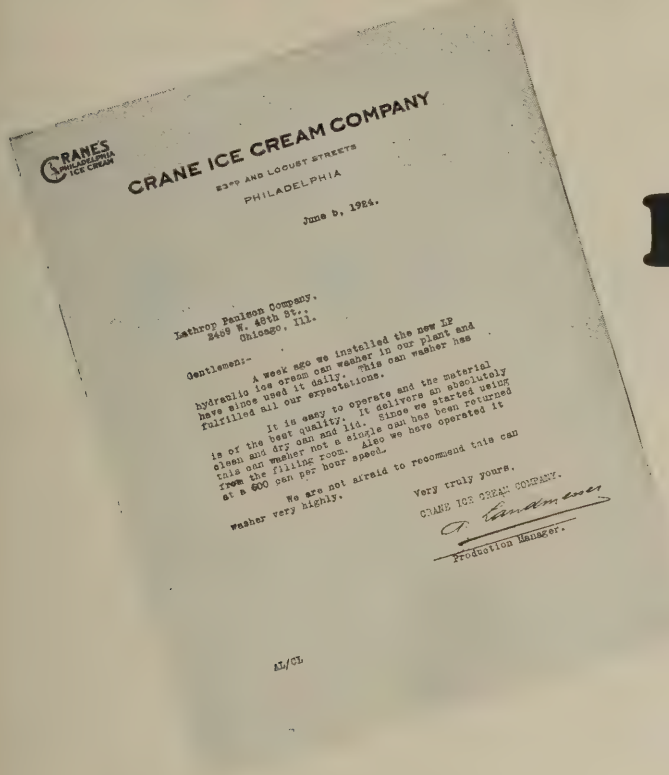
Let us submit quotations on your requirements —no obligation to you.

The Vilter Manufacturing Company
ESTABLISHED 1867
830 Clinton Street Milwaukee, Wis.

It is well known to biologists that there are certain types of animals in which life and energy permeate them with such vigor and profusion that multiplication is effected by what is termed division. A piece of the original animal when divided from the parent goes on its life way, develops and multiplies.

In its beginnings, the Wisconsin Dairymen's Association functioned in numerous capacities, concerning itself about the production of good pure milk from healthy cows; the proper caretaking of that milk; the selection, breeding, feeding and caretaking of the dairy herd; the tillage of the soil; the variety, adaptability and economy of feeds, the procuring and storing of same; the silos filled with the golden corn; barns stored with the "lush, fragrant, dead plunder of the sweet-scented meadows of June"; the manufacturing of butter; the manufacturing of cheese; the marketing of each; the gaining and maintenance of reputation; the making of dairymen; but as the evolution progressed and life grew more and more vigorous in the organization, new dairy organizations began to come into existence, narrowed in scope and specializing to meet their respective interests.

In 1893, the Wisconsin Cheese Makers' Association was divided from the parent association and became the largest organization of its kind in the world, whose avowed business, purpose and object is to educate all its members for better work in the art of cheesemaking, the care and management of factories, the sale of their products and the weeding out of incompetency in the business of cheesemaking.



In about the year 1900, the Southern Wisconsin Cheese Makers' and Dairymen's Association was organized with the primary aim and purpose of promoting the growth and development of the cheese industry of the foreign type—namely: Swiss, brick, Limburger, and others, in southern Wisconsin — the Switzerland of America.

IN 1901, the Wisconsin Butter Makers' Association was organized, as an offshoot of the Wisconsin Dairymen's Association, whose avowed purposes and objects were the education of its members in a better practical knowledge of creamery operation, promoting progress in the art of buttermaking, in the care and management of creameries, in the sale, transportation and storage of butter, and in the weeding out of incompetency in the business of buttermaking, and to promote the enactment and rigid enforcement of such laws as would protect the manufacture and sale of pure dairy products against fraudulent imitations.

The state encouraged the pioneer missionary educational activities of the Wisconsin Dairymen's Association, and of the other associations I have named, by granting a moderate annual bounty as an aid and stimulus to those activities. To these different dairy organizations, the state's modicum bounties bestowed, were veritable lifesavers cast to them on stormy seas. To the state, the bestowal of these bounties was a casting of bread upon the watters which has returned to the state with the artesian effect of the widow's cruse of oil, namely: the fruits of good citizenship manifest in the industry, frugality, opulence, sobriety, progressiveness,

PHILADELPHIA

June 5, 1924.

Lathrop Paulson Company,
2459 W. 48th St.,
Chicago, Ill.

Gentlemen:-

A week ago we installed the new LP hydraulic ice cream can washer in our plant and have since used it daily. This can washer has fulfilled all our expectations.

It is easy to operate and the material is of the best quality. It delivers an absolutely clean and dry can and lid. Since we started using this can washer not a single can has been returned from the filling room. Also we have operated it at a 600 can per hour speed.

We are not afraid to recommend this can washer very highly.

Very truly yours,
CRANE ICE CREAM COMPANY.
Production Manager.

AL/CL

L.-P.

ICE CREAM

Can Washer

Fast, Efficient and Fool Proof.

Washes All Sizes of Cans and Covers from 5-gal. Down to Smallest. Small Cans May Be Washed Together with Larger Ones Increasing Capacity to 1200 per Hour.

Cans Are Fed in and Delivered at the Same End of Machine.

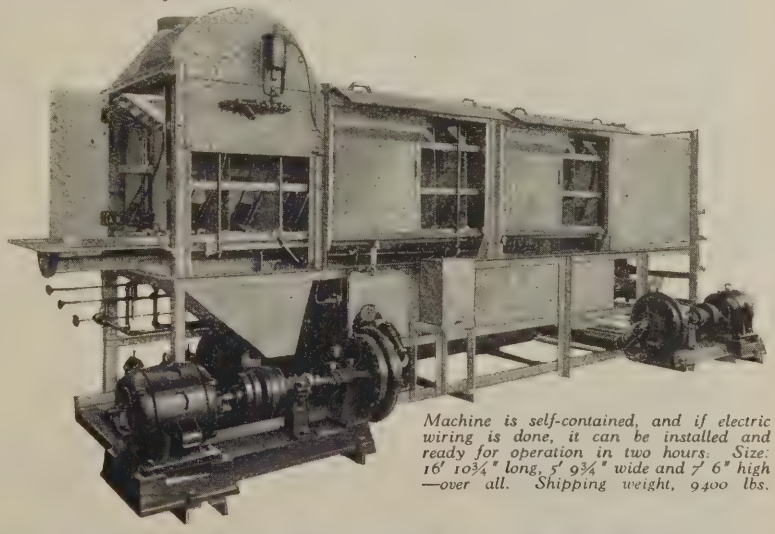
This machine embodies many of the L. P. features of efficiency, simplicity and durability which characterize L.-P. equipment.

600 Cans and Covers or Brick Pans Per Hour

Absolutely Clean, Sterile and Dry

THIS machine has two speeds—600 and 300 per hour. At the 600 speed it will efficiently wash, sterilize and dry all ordinary city and shipping cans, and at the 300 speed it cleans, sterilizes and dries the dirtiest of cans. Handled at 600 per hour, cans, brick pans and covers come from the machine **absolutely clean, sterile and dry.** Cans are washed on outside as well, freeing the cans, lids, pans and covers from brine. This machine eliminates the necessity of washing cans and covers separately. Cans which have been stored and coated with oil do not have to be brush washed. They come out ready for service, or may be piled in storage racks without danger of rust. The machine will also handle brick tanks up to 12-qt. size.

Each Can Receives 17 Distinct and Intensive Treatments



All cans are placed in machine upright. They are first thoroughly rinsed with preliminary tempered water, which thoroughly flushes out the cans, freeing them from refuse. This rinse water is caught in a separate tank and carried away. They are next washed inside and out with six separate intense soda solution treatments under 40 lbs. pressure; they are then entirely freed from soda and thoroughly drained before receiving six clear hot water washes, which are followed by scalding hot unused water rinse. Next comes the steam, inside and out, thoroughly sterilizing the cans, lids, pans and covers. They then pass over two hot air jets (the same as are used on all L.-P. Can Washers) and are delivered absolutely dry and ready for immediate service.

Only two men are required to operate the machine at maximum speed, and one man can handle the work efficiently at the 300 speed.

There are two powerful pumps operated by 10 h.p. and 7½ h.p. motors in separate units. No other power required.

The machine is sturdily constructed and heavily galvanized. Temperatures are thermostatically controlled. Soda solution is automatically controlled by L.-P. patent Soda Regulator.

This machine has passed its experimental stage. It has stood the most rigid tests in actual operation, and is sold on a results-guaranteed basis. Write for full information and names of users.

Machine is self-contained, and if electric wiring is done, it can be installed and ready for operation in two hours. Size: 16′ 10¾″ long, 5′ 9¾″ wide and 7′ 6″ high —over all. Shipping weight, 9400 lbs.

THE LATHROP-PAULSON COMPANY

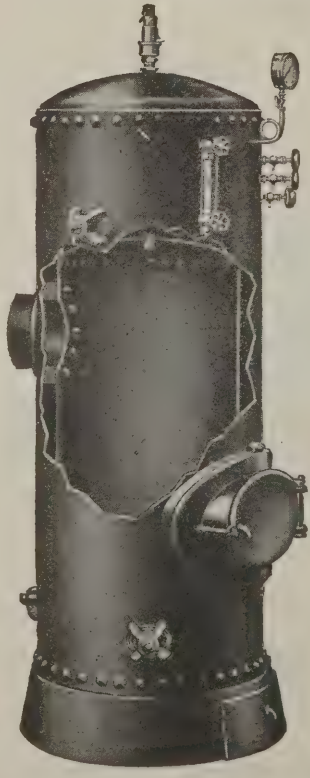
EVERY AD IN THE REVIEW HAS AN INTERESTING MESSAGE FOR YOU.

vast contribution to the general prosperity, public spirit and patriotism of those who comprise the magnificent dairy industry of the state; for it is as true today as it was twenty-three centuries ago when uttered by that great Athenian, Thucydides: "Where the rewards of virtue are the most liberal, there will be found the best citizens."

UNDER the inspiring leadership of that great seer, former Governor Hoard, Wisconsin was seeded down with ideas of dairying, among which were that for successful dairying, the special purpose dairy cow as distinct from the dual purpose cow is a necessity. Some of these ideas as seeds at first feel by the wayside where the fowls of the air came and devoured them. Others fell on stony ground where there was not much earth and still others among thorns that choked them. But later the seed fell into good ground that bore fruit more than a hundred fold and so developed that the breeding of pure bred dairy cattle became prevalent and organizations for promoting the different breeds of dairy cows were instituted and have been maintained to the present time.

One of the "Old Guard" it was, H. C. Taylor, who developed "Brown Bessie" of Chicago World's Fair fame. Another one of this group, Fred Scribner, developed "Lorretto D" of St. Louis-Columbian Exposition fame. Mr. Gillette was the proud owner and breeder of the renowned "Colantha 4th Johanna," and the Hills were the proud owners of "Old Benjamin" of Guernsey fame, and they were pioneer breeders of pure-bred Guernseys.



What are the results? 56,000 head of dairy cattle were purchased in Wisconsin in 1923 by dairymen from other states. Foreign shipments went to Japan, New Zealand, South America and Mexico, yet Wisconsin has left in 1924 the handsome balance of 2,217,000 dairy cows and heifers, 453,000 in excess of its nearest competitor.

AS THE years advanced and the Wisconsin dairy school functioned, the activities of the dairy and food commission broadened, and the Wisconsin Cheese Makers' Association, the Southern Wisconsin Cheese Makers' and Dairymen's Association, and the Wisconsin Butter Makers' Association developed "as bees swarm and boys and girls marry and go for themselves," the technique in the various phases of the dairy industry received less and less attention from the pioneer organization which then concentrated its efforts very largely upon cow testing associations. Under the secretaryships of A. J. Glover and Paul C. Burchard, respectively, and in co-operation with the Wisconsin Agricultural Experiment Station and the National Department of Agriculture, the activities and the beneficial results of those organizations have been developed to stupendous proportions. These associations now number 168, far in excess of any other state. Later the Central Wisconsin Butter and Cheese Makers' and Dairymen's Advancement Association has sprung into vigorous life and activities in the more recently developed dairy areas.

The Wisconsin ice cream industry which in recent years has developed into such magnificent proportions, if not indeed a distinct branch of the dairy industry, is certainly an ally. Over six million gallons of ice cream were produced in Wisconsin in the year 1923, valued at more than six and a quarter million dollars. This means an enlarged market for the dairymen's produce. The Wisconsin Association of Ice Cream Manufacturers is of recent origin and is timely. In its personnel it furnishes a leadership that appears to have a vision and an appreciation of the opportunities within the grasp of such a state organization and such an industry. Its members have the wisdom to discern and the experience to confirm that the production of genuine ice cream of high quality is as a business proposition and practice greatly to their own interest, as well as to that of the consuming public. It was this organization that at the session of the legislature in 1921 took the initiative in the enactment of standards for ice cream in Wisconsin unexcelled if not unequalled by any other state. The members of this organization seem to be allied not only with the present Wisconsin dairy industry but with the spirit of the pioneers of that industry who sought to build upon the solid foundation of high quality and integrity.

As the past more than fifty years of organized dairying in Wisconsin rises before us, and as we view the great panoramic procession, we recognize that there

Do Away With Flue Troubles

The Gem Flueless Boiler is just the thing for the Creamery and Cheese Factory.

It cuts down the cost of repairs.

It has little or nothing that can get out of order.

It develops steam quickly and economically.

MEET Old Friends

WHETHER or not you attend the *Dairy Show* you'll find many of your "old friends" looking and feeling well satisfied with business so far this year.

As we look over our sales record for the past year we are proud to have numbered among our customers so many of the *bigger concerns.* This sales record indicates a *strong leaning* toward Emery Thompson Horizontals with their time, labor and material saving refinements.

Incidentally, at the Emery Thompson booth we'll be mighty glad to "meet old friends." Look over the new machine.

were giants in those days who laid a broad and deep and strong and well-proportioned foundation whereon to build a towering dairy super-structure.

The proportions of the colossal Wisconsin dairy structure as it now stands, is briefly and tersely told in the stupendous figures given in the following tabulation:

WISCONSIN DAIRY STATISTICS FOR THE YEAR 1923.

	Pounds	Received for or valued at
Cheese produced in factories, other than cottage, skim milk, cheese curd, cooked, buttermilk and cream cheese	343,313,245	$77,433,752.75
Cottage, skim milk, cheese curd, cooked, buttermilk and cream cheese	5,570,002	368,438.79
Cheese produced on farms	308,117	98,599.00
Butter produced in factories	147,823,584	66,388,231.38
Farm made butter	8,666,037	4,733,556.00
Condensery products:		
Evaporated, condensed, powdered, concentrated milk and evaporated cream	512,134,253	38,581,438.16
Evaporated, concentrated powdered and condensed skim milk	6,297,697	189,124.55
Value of milk used in manufacture of malted milk, etc.		1,433,891.08
Ice cream (gallons)	6,031,996	6,260,250.43
Milk produced other than furnished cheese factories, butter factories, condenseries, and ice cream plants (pints)	960,621,235	28,818,637.05
Skim milk	2,808,699,346	10,953,927.25
Whey	3,191,292,487	6,223,020.35
Estimated value of milk and cream shipped to Chicago, St. Paul, Minneapolis, Dubuque, and other points outside of Wisconsin	276,936,482	5,732,585.17
Total		$247,215,451.96

IF THE secret of the power and influence which this organized group of people wielded be sought, I think the answer must be found in the fact that they were a group of brainy and self-effacing people who had learned and practiced the teaching of that one of Aesop's Fables entitled, "The Father and His Sons": "A father had a family of sons who were perpetually quarrelling among themselves. When he failed to heal their disputes by his exhortations he determined to give them a practical illustration of the evils of disunion; and for this purpose he one day told them to bring him a bundle of sticks. When they had done so he placed the faggot into the hands of each of them in succession and ordered them to break it into pieces. They each tried with all their strength and were not able to do it. He next unclosed the faggot, and took the sticks separately, one by one, and again put them into their hands, on which they broke them easily. He then addressed them in these words: 'My sons, if you are of one mind, and unite to assist each other, you will be as this faggot, uninjured by all the attempts of your enemies; but if you are divided among yourselves, you will be broken as easily as these sticks.'"

The Wisconsin pioneers in dairying practiced the precepts of this fable, and the various units of the modern dairy industry should profit by their example.

But you ask, "What do you think of the future?"

Coming with my parents to Wisconsin before I was three years of age, I have lived seventy-seven years in this state. Therefore, what I have herein recounted has come within my own observation and personal knowledge, so that I may say, "All of which I have seen and a part of which I was." But tell me, who can, what could I have said as to the future of dairying in Wis-

25% Off Gross Weight On Glacifiers

On Oct. 1st the new express rate is effective

And the gross weight of Glacifier—five gallon size—packed ready for shipment, is 90 pounds.

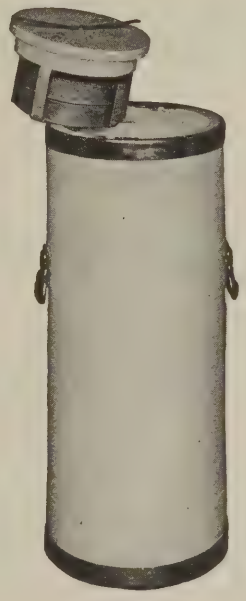
When the tub costs.....	$0.77	$0.84	$0.89	$1.08	$1.26
The Glacifer costs	.46	.49	.52	.64	.74
Saving by use of Glacifer..	.31	.35	.37	.44	.52

The gross weight of Ice packed tubs—five gallon size, ready for shipment is 155 pounds.

Note this rate effective now in

NEW YORK
PENNSYLVANIA
MAINE
VERMONT
MASSACHUSETTS
OHIO
TENNESSEE
IOWA
ILLINOIS
WISCONSIN

With Glacifer packers you pay the rate on 67 pounds.



With Ice-packed tubs you pay the rate on 115 pounds.

With Glacifer you save the rate on 47 pounds in every 5 gallon shipment.

20 Quart Brick

And you save the cost of 60 to 95 pounds of ice—*on every five gallon shipment.*

5 Gallons Bulk

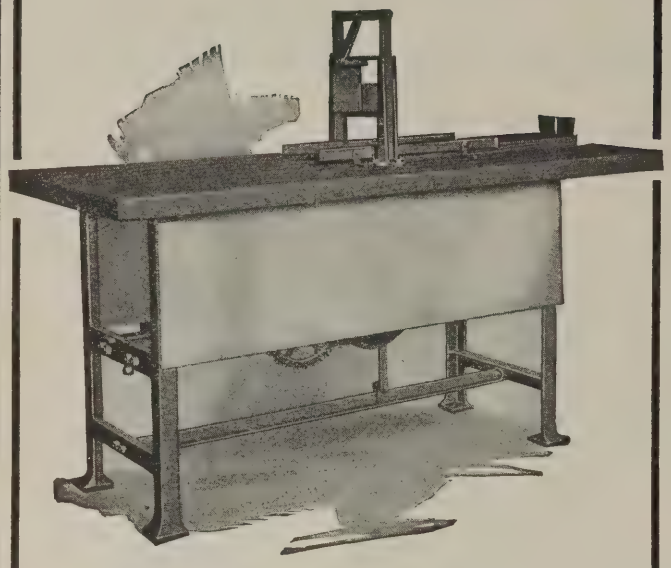
And you save twenty to thirty per cent on the cost of handling—*on every five gallon shipment.*

And you save the wear and tear (due to corrosion) on your packing and delivery equipment.

And—now—as a plus in all this:

You save 25 per cent on the gross weight!

Figure it out for yourself.



Write us your requirements and we will tell you just how much Glacifer will save you based on these requirements.

Glacifier Packers are made in 1 gal., 3 gal. and 5 gallons for bulk and brick cream.

Send for cost comparison and express rate comparison.

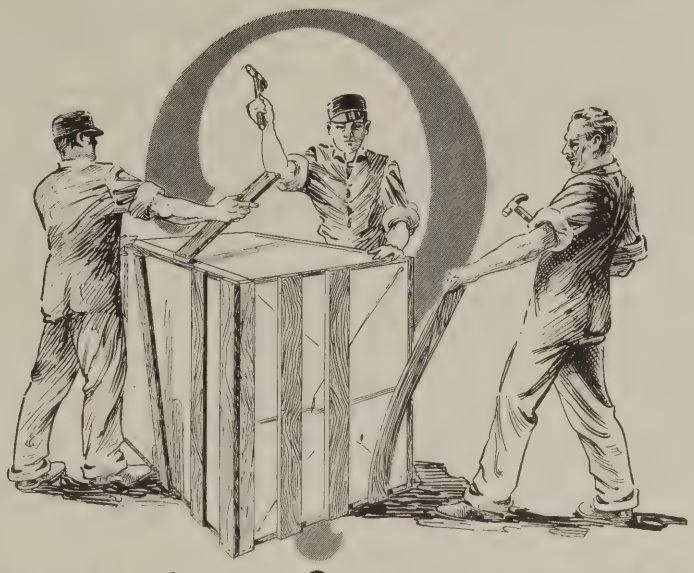
consin, when at the time on my father's farm in Dane county, I saw with my own eyes, the ravages of the fields of barley, of wheat, of oats, of corn, by the chinch bugs!

NOW looking upon the prodigious Wisconsin dairy industry, I see in it the achievements of the American pioneer spirit, that "Has tamed the savage continent, peopled the solitude, gathered wealth untold, waxed potent, imposing, redoubtable," the spirit which has with magic hand carved the progress of the centuries.

I recall that the American pioneer is a complex of different nationalities, comprising those of Norwegian descent, with their kindred the Swedes, a race of which it has been truthfully said, "The heroes who followed Charles the Twelfth, who ravished and conquered Normandy and carried victorious arms into England and Scotland, who planted their sturdy colonies on the coasts of Ireland and Great Britain, and who have even left their monuments on the shores of New England, were of a blood of courage and persistent power;" the Irish element or group whose characteristics are typified in this country by that of fighting General Phil. Sheridan, whose soldier tent is pitched on fame's eternal camping ground; the German element, descendants from a race or nation that has required an alliance of nearly all the great nations of the earth to keep it within its own reservation; Frenchmen in whose veins courses the blood of the race of that great chieftain, General Foch, who said to the advancing German legions, "You shall not pass"; the Scotch element whose characteristics find expression in that great statesman and orator, Patrick Henry, who, when the making of a choice seemed imperative, said, "Give me liberty or give me death"; the Welsh element of the race of the little statesman who guided the destinies of a nation through the great world war; the Swiss element of the race of William Tell, with a ruggedness suggestive of the Alps; and that it is the blood of each and all of these elements which mingles with the blood of the Pilgrims who landed on Plymouth Rock and constitutes the American pioneer.

Observing the present towering Wisconsin dairy industry as the achievements of this American pioneer spirit, my answer to your question shall be that which the poet put into the mouth of the great Admiral sailing an uncharted sea, seeking an undiscovered country:

"What shall I say, brave Adm'r'l, say,
If we sight naught but seas at dawn?"
"Why, you shall say, at break of day:
'Sail on! Sail on! Sail on! and on!'"



DAIRY AND POULTRY PRODUCTS IN BRITISH COLUMBIA.

The British Columbia Department of Agriculture and trade papers have issued figures showing the value and production of dairy and poultry products for the year 1923 as follows, states Luther K. Alther, clerk in the American consulate-general in a report received in the department of commerce. The value of poultry was $1,989,567; eggs, $1,963,412; dairy products, $9,234,576. Under dairy products were included: Butter, 4,221,704 pounds; fresh milk, 12,000,070 gallons; evaporated milk, 213,199 cases; and ice cream, 419,701 gallons. The goats' milk produced exceeded the quantity and value for 1922.

Don't be without a position, when at a small cost you can locate one through the Want Department in "The Ice Cream Review."

The NEW PRODUCT? OF AN OLD FIRM

A new idea (?) built around an old theory

WHEN this crate is opened, there will be revealed an ice cream cabinet that will not only astonish manufacturers everywhere, but will revolutionize the hardest phase of the ice cream industries—perfect preservation at a minimum.

After two whole years of exhaustive tests made under all sorts of conditions, we have perfected an ice cream cabinet which we know is worthy of sharing the honors with our other refrigeration products. It took us that long to be absolutely certain that we had a new commodity worthy of the Jamison name plate.

It is unfortunate that you have been deprived of the Jamison Cabinet during the experimental period, but our twenty years of success is based on the manufacture of proven products, and now we are able to unreservedly offer you the best and most practical cabinet on the market, and—at a fair price.

When you see the Jamison Cabinet, you will most likely say: "Why hasn't this been done before!" So easy, so simple is the method used to enforce rigid economy in this new cabinet.

Thirty days more and you will be told all about

Jamison Cabinets

Michigan Dairy Progress Covers Period of 25 Years

*By T. H. BROUGHTON**

MICHIGAN became quite a dairy state in 1898. During the immediately previous years a number of cheese factories and creameries were established. The report of the dairy and food commissioner for that year indicates that there were 250 such factories. It is very probable that they were mostly new factories. The first cheese factory established in Michigan was located in Lenawee county in 1862. In 1898 this county had 15 cheese factories but since that time cheese factories have gradually decreased until at the present time there is only one cheese factory left, this being operated by the Horton estate. The decrease has been due to the demand for whole milk in the territory near to Detroit. The cheese factories gradually moved north and most of those operating are located in the upper peninsula, many being in Menominee county. There are at present 60 cheese factories in Michigan.

Many of the creameries remained in Michigan and they increased in number until 1913, when there were 284. Since that time the number has decreased slightly, there being at the present time 238 creameries. The tendency since 1913 has been toward larger creameries and less in number. Several of the larger creameries now operating are co-operative plants.

The first condensery was registered in Michigan in 1903 and the number has gradually increased until now there are 36 condenseries in the state.

THE market milk business has become a great part of the dairy business in southern Michigan. In 1923, 35 per cent of the milk produced was consumed in the natural state with 44 per cent used for cream to make butter. The number of market milk plants buying milk from three farms increased from 11 in 1905, to 83 in 1910, 115 in 1920 and 308 in 1923.

The production of creamery butter has increased from 35,500,000 pounds in 1909, to 71,600,000 pounds in 1923. In 1923, the state manufactured also over 12,000,000 pounds of cheese and over 188,000,000 pounds of condensed, evaporated and powdered milk. The amount of milk used for household purposes, including cream, was approximately 1,500,000,000 pounds and the amount of ice cream was over 11,000,000 gallons.

The number of ice cream manufacturing plants has gradually decreased from 478 in 1910, to 313 in 1915, 273 in 1920 and 289 in 1923, while at the same time the production has increased.

Michigan was one of the pioneer states in the organization of The State Dairymen's Association. In 1909, under the administration of Governor Warner, who was an operator of several cheese factories, the Michigan Dairymen's Association received an appropriation from the state. From 1892 to 1910, S. J. Wilson was secretary of the association and from 1911 to 1917, George H. Brownell was secretary. Some time afterwards the association became known as the Allied Dairy Association. Previous to the change the different branches of the industry were identified as units and these divisions have more or less existed until the present time. R. F. Frary is secretary of the Creamery Managers' and Owners' Association and is also secretary of the Allied Dairy Association. For a number of years the allied association has had an annual convention with exhibits of dairy equipment, etc.,

Michigan Dairy Production 1923.

	Amount Pounds	Amount milk used

Promoting Iowa's Dairy Production

*By M. MORTENSEN**

PRIOR to the year 1876, Iowa butter was not known in the Eastern markets. In the Eastern states, New York butter was recognized as being the best butter obtainable. The reason for that was Iowa butter was made entirely on the farm. It was bought up by the storekeepers and it was then shipped in big barrels to the market.

In 1872, two producers, dealers at Manchester Ia., decided to form a co-partnership and start a creamery. This creamery was started in 1872 at Springbranch, Ia. The manager of the plant was John Stewart, and his partner, Van Dusen, was the buttermaker. The plant was not modern, as those of today. The main work room was a room 36 feet long, 16 feet wide, and 12 feet high. The churn room occupied 16x12 feet. The rest of the room was used for setting the cream in pans so as to allow the cream to separate. The equipment of the plant consisted of a box churn and a Bennet butterworker. The power consisted of a sweep which was revolved by an old gray horse which later lost its life when it fell into an old well, and as they decided it was cheaper to bury it right there, than to make a new grave, they levelled the well with dirt, and although no tombstone is placed on the grave, the old settlers still say that they can show us the very spot where the old blind horse was buried.

There were at first many handicaps to overcome. The cost of manufacture was too high, and the outlet for the butter unsatisfactory, as there was no one in the East who would care to eat Western butter; the only demand was for New York butter, at that time, until in the year 1876, when Stewart and Van Dusen exhibited butter at the Centennial Exposition in Philadelphia. On that exposition their butter won first prize and gold medal and became a world-known product. They experienced no difficulty in disposing of their output after this exposition and their business continued to grow as fast as their facilities would permit, but they were greatly handicapped on account of the cost of transportation of milk and the cost of handling the milk in the plant. They had to continue to work under those handicaps until the introduction of the cream separator.

After the invention of the cream separator in Europe, a Danish-American by the name of Jeppe Slifsgaard, who was living seven miles from Waterloo, decided to visit his native country. While there he became interested in the cream separator and on his return trip he brought a separator along with him. This machine reached New York in July, 1882. It was kept in the custom house at New York for two months as the officers were unable to determine whether the machine was constructed from steel or iron. They finally decided that it was constructed from steel and fixed the duty at $93.00. It is claimed that a cream separator had been operated in the state of New York prior to that time, but Mr. Slifsgaard introduced the first cream separator to the state of Iowa.

After the introduction of the cream separator, dairying began to develop extensively and the creameries multiplied at an enormous rate. In 1889 Iowa already had 693 creameries and 164 cheese factories.

The ice cream industry has developed at a tremendous rate during the past year. During the year of 1923 the consumption in Iowa reached the high average of about 32 gallons per capita. The first wholesale ice cream factory was established by F. D. Hutchinson of Sioux City, in 1890. Telling about the pioneer days, Mr. Hutchinson writes: "I remember the Fourth of July of 1890, we shipped out nearly 300 gallons, all frozen by hand power." The second large ice cream factory was established by the Hanford-Hazelwood Company in Sioux City in the year of 1900.

The improvement of herds and dairy products has been the result of various organizations. In the year of

BAKER

System Refrigeration

Are you still using ice and salt in manufacturing ice cream? If so we can show you how a Baker System Refrigeration will do the work more effectively at a fraction of the cost. Besides, with a Baker you can make your packing ice cheaper than it can be bought.

Personal Survey of Your Plant

Baker System Refrigeration is built to order —"tailor-made" to your individual conditions. No order is accepted until one of our refrigerating engineers has made a personal survey of your needs. This guarantees to you an efficient plant which should pay for itself in a very short time.

One southern ice cream manufacturer said he could buy a Baker plant every 16 months out of the savings made over the ice and salt method.

Get Your Copy Bulletin 65D It's chuck full of useful information you will value. It explains the Baker System Refrigeration in detail and gives you the reason why over 5,000 Baker plants are in successful operation.

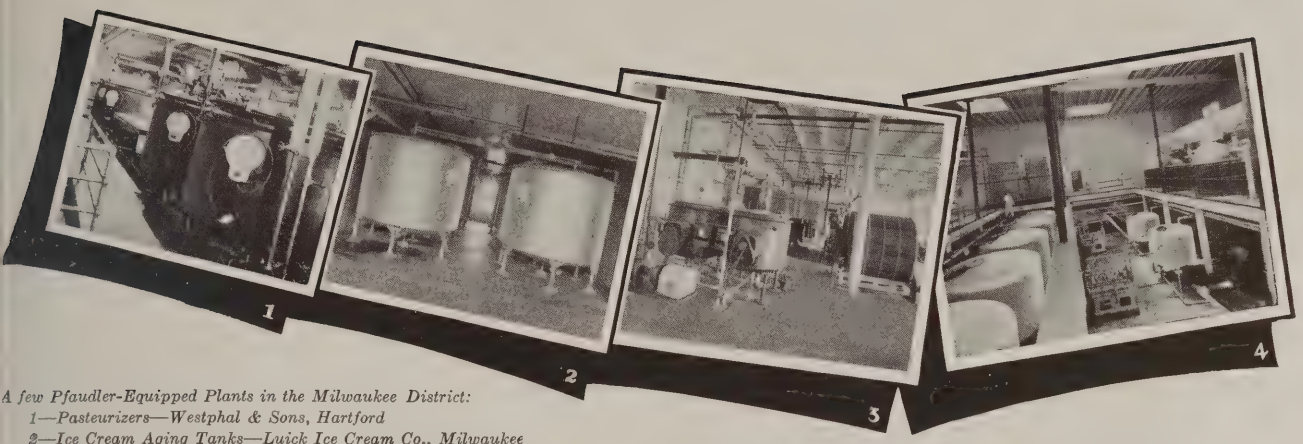
NATIONAL DAIRY EXPOSITION

SEPT 27th *to* OCT 4th

RESERVE SEPT. 27TH TO OCT. 4TH
TO INSPECT PFAUDLER GLASS
LINED EQUIPMENT

Catch that Milwaukee Flyer! ~

And spend a week at Pfaudler Booths Nos. 63 and 64. If you can't stay that long make a day of it, and learn of some of the mechanical features which have made glass lined equipment the Favorite of Modern Dairy Practice. Don't forget to visit some Pfaudler-Equipped Milwaukee Plants.



Pfaudler Glass Lined Milk Pasteurizers (Elyria Division)—Gridley Dairy Co., Milwaukee, Wis. Altogether this concern has 31 pieces of Glass Lined Equipment.

Pfaudler

GLASS LINED

NATIONAL DAIRY EXPOSITION

A few Pfaudler-Equipped Plants in the Milwaukee District:
1—Pasteurizers—Westphal & Sons, Hartford
2—Ice Cream Aging Tanks—Luick Ice Cream Co., Milwaukee
3—Starter Cans and Ripeners—Blue Valley Creamery Co., Milwaukee
4—Condensery—Carnation Milk Products Co., Oconomowoc

Be Sure to Visit a Milwaukee Plant!

In the Meantime ~

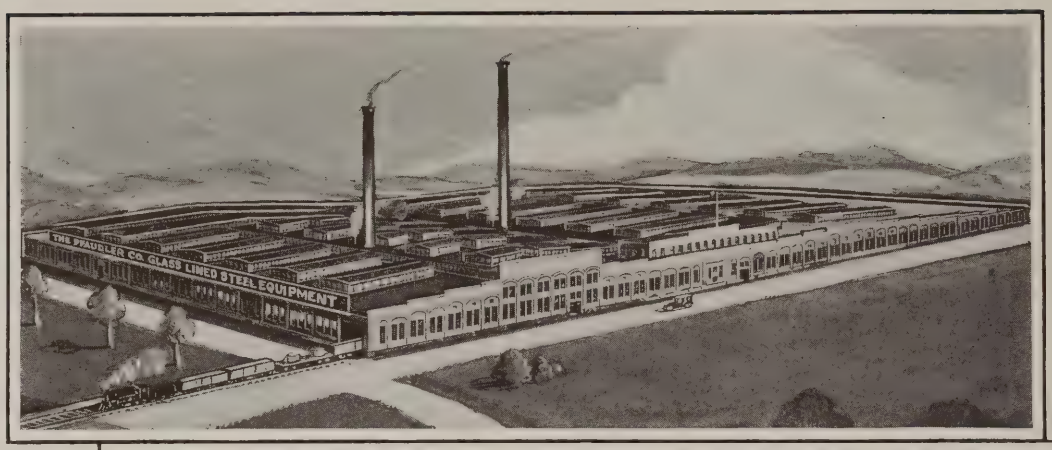
Consider *this one big feature* of our equipment which is not duplicated in any other—NAMELY, THE GLASS LINING. With that miracle coating of silicate goes a host of advantages, which the user of glass lined equipment alone, can fully appreciate—greatest facility in cleaning, heavy reduction in bacterial counts, better-flavored milk.

We are living in an age of glass.

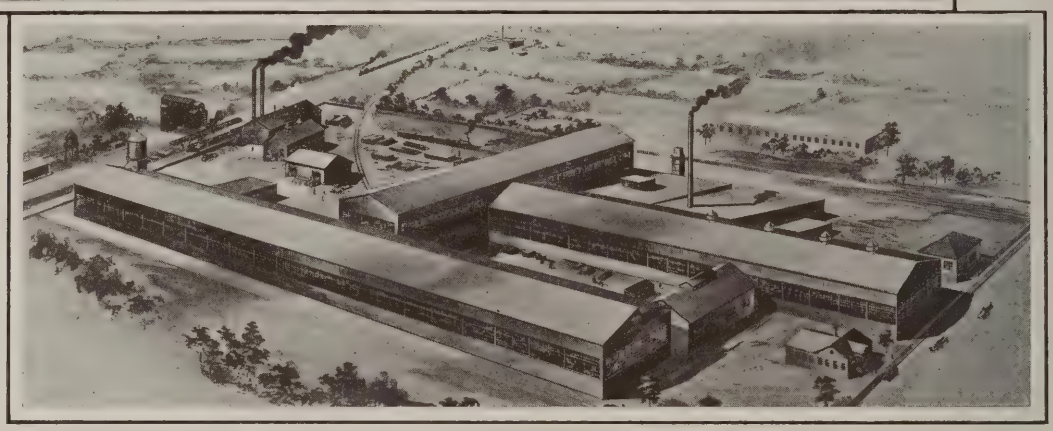
The future of better dairy practice lies in more sanitary handling methods, which can associate themselves *only with glass as* THE *sanitary conveyor of perishable food products.*

Put yourself ahead of the crowd by buying Glass Lined Equipment NOW.

Or, perhaps you'd sooner wait until the Show.



If so, we'll be there to tell you about it.



(*Turn to next page*)

STEEL EQUIPMENT

Pfaudler

MILWAUKEE ~ ~ SEPT. 27th *to* OCT. 4th

Above—Rochester (N.Y.) Plant of The Pfaudler Co., fully equipped to handle your most urgent orders.
Below—Elyria Plant of The Pfaudler Co., equally well equipped. Located at Elyria, Ohio.

And when finally you take that same Milwaukee Flyer home ~

Bear in mind that two big factories are at your service to give you immediate shipment on any standard Glass Lined Equipment you may require. These factories are strategically located, and they tie up with a sales and engineering organization which covers the United States, Canada, and several foreign countries in a most thorough manner.

Give our equipment and service the most exacting test you can think of.

Literature on any Pfaudler Equipment may be obtained at our Booths Nos. 63 and 64, National Dairy Exposition, Milwaukee, or by writing—

to the

NATIONAL DAIRY EXPOSITION

MILWAUKEE WISCONSIN

Dairyland Awaits and I

ALL is in readiness for the 1924 National Dairy Exposition. There is generous evidence that it will be the greatest event in American dairy annals. The dairy battalions have formed in all parts of American dairydom and are proceeding on the dairy capital of the country on an extended line of march spreading from the distant meadowlands of the South to the rugged boulders of the Canadian Northwest. Many visitors from foreign countries now are on the high seas, enroute to obtain more practical knowledge, drawn by the widespread advertising of America's dairy glory.

The exposition holds more interest for ice cream men this year than ever before. Manufacturers are expected from many states. There will be the largest exhibit of ice cream supplies, machinery and equipment ever staged outside of the exhibits of The Association of Ice Cream Supply men, which body has decided not to hold an exposition in 1924.

Ice cream men are coming to the realization that the dairy exposition is an event of importance to them. There is a growing realization of the importance of dairying's relationship to the ice cream industry. As the cornerstone of our industry, dairying is the foundation of the development of the ice cream business.

George D. Mansfield, chairman of the Ice Cream Division of the National Dairy Club of Wisconsin, the organization engaged in preparing for the exposition, has been in communication with officials of state organizations, who have been requested to let their members know that a royal welcome awaits them in Wisconsin.

Mr. Mansfield has been a most aggressive figure in the activities preceding the exposition. As the time draws near for what surely will be the greatest gathering of dairymen and dairy manufacturers ever held in America, this Milwaukee man stands out as the loyal champion of his industry and an earnest worker for its greatest representation at the exposition.

Largest Ice Cream Ex
Association Exposition
Exposition, Milwaukee,

Here's Where the Fun Will Take Place — Milwaukee Au

J. D. Hughes of the Luick Ice Cream Co., Milwaukee, is chairman of the reception committee for the ice cream manufacturers. It will be this committee's pleasant duty to extend the glad hand of welcome to all of their clan visiting the exposition.

Other members of the committee are:

J. D. Hughes, chairman, Milwaukee; A. H. Kramer, Madison; F. E. Caughey, Madison; Chas. Touton, Janesville; D. D. Smith, Fond du Lac; J. R. Fess, La Crosse; Arthur Mory, Appleton; Geo. Morey, Stevens Point; Chas. Carver, Oshkosh; A. E. Sorge, Reedsburg; C. E. Wright, Beloit; Mr. Nelson, Racine; C. R. Jeffrey, Waukesha; Walter Bendfelt, Milwaukee; Geo. Blommer, Milwaukee; A. R. Ruttan, Milwaukee; C. C. Mueller, Milwaukee; Ralph J. Baker, Marshfield; S. J. Dufner, Eau Claire; H. S. Russell, Superior; Mr. Bruner, Monroe; D. Blaesser, Manitowoc; Prairie du Chien Creamery Co., Prairie du Chien; H. A. Hass, Madison; Edward Barclay, Green

Wisconsin manufacturers have let it be known that they mean business. The Wisconsin association will not hold its annual convention at the exposition for the reason it wants

Just how much space will be given over to consumers' features had not been determined when this issue was ready to go to press, though it was definitely known at that time that the large amount previously set aside for this purpose would hardly be adequate.

Ice cream men of Wisconsin have made plans extensively to push ice cream to the front in connection with this feature. Manufacturers of the state have agreed upon a special brick to be sold just prior to the show as the "Dairy Show Special."

, Scene of Ice Cream Exhibits — 1924 Dairy Exposition.

its members to be foot-loose to do the honors to visitors. They have made their plans well, and any man engaged in the manufacture of ice cream is sure to find himself in the atmosphere he loves when he comes up to the dairy classic.

The dairy exposition will be marked by the most ambitious effort to teach the public something about ice cream and its food value to children and grown-ups alike ever undertaken. For the first time in the history of the dairy exposition, there will be a consumers' division. This will be featured by food exhibits and contests. It is under the direction of H. E. Van Norman, president of the Natoinal Dairy Association, and Mrs. C. E. Hatch, chairman of the consumers' division of the National Dairy Club of Wisconsin.

Mr. Van Norman, in these exhibits, will feature methods of what he calls "Feeding the Family." The exhibits will take up a vast amount of space on the lower floor of the Milwaukee auditorium, where will be held all the exhibits of interest to ice cream men.

In addition to this, expert dietitians will be on hand to tell the public about ice cream.

Just how valuable will be this advertising is understood when it is pointed out that there will doubtless be more than one hundred thousand people to attend the dairy exposition, among these being bankers, manufacturers, railroad men, business leaders and many of their ladies and children.

Ice cream men will feel at home at the exposition. There is every reason why there should be a large attendance from the ranks of this industry. In no way will the show conflict with convention dates of the ice cream associations.

Come and profit by a visit to America's Dairy Capital." A journey through some of Milwaukee dairy and ice cream plants will prove interesting, as many of these plants were designed especially by their operators and have been used as models for plants constructed in many parts of the country.

Milwaukee is waiting for you. A good time is assured for everybody. You will find a bunch of the most wholehearted good fellows in the country with nothing on their minds except making you feel at home.

Milwaukee, the Dairy Capital, Bids for Laurels as Foremost Ice Cream City

Wisconsin's Metropolis Stands to Fore With Some of the Most Up-to-date and Modern Ice Cream Factories in the World

MILWAUKEE, long recognized as America's Dairy Capital, has made such rapid strides in ice cream production in recent years that it has threatened Philadelphia's position as the ice cream capital of the country. Although the Quaker City has a good lead in gallonage, Milwaukee is fast cutting down that lead, and in point of quality production, Wisconsin's metropolis yields to no city.

It is significant that Milwaukee and Philadelphia, cities in different parts of the country, with entirely different types of people, have made such gigantic strides in ice cream production and are following so closely to the lines of quality. There could be no greater assurance that a quality product will boost consumption in any part of the country.

More than anything else it is due to Milwaukee's excellent cream supply that the ice cream produced in the dairy capital is of such uniformly good quality. Milwaukee people have been educated to expect good ice cream; anything else would fail to "go over" here. Far-sighted ice cream men in the city saw this opportunity years ago, and as a result, production has pushed forward at a surprisingly rapid rate.

IF THE ice cream industry as a whole is in its infancy, this is particularly true of Milwaukee, Wis., which, for the last 50 years, has been establishing itself as the world's greatest dairying state, long gave so much attention to other branches of dairy manufacturing that the ice cream industry did not get a foothold until creameries and cheese factories were established in various parts of the state, and the tide had begun to shift toward market milk.

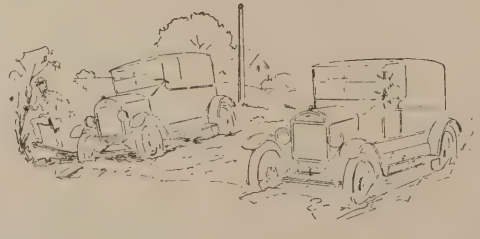
The good work done in the short time that ice cream has been in the ascendancy in this state, however, is strikingly shown in the fact that while the per capita consumption of the nation as a whole is around two and one-half gallons, Milwaukee's per capita consumption is something more than four gallons.

One-half of the six million gallons of ice cream manufactured in Wisconsin is made in the city of Milwaukee, whose sixteen ice cream factories are among the most up-to-date in the world.

IT IS worth a trip to the National Dairy Exposition just to look through Milwaukee's dairy plants, and ice cream manufacturers will find the local ice cream factories veritable storehouses of information. Many of the plants were designed particularly by the owners, and manufacturers everywhere in the country can get valuable information from these plants, both as to construction of plants and as to layout of machinery and equipment. These plants are the last word in scientific perfection.

It was related in the August issue of The Ice Cream Review that Milwaukee manufacturers and their neighbors out in the state have put their shoulders to the wheel and are working for the success of the national dairy exposition. They have invited members of their industry from every state to visit the exposition, appointing committees to show visiting manufacturers around Milwaukee and the Milwaukee plants.

Milwaukee long has been one of America's greatest convention cities. It is a favored gathering place for dairymen and dairy manufacturers. Ice cream manufacturers of the state favor Milwaukee as their convention city.



MILWAUKEE'S large auditorium is admirably suited to the purpose of the exposition. It is in that building that visiting manufacturers will find the exhibits of interest to them. Definite assurance has been given that it will be the most complete ice cream exhibit the National Dairy Association ever has staged. It has been so arranged that the exposition will not take up much of the time of any of the visitors; ice cream men are expected in the city on only one day—Thursday, October 2. Remember that day. You can reach the city the night before, meet a bunch of jolly good fellows in the Wisconsin reception committee, find friends from other parts of the country at your hotel, spend the most of the following day at the auditorium, with a run out to the cattle and dairymen's exhibit at the state fair grounds, if you wish, and then hop right back on the train that night and pick up the loose ends of

MILWAUKEE, THE DAIRY CAPITAL BIDS FOR LAURELS AS FOREMOST ICE CREAM CITY.

(Continued from page 92)

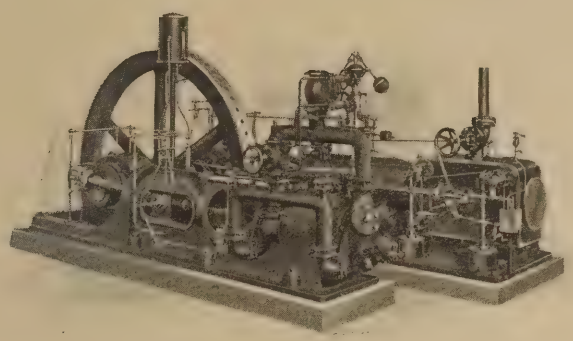
your business where you left off a few hours before. No trouble at all.

All branches of the dairy industry will have special days, and it is on Thursday, October 2, that the ice cream men will have the stage to themselves, the cheesemakers, buttermakers, condenserymen and market milk people not being in on the fireworks of this occasion.

Come to Milwaukee and see what these gentlemen have done to put the Cream City in the running with Philadelphia as America's ice cream capital.

DAIRY laurels hang high as widespread organized activities shape up for a mighty movement upon America's dairy capital when the industry's exposition extraordinary is staged September 27 to October 4. While the rank and file of American agriculturalists and economists form their battalions for an enterprise of high adventure in dairyland, a sweeping survey shows the situation has resolved itself into nothing more or less than a nationwide urge to solve the economic problems of outside states before the high court of dairy prosperity.

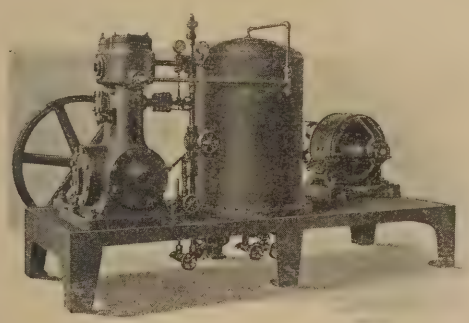
Such a survey has been made by the writer under the direction of abler and wiser men who have helped to put Milwaukee and Wisconsin at the pinnacle of dairying and dairy manufacturing development. This effort was inspired by the astonishing early interest in the 1924 dairy classic. By far the most interesting phase of this expedition into cause and effect are the striking revelations of what Milwaukee offers visitors who wish to know why this city is entitled to be known as the nation's dairy capital. The investigators deserved to be startled by the discovery that Milwaukeeans themselves know much less of the importance of their city in dairy manufacture than many people in other states. For in this respect Milwaukeeans run true to form in human nature, which is just the same everywhere today as it was when early prophets were not properly appreciated in their own country.



THE tide of dairying hosts now surging toward Milwaukee is nothing more than a greatly extended order of the pilgrimages made almost every day in the year by people from every state and many parts of the world to whom Wisconsin's dairy fame has spread. Milwaukee dairy plants are widely recognized as models, and visitors attracted to these plants range all the way from school children and college students to community capitalists, dairy experts of high authority and scientists of various fields. They come to pay tribute to the sound economic scheme of dairying fashioned in Wisconsin, for the high standards of dairy production in Milwaukee are due to nothing so much as the progressive system of dairy development that has been underway since the industry was given a solid foundation, a half century ago, by constructive legislation, proper attention to purebred cows and active interest in the growing of feedstuff necessary to high quality production at minimum cost.

For sometime men close to the situation have held the opinion that Wisconsin dairy products hold high rank in quality. Milwaukee and Philadelphia for many years were regarded as the country's leading cities in production of quality ice cream. There are reasons to believe this condition is ended—that Milwaukee is well in the lead. Men who tour the ice cream centers in various capacities are virtually unanimous in this verdict.

(Continued on page 98)



Vilter

Refrigerating and Ice Making Machinery

Vilter equipment for refrigerating and ice making plants includes not only various types of ammonia compressors, two of which are illustrated, but also a complete list of ammonia fittings, ammonia valves, special pipe work, double pipe brine coolers, etc.

The Vilter horizontal medium speed type ammonia compressors are available in many different sizes and arranged for several different types of drives. This unit illustrated is direct connected to a Vilter Corliss engine and has proven to be a most desirable unit for dairies and condensed milk plants where steam for power purposes is usually available. For ice cream plants this type of unit direct connected to a synchronous motor has been very successful, the compressor in this case usually being of the duplex style. Our Bulletin No. 10 fully describes these units.

The self-contained unit illustrated consists of a Vilter enclosed type twin cylinder ammonia compressor mounted on a substantial base, together with the ammonia condenser and liquid receiver, as well as the motor required for operating the compressor. This unit and also the Vilter twin cylinder compressor, arranged for belt drive, or direct connected to a vertical steam engine, also other equipment utilized in the smaller size plant are fully described in Bulletin No. 29-R.

The Vilter organization is equipped to design, build and install refrigerating and ice making plants of all capacities, and complete data and estimates will be promptly forwarded upon application to the nearest office.

MILWAUKEE'S argument is strongly upheld by the fact that Wisconsin sweet cream is shipped to eastern and southern cities to be made into ice cream and also to be retailed. Milwaukee dairies successfully compete with the greatest dairy organization of the East in their own field. It is estimated that approximately 1,500 carloads of sweet cream are shipped to eastern cities from Wisconsin every year. One local milk plant alone shipped 65 carloads last year.

This advanced system of merchandising dairy products by rail is made possible by specially constructed refrigerated baggage cars. The appearance of these cars, an industrial epoch in itself, is largely due to dairy advancement in this state.

While other cities in Wisconsin may be of more importance as concentration points in dairy manufactures, Milwaukee business received many of the dairy-dollars from the state-at-large as well as those actually involved in the city itself.

AS DAIRY honors are falling thick and fast for the dairy capital, other cities of the country look on with all the more eagerness. Milwaukee is opening its gates to all comers. The nation has been assured that the exposition is for the country and what Milwaukee and this state have done in dairying, everybody will be made welcome to see for themselves. Our dairy guests will be given the utmost in courtesy and no pains will be spared to let them get an insight into the dairy scheme here and vision opportunities for similar development in their own section.

They are extremely interesting cavalcades. Representatives of acres that long have groaned under unbalanced farm programs are particularly interested.

Few people know that the metropolis of the world's greatest dairy state has the largest ice cream factories, the largest milk plants, the largest cheese factories and the largest butter-producing plants in the state.

Many of Milwaukee's dairy plants were especially designed by their operators. They are used as models for plants constructed in other cities. Dairy manufacturers of many states visit local plants for ideas on construction for both sanitation and expediency in production.

WISCONSIN'S dairy production has a farm value in the neighborhood of a quarter of a billion dollars, the most of which eventually finds its way into local marts of trade. This does not take into account the 34 factories and branch offices in Milwaukee that employ several hundred persons in the production of dairy plant supplies, equipment and machinery used in every state in the Union and many foreign countries, repeatedly making large shipments to Europe, Asia, Africa and the Latin Americas. Production of much of this machinery involves a very large turnover of capital.

This local dairy supply industry takes in products ranging from cream cans to ice machines, automatically refrigerated ice cream cabinets and giant milk-bottle-washing machines. These dairy supply houses are among the nation's leaders, and many firms of this kind are establishing branch offices in Milwaukee and other dairy centers of the state every year.

Capital employed in the operation of Milwaukee plants engaged in the manufacture of butter and cheese is approximately $55,425, and the value of the products is established at $3,636,431. The milk dealers of the city employ capital of approximately three and one-half milion dollars and the value of their product is in the neighborhood of twelve million dollars. Total sales of one large milk distributor alone amounted to about $7,500,000.

Each of Milwaukee's principal ice cream factories represents an investment of about a half million dollars in plant, machinery and equipment. Approximately $20,000,000 worth of butter, cheese, milk and ice cream are prepared for market in Milwaukee every year.

Two hundred thousand quarts of milk are distributed to local homes and factories in bottles every day, and about 4,000 gallons are sold to local hotels and restaurants in bulk form.

In 1923 Milwaukee produced about onehalf of the 6,000,000 gallons of ice cream made in the state, shipping much of it to points in Michigan, Illinois and far into northern Wisconsin. The average shipping distance, though, is within a radius of 150 miles.

Local dairy plants, not including the supply houses, last year paid out about $3,000,000 in wages.

In deciding upon Milwaukee for its 1924 exposition, the National Dairy Association selected a city that is very popular with dairy delegates, many organizations of creamerymen, cheesemakers, milk producers and ice cream manufacturers have favored the dairy capital as a gathering place for many years.

IT IS largely because of Milwaukee's advanced ice cream industries that many ice cream men are expected to attend the exposition this year. In past years the ice cream men have not been so interested in the dairy exposition as other branches of the industry. Officials of the National Association of Ice Cream Manufacturers, The Association of Ice Cream Supplymen, the Southern Association of Ice Cream Manufacturers, and organizations of ice cream manufacturers of the Pacific coast have signified their intention to attend. W. E. Skinner, secretary of the National Dairy Association, at a recent luncheon of the National Dairy Club of Wis-

consin, announced that the interest of the ice cream supply houses in the exposition is one of the important factors contributing to the outlook for a record exhibition of all kinds of dairy plant supplies, equipment and machinery. This will make the exposition more all-round representative of the industry as a whole than any past event of its kind.

Cities that contested Milwaukee for the honor of staging the 1924 exhibition have announced preparations to send especially large delegations to study the features that make this city such a desirable place for the exposition. Among these are Louisville, Kansas City, Columbus, Detroit, Denver and St. Louis.

In many ways the exposition will be in the nature of a determined movement to bid for shares of the dairy prosperity that has given Milwaukee such economic security. The attraction is not alone from the important dairy industries operated in the city, but also for the surrounding dairy prestige that has had such a happy influence upon general business conditions here.

Milwaukee is the home of the largest plant in the country producing dairy educational and advertising literature, in addition to publishing three dairy trade publications that are widely admitted as the leading journals of their field. The Olsen Publishing Company has been in operation here for fifteen years.

MILWAUKEE'S prestige as a dairy metropolis comes principally from the fact that it is the center of the most intensive scheme of dairying activities in the world. If St. Louis is entitled to be known as "the city surrounded by the United States," Milwaukee certainly wears well the distinction of being "the city surrounded by the dairy industry." For it is from Wisconsin that the dairy industry is radiating into other sections. Farm and economic leaders of other states look to Wisconsin for purebred cattle and advanced ways of conducting dairy farming. Hundreds of heads of Wisconsin dairy cows annually are being imported into southern and western states.

And just as these outside leaders look to the Wisconsin dairy-industry-at-large, it is to Milwaukee that advanced dairy plant operators of the country are looking for advanced thought in plant construction and operation methods.

WHY has Milwaukee become so widely known outside the state in connection with dairying when it formerly was thought of only in connection with the beer industry? It is not that this industry has only lately been developed in the city, but that prohibition has made it possible for others to see that dairying for many years has been the bulwark of this city's economic foundation. The failure of any crisis to appear when the large breweries of Milwaukee were closed by the eighteenth amendment served strikingly to call the attention of outsiders to just what an important factor dairying is to Milwaukee's stability. Dairying has prevented Milwaukee from ever experiencing the "breadlines" such as are caused in other cities when particular industries undergo periods of depression. Dairying has had much to do with the consistent flow of money in the city, keeping much of it at home.

When the agricultural crises of other sections of the country made it necessary for Wisconsin's dairy cows to be called upon, Wisconsin dairy farmers and manufacturers also were drafted. These dairy farmers have told the story of advanced dairy plants. As more Wisconsin men leave for the South and the West every year, the fame of the city continues to grow.

But what is the future of the industry? Has Wisconsin reached its limit of dairying development? Far, far from it, say local experts. There is a great tendency toward dairying in the northern part of the state, where cut-over timberland offers considerable additional space for dairying farming. Among the sections of the state where the outlook is especially bright for more intensive dairying are the vicinities of Marshfield, Wausau, Rhinelander and Shawano.

In the extreme northern part of the state, Polk county particularly is undergoing a dairying urge at this time.

Milwaukee's point of vantage in a territory peculiarly adapted to the growing of good dairy cattle feed is one of the principal reasons for the excellent milk supply that makes qquality production of dairy products possible. The soil of southern Wisconsin is particularly favorable to grain and hay crops, good grass, and to corn for silage. This section of the state for many years has been populated with excellent cattle and is a very large breed center. Waukesha county, from which Milwaukee draws much of its milk, has more purebred dairy cows than any other county in the United States.

During the month of May approximately 700,000 pounds of milk was shipped into Milwaukee daily for milk distributors, representing a farm value of $1,400,000. A large part of this daily income by outside citizens is spent in the city. Milwaukee ice cream plants consume about 9,000,000 pounds of cream annually from sources other than the milk dealers' supply, which comes through the Milwaukee Co-operative Milk Producers and unorganized producers operating within a radius of 40 miles. Buttermakers in Milwaukee draw into the city about 180,000,000 pounds of milk a year in the form of cream.

MILWAUKEE furnishes many of the advanced workers in the different dairy associations of the country. John LeFeber, who began one of the first milk dis-

HANSEN'S
June Cream
Ice Cream Color

and you will be convinced that it will not only give you **more coloring power per dollar invested,** but whether you desire a pale cream color or a rich yellow egg shade, the result will be just what you want in your ice cream.

HANSEN'S
Ice Cream Rennet

A pure rennet enzyme, unadulterated, in handy liquid form, especially prepared and packed for the ice cream trade. The specific action of Hansen's Ice Cream Rennet is to increase the viscosity of the mix, thereby increasing the smoothness and apparent richness, enhancing the flavor and making the desired overrun more uniform and certain.

Try a gallon now, and be convinced that **Hansen's Ice Cream Rennet** will do better work, if used as an improver, **at less than one-tenth the usual cost.**

Ask your dealer or write us for prices, giving us your dealer's name and we will send you an interesting little booklet by W. W. Fisk, the well known expert in ice cream manufacturing, "**Some Ice Cream Problems Solved,**" without charge.

Meet us at Booth 200 in the Auditorium at the National Dairy Exposition September 27th to October 4th.

CHR. HANSEN'S LABORATORY, Inc.
Western Branch: **Milwaukee, Wis.**

tributing plants in the city in 1896, and was the first to bottle milk and one of the first to pasteurize the product, is a past president of the International Association of Milk Dealers. An idea of the growth of the milk distributing business is given by the fact that in the early days two milk routes were considered a big undertaking. One firm here now operates 285 milk routes. Lester LeFeber of Milwaukee is a director of the International Association of Milk Dealers.

William F. Luick is a past president and now a director of the National Association of Ice Cream Manufacturers. George D. Mansfield is a past director of the same association. A. H. Graeszel is secretary of the Wisconsin Association of Ice Cream Manufacturers and W. H. Bendfelt is treasurer.

H. P. Olsen, president of The Olsen Publishing Co., is secretary of the National Dairy Club of Wisconsin, and active in dairy organizations of all branches of the industry and in various sections of the country.

Edward K. Slater, former dairy and food commissioner of Minnesota, has long been identified with dairying activities in Milwaukee and the state, and is widely known in association circles of the country. He is secretary of The Olsen Publishing Co.

This is to say nothing of the 100 or more loyal dairy workers who gather every two weeks at the luncheon-conference of the National Dairy Club of Wisconsin and help make ready for the greatest dairy delegation in the history of the industry. The importance of their work is understood when it is pointed out that the 1924 exposition is expected greatly to eclipse the 1923 exposition, when delegates from thirty foreign nations and every state in the Union gathered at Syracuse.

Milwaukee's star of destiny shines high over American dairydom as local dairy manufacturers prepare to bid welcome to friends from far and wide.

FAVORS 8 PER CENT AS MINIMUM ICE CREAM STANDARD.

With regard to the matter of standards in the ice cream industry, James H. Heald, North Carolina food inspector, recently made the following announcement, which was published among the members of the North Carolina Ice Cream Manufacturers' Association in a bulletin issued by the secretary, A. E. Dixon of Feyetteville:

"I am heartily in accord with the most of the arguments presented by the committee and favor a minimum butterfat standard of 8 per cent, such as we now have in North Carolina. I believe this standard to be particularly applicable to the warmer Southern states, where a higher standard would not be so palatable.

"I believe the 8 per cent minimum standard should apply to all flavors, including fruited and nut creams. If a slightly higher standard vanilla mix is necesary to take care of the reduction in fat due to the addition of fruits, nuts and flavors, then it should be used. The vanilla cream itself would not be harmed as it can carry considerable more than 8 per cent without becoming unpalatable.

"While not mentioned in the report, I desire at this point to express myself as unfavorable to the term 'compound ice cream' as applied by our state law to cream between 4 per cent and 8 per cent. As it may be made in exactly the same way as 'standard ice cream' but with lower fat content, but I fail to see how the term 'compound' applies, and I consider it a misnomer. There may be some justification to the term 'imitation ice cream' for that below 4 per cent fat.

"I believe the argument of the committee that ice

cream should be kept in the 'food' class and out of the 'confection' class is sound.

"The economic argument in favor of the greater use of solids not fat I believe to be well taken. This highly nutritious portion of milk should not be lost sight of in the desire for excessive fat content."

B. F. SPRINGER.

JOHN SCHROEDER LUMBER COMPANY.

The John Schroeder Lumber Co. was incorporated in the year 1881, and was established about ten years earlier by John Schroeder, who was the father of the company's present president, Fred J. Schroeder. The present plant was erected about twenty-five years ago and since that time a number of additions have been made. The company originally was capitalized at $200,000, while its surplus at the present time is $2,000,000.

Referring to the approximate yearly output, yearly contributions to the ice cream and dairy industries—it is estimated that the products manufactured for these industries amount to somewhere between $200,000 and $300,000 during the course of a year. This includes ice cream cabinets, shipping tubs and special boxes, crates, etc., for the dairy industry.

H. C. WETZEL.

The officers of the company are as follows:

Fred J. Schroeder, president and treasurer; B. F. Springer, secretary; W. J. Merkel, vice-president; E. H. Schroeder, vice-president; J. E. Schroeder, vice-president, and A. H. Schroeder, vice-president.

H. C. Wetzel is manager of the manufacturing division, which produces the supplies for the dairy industry. Mr. Springer established this department a number of years ago and Mr. Wetzel served as his assistant for some time. About six years ago, when Mr. Springer was made secretary of the firm, Mr. Wetzel assumed full charge of this department. Mr. Wetzel and Mr. Springer are quite well known to the ice cream and dairy trade.

You'll make better ice cream if you get "The Ice Cream Review."

GROWTH OF THE MANSFIELD CO.

The Geo. C. Mansfield Co. of Milwaukee has grown to be one of the truly great dairy manufactories of the country. The success of this company has drawn widespread attention to George D. Mansfield, the present head of the company, which was founded by his father, the late George C. Mansfield. The Mansfield company does an annual business of $1,250,000.00.

This company was established in Johnson Creek, Wis., in 1860, by George C. Mansfield, now deceased.

Mansfield Plant.

The old home plant is now operated as a condensery, under the management of Fred C. Mansfield, one of the founder's sons.

The Milwaukee plant originally was a branch of the Johnson Creek plant, being operated on this basis from 1904 to 1908. During that time the company did business in rented property. The first unit of the present plant, at Fourth and Poplar Sts., Milwaukee, was built during the winter of 1907-08. The second unit was erected during the summer of 1919, for a total plant investment of $400,000.00.

The Mansfield company is one of Milwaukee's ranking industries. The present plant is one of the industrial show places of the city.

Officers of the Mansfield company are: George D. Mansfield, president and treasurer; Fred C. Mansfield, vice-president, and Arthur H. Graeszel, secretary.

For many years the business of the company was operating creameries, and wholesaling butter and eggs. When operations began in 1908, the business was confined to the manufacture of wholesale ice cream, wholesale butter and eggs, and public cold storage. At the time of building the new addition in 1919, the manufacture of artificial ice was begun.

JERSEY ICE CREAM CO.

The Jersey Ice Cream Co., has made rapid progress since it was established in 1915. The present owners took over the business from two brothers by the name of Herro in 1918.

The investment in the business at that time was approximately $25,000. The plant produces in the neighborhood of 75,000 gallons of ice cream a year.

The officers of the company are Charles C. Mueller, president, and Carl F. Mueller, secretary.

A Simpler Way To Test Overrun

The smooth, simplified cup with no weights to adjust makes the overrun testing process a faster and more certain operation. The accessibility of the cup hanger is also a great advantage while the reading always shows itself in large illuminated letters through the bullseye indicated by the arrow. The direct front view reading is positive. The adjustment for specific gravity variation is made on the tester itself. Write for descriptive literature and price.

The Luick Ice Cream Company

Six Hundred Gallons of Ice Cream Every Twelve Minutes Possible in this Plant

THE plant of the Luick Ice Cream Co. of Milwaukee is one of the outstanding dairy plants of the country. It has attracted wide interest in the dairy industry, particularly among manufacturers of ice cream who have for years given study to the construction of a plant along scientific lines for the production of a scientific, quality product.

Original Home of the Luick Ice Cream Co.

William F. Luick, widely known in the ice cream industry, a past president of the National Association of Ice Cream Manufacturers, has been in the ice cream industry in Milwaukee for a number of years, having virtually been reared in this industry. Mr. Luick's father was an ice cream manufacturer for several years. The present home of the Luick Ice Cream Co. was completed in the spring of 1923. It is five stories high, the main plant being 120 by 120 feet. Each 20 feet of space forms a panel, and there is a barn drain through each panel, thus affording drainage for each floor. The floors and wainscoting are of terrazzo. Part of the first floor is devoted to a show room as a place to receive and entertain clubs, dealers, and members of the public. The public is invited to attend the plant often to see how ice cream is made.

The Luick Co. has concentrated upon brick ice cream. It probably sells more of this product than any other ice cream company in the country. The company makes its own vanilla extract, importing most of the vanilla beans direct from Mexico.

The laboratory is one of the distinctive features of the plant. Every day's output is mixed on paper before going into the tank. Mr. Luick himself personally samples every batch of ice cream made. Visitors will be particularly interested in this remarkably complete laboratory.

The freezing room is a group of twenty freezers, each with a capacity of 30 gallons every 12 minutes. These machines are Mr. Luick's own design, and he claims that they contain a number of improvements over other machines the company has been using for twenty years. There are twelve 30-quart freezers for bulk and six for brick ice cream.

Space does not permit a complete description of this plant, and readers will recall that the plant was completely described in the June, 1923, issue of The Ice Cream Review. It is worth while at this time, however, to point out that dairy show visitors will be much interested in not only visiting the Luick Ice Cream Co.'s plant but also in going through the power house, which is separate from the plant, being equipped with the most modern machinery.

New Luick Factory, Completed Last Year.

A high salaried man on your staff—

Mr. F. J. Paddock a reader of The Ice Cream Review who operates three ice cream plants has this to say:

"We appreciate the interest you take in our business.

"We consider the information obtained from your magazine one of the greatest helps in solving our problems.

"In fact every month in the "Review" we find something that improves our business; and we consider it worth as much to us as though we had a high salaried man on our staff for this information."

Ice Cream Men get all this for little effort and small cost.

The advertiser, too, obtains the services of the high salaried man—at little cost. The "Review" brings regularly to the ice cream industry news and information on meritorious products, supplies, machinery and equipment that ice cream manufacturers use.

THE VILTER MANUFACTURING CO.

The history of the Vilter Manufacturing Co. dates back to the year 1867 when this company was first established in a small frame building in the city of Milwaukee. The name of the firm at that time was Peter Weisel, which name was retained until 1879 when Ernst Vilter acquired a half interest and the name of the firm changed to Weisel & Vilter.

In 1886 the business was incorporated as The Weisel & Vilter Manufacturing Co. and a re-organization was effected in the year 1893, immediately after a most disastrous fire in the city of Milwaukee, which destroyed, among other things, the entire plant of The Weisel & Vilter Co. This was on October 28, 1892.

After the fire the re-organized company, which has ever since been known as The Vilter Manufacturing Co., moved to a new location and erected entirely new shops. Officials say the business, which from its earliest beginning had shown a most consistent growth, continued to grow and it was necessary to add new departments and new buildings from time to time, as well as the acquirement of additional land, until today the company has established a very complete system of shops, including pattern shop, carpenter shop, foundry, machine shop, with all smaller shops contributory thereto, such as fitting departments, small machine parts department, and, of course, large and commodious erecting and test floors.

The company also maintains large modern pipe shops and welding departments for the fabrication of low pressure and high pressure parts of refrigerating and ice-making plants.

The present officers are Emil Vilter, president; E. F. Goes, vice-president; Wm. O. Vilter, secretary and treasurer, all three of whom were with the company prior to the re-organization in 1893, having commenced their association with the organization about the time the first refrigerating machine was placed on the market. Theo. Vilter, formerly president of the company, was associated with the business from the earliest days of the company's participation in the ice-making and refrigerating field up until the time of his death, which came quite suddenly in the fall of 1919.

W. R. Kremer is a member of the board of directors and also general sales manager. F. C. Trubshaw is a director of the company and superintendent of erection. Prominent in professional engineering circles are J. G. Keller, chief engineer; C. G. Bach, assistant chief engineer; E. S. H. Baars, engineer in charge of research and investigation, and Harry Sloan, consulting engineer.

BLOMMER'S 20 YEARS' SERVICE IN MILWAUKEE ICE CREAM INDUSTRY.

The Blommer Ice Cream Co. has been doing business in Milwaukee for nearly twenty years, though it was not until 1909 that this present company was incorporated. The business was established by Conrad Blommer, and in 1909 the present building was erected at a cost of about $35,000.

This company has about $75,000 invested in building and equipment. Officers of the company are Conrad Blommer, president; A. C. Blommer, vice-president; George C. Blommer, secretary-treasurer, and John J. Blommer is second vice-president and general manager.

The company has an annual output of about one-half million gallons, including the ice cream made in two branch plants, one at Wisconsin Rapids and another at Kenosha, Wis. The mix is made at the Milwaukee plant and shipped to the branch plants, though the Kenosha plant makes its own bulk and the Wisconsin Rapids plant makes its own brick ice cream.

Visitors will find it very worth while to look over this plant.

BENDFELT ICE CREAM CO.

The Bendfelt Ice Cream Co. was established in Milwaukee in 1916 by W. H. and H. A. Bendfelt. This company has taken its place among the ranking ice cream concerns of the state. The Bendfelts have taken an active interest in matters concerning the industry's advancement, and they have given valuable assistance in connection with the preparations for the dairy exposition by the ice cream division of the National Dairy Club of Wisconsin.

The officers are: W. A. Bendfelt, president; W. E. Telling, vice-president, and H. A. Bendfelt, secretary-treasurer.

THE SANISCO COMPANY

Manufacturers

1019 Third Street **Milwau**

MANUFACTURE OF ICELESS CABINETS IN MILWAUKEE.

Milwaukee is one of the greatest manufacturing centers in the United States.

Its large machine shops, foundries, car shops, knitting works, tanneries and similar industrial enterprises are known throughout the land. In the advertising pages of national magazines there are more products manufactured in Milwaukee than in any other one city.

To this long list of nationally known products there has recently been added a small automatic refrigerating machine. This machine is specially designed for the refrigeration of the household icebox, ice cream cabinets, soda fountains and small semi-commercial uses such as grocery stores and delicatessens. The machine referred to is known to the trade as Refrigo, and is manufactured by the Refrigo corporation with its factory and general offices at 1112 Forest Home Ave.

The history and development of this company is exceedingly interesting. In 1919 an engineer conceived the idea of designing and building a small ammonia refrigerating machine. He worked over his plans and drawings at night.

When he had his design perfected he knew that his machine was in conformity with the best mechanical and engineering practice. But like a great many other inventors he did not have the necessary resources to build his first model.

Finally he found a man with business ability and a little cash. They formed a corporation and began experimenting and perfecting this wonderful little refrigerating machine.

A factory was purchased, machinery installed, an office equipped and skilled mechanics employed. Many difficult problems had to be solved from time to time. But all were successfully met.

Now the shop is running overtime. They will soon be compelled to erect larger quarters, officials say. Recently the company has adapted its machine for the mechanical refrigeration of ice cream cabinets.

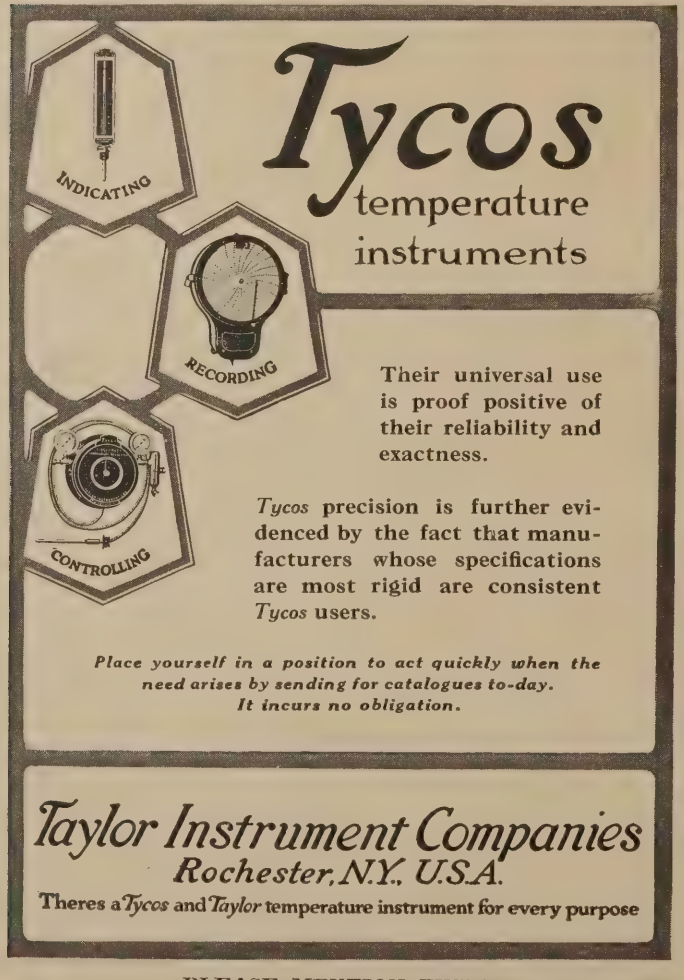
The Refrigo corporation is reported to be in very sound financial condition. It is believed that in a comparatively short time it will be one of Milwaukee's most thriving enterprises. Thus it appears that the early struggles of the company are now being justly rewarded with success.

The following are the officers of the company: Alex Prengel, president; Joseph Ellmauer, vice-president and engineer; Julius E. Kiefer, secretary-treasurer and general manager.

Ludwig Plant.

LUDWIG ICE CREAM CO. HAS RAPID GROWTH.

The Ludwig Ice Cream Co. is one of Milwaukee's fastest growing ice cream concerns. This company was organized in 1920, and has made rapid progress in the four years it has been in business, manufacturing a quality product. The business was established by Peter J. Wolf and John H. Ludwig. A $50,000 plant was erected at that time.



The business at present is under the management of F. C. Schultz, president and treasurer; A. R. Ruttan, vice-president, and George Johnson, secretary. These gentlemen at this time are moving with plans to erect a garage.

The company does no shipping business, confining its activities to the city of Milwaukee, having built up an annual output of 100,000 gallons.

It is likely that the new garage will not be completed in time for the visit of National Dairy Exposition delegates, but visitors no doubt will be much interested in the modern, up-to-date plant which is in operation by the company.

Messrs. Schultz and Ruttan have taken much interest in the work of the ice cream division of the National Dairy Club of Wisconsin. This division has worked up very interesting plans for the entertainment of the ice cream men during the dairy exposition.

You can find the person who will be glad to buy what you wish to sell, by letting your desires be known through an advertisement in The Ice Cream Review.

Cream City SANITARY MILK CANS
AND ICE CREAM PACKING CANS

"The Cans with the Strong, Straight Breasts"

WESTERN PATTERN

An exceptionally well made, low priced can, very popular with the farmers for use in delivering to Cream Stations.

The breast hoops are butt welded, shrunk and swaged on to the breast. The strong bottom hoops are electrically butt welded, terne coated, and securely riveted and soldered to the outside of the body, the body and bottom of the can resting on the inside shoulder of the bottom hoop, thereby eliminating any strain on the rivets.

Note straight cone-shaped breast construction preventing breast from caving in at the neck or from being dented.

(*SEE OTHER SIDE*)

JERSEY PATTERN
(Tiger Style)

Single Neck on 5 Gal. Double Neck on 8 and 10 Gal. Sizes.

Where a medium weight shipping can is desired with the popular Jersey bottom we strongly recommend this type as it will stand hard usage.

The strong breast hoops are butt welded, shrunk and swaged on to the breast.

The double neck construction of the 8 and 10 gallon sizes, adds greatly to the strength of the can and eliminates the inside seam generally found at the juncture of the breast and neck.

The pressed steel extra heavy hoopless bottom is drawn to form an outside channel into which the body of the can is inserted, securely riveted and smoothly floated with solder, making this practically one solid rim as shown in the center cross section. These heavy bottoms will permit stacking the cans high without denting the bottoms.

EXTRA HEAVY IOWA PATTERN
(Cleveland Style)

Where an exceptionally heavy shipping can is required we suggest this type of can.

The double deck construction not only adds greatly to the strength and life of the can, but also eliminates an inside seam at the juncture of the breast and neck.

The heavy half-oval breast hoops are butt welded, shrunk and swaged onto the breast. The heavy inside bottom hoops are terne coated, and securely riveted to the can, the weight of the can resting on top of the hoop, removing all strain from the rivets.

GEUDER, PAESCHKE & FREY CO., *MANUFACTURERS* 24--15th St., Milwaukee, Wis.

THE MIDWEST GLACIFER CO.

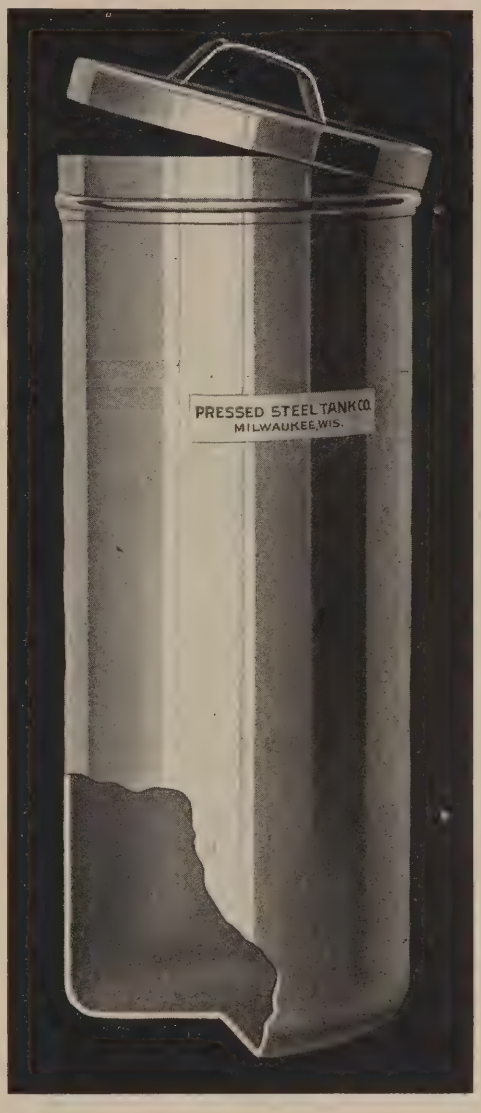
One of the new-comers to the Milwaukee ice cream colony is W. B. McCormick, president and general manager of the Midwest Glacifer Co., a concern Mr. McCormick recently organized. He can hardly be called a stranger to the Wisconsin dairy industry, for formerly Mr. McCormick was connected with the McCormick-Roberts Co. of Wausau, which still is serving dairy manufacturers of the state.

W. B. McCORMICK.

The Midwest Glacifer Co. is handling the distribution in the Middle West for the Glacifer Co. of Somerville, Mass., and Philadelphia, Pa. Immediately after making Milwaukee headquarters for the company, Mr. McCormick has proceeded with efforts to explain to ice cream manufacturers why Glacifer packers keep ice cream in good condition, without ice or salt, for 15 to 36 hours. These packers, which the manufacturers say are widely used in transporting ice cream, are a real connecting link between the manufacturer and the dealer, it is pointed out by Mr. McCormick, especially in cases where there have been installations of iceless cabinets.

The territory of the Milwaukee concern embraces Wisconsin, Illinois, Iowa and Minnesota.

Glacifer packers, which are supplied for brick as well as bulk ice cream, are described as being constructed of a seamless tube of heavy gauge, hard, vulcanized fibre. Corkboard is used for insulation. The inside of the package is finished with a complete metal liner of rust-resisting material.



SCHWAB-LEZOTTE BOILER CO.

The Schwab-Lezotte Boiler Co. was established in Milwaukee in 1896 by Philip Schwab. The present plant was erected in 1919 at a cost of $75,000.00. The officers of the company are Philip Schwab, president and treasurer; Martin Schwab, vice-president, and John Ewecker,

ICE CREAM PLANT OPENED AT SHREVEPORT.

The Dickson Ice Cream Co., Inc., is one of the new industries to be established at Shreveport, La. This company, which was organized on May 17, 1924, began operations on June 7. The company was organized with a capital stock of $25,000, fully paid. S. Allen Dickson is president and treasurer of the company, E. J. Lieindecker is vice-president, and C. B. Dickson is secretary. The officers and W. K. Henderson and E. R. Jones make up the board of directors.

The plant is equipped with glass lined equipment and has a daily capacity of 500 gallons of ice cream, with storage capacity of 12,000 gallons, and a milk room with a capacity for storing 300 gallons of milk and cream.

The Can that Lasts
Standard sizes, 10, 12 and 20 quarts

When Buying Cans Consider the "Upkeep"

The cost of retinning "Seamless" Steel Ice Cream Cans is reduced to the minimum because there is nothing to come apart. You will have no explaining to do because of short measure after cans have been retinned, for there are no parts to be re-assembled.

"Seamless" cans are drawn from a single flat plate of flange quality steel and double coated with pure tin.

For information on "Cans that Last," address

Chicago: 208 So. La Salle St.

The Ice Cream Angle of the Dairy Exposition

Progress and Profit

*By H. E. VAN NORMAN**

PROGRESS is built on exchange of ideas. New countries differ from old in the ease and rapidity with which men try new ideas, new methods, new machines, discarding the impracticable, holding fast to the useful and profitable.

France recently awarded prizes to families now living on farms which had been longest occupied by their ancestors. The highest honor went to a family who for over 700 years lived on the same farm.

Contrast the slow change possible in a country with a long history of family and business custom and tradition, with those of our country of quick change.

H. E. VAN NORMAN.

The marvelous growth of our ice cream industry is only possible because of quick exchange of new ideas.

A new freezer, some testing device, a better flavor given to the public today finds its way to the far corner of the nation tomorrow, because leaders, thoughtful, observing men, from every state gather at the annual exposition by the hundreds to see the new apparatus, compare experiences, exchange ideas and then in thousands of factories, former practices and equipment give way to the new.

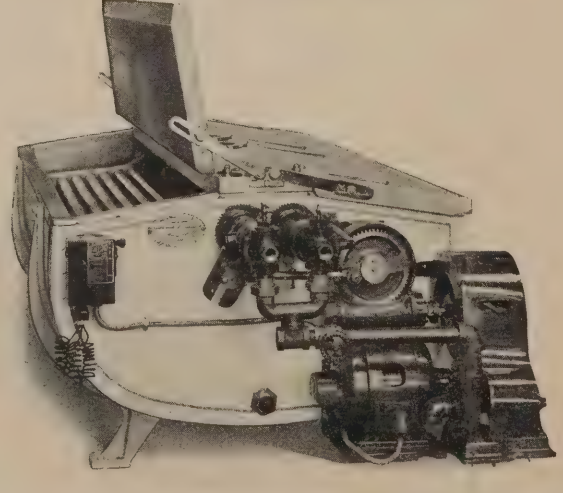
*President, National Dairy Association.

"Yes, indeed, I will be there," said the head of a big ice cream company, "I cannot afford to take a chance that something new will be sprung and I not there."

THIS is the spirit of the men who lead the way, they and those who are quick to profit by their example have raised ice cream making from a "chef's dessert" to a manufacturing business, amounting to millions of dollars annually.

It is the actual seeing of new equipment at a national show, the oral exchange of ideas that saves a dollar here and adds a sale there from day to day in the months following attendance at a Great National Dairy Exposition. A few days away from home business brings a new and keener view of its problems and perplexities. Yes, go to the exposition, meet your friends, your competitors, the maker of your equipment, and the fellow with the new ideas you are all looking for.

⚜



HUBER AGAIN CONTROLS HUBER ICE CREAM CO.

Announcement has been made that Earnest C. Huber, who organized the Huber Ice Cream Co. at New Albany, Inc., some six years ago and last October sold controlling interest to W. B. Gallemore and Earnest Denk of the Seymour Ice Cream Co. of Seymour, Inc., has purchased all of the stock owned by Messrs. Gallemore and Denk and again is in complete charge of the management of the business.

With the resignation of Messrs. Gallemore and Denk, as officers and directors of the company, the new officers are Earnest C. Huber, president, treasurer and general manager; Ben E. Rowe, vice-president; and Catherine C. Huber, secretary.

The business has grown rapidly under the management of Mr. Huber, and it is expected that it will continue to expand.

Milwaukee Ranks at Top in Manufacture of Chocolate

[Industry Has Advanced on Basis of Safeguarding the Public]

MILWAUKEE is one of the ranking chocolate-producing cities of the world. Millions of dollars are invested in plants and equipment for the manufacture of chocolate in the city known far and wide in connection with dairying achievements.

This city's position in the manufacture of chocolate cannot be traced to prohibition, nor can dairying be said to have been responsible for early development; but since the advent of the Eskimo pie, chocolate is playing such an important part in the ice cream industry this product virtually can be classed as a dairy product, especially when it is considered that thousands of gallons of milk and cream are used annually in the making of chocolate.

For a long time, in discussing chocolate, the custom has prevailed of dipping back into the original habitat of the highly useful cocoa bean, which, year after year, is growing in importance. But what happens to the bean after it reaches Milwaukee is the really important part of the program insofar as the ice cream manufacturer is concerned.

IT CAN safely be said that the manufacture of chocolate has advanced to an industry of high ranking for the simple reason that every precaution has been taken to safeguard the public. It is a habit of American business, famed throughout the world for being practical and solid in all of their commercial buildings, to give earnest thought to the consumer before going to any great effort in other phases of the business. In other words, American business men understand that the buyer must be offered something which is good for him, which will satisfy his wants without any "kick-back."

American food manufacturers have formed the habit of not merely complying with food regulations but of staying a step or so ahead, often working with food officials in putting over legislation offering the public greater protection.

It is this assurance of protection in connection with chocolate which is making for the industry's progress. Ice cream men recognize this as a potent factor in their own industry's progress. As we advance this industry in the confidence of the public, just so rapidly shall we find consumption increasing.

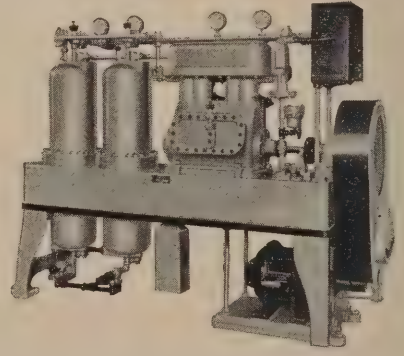
THIS is by way of saying that Milwaukee chocolate is of high standard. This business was being built up on the solid basis of quality away back in the early days, when the stuff that "made Milwaukee famous" was being brewed. The coming of prohibition had the effect of turning over to the chocolate industry additional manufacturing space and equipment.

It is for this reason that the present investment in the manufacture of chocolate in Milwaukee will run far, far into the millions, one plant alone having an investment of something like fifteen or twenty million dollars.

Though for a number of years milk and cream have

Indispensable—And a Matter of Cold Profit!

THERE is one paramount reason why progressive ice cream dealers and dairymen throughout the country have chosen Lipman Full-Automatic Refrigeration to serve them: *It is a money-saver and pays for itself!* And that isn't a line of "poppycock." We can show you dozens of testimonials from satisfied Lipman owners telling us they have profited over the old messy ice system from the day of installation to this.



Lipman refrigeration is automatic. It takes up every little space. It needs no attention except occasional oiling. It keeps your products fresh, cold and saleable. And, above all, it saves enough money for you to pay for itself—after that the saving is clear refrigeration PROFIT for you.

Lipman equipment includes several full-automatic models—a machine for every requirement. Details furnished on request.

FREE INSPECTION SERVICE

Two Friends
That go hand in hand
to make purer, better dairy products

ZEROBAC

is the arch-enemy of bacteria. A small quantity will attack the largest colonies. Complete destruction is the outcome of an attack and thoro elimination of bacterial traces thru its super-rinsing qualities.
Such is the friendship Zerobac extends to you. It's a military alliance that puts you on the successful defensive to destroy and eliminate those trouble-makers that mark down the quality of your products while you sleep.

Zerobac is a powder—packed in 5 and 10 pound cans—six to a case, and does not increase your cleansing cost because it takes less washing powder to accomplish the desired sterility.

KAO

is Zerobac's big brother. It rids the surface of dairy utensils and equipment of foreign substances so that Zerobac can get in its effective work. KAO is a heavy artillery dairy cleanser that lays down a barrage no foreign substance can withstand.
A leader in Wisconsin for 10 years without injury to hands or equipment.
You'll appreciate an acquaintance with the sterling qualities of KAO.

Some trial packages will make a lasting acquaintance

A Private Affair

THERE are times when you want privacy in operation — buying — selling—seeking—or acting in any way; when for a short time you would prefer to act independently of those associated with you.

At such times a classified advertisement will prove to be an ideal agent, working discreetly and privately. It will not reveal your identity nor disclose more details than you are willing to have disclosed. It operates silently and efficiently, introducing you to other individuals with whom you can negotiate by mail or in person.

Classified advertisements in The Ice Cream Review are the dairy products man's *confidential agent.* Insert them under any of the following headings:

Wanted-to-Buy
For Sale
Business Opportunities
Employee Wanted
Position Wanted

Cost is but 2c per word. Write out your advertisement and mail with check or money order to The Ice Cream Review, 5th and Cherry Streets, Milwaukee, Wisconsin.

Classified Advertisements are found in the last pages of this issue.

been used in the manufacture of chocolate, this product did not fully take its place in the ranks of dairy products until the coming of the Eskimo pie. It is easy to understand that ice cream and chocolate are natural affinities—they pair off well. Long before the coming of the Eskimo pie many people enjoyed munching a chocolate candy between spoonfuls of ice cream. More than one man must have thought, in the years gone by, of what a nice dish could be made by combining manufactured chocolate and the frozen beverage.

MILWAUKEE stands at the top in candy production. In late years it has started a swift climb toward extremely high ranking in ice cream production. The chocolate bar is keeping step with this march.

A list of the chocolate manufacturers of Milwaukee would read like a page from the directory of the leading chocolate manufacturers of the country.

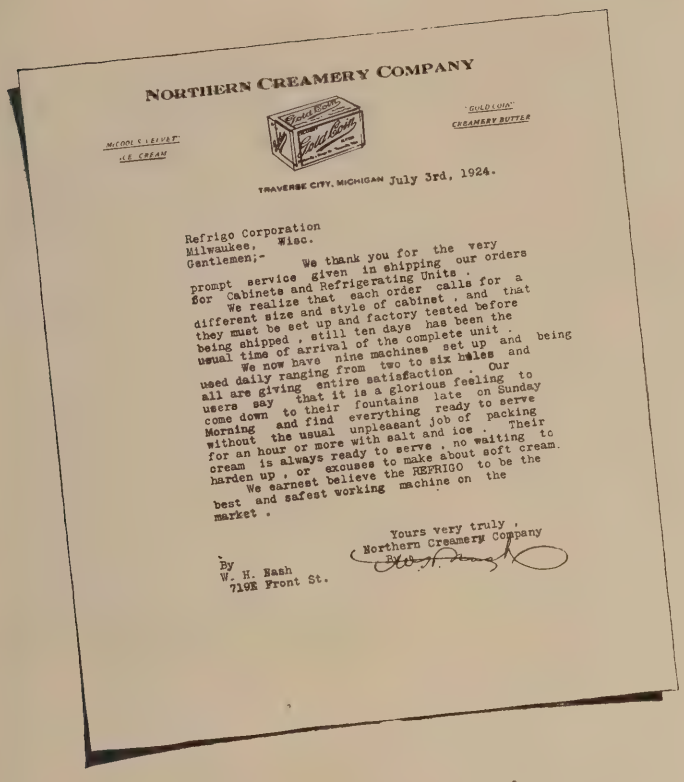
Somebody has suggested that the coming of the Eskimo pie was in the nature of something to settle an argument. While this writer has never yet heard of any kind of argument being settled by anyone, it must be admitted that an admirable method was made to effect a compromise in this case.

The story goes that certain people liked chocolate better than they did ice cream, while some of their friends liked ice cream better than chocolate and candy. The ice cream people pointed out—quite correctly—that ice cream is more wholesome than candy, whereupon the lovers of chocolate sprang up with the assertion that so is chocolate more wholesome than what is generally termed confectioneries. The only thing then to do was to put the two together, which pleased both the lovers of ice cream and chocolate.

THERE is no way of establishing the fact that the chocolate industry has been a considerable means of developing the ice cream industry of Milwaukee, for there is ample evidence that Milwaukee is promoting ice cream consumption solely on the quality and goodness of the product, and local ice cream manufacturers like to believe that it is the quality of their product alone that is pleasing the public.

But the fact remains that a considerable part of a very large chocolate business in Milwaukee is going into the ice cream industry, for chocolate manufacturers of the "Cream City" are distributing their product into far corners of the industry.

The Milwaukee chocolate manufacturing industry is among the great industries of a city famous for many and diversified lines of industrial activity.



BENDFELT BUYS SHEBOYGAN PLANT.

The Grasse Milk and Produce Co., 1420 Kentucky Ave., Sheboygan, Wis., has been purchased by the Bendfelt Ice Cream Co. of Milwaukee. In making this announcement, W. H. Bendfelt, president of the company, stated that his company has established a separate local branch in Sheboygan and will conduct the business as an entirely local concern. Bendfelt ice cream is being delivered by trucks of the Sheboygan plant. The milk business of the company will continue to be operated by Barney Grasse.

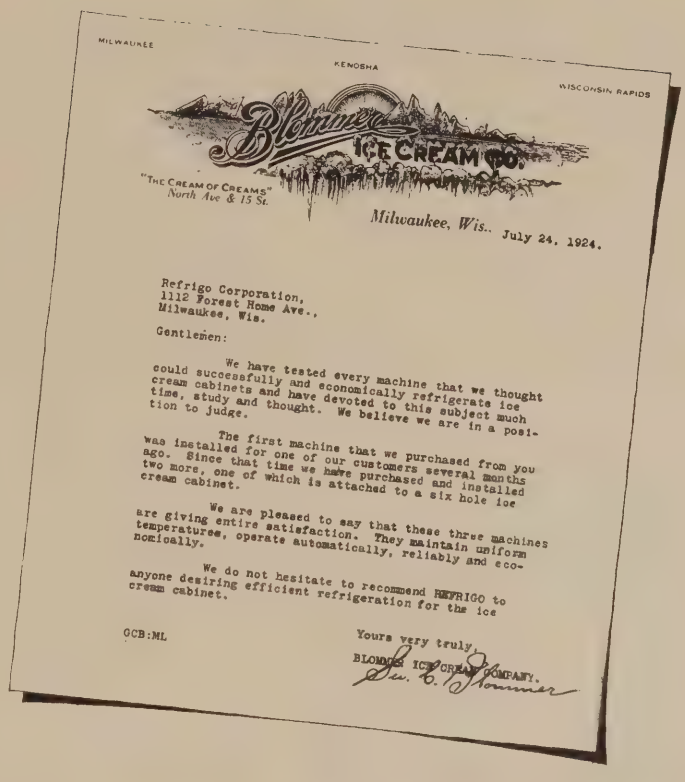
Two new trucks have been added by the Bendfelt company to the four operated by the former owners. Included in the equipment the Milwaukee company has taken over is the ice machine, storage room, hardening room, ice house, office and garage.

The Bendfelt Ice Cream Co. is said to be the second largest concern in Wisconsin.

NORTHERN CREAMERY COMPANY

"GOLD COIN" CREAMERY BUTTER

TRAVERSE CITY, MICHIGAN July 3rd, 1924.



Refrigo Corporation
Milwaukee, Wisc.
Gentlemen;-

We thank you for the very prompt service given in shipping our orders for Cabinets and Refrigerating Units. We realize that each order calls for a different size and style of cabinet, and that they must be set up and factory tested before being shipped, still ten days has been the usual time of arrival of the complete unit.

We now have nine machines set up and being used daily ranging from two to six holes and all are giving entire satisfaction. Our users say that it is a glorious feeling to come down to their fountains late on Sunday Morning and find everything ready to serve without the usual unpleasant job of packing for an hour or more with salt and ice. Their cream is always ready to serve, no waiting to harden up, or excuses to make about soft cream.

We earnest believe the REFRIGO to be the best and safest working machine on the market.

Yours very truly,
Northern Creamery Company

"The Cream of Creams"
North Ave & 15 St.

Milwaukee, Wis., July 24, 1924.

Refrigo Corporation,
1112 Forest Home Ave.,
Milwaukee, Wis.

Gentlemen:

We have tested every machine that we thought could successfully and economically refrigerate ice cream cabinets and have devoted to this subject much time, study and thought. We believe we are in a position to judge.

The first machine that we purchased from you was installed for one of our customers several months ago. Since that time we have purchased and installed two more, one of which is attached to a six hole ice cream cabinet.

We are pleased to say that these three machines are giving entire satisfaction. They maintain uniform temperatures, operate automatically, reliably and economically.

We do not hesitate to recommend REFRIGO to anyone desiring efficient refrigeration for the ice cream cabinet.

GCB:ML

Yours very truly,
BLOMMER ICE CREAM COMPANY.
Geo. C. Blommer

Satisfaction comes to those who use them.

REFRIGO

for the Ice Cream Cabinet

THAT "ever dissatisfied dealer" is the bain of the ice cream business. And,—many times the dealer has a right to be dissatisfied. Everlastingly cleaning up around a mussy ice cream cabinet—dishing out soft ice cream that robs him of his profits, certainly adds no pleasure to the job of selling your ice cream. Neither is the "ruin"—caused by ice and salt—compensated by his profits.

Read what these well and favorably known ice cream manufacturers have to say about REFRIGO Cabinets and Dealer Satisfaction.

Mechanically, too, Refrigo gives entire satisfaction. The refrigerating agent is ammonia—giving maximum refrigeration with little power. The automatic thermostatic switch saves power and insures a uniform temperature.

Refrigo Corporation

MILWAUKEE WISCONSIN

DIXIE MAIL BAG

ARKANSAS TRADE CONDITIONS STABLE.

Stuttgart, Ark., July 23, 1924.

Editor The Ice Cream Review:

Just got over our July winter in the "Sunny South" and you can imagine the hole it knocks into the ice cream manufacturers' profits when you have almost a light frost every night for ten days in July, and this after a late, cool spring. According to the weather records, the last Fourth of July was the coolest since 1879.

However, we are not complaining. Every manufacturer to show a profit at the end of this season.

G. A. MEYER

When we take into consideration the price-cutting and the slashing which naturally causes a lower quality in the product in our neighboring states, we feel that the manufacturers in our Grand state of Arkansas are in a better condition than they are in those states. While the manufacturers in this state need a lot of faith in their competitors, a better price for cream is received and there is a better quality. This is the result of a real live association which we are fortunate to have in this state.

Manufacturers will be represented in a large number at the Southern and national conventions at New Orleans in November. Quite a number have made the statement that they will attend.

G. A. MEYER, Vice-President
Arkansas Ice Cream
Manufacturers' Association.

JAPAN LIKES ICE CREAM SODAS.

The record made by Japan in the importation of American soda fountains calls attention to the fact that ice cream sodas are displacing tea in the affection of the Japanese. U. S. Department of Commerce figures show that fountains exported to England last year were valued at $37,920 and Japan was in second place, having bought $18,850 worth of our soda fountain equipment.

FLORIDA'S SUMMER ICE CREAM TOURISTS.

I am again on deck, but was very sick from February until May, as I had to have a mastoid operation and was confined at my home in Baltimore most of the winter, but am happy to state the good Lord who watches over the ice cream supply salesmen spared me, for which I am truly thankful.

SAM A. LANDAU.

I am just returning from a trip through Florida, where I found conditions flourishing, and, to my surprise, found the state filled with tourists in the summer months. Now that Florida is spending some money advertising its merits as a resort in summer, as well as in winter, I can assure you they are getting results and, of course, the ice cream manufacturers are reaping the benefit. Found them all satisfied, and you know at times that is hard to do. Our friend, Mr. Stiling at Daytona, was all smiles, and had to wait my turn to get a few words with him, as he was as busy as a ticket seller in the New York subway. Mr. Barrit, Jr., at Orlando, is expecting soon to get into his new building, while our friend, J. G. Berrier, is in his new building at Jacksonville and, of course, very happy.

Mr. Sherrill of Ashley Ice Cream Co., Charleston, S. C., reports very fine business, and in fact they are all very optimistic.

Sincerely yours,
SAM A. LANDAU,
Baltimore, Md.

INDIANA PLANT ENLARGED.

The Jersey Creamery of New Castle, Ind., is taking steps thoroughly to familiarize its community with the richness and food quality of the ice cream manufactured by this company. The company is planning an extensive advertising campaign and has distributed a large number of tickets entitling the holder to a free dish of ice cream wherever the Jersey product is sold in New Castle. This last step has been taken to convince people of the city that the quality of the Jersey Creamery Co.'s ice cream has been greatly improved in the past months. The officials say they have taken all steps necessary to produce a high quality product in their modern plant.

Joseph and Rinehold Schuhardt took over the management of the plant in 1915, and it is reported that the business has progressed nicely under its present management. This is verified by the fact that a new building valued at $100,000 was erected and all the latest style and best devices for making butter, pasteurizing milk and making ice cream have been installed. Two 15-ton compressors furnish pressure and water, while the creamery makes its own ice, having a capacity of 5 tons at one time.

Six trucks and wagons are used to collect the milk from their 800 farmer patrons, and the same number is used to distribute the finished products.

150 BRISTOL Recording Thermometers Check Efficiency Here

WHEN it comes to convincing a buyer that a certain piece of equipment will maintain a certain degree of temperature under various conditions it is essential that a manufacturer KNOW by a **record** of **actual performance** what that piece of equipment **will** do—not only what it should do.

It is equally essential that the testing apparatus should be of recognized standard and high in efficiency, and give an unquestionably authentic record. Thus after long and severe tests, the Nizer Corporation of Detroit have installed 150 Bristol Recording Thermometers to give them reliable records of what each cabinet will do. They have placed themselves in the position where they KNOW.

You, too, as an ice cream manufacturer can place implicit confidence in the record of Bristol Thermometers to tell you what it is essential to KNOW in the manufacture of YOUR product.

National Dairy Exposition

Points to Check

ICELESS cabinets are no longer a matter of guess work. Sufficient facts have been established by actual long-term operation to permit you to judge them by definite standards. Here we have outlined the more important standards. If your results do not compare favorably, we suggest that you look into the Nizer proposition.

OPERATING COST

Cost of electricity and water, the year 'round, should average 1¼c or less per day per hole (5 gal.). This figure is based on electricity at 5c per K. W. and water at 65c per 1000 cubic feet.

SHRINKAGE

Temperature should be so perfectly maintained that loss from shrinkage of the ice cream is less than ¼ of what it is in ice and salt cabinets.

SIZE

Width should not exceed 30 inches, for that is the standard width of fountain interiors. 30 inch width insures that the cabinet will not project into the aisle behind fountain.

DESIGN

For use in the average store, the refrigerating mechanism should be located within the cabinet. This permits quiet, inexpensive installation of a cabinet and quiet, inexpensive removal.

SERVICING

One trained service man should be able to take care of the field inspection and repair on 200 cabinets. Trouble calls should not average above 3½ per year per cabinet.

CONDITION OF ICE CREAM

The temperature maintained should be such as to eliminate all "graining" and spoiling of flavors. Neither brick or bulk should ever be too hard or too soft, winter or summer, for perfect serving.

LENGTH OF LIFE

This depends largely upon the number of hours per day that the refrigerating mechanism is compelled to run. The year 'round average should not exceed 50 minutes per day per hole. The full life of a cabinet which meets this standard should be much greater than ten years.

QUIET RUNNING

The compressor unit or refrigerating mechanism should be mounted on spring supports so as to absorb the vibrations and thus prevent noise.

You are cordially invited to visit our Booths at the various Expositions and our Detroit plant. Our staff of practical ice cream men and engineers will gladly discuss with you all questions arising from the standards stated above and also give you complete data on ice cream delivery costs, cabinet financing, cabinet patents, etc.

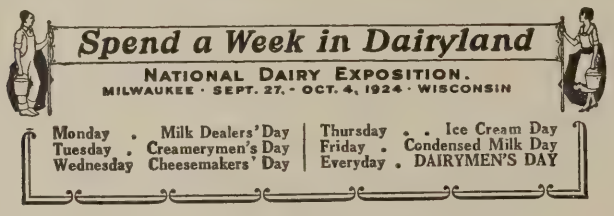
PROMOTING IOWA'S DAIRY PRODUCTION.

(Continued from page 84)

The Iowa State Dairy Association was organized in the year of 1891. This was later re-organized under what was known as "The Iowa Butter, Cheese and Egg Association." The latter had become rather inactive, and the new association started along definite lines of work mainly for the purpose of improving the dairy cattle and the quality of dairy products, with particular reference to butter. This organization is still functioning and is the parent organization of the dairy cattle congress, which is held annually at Waterloo, Ia.

The Iowa Buttermakers' Association was organized about 1910. The first officers elected were E. Miller, president, and J. J. Brunner, secretary. This organization was again re-organized in 1920 and has always been active and working for improvement in general. This organization is now employing a paid secretary whose business it is to work with and for the buttermakers and the creameries. It is the rule of the organization that a buttermaker must make good; otherwise his name will be dropped from the membership. It is largely due to the work of this organization that so much progress has been made in Iowa during recent years, especially in reference to quality.



The Iowa Association of Creamery Secretaries and Managers, the Iowa Buttermakers' Association, and the Iowa Dairy Council, are all organizations working for the promotion of better products and better methods of manufacture and better markets for our products.

The Iowa state trade mark for butter was established by legislation in 1915. Creameries qualifying for the Iowa state trade mark must manufacture butter 75 per cent of which will score 93 points and no score is permitted lower than 92. At present 21 creameries are permitted to use this trade mark.

The improvement of herds and dairy products has been the result of various organizations. In the year of 1903 the state dairy commissioner appointed the first inspector, or he was known as the "assistant dairy commissioner." This was P. H. Keiffer, who is now the president of the Gude Brothers-Keiffer Company of New York. The number of inspectors increased from year to year until we today have a large force of dairy and food inspectors.

Considerable improvement has been made in the dairy herds of the state. Originally the foundation breed for our dairy cattle was the Shorthorn. At present all of the leading dairy breeds are well established throughout the state and a great deal has been done along the lines of improving the scrub herds. At present fifty-nine cow testing associations are active in the state.

It is felt by most of those who are in touch with the situation in Iowa that the progress which has been experienced during recent years is largely a result of true co-operation among all of the various dairy interests of the state.

Envy stands between many a man and success. Until you are a big enough man to honestly and sincerely glory in the promotion of a fellow worker—you'll never get far in the business world.

Georgia's Dairying Development

Industry Has Made Gigantic Strides in Last Three Years

*By PETER F. BRANHAM**

DAIRYING as a business never began at all in this state until after the Civil War. It is true that there were imported by Andrew Reid, of Putnam county, some Shorthorn cattle of the dairy type. The DeJarnette family of the same county brought some Ayrshires along about the same time. Just after the war Captain Sidney Reid brought a purebred Jersey bull from Kentucky, which greatly improved the dairy cattle in middle Georgia.

DR. B. W. HUNT.

In 1876, Dr. B. W. Hunt came from Pennsylvania to Putnam county, bringing some registered Jerseys with him, of the then leading families, and he has continued buying from that time up to the present, and just here I want to say that Dr. Hunt has perhaps done more for the dairying interests than any one single man of our state. He has given his time, his money and his influence to the propogating of good dairy stock and the distribution of the same in middle Georgia.

No one was more devoted to the Jersey breed than Richard Peters, whose pasture just after the war was in what is now the heart of Atlanta, on the most fashionable residence street, Peachtree. However, the first commercial dairy that I recall was established by Ex-Governor Rufus Bulloch, about twenty-five miles from Atlanta, in 1866 or 1867. A little later J. B. Wade brought some thoroughbred Jerseys and established a commercial dairy in Kirkwood, which is now a part of Atlanta.

BUT commercial dairies did not flourish in Georgia even after the war for many years, because of the fact that servants were plentiful, cheap land was abundant and the native grasses, such as bermuda, lespedeza, etc., were sufficient to keep cattle from six to eight months in the year and every family kept its cow or cows. What butter was bought was either country butter or Goshen butter, but as land has increased in value and the negroes have gone to the cities, many of them to the North and West, commercial dairies began to grow and for the last several years they have grown rapidly. Dr. Hunt, with the assistance of Mr. Nelson of Louisiana, is responsible for the beginning of the creamery business in Georgia. The first creamery was located at Eatonton, Ga. At the present time the commercial creamery of Eatonton is shipping the yield of from 3,000 to 3,500 cows, all pure or highly bred Jersey cows. This cream goes in the summer to the ice cream manufacturers, in winter to Florida tourist resorts. There are now located in Georgia twenty creameries, which are making around 300,000 pounds of butter per month.

The main thing that we need is permanent pastures and the improvement of some of our methods, the principal one of which is to weigh behind the cow and to cut out the boarders.

NO MAN, no community, no nation has ever radically changed their way of doing business until driven to it by necessity; up until a few years ago a kind providence had so blessed the people who lived in Georgia that they could make a living by working from four to eight months in the year, producing cotton, but under changed conditions produced by an undesirable citizen known as the boll weevil, we have been compelled to change our method of doing business.

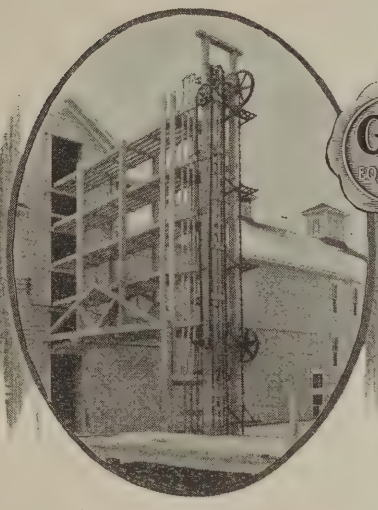
As I said in the above statement, no people change or revolutionize their business methods unless compelled to. Denmark never became a rich dairying country until they could not raise oats and rye. Wisconsin never became the leading dairy state in the Union until the chinch bug destroyed their corn and they were unable to raise wheat. The South has now come to the parting of the ways, and we are rapidly developing, in a crude way, our dairying interest and it is only a few years and a question of a little time and education until this state will blossom as the rose and smell like a dairy.

*Georgia State Dairy Inspector.

DAIRYING IN THE SOUTH.

By Frank D. Lowden.*

I AM farming in one section of the South now and have been for many years and I know of no part of our country which has so many natural advantages for dairying and in which other interests have been predominant over dairying as the southern part of our country. They raise legumes of all kinds in most parts of the South more easily than we do in the North. They have an advantage in the way of climate which permits the cattle to find green pastures during the larger part of the year that we do not find in the North. They also require less expensive buildings for shelter for the cattle than we do in the North.



HON. FRANK D. LOWDEN.

The students of agriculture in the South have deplored for many years the fact that the South has been so largely dependent upon cotton. In view of the ravages of the boll weevil in recent years, I think the sentiment has been growing in this part of the country in favor of a more diversified agriculture and especially in favor of the dairy interests.

*Formerly governor of Illinois.

G-W Double Gig Elevator

G-W Perpendicular Elevator

G-W Single Gig Elevator

For Economical Harvesting—
a well-built Elevator

An ice elevator that gets out of order is a costly proposition. Delays cost money—and so do repairs.

G-W Perpendicular and Gig Elevators are first of all *designed right*—and, secondly, they're *built right*. It takes experience to properly design and build these elevators—and we've had many years of it. Hundreds of G-W Elevators have been installed and the excellent service they have given is convincing evidence of their high efficiency and sturdy construction.

KANSAN MADE ICE CREAM IN '66.

The report of the Kansas State Board of Agriculture just published for the quarter ending March, 1924, contains a chapter on the Dairy Manufacturers in Kansas by Prof. N. E. Olson, department of dairy husbandry, Kansas State Agricultural College. Included in the facts and figures presented by Professor Olson is the following interesting history of the development of the ice cream industry in this state:

The manufacture of ice cream as a business in Kansas dates back to the years immediately following the Civil War, and so far as the writer was able to learn, the city of Lawrence has the honor of being the birthplace of the industry in this state. A. M. Field commenced the manufacture of ice cream for sale in Lawrence in 1866. Two years later (1868) William Weideman opened an ice cream business in the same city. According to his wife and daughter, who are still living in Lawrence, Mr. Weideman shipped ice cream to Topeka and other cities in the early days. For power Mr. Weideman first used hand power and later water power and horse power (treadmill) before the development of electricity in the West. This store is still operated by other parties under the name of "Weideman."

In Topeka, Henry C. Scott began making ice cream in a small way in 1882, and in 1884 Mr. Baughman, father of the present Baughman Brothers, opened the business, which is still carried on.

Probably the first really commercial ice cream business was started in Wichita in 1882, when Nicholas Steffen added ice cream to his bakery and confectionery business. In 1889 the firm of Steffen & Bretch was formed, an ice and ice cream factory built, and a shipping business inaugurated. By 1902 the business had developed to the point that shipments were made over a territory 500 to 600 miles in diameter, including the cities of Fort Worth, Tex., and Roswell, N. Mex. This concern froze with brine and hardened in brine tanks. In 1902 the Steffen-Bretch Ice and Ice Cream Company was incorporated, and in 1905 C. M. Beachy, the present manager, took charge.

The big development of the ice cream industry in the United States dates from the time of the Chicago World's Fair in 1893, and in Kansas from about 1900, when artificial ice plants began to make their appearance over the state.

The ice cream industry of the state has grown rapidly since 1900, until at the present time the annual output is over 3,000,000 gallons, with a value of almost as many dollars.

There are at present some 200 ice cream factories in the state, varying in size from a few gallons a day to over a thousand gallons per day in the busy season. Most of the larger ice cream plants in Kansas are combined with some other dairy manufacturing business, such as butter and market milk; others are in combination with the ice business, while the smaller plants are a side line to the confectionery and soda-fountain business.

⚜

WEST VIRGINIA CONVENTION DATES.

The 1924 convention of the Ice Cream Manufacturers' Association of West Virginia is to be held at Clarksburg, W. V., December 9 and 10, according to the announcement by C. F. Jamison of Huntington, secretary of the association. Hotel Waldo will be headquarters. The program will be announced later.

An Air-Cooled Type Ice Cream Cabinet Now Completes the Frigidaire Line

Frigidaire, equipped with the air-cooled compressor has been rendering such excellent service in household use that Delco-Light engineers have applied the same principle to ice cream cabinets.

Frigidaire Ice Cream Cabinets can now be obtained in all standard sizes, equipped with air-cooled compressors, and they will be found to give the same dependable refrigerating service as the water-cooled type cabinet.

The lower price of the cabinet equipped with air-cooled mechanism, combined with its reduced installation expense, *no pump or water connections required,* makes this type of Frigidaire cabinet very desirable for use in many localities.

With the addition of this air-cooled compressor, the line of Frigidaire Ice Cream Cabinets now meets all requirements of city or rural installation.

Our national sales and service organization is in a position to make prompt and satisfactory Ice Cream Cabinet installations and to render efficient service in every section of the United States.

Delco-Light Distributors are located in all principal cities. See the nearest Distributor for further details and prices, or write

ELECTRIC ICE CREAM CABINETS

Relation of The Ohio State University to the Ice Cream Industry

*By PROF. R. B. STOLTZ**

THE work of the department of dairying is threefold: teaching, extension and research work. Our chief duty is teaching, that is, to prepare men so that they may go into the production and manufacture of dairy products. Our regular course is four years in length. This course is open only to high school graduates. Besides this course, we give short courses of four and eight weeks each. Our graduates have been successful in a comparative way, that is, when we compare our graduates with those of other universities and colleges. We have placed men in practically all of the more progressive ice cream plants in Ohio, as well as men in twenty or more other states. Fifteen years ago there were very few college men that worked in milk plants or ice cream factories. At about this time ice cream plants were beginning to install laboratories. We felt very proud at that time if a company hired a graduate as their chemist or bacteriologost. We are no longer satisfied to turn out men who are only qualified as dairy chemists and men to operate laboratories, but it is our endeavor to train men who are qualified to do not only laboratory work, but know enough about the business so that they can become superintendents and general managers.

It has been our desire to give our men a training so that with the proper experience and guidance they will be qualified as a dairy engineer, with an ambition of finally becoming the manager of the ice cream plant, creamery, milk plant, cheese factory, or what ever special line of dairying they may choose to follow. During my association with the manufacturers of this state, I believe that this is the first opportunity that I have taken to attempt to explain our relationship to one another. One of our jobs is to train men to suit your wants and needs. Our greatest weakness in the past has been that the services of these men have been over-sold. I do not believe that their being over-sold is due to the fact that we claimed more for them than they could do, but the man who had been in the ice cream business all of his life, especially if he had not had the opportunity to take a technical training, expected a college graduate to know everything about dairying, both from the practical and technical side. In other words, they expected the college graduate to be a finished product, while as a matter of fact he has only received the fundamentals of his education.

The larger electrical companies, such as the Westinghouse Company, have been employing graduates of the engineering colleges for a good many years, and they would not think of putting these men directly into a responsible position, but enter them in a school of their own where they are carried along for two years or more. It would seem that the ice cream manufacturer must follow a similar plan. He must expect to weed out from several graduates one or two good men. We have experienced only recently some of our own graduates employing men in the laboratory who had not had a college education and their excuse was that so many college graduates were not satisfactory. The man without the education can learn to do a particular kind of work just as quick as the college graduate, but as a whole the college graduate will grow faster and develop more.

I WONDER how many men realize the value of your organization? Suppose you were to lose your plant, your trade and your money (not credit), but held the personnel of your organization together, would it have any value? Don't you think that your organization alone is the most valuable asset that a growing concern pos-

ALL OVER THE WORLD

JAMISON Cold Storage Doors are found wherever a high standard of refrigerating efficiency is maintained. From the Atlantic seaboard to the Pacific, and from uppermost Canada to the Gulf of Mexico, to say nothing of distant lands, the superiority of JAMISON Equipment has been immediately recognized, and plant owners universally evince their complete satisfaction in this world renowned line by invariably specifying it when additional refrigeration is required.

It is easy to estimate the value of JAMISON features: Multiple seals between door and frame, where others have but one. Automatic self-tightening fastener that gets tighter with age, and the adjustable spring hinges that extend over half the width of the door, making the pressure controllable and renewing the seat against the multiple seals of contact at will. Three times the material weight found in the hinges and fasteners of other makes, all bolted, not screwed in place—these are some of the reasons why you will find JAMISON equipment in all corners of the world. Jamison hardware is made for hard wear.

Refrigerating plants all over the world.

Door satisfaction in every plant we equip.

sesses? If this is true, then is it not a fact that the personnel of your organization should be selected from the very best material available? A large number of people point to the average graduate and compare him with an exceptionally successful non-college man. Remember, that the man who has not had a technical college education has been sifted, hand-picked and is the survival of the fittest of hundreds of other men, while a college graduate might be compared to the run of mine and the better ones must be picked out as they have finished their training.

Even though our students are of excellent material, they have had no experience in handling men, and it is hardly fair to put a college man out on the job who is very familiar with the technical end of the busines, but who is very apt to fall down when he is required to handle a large group of men. It would, therefore, seem necessary that each employer give enough attention to these graduates so that they may be watched and guided in the proper channels. If the executive in charge of the ice cream plant would realize that these boys are not finished products, that they should be further developed, in time, by selection, your organization will be stronger. It costs no more to hire a college graduate. If they don't progress they should not be advanced, but if they are superior they should be advanced accordingly. The Ohio State University is your school. You are supporting it. If it is not giving the proper training, we invite constructive criticism. Encourage your young men who expect to follow the ice cream business to obtain a technical education.

THE second phase of the dairy department is extension work. Attending this meeting is an example. We prepare exhibits for the state fair, the national ice cream convention, etc. The university has never supported an extension man in dairy manufacturing, as is practiced in some other states. The small amount of work that has been done was by the resident teaching force.

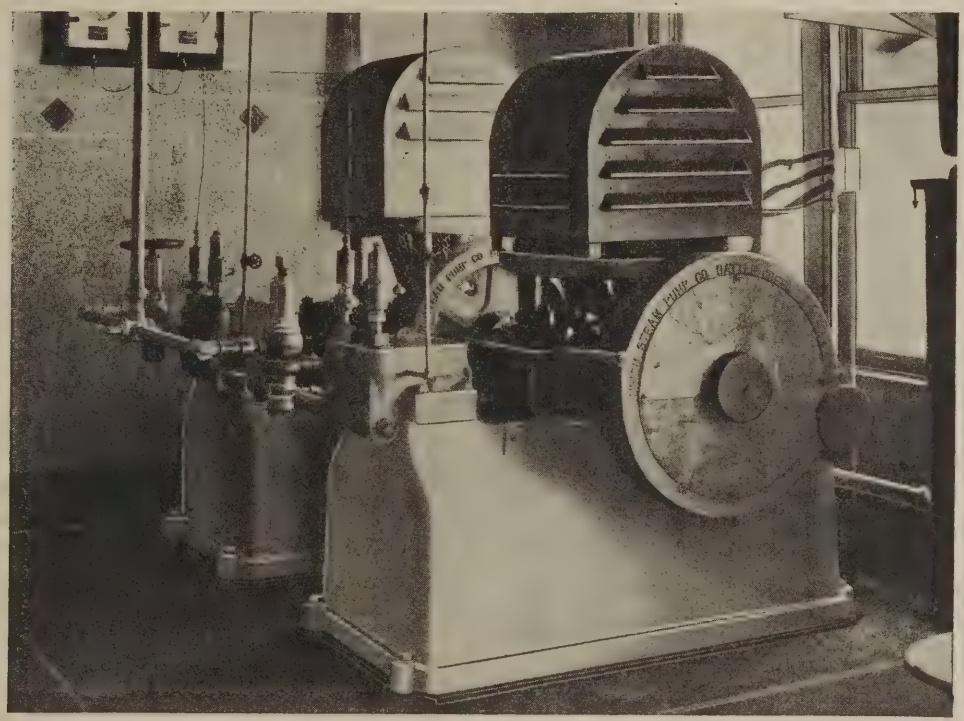
The third phase of our work is experimental. We have done some work on comparing ice cream made from mix which had been emulsified, viscolized, homogenized, and mix that had received no treatment. We have made ice cream out of various constituents, finding that the high per cent of milk solids not fat is a very important factor.

Since there is a keen interest at this time in regard to service charges, we have collected some data from seventeen different ice cream companies located in Ohio, which we believe you will find interesting. Thinking that the ice cream manufacturer may ruin the industry by being over zealous to establish sales agencies, we have collected these figures for the month of August. We assume that a profitable stop must purchase at least fifteen gallons of ice cream per week, or sixty gallons per month, during the season. If this is not the proper amount, you may raise or lower the classes according to your condition. We have divided all the customers into four classes: First, those that have purchased more than 120 gallons of ice cream during the month of August. Second, those that have used between 90 and 120 gallons of ice cream during the month. Third, those that have used between 60 and 90 gallons, and, fourth, those that have used less than 60 gallons of ice cream during the month of August.

YOU will be surprised how many poor customers you are serving. In order to determine the average number of gallons per customer in each class, the total number of gallons sold in each class divided by the number of customers in that class. The most interesting thing is the last column, which is the per cent of sales of each class of the total sales. One company had over 90 per cent of their sales to fall in the first class. Another one had less than 2 per cent of their sales to fall in the fourth, or poorest class. These figures go to show that there are more ice cream dispensers that are a detriment to the ice cream manufacturer than there are dispensers that use more than thirty gallons of ice cream per week. All of these 1,951 stops may not be a loss, but one-third or one-half could surely be eliminated. Why should the small dealer be served?

The most logical reason is that he may grow to be a larger dealer and another reason, or excuse, is that he may have a stop where an advertisement is worth the difference in the loss of the service he is given. Have you ever considered why he should not be served? He invariably wants three kinds of ice cream, and as you know when ice cream is sold slow it is not appetizing. The ice cream is not reaching the consumer in a satisfactory manner, and yet it is your ice cream and you are receiving the bad advertising of that particular stock. It would be better for you to have this small consumer come to the ice cream plant and give him his ice cream free of charge. You would be better off, financially, than to give him the service and charge him for the ice cream. We were interested to note from the reports sent in that the companies located in cities where the price was low had a much smaller number of stops in the fourth class. One would naturally expect the newer companies to have a larger number of fourth class stops.

The ice cream industry is growing rapidly, and it is time to study its efficiency. When you go home don't you think that it would be time well spent to separate your customers in these four classes, or similar ones, for each month of the year?



We wish to take this opportunity to express our thanks and appreciation to the ice cream manufacturers in Ohio for the co-operation received, and especially to those in Columbus and vicinity, for the courtesies shown our classes when visiting their plants.

History of the Dairy Industry in Colorado

*By CHAS. SHEPARDSON**

COLORADO, located astride the Continental Divide and usually considered a mining and range state, is fast developing into one of the leading dairy states of the Union.

The dairy industry had its beginning in small local plants scattered throughout the state. In 1899, the earliest figures available, the state dairy commissioner reported 65 creameries and cheese factories, with an investment of $195,000. The cheese output was 1,779,375 pounds, and the total butter output was 4,270,500 pounds, of which about one-half was farm butter. The total value of dairy products in the state for that year was given as $3,257,325.

The next three years showed a marked increase in the industry. In 1902, there were 86 plants, with an investment of $264,000. The cheese output showed little increase, but the creamery butter output jumped from 2,135,250 pounds annually to 6,716,000 pounds. In addition, the first milk condensery was established at Fort Lupton by the Colorado Condensed Milk Company. This marked the beginning of the Fort Lupton Johnstown dairy district. At the present time there are four condenseries operating in this district, and it is known throughout the state as the most prosperous farming section in this territory.

The total value of dairy products in 1902 was $6,629,988, or over double the value in 1899.

During the next ten years the development was slow. Through the activities of promoters, many plants were put up which afterward failed and caused a considerable depression in the industry. The annual cheese production dropped from nearly 2,000,000 pounds to about 250,000 pounds. However, during the latter part of this period the centralizer creameries became active, and much progress was made in butter production. In 1916 the creamery butter output amounted to 11,995,443 pounds and the cheese output amounted to 377,021 pounds. The number of plants was decreased to 75, while the valuation jumped from $219,000 in 1910, to $1,402,560 in 1916, and the total value of dairy products was estimated at about $10,000,000. Since 1916, the growth has been rapid. In 1922 the butter output was 19,934,255 pounds, compared with a consumption of 16,374,400 pounds, so that the state had passed over into the exporting class. The cheese production had increased about 900 per cent in six years to the high point of 3,210,294 pounds and the total value of dairy products for the year was estimated at $20,214,794.61.

The present status of the industry is shown by the following statement prepared by the state dairy commissioner's office:

Estimated value of farm butter, 6,406,952 lbs. @ .43c lb			2,754,989.36
Total estimated value of milk consumed and farm butter			$11,993,779.99
Total Value of all dairy products			$23,348,256.89

Butter, condensed milk and ice cream are exported while a small amount of cheese is imported. In fact the exports for 1922 practically equal the imports of 20 years ago at which time the state was importing about $5,000,000 worth of dairy products.

For the past 11 years the office of the state dairy commissioner has been located at the state agricultural college and these two agencies have done much in educating and developing the industry.

Among the pioneer commercial concerns who have aided in this growth, mention should be made of the Beatrice Creamery (formerly the Littleton Creamery), the Boulder Creamery, the Frink creameries and cheese factories, Carlsons and Corbetts Ice Cream Companies and the Windsor Farm Dairy at Denver, also the Sinton and Holland Dairies at Colorado Springs, the Helvetia Condensing Company in the Arkansas Valley and the Colorado Condensed Milk Company, the pioneer condensory of the West, at Fort Lupton.

Among the familiar names of early Holstein-Friesian breeders in Colorado are those of Canon and Penrose, Carlos W. Hall and Dr. Hubert M. Work. All of these men and particularly Dr. Work are in a large measure responsible for the unusually high class of Holstein-Friesian cattle that exist generally, throughout the state. A number of the early purebred importations to Colorado were made from New York state though, particularly in the Johnstown district, much of the foundation stock is of Wisconsin breeding. Several excellent bulls have been brought to Colorado from time to time and it is quite largely the off-spring of these bulls that have been disseminated throughout the state and therefore done the greatest good in developing a high quality of

The Daily Clean-up at Our Milk Plant

AT the end of each day every piece of apparatus in the Merrell-Soule plant is taken apart and each separate unit thoroughly cleansed by hand-operated brushes. The entire piping system, connected by easily removable flanges and valves, is removed and the heavily porcelain-lined pipes are washed and rinsed to the point of absolute cleanliness. When the piping system has again been connected, live steam is shot through the entire system. As each employee leaves the plant he turns in the white uniform supplied him at the beginning of the day. The next morning, when reporting for duty, he is handed a freshly laundered outfit which he wears for that day only.

ALL DIXIE IS LOOKING FORWARD TO 1924 NATIONAL CONVENTION AT NEW ORLEANS.

The PURITY Pasteurizer and Ice Cream Mixer is furnished with either belt or motor drive, as desired.

The PURITY Pasteurizer when used in connection with a small cooler makes an ideal pasteurizing unit, and it costs less to buy and operate than an extra coil machine.

The PURITY is very easy to clean. As shown, the working parts lift out and the drive head swings aside, leaving the inner copper can easily accessible for washing.

The Purity Ice Cream Mixer

HAS a powerful double motion agitator of the famous propeller type, which provides the maximum of thorough but gentle agitation.

This produces a *smooth, perfect ice cream mix.*

A *special current deflector throws* the mixture constantly toward the center, where the propellers suck it down in little whirlpools. This makes the PURITY mixer particularly successful for emulsifying powdered milk.

The PURITY is also very useful for pasteurizing and holding cream or small special amounts of milk.

It is entirely lined with tinned copper, which prevents rust.

This up-to-date piece of PURITY equipment will *improve your ice cream and increase your profits.*

Write *today* for circular and prices.

Fifty Years of Honest Equipment

Eskimo Pie Section

Views and Reviews of the Chocolate-Coated Bar Industry

IT HAS been shown that just what the ice cream manufacturer can do with Eskimo pies depends almost altogether upon the ice cream manufacturer. It has been less than three years since this so-called novelty knocked upon the door of the ice cream industry. It created quite a furore of excitement, even among men seasoned and scarred from long experience in the industry. Many of those frankly interested at the outset were equally frankly doubtful that the Eskimo pie would prove to be little more than a novelty; some called it a "flash."

Men of commerce know only too well the meaning of the word "flash." It suggests something on which you can "clean up" for the time being, if you step right into action immediately, and be prepared to step right out again equally as promptly.

It was for this reason that many conservative members of the ice cream industry laid down a "hands-off" policy with regard to the chocolate-skinned new-comer to the trade. Wise in their ways, sophisticated in their generation, they gently side-stepped and discreetly confided to themselves that they were getting "out from under."

There is nothing more interesting than looking back upon the course followed by a line of merchandise after it has plowed through the trade-fields of doubt and uncertainty. A few years ago we saw manufacturers going into the chocolated-bar business in large numbers. Some of them were not just sure why they were taking up this line. Others thought they had weighed the matter carefully and found it was worth "taking a chance." It would be hard to say just how many—or how few—really felt convinced that this Eskimo pie business really had a place in their business.

"As a winter novelty," several manufacturers took a hand. It was generally expected that the new-comer would help build up winter business. Actual results served to justify this judgment.

At the present time the chocolate-coated ice cream people are insisting that the ice cream bar has a place in the trade all the year around. It has been pointed out that many manufacturers are making money from pushing the bat at all stages of the game. At a convention in the East last year, one of the principal features was the speech of a gentleman whose company has built up a considerable trade in the bars. He explained how. This will be touched upon on another page in this issue.

The "flash" has not gone. Manufacturers who have held aloof have seen the ice cream bar hold its ground, slipping at times and regaining at other times, occasionally pushing forward.

Is it to win a place for itself just as the ice cream cone has done? Many of us remember how, twenty years ago, manufacturers, wise in their ways, said the cone would not stay long. The cone is an established institution now.

Is the bar to emulate the ice cream sundae in remaining a permanent fixture? Has it not certain points of merit so strongly recommending it to public popularity that it can be built up into a profitable place in the ice cream industry's scheme?

The Ice Cream Review is frank to state that its only interest in the matter is the ice cream manufacturers' interests. This publication, from the outset, has been on record as favoring anything that stands for the industry's advancement; we believe in any course, as an able statesman once said, "as long as it is forward."

It is for this reason that features of the chocolate industry are covered in more or less detail in this issue. We have seen the chocolate bar people stand on trial before the high court of trade opinion. These people have made out their case. There are those who believe it is a good case. They are investing money on the strength of what has gone before.

But to say, with the definiteness of snapping the trigger, that every manufacturer who takes up the ice cream bar can make money out of it would hardly be the proper thing. Some merchants who couldn't sell shoes now are piling up fortunes in the grocery trade. Men who have failed miserably as dry goods merchants are making good in the five-and-ten cent business. Some of us naturally can push certain lines better than others.

There can be no doubt that the chocolate-bar people offer something recommending itself to earnest consideration. Men who have succeeded in this business followed lines of trade promotion that, very probably, ice cream men of all parts of the country can promote.

It will be worth your while to give consideration to what follows in this department.

SPEND A WEEK IN DAIRYLAND — NATIONAL DAIRY EXPOSITION — MILWAUKEE, WIS., SEPT. 27 TO OCT. 4.

15 Million Winter Gallons

The Outlook for Eskimo Pie Business Beginning This Month

ENOUGH time has elapsed since those first frenzied days when Eskimo pie first came on the market in 1921, for us now to study what happened calmly and say, "This was right, this was wrong; this was a natural cause; this result may be expected in future."

By this method, we can conservatively say that it is a tremendous future—a future of rapid and continuous growth—a future built on a sound foundation of good manufacturing and good merchandising, the essentials of every permanent success.

This will be a future built on experience. We know now what no one knew in 1921. No one knew how to make Eskimo pies economically; no one knew what the price should be; no one knew what size they should be, for no one knew how much ice cream and chocolate a person could eat at one time and keep the appetite for more which would bring repeat sales.

Eskimo pie came on the market three years ago, to the exact month. In three months, 95 per cent of the industry had rushed to the making of this new bonanza —with a rush like the rush to the gold fields in '49. And in three more months after this phenomenal peak, the industry pronounced this remarkable sales-maker dead!

But the Eskimo pie is a long way from dead. Just as the men who rushed to California in the gold rush hurried right over the ground which is now producing the most gold—the first scramble to profit by the winter gallonage made possible by Eskimo pie was a rush which ignored the bed-rock principles of sound business.

So, today, Eskimo pie can show some remarkable figures as to its present and future. It can show that sales for the year just completed increased 364 per cent over the number of Eskimo pies sold in the 12 months just preceding. By accurate study of these sales figures, it can show that the season just commencing should witness the manufacture and sale of 15 million gallons of ice cream to supply the demand for Eskimo pie.

Let us review the past briefly, to show the experience on which the future is built.

During the first season, Eskimo pies sold for 10 cents. Ice cream and chocolate are such a delicious combination—these new bars were such a novelty—the name was of such a "catchy" nature—that the public gladly paid this price in the first season.

But a 10 cent bar was too much for youngsters—as a steady proposition. The price was too high—the margin of profit was too high—the manufacturing cost was too high. When the sales dropped off, manufacturers were beginning to be busy with spring business, the "cone" season was coming back, and they jumped to a hasty conclusion—"Eskimo pie was too good to be true."

WITH the coming of autumn, 1922, two or three manufacturers had the idea of trying a 5 cent pie. The response of the public was instantaneous. Every child can get a nickel. Adults could use Eskimo pie as a desert, and the cost was not out of reason. In 90 days' time over 100 manufacturers were making a 5 cent pie. This brought new problems. The cost of manufacture had to be figured more closely, and the volume of manufacture must be greater, to produce a 5 cent pie and maintain the right margin of profit.

The drawbacks of 1922, therefore, were primarily manufacturing problems, and before the end of the season there were several machines in operation to reduce labor costs and save waste of materials. By the summer of 1923 a machine was perfected, by which it was possible to cut, dip and wrap the pies automatically and economically.

Thus it was that the fall of 1923 can be regarded as the beginning of the first really normal season for Eskimo pie. The price was right. The size of the bar was right. The problem of manufacture was at a stage where pies could be turned out economically and in volume.

One problem remained—and that was the problem of sales and merchandising.

Over 300 ice cream manufacturers entered the season of 1923—many equipped with automatic equipment. Plans for merchandising were developed in this season of 1923-24, and instead of the sixty million pieces sold at 5 cents in the previous year, the spring of 1924 saw an increase of 364 per cent in the number of Eskimo pies sold.

We are, therefore, entering the season of 1924-25 with some real facts to guide us. Records have been carefully compiled as to the sale of each individual ice

THE ESKIMO PIE CORPORATION
5 N. Wabash Avenue CHICAGO, ILL.

cream manufacturer. They have also been compiled by cities and states on a per capita consumption. While Eskimo pie is still barely three years old, and as yet it is impossible to say what will be a reasonable saturation point—we can at least study the records of the past and say, "What a large number of typical cities have done—other cities can do."

That is what we propose to do in the analysis of the figures before us.

If we take the total city population of the United States and divide it into the number of Eskimo pies consumed in the fiscal year ending June 30, 1924, we find that the sale, over the whole country, totaled 4 pies per capita.

But these figures are obviously not fair, since all cities are included, whether anyone in the city ate Eskimo pies or not. In other words, a large proportion of this population was in territory not reached by any Eskimo pie licensee.

Now, suppose we take a typical group of states, in which Eskimo pies were sold. For the states of Arkansas, Iowa, Mississippi, Connecticut, North Carolina, Vermont and Kentucky, the average consumption of Eskimo pies proves to be 10.7 pies per capita.

On this basis, figuring for the whole country, there would be a total sale of 560,000,000 pies—7 million gallone. But even in these states, many cities were not reached. Hence, we take the sales in cities only—taking care not to choose one or two exceptions, but basing our calculations on a large enough number to make our estimate scientifically correct.

Figuring the sales in 45 cities, ranging in population from 10,000 to 600,000 and including cities as large as Pittsburgh, we find that Eskimo pie sales in the 12 months in question averaged 21.8 pies per capita.

FROM every aspect, these figures are fair. They are based on cities of various sizes, in many parts of the country—and on this basis the whole country could consume 1,100,000,000 (one billion one hundred million) Eskimo pies—and 15 million gallons of ice cream will be required to make them.

This estimate is based upon merchandising methods as they were applied during 1923-24, and not upon the improved methods which it is hoped we can develop during the coming year. This leads to the intensive plan for merchandising which is a part of the 1924-25 schedule.

Through their promotion and service department, the Eskimo Pie Corporation will have representatives who cover every manufacturing plant in the United States every 90 days. Successful merchandising plans or methods that may be developed either by them or individual manufacturers are immediately reported to the general office and this information is passed on to the rest of the industry. With one central organization in position to analyze at all times the status of an industry and to select the best methods employed by that industry and make it available for all manufacturers, Eskimo pie has every reason to become the most popular and widely sold confection offered to the American public. Should a manufacturer in Portland, Maine, hit upon some successful method in the manufacture, the distribution or the building of volume of Eskimo pie, within a week's time, that same information will be in the hands of the manufacturers in southern California, in North Dakota or in Texas.

FURTHERMORE, through their service department, the Eskimo Pie Corporation furnishes all point-of-purchase advertising, bringing this out in attractive colors to appeal to the younger set and more particularly the children who are the large buyers of the chocolate coated ice cream bar. They have decided upon the policy and will furnish for the coming year an entirely different series of advertising every thirty days to their licensees.

There are few great businesses which can show such a record of growth, and such a record of quick and efficient solution of its basic problems, as the Eskimo pie business. Few businesses, in fact, have all their problems thrust on them at once, as was the case with Eskimo pie, because of the universal welcome received by this product.

But in three years, we find that all the major problems have been straightened out, settled, and proved correct. The first year demonstrated the demand—the next season established the proper price and size—the next season developed an answer to the manufacturing problems, and showed the way to intelligent and consistent merchandising. The road ahead is now clear—the only limit is the "saturation point" of the American public, which is known to have the greatest sweet tooth in the world.

SELLS ICE CREAM DESPITE COOL WEATHER.

Here is an ice cream manufacturer who is not complaining about the cold weather as jeopardizing his business. The plant of the Spring Grove Ice and Ice Cream Co. of Tarentum, Pa., reports that it is necessary to operate their plant almost day and night to keep up with the large volume of business they are enjoying at the present time.

UNIVERSAL

ESKIMO PIE—MAKER

No matter how small—No matter how large YOU need this machine!

Here's the machine with an output large enough for the big manufacturer — sold and operated at a cost within the reach of the smallest maker of ice cream.

Does every operation of cutting, dipping, agitating, removing finished pies from hook — but weighs only 80 lbs. Turns out 60 to 90 DOZEN PER HOUR — yet takes no more space than a typewriter. Easy to operate, easy to clean, built from finest materials, runs from any light socket — AND SELLS FOR ONLY $225.

$225

Don't Lose a Day of Profit

Cooler weather will soon cut the gallonage of manufacturers who are not equipped to make and sell ESKIMO PIES. All over the country, these winter-time profit-builders have increased the winter business of manufacturers millions of gallons. If you are an Eskimo Pie licensee, get this machine on the job at once, and turn out better, quicker, more economical pies than ever before. If you're not an Eskimo Pie licensee, this machine proves the profit of joining now. Write or wire for full particulars. Machine shipped on receipt of $50.00 deposit.

An Eskimo Pie Idea from Coney Island

Showing the Public How It Is Done

ONE of the staff of The Ice Cream Review recently was paying a business visit to the world famed Coney Island at New York City and out of sheer curiosity took a ramble on the new boardwalk, which incidentally is destined to become more famous than its well-known predecessor at Atlantic City.

Being very well acquainted with the resort under old conditions and having a thorough appreciation of the great changes which have been wrought on one of the most valuable and beautiful ocean bathing fronts on the Atlantic Coast (diverting it into what nature intended it should be) it was indeed a very agreeable surprise

Showing the public how Eskimo pies are made.

while strolling along enjoying the ocean breezes and incidentally absorbing with great interest the many startling changes being made, including the widening, grading and re-aligning of the cross streets leading to the walk, as well as the construction of such buildings facing on the walk as Childs' New Monmouth Restaurant, which is bound to establish the future character of the walk—the writer's attention was attracted to a crowd gathered around one of the concession stands, which border the walk through its entire length.

Judge of his surprise on investigation to discover the cause of all the excitement was a manufacturer of Eskimo pies, who it appears has the concession for manufacturing Eskimo pies on Coney Island, and who had some very decided ideas on the value of showing the public just how he makes his pies in a clean, sanitary way (as he puts it) in barking to the public.

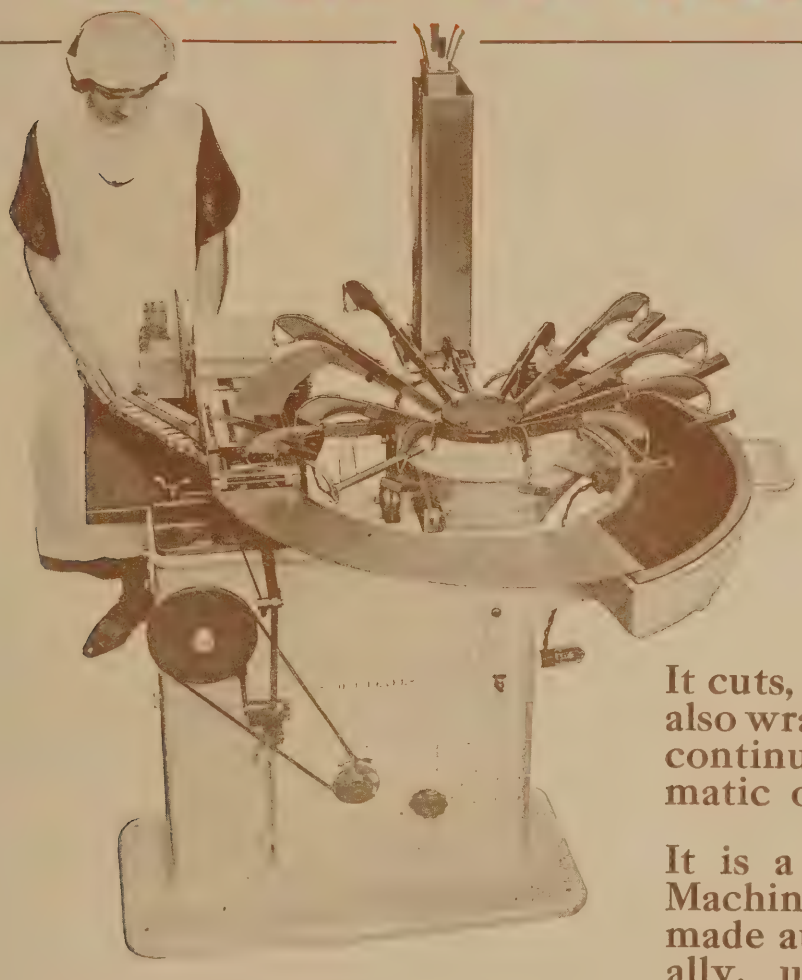
THE writer is forced to confess that the pie salesman was certainly a good judge of human nature. He had seen an Eskimo pie machine (made by the Anderson Bros. Mfg. Company) in operation somewheres, and realizing its drawing ability, brought about by its almost uncanny automatic features, had placed one of these machines in his stand, and took great pleasure in showing the public just how his Eskimo pies were made, and how the human hands never touched the ice cream from the time it went into the machine until it was cut, dipped through the chocolate, and then wrapped in tin foil and ready for consumption.

The picture below will in a measure substantiate this story. The writer was so impressed with the psychological features of the proposition as an advertising possibility (which might be adapted to almost any line of effort) that he took measure to substantiate same by having some photos of the scene.

The writer would surely like to be able to show you the effect on the observers, as regards appealing to their appetites for pies. I didn't keep tab on how many he sold while I was watching, but the proprietor advised it was not unusual for him to sell five thousand pies on a Saturday or Sunday, which he claimed could be doubled but for the fact that the police refused to let him run the machine only at intervals, owing to the congestion it creates.

THE moral of the situation is as follows: In case one wants to be up-to-date in any line of effort one must always be prepared to meet emergencies as they arise, viz.: if I had a moving picture machine with me, I could show you the public purchasing the pies, could also show the machine (almost human) in action, all of which ought to be of vital interest to all manufacturers of automatic machines, particularly those which are used for the manufacture of eatables and food stuff, in fact, it seems to me the concessions on that boardwalk could be made doubly interesting and much more profitable, if more of the concessionaires would take the hint from our friend with the Eskimo pie machine.

The writer hopes the thought as suggested in this article may be of some benefit to our many readers in the line and our hope is that the general scheme may be adopted for the combined benefit of both consumer and purveyors of refreshments, etc., at popular summer resorts and beaches.



HOW TO FIGURE COSTS AND PROFITS ON ESKIMO PIES.

The ice cream manufacturer has long been accustomed to figure his costs on the basis of gallons. Eskimo pies, on the other hand, are ordinarily discussed in terms of dozens. Because of these facts, it has sometimes been a difficult job for the manufacturer to arrive at a true picture of what Eskimo pie makes him in the way of profit. The answer lies in talking Eskimo pie in terms of gallonage.

Here are some suggestions, based on the averaged manufacturing costs of a number of leading ice cream manufacturers. It has been found that in cutting twenty bars to the quart and selling them at 45 cents per dozen, the cost of converting ice cream into Eskimo pies is 94 cents per gallon. This includes coating, labor, wrappers, and cartons.

Pies selling at 45 cents per dozen give the manufacturer $3.00 per gallon for the ice cream sold in the form of Eskimo pies; deducting the cost of 94 cents per gallon for converting the ice cream into Eskimo pies leaves a selling price of $2.06 per gallon for the cream. Manufacturers selling Eskimo pies at 40 cents per dozen receive $2.70 per gallon for the ice cream sold in the form

of Eskimo pie, and deducting a manufacturing cost of 94 cents per gallon leaves $1.76 per gallon for his ice cream.

In other words, it is just as reasonable for a manufacturer to try and compute his profit on Eskimo pies by the dozen as it is for him to try and compute his profit on ice cream by the pint. Many of the leading manufacturers are and it is strongly recommended that a manufacturer figure his cost on a gallonage basis and merely consider that Eskimo pies are a means or medium of selling more ice cream. In doing this, it is readily apparent that he receives from $1.75 to $2.05 per gallon on ice cream over and above the additional cost he is put to, in making Eskimo pie.

Eskimo Pie and Winter Consumption

How a New Englander Has Profitably Coped With the Situation

READERS of The Ice Cream Review will recall an address before the 1924 convention of the New England Association of Ice Cream Manufacturers by W. J. Sheehan on "Building up Winter Consumption," which was published in the March issue of this publication.

In speaking of the Eskimo pie, which he believed had taken its "rightful place in our industry as a means of taking care of overhead," Mr. Sheehan went on to outline certain conditions why many ice manufacturers were "stampeded" into unwise actions when the pie was first introduced.

These conditions were summed up as follows:

"In my judgment the milk and cream business, if conducted successfully, demands location, experience, and a large financial outlay in equipment. Also it is a business separated from the ice cream business in many ways. The Charlotte Russe is fairly successful, if you happen to have a surplus of cream and are located in a large city that can and will consume your supply. The box sundaes will never be a pronounced success on account of the great difficulty in shipping them profitably, the small returns in money to the makers, and the fact that this product comes into competition with the college ice trade of the dealer. The candy business positively cannot be conducted in conjunction with the ice cream business, inasmuch as it begins early in the fall and continues into late in the spring and requires almost an entire crew of men in which your surplus ice cream help cannot be used profitably."

MR. SHEEHAN then went on at length to discuss what he had found to be proper methods of taking care of the chocolate proposition, speaking in part as follows:

"I believe that in the making of this bar only a plain well flavored cream should be used for a center. The coating should consist of a high grade of milk chocolate with a small amount of bitter chocolate and cocoa butter. One pound of this mixture should be used to cover 40 ice cream bars. The chocolate covered bars should be cut 20 to a quart and packed in one or two dozen cartons. These bars should retail at 45 cents a dozen and yield the dealer a profit of 15 cents a dozen. This is a legitimate profit principally on account of the remarkably rapid turnover on the original outlay. A machine neither too large or expensive but suited to your general needs, should be purchased. Your ice cream business should be so arranged that you can use your surplus help for a whole day at a time and not for a part of a day.

It is, of course, important that the bars should be fresh, so do not keep too large a stock on hand. Use your regular transportation equipment for delivery. The publicity given to the product is of the utmost importance. You should make sure that the men have a sufficient supply of window and inside store advertisements, and that they distribute judiciously and replace them when they become dirty or discolored. You should not conduct this department in a lukewarm or half-hearted manner. If it is to be a success, you must devote to it time and effort. The results that you achieve will be in proportion to the care and attention you bestow upon it.

A DEALER should make his own chocolate bars as the accepted custom is for the Eskimo pie department to purchase ice cream from its own company, thus making this department your largest customer. You charge them the regular wholesale price of quart bricks. In addition to this customer, you will retain the good will and confidence of your dealers. You will also impress them with the idea that you are wide-awake, up-to-date, and always among the first in the field with anything worth while. You will also make from a minimum of five cents to a maximum of eight cents profit a dozen on your bars. This will give you extra money to do business with during the lean months of the winter of your discontent.

"In conclusion, the Eskimo pie offers to you a solution of your winter overhead problem. If you will put into the making and marketing of them the same thought and the same energy that you put into your summer ice cream business, you will find that you have discovered the weapon to slay the robber who has for too long a time fed fat on your hard earned summer profits.

ICE CREAM PASSES NUTRITION TESTS AMONG NEW ORLEANS SCHOOL KIDDIES.

E. B. Geisel, manager of the Anheuser-Busch Ice Cream Co., New Orleans, recently conducted an unique ice cream nutrition experiment among New Orleans school children, which proved in decisive manner that ice cream is, in every sense of the term, a health food and a body-builder. Herewith is shown one of Mr. Geisel's nutrition classes in the New Orleans public schools.

Starting With a Real "Bang"

How Ice Cream Manufacturers Plan to Enter the Eskimo Pie Season With Record Sales for the First Day's Business

HERETOFORE the ice cream industry has regarded Eskimo pie as a seasonal seller. The season starts when cool weather begins — and runs through the winter months, well into spring.

But this year, many ice cream manufacturers are not going to let "nature take its course." They are going to make their first Eskimo pie day a banner day. Every dealer will be stocked. Every dealer will have Eskimo pie streamers in his windows and Eskimo cards in his store. All on one day, the children and grown-ups of his community are going to realize that Eskimo pie season is back again—and sales are going to start from the word go, full speed ahead.

If anyone says, "It can't be done," the answer is, "It has been done—by Balloon Day."

Balloon Day is a perfectly simple application of well-known selling principles. The manufacturer supplies his dealer with Eskimo pie balloons—large, handsome, durable balloons—bearing the name Eskimo pie, and also the name of the particular ice cream manufacturer.

The dealer gives one balloon free to each child buying an Eskimo pie. And children flock to the dealer's store to buy.

Perhaps that sounds amazingly simple. It is simple —but it works. The first Eskimo pie balloon day was tried by a manufacturer in a small town in Iowa back in 1923. He wanted a premium. The Eskimo pie folks secured the balloons for him—1,000 of them. The success was amazing.

Then came Pittsburgh—the first large city to use the idea. Over 90,000 balloons were given away—with an equal number of Eskimo pie sales. The manufacturers reported that 25,000 additional sales could have been made, if there had been that number of balloons.

Washington, D. C., tried the same idea. Same result. Several balloon days were run in the capitol city during February and March, 1924, with equal success. From Washington the idea spread to New Jersey—from New Jersey to New York and Pennsylvania—and on up the coast, until practically every Eskimo pie manufacturer in New England put on one or more balloon days.

A little common sense reasoning will show why Balloon Day succeeds so remarkably for Eskimo pie, whereas other premium ideas do not always ring the bell. When you give a balloon free for a 5c purchase, you have the perfect premium. Every child wants a balloon. Every child can eat Eskimo pie. And the final factor of success is the fact that a balloon of equal size and quality would ordinarily sell for 5c without the pie.

CHICAGO

Cosco — *For Forty-four Years the Mark of Quality in Ice Cream Products*

Not only does the manufacturer and dealer get immediate benefits on Balloon Day—but these benefits continue for months to follow. The child who buys one Eskimo pie buys many more in succeeding weeks.

THE statement of James Tait, of Tait Brothers, Springfield, was that after their Balloon Day on February 11, their Eskimo pie sales increased 100 per cent and held that increase for thirty days thereafter. In other words, the sales from February 11, for thirty days thereafter, were 100 per cent greater than the thirty days previous to February 11.

The whole proposition is concisely summarized in a statement of James Tait of Tait Bros., Inc., of Springfield, Mass., who put on a Balloon Day on February 11, 1924. Mr. Tait says:

"The prime benefits to be derived from Balloon Day, are first: The average dealer will sell ten dozen or 120 pies. This requires 120 balloons, costing approximately 1c each or $1.20. If this dealer sells 120 pies on that day, it means 120 youngsters will come into his store, it means his cash register will ring 120 times, it means that he will appreciate that the ice cream manufacturer is a live wire, and is doing something to stimulate his business. In no other way can an ice cream manufacturer spend $1.25 more profitably with the dealer. Not only is the expense well worth the gratitude and appreciation of the dealer, but it means that on Balloon Day, ten times as many Eskimo pies are sold as would be without balloons."

So far as the dealer is concerned, he is glad to cooperate, when the manufacturer can show him such definite facts and absolute proof that he can profit by Balloon Day.

The balloons are supplied to the dealers by the manufacturer without cost. Complete window trim material for the dealer is supplied to the manufacturer without cost by The Eskimo Pie Corporation.

LAST and far from least, Balloon Day makes it possible for the manufacturer to add one more month of profit to his Eskimo pie season. With this plan he can start at least a month earlier than he would if he waited for the public to get the Eskimo pie habit again, without any advertising pressure.

It is conservatively estimated that over five million balloons will be used by manufacturers throughout the United States on the opening day.

MASTER METAL WRAPS *for* ESKIMO PIE

Eskimo Pies

From a Speech Before the 1923 Oklahoma Convention

IN TALKING to you today, I assume that all of the Wolf Hounds are boosters of Eskimo pie, and I will ask the Wolf Hounds and the ice cream manufacturers to forget that I am a representative of the Eskimo pie corporation, and, instead of talking about Eskimo pies, we will talk about chocolate coated ice cream bars.

For the past eighteen months I have visited every large ice cream manufacturer east of the Mississippi River. I had the opportunity and pleasure of meeting the largest representative ice cream manufacturers of the country, and I have seen the methods they employ in the manufacture of ice cream and chocolate coated ice cream bars.

When I came to Oklahoma and found that the price of ice cream is from $.90 to $1.00 a gallon I was dumbfounded, for this price is entirely out of proportion with prices and conditions as I have found them in other parts of the country. So far as I have been able to determine, whether it is the inability of the Oklahoma ice cream manufacturers to get a better price, or if they are so much more efficient ice cream makers that they can afford to sell it for that price. I do not know of any place in the East where ice cream is sold for the price it is sold for in this state. In the state of Michigan we find some of the finest ice cream plants in the country, and ice cream is not sold there for a dollar a gallon. They are not getting less than a dollar a gallon, and their butterfat standard is ten per cent. I firmly believe that ice cream manufacturers who have been selling their cream for a dollar a gallon would sell more ice cream, and they would make more money, if they would add about twenty cents to their price. Put ten cents of this into better quality, five cents of it into more advertising, and five cents extra profit, and your sales will be very satisfactory, and you will have a bigger net profit at the end of the year. In Pennsylvania, in the cities of Wilkes-Barre, Scranton, Allentown, and Reading, the per capita consumption is twice as great as it is here, and they are getting $1.75 for brick and $1.40 for bulk cream, and still they are complaining of the poor price they are getting.

In connection with the making of the chocolate coated ice cream bar, there are two questions in which the average ice cream manufacturer is chiefly interested:

1. How can I make and sell it profitably?
2. How can I build gallonage?

THE first thing to do is to figure what the product is going to cost. Many figure on the dozen basis. They figure costs and profits, and they sell on the dozen basis. A middle eastern manufacturer inaugurated a system that is being taken up by others. He wanted to build up his winter gallonage, and he found that it would be necessary for him to install extra equipment for cutting, coating, wrapping, etc. It would cost him 85 cents a gallon to convert his ice cream into chocolate coated ice cream bars. He is getting $3.00 a gallon for ice cream sold in the form of chocolate coated ice cream bars, and making money after allowing the 85 cents for conversion to bars.

One of the most important factors in the making of chocolate coated ice cream bars is the coating. The leading chocolate manufacturers have become interested, and have perfected a coating that is ideal for this purpose, selling at 27 to 28 cents a pound. This product has a cocoa butter content of about 42 per cent, and will coat from 36 to 48 bars to the pound of chocolate. It provides a very thin coat, which is more desirable, and less expensive.

A FURTHER economy is effected by putting more bars in a carton. The old method was a dozen to the carton. Under the new method, they sell them by the carton instead of by the dozen, a dollar for a carton of 27 bars. The dealer's profit is small, and when he thinks of buying a dozen, he sees only a very small profit for the sale of that dozen bars. Now he buys a carton for a dollar, sells it for $1.35, and there is a greater inducement for him to buy. Through the use of the 27 bar carton, the sales are increased, and the cost of cartons to the manufacturer is cut a little more than half.

I have actual records from 14 manufacturers showing that it costs them from 90 cents to a dollar to convert their cream into bars, and they are getting $3.00 a gallon for cream so converted. In Oklahoma at present prices you could sell this cream for $2.00 a gallon and make money.

To sell any product we must let the public know where to buy it. In a large eastern city last season the largest ice cream manufacturer averaged 3,500 dozen chocolate coated ice cream bars a day for 110 consec-

utive days. Another manufacturer was selling about a thousand dozen a day, average for the same period of time. This year the largest manufacturer has been selling only 900 to 1,000 dozen a day, and the smaller manufacturer actually 1,226 dozen a day. They had the same proportionate gallonage as last year; they were selling at the same price, they were selling the bars under the same name; they were using the same advertising. All conditions appeared to be identical, yet the larger manufacturer was not getting the increase he should have gotten, in comparison with the smaller manufacturer. Something seemed to be wrong, and an investigation was conducted.

We found the small manufacturer was using a high grade coating. The large manufacturer was using another coating that didn't sell any ice cream. One would take a bite of the bar and feel like spitting it out and throwing the rest of the bar away.

THERE was a similar instance in another eastern city. I was called in to investigate. The manufacturers placed the bar on the market at the same time. The quality was the same. The largest manufacturer bought the coating by the carload, and supplied all the other manufacturers so the coating was the same. They advertised co-operatively, so the advertising was the same. Two cents a dozen had been set aside for advertising. I went to the dealers to find out what was wrong, why the small manufacturer should be selling 40 per cent more chocolate coated ice cream bars than the large manufacturer with two and one-half times greater gallonage. I found the large manufacturer's dealers had no advertising. The drivers had chucked the advertising material under the seats of the truck and no one knew where to buy the large manufacturer's ice cream bars. This is just an illustration to show that we cannot expect to sell a product unless the people know where to get it.

I have here some charts which give a few figures regarding the chocolate coated ice cream bar industry. These figures apply to the bars sold under our own trade name. Last year there were sold approximately 70,000,000 chocolate coated ice cream bars. This year there will be approximately 160,000,000 million sold, basing our estimate on the number sold during the first eight months of the year. For next year we have set a quota of 360,000,000 million bars, which would be equal to four and one-half million gallons of ice cream. I am glad to say that the New England states are surpassing their quota, on the present rate per month. These figures I have given no doubt seem new to you, but the chocolate coated ice cream bar business has progressed the most in the eastern states. Eighty-two per cent of the chocolate coated bars are sold east of the city of Cleveland.

The quota that has been set for the chocolate coated ice cream bar industry for next year is not large when we consider that there were more than one billion, four hundred million pieces of chewing gum sold last year, and people do not need teeth to eat ice cream either. It is eaten before we get our teeth and after we lose them. We have every reason to believe that the chocolate coated ice cream bar industry should equal that of the gum and soft drink manufacturers. America consumes four billion bottles of pop in three months of the year. The pop and gum manufacturers have built up this big demand by advertising their products. They don't knock each other, and they don't knock ice cream. We don't need to try to cut the sales of soft drinks or

gum, but simply talk and advertise to induce people to eat more ice cream and chocolate coated ice cream bars.

SEVERAL eastern cities have adopted the co-operative advertising plan, and are putting it over on a big scale. In one particular city six manufacturers have joined, and the cost is pro-rated among them according to gallonage. They put on a big advertising campaign for the chocolate coated ice cream bar, raised the price to ten cents and sold 15,049 dozen ten cent bars in ten days.

I can give you another illustration of what can be done when ice cream manufacturers begin fighting among themselves. In an eastern city an ice cream war was on. Each one began eating a hole in the business of the other. One of them spent $15,000 and the other spent $10,000, and at the end of two weeks, one man had three stops more than he had when the fight started, and the other had the same number of stops he had at first. Both lost heavily. If they had gone together and spent less money, both would have sold more ice cream.

In another big city manufacturers cut the price during their ice cream war to 92 cents a gallon and lost between $2,250,000 and $2,500,000.

THE best endorsement of the chocolate coated ice cream bar that I can give is to say that of thirty directors of the National Association of Ice Cream Manufacturers, twenty-nine of them are making them, and I am glad to state further that 82 per cent of those making the bars are making Eskimo pies.

If there are any questions I shall be glad to answer them. I thank you.

W. M. Hawk: How many manufacturers are making a ten-cent bar?

Mr. Lund: Only one. We started November 3, and continued. This was just a campaign to see what could be done with selling a ten-cent bar with a heavy advertising campaign. It illustrates the dynamic power of advertising. In this campaign they spent about 40 cents a dozen for advertising. They made a good sized bar, and the people were pleased. After the ten day campaign the price was reduced to five cents, and the public was pleased again.

Mr. Hawk: How many bars did you cut to the quart of cream?

Mr. Lund: For the ten cent bar we cut 14 to the quart, and for the five cent bar, 20. I wouldn't advise anyone planning to begin making chocolate coated ice cream bars to try to sell them for a dime.

Member: How many did they sell before the demand began to wane?

Mr. Lund: The demand had already begun to drop at the end of ten days, but picked up again when the price was reduced to five cents.

Mr. Porter: I want to explain to Mr. Lund that our price of a dollar a gallon in Oklahoma is equal to about $1.25 in other states, for we do not give any re-icing service. This accounts for the difference in price in this state and other states, but at that, we probably ought to have more for our ice cream.

Mr. Lund: You are indeed fortunate in having disposed of the icing problem that way. It shows that you are working together. In some places they are not only icing free of charge, but they put linoleum on the floors, paint store fronts, and even loan money. One large city manufacturer I know of has $80,000 loaned out to dealers. Gentlemen, I thank you.

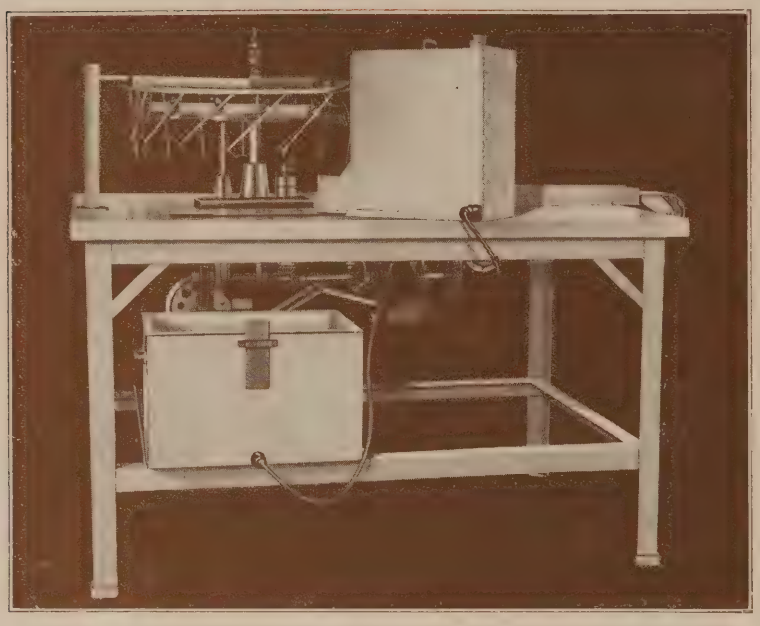
ALUMINUM FOIL

The Standard Wrapper

for

ESKIMO PIE

During the last twelve months, more aluminum foil was used for Eskimo Pies than all other wrappers combined.



Aluminum foil is especially suited for wrapping food products because it is absolutely hygienic and can form no poisonous compounds with any food. Aluminum foil wrappers are made for all wrapping machines used on Eskimo Pies.

Bright silvery—white foil—made of pure aluminum—keeps its lustre and brilliance better than any other metal foil.

Made Right

ESKI ARE A PROFIT

NORTHWESTERN Ice Cream Cutting *and* Dipping Machine

Cut to uniform size;—dipped into a uniform chocolate bath;—delivered on a convenient table; all with absolute automatic precision at a rate of 120 dozen per hour, is the accomplishment of the Northwestern Ice Cream Cutting and Dipping Machine.

It is easily adjustable to 5c or 10c bars. Furnished complete with motor and electrically heated chocolate tank at a price of only $375.00 brings the cost of manufacture down to a point where Eskimo pies are "made right" from an equipment investment consideration.

If price and performance are a consideration in buying equipment for the production of Eskimo pies,—you will find an investigation of the Northwestern Cutting and Dipping Machine worth while.

NORTHWESTERN CO

Sold Right

MO PIES

YEAR 'ROUND ABLE ARTICLE

Eskimo pies—no matter how well made—must be "sold right" to keep them in public favor. They must be sold in places where the public gathers.—where only a quick, handy serving of something cold will satisfy. The bars must be readily available without the usual digging into a regular ice cream cabinet with the familiar "wait." The bars must be hard, with the coating firm and devoid of any "greasy" appearance.

The Northwestern Bar Cabinet is an achievement in the successful sale of Eskimo pies on a year 'round basis. Wherever these little sales producers have been employed the sale of Eskimo pies has been a profitable success throughout the year.

Let us tell you some novel ways these Northwestern Bar Cabinets are used to increase sales.

RPORATION, Morris, Ill.

SUPPLY SALESMEN ADD TO CLUB'S RECORD BY SUCCESSFUL SHORT COURSE ENROLLMENT.

Forty-odd members of the Salesmen's Club of The Association of Ice Cream Supply Men enrolled for a special course in dairy products merchandising and manufacturing, with the pre-dominant emphasis on ice cream production, at Penn State College late in August, where they will remain until August 29 under the instruction of Professors W. H. Martin, I. R. Knapp, A. A. Borland, L. W. Morley, W. D. Swope and M. H. Knutson. Many of the extensive laboratory and classroom facilities of Penn State College were at the disposal of the salesmen throughout the course.

Commenting on the success that has attended the club's first educational effort of this sort, President Jordan of The Association of Ice Cream Supply Men recently paid this tribute to the club:

It is the "man on the road' who more often than I am afraid everyone realizes is and can be the upbuilder of the industry. The Association of Ice Cream Supply Men is distinctly gratified at the progress made by its affiliated Salesmen's Club. The Penn State Salesmen's Club short course is a significant example of the future possibilities of the club. I can foresee the day when the self-improvement of salesmen along constructive and legitimate and proper lines will be carried on day in and day out through the agency of this club.

As an adjunct of The Association of Ice Cream Supply Men, the club is thoroughly appreciated and has no light value placed upon it. The discussions that take place on what might be called the written forum of the club, that is, through its frequent membership bulletins, are practicable and serviceable to the extreme. They touch on actual problems of the industry, of the salesman's life, of his relation to his customer, of his implied and actual duty to and responsibility for the growth of the industry to which he caters. Thinkers of real ability have come to light through the medium of these discussions.

As, ex-officio, a member of the executive committee of the club it has been my good fortune to participate in all the meetings of its directors. At a recent meeting in Cleveland I was forcibly struck by the constructive sense of the directors there and by the broad view they have acquired of the industry and of their determination loyally to advance its interests.

The officers and directors of the club are: N. M. Thomas, president; M. J. Conaton, Jr., vice-president; C. H. Achelpehl, treasurer; Robert Everett, secretary. Frank Carroll, Byron Morris, Herman Lapat, Eli Rosenbaum, M. C. Swartout, I. E. Colvin and O. C. Jordan, ex-officio.

Those whose enrollment at Penn State were received in time to be announced for publication are:

R. S. Damuth and W. R. Maguire, J. G. Cherry Co.; J. J. Clark and L. Eyring, F. Bischoff, Inc.; L. VonLosberg and H. I. Rosner, Joe Lowe Co., Inc.; A. J. Hulsebesch and C. R. Ficker, Brown & Shaw; F. S. Key, R. L. Adolph, E. F. Hasselfeldt, J. W. Stevens and W. G. Royer, National Bakers' Egg Co., Inc.; Eli and Robert Rosenbaum and E. B. Van Dusen, David Michael & Co.; C. Blake, F. Carroll and A. W. Johnson, Milligan & Higgins Gelatine Co.; G. Kaehler, Van Houten, Inc.; S. E. Swanker, H. L. Trimby and J. G. Brown, G. R. Ryan Mfg. Co.; S. H. Stayton, H O Wilbur & Sons.

TWO NEW PLANTS FOR GLOBE ICE CREAM CO.

Two new plants are planned by the Globe Ice Cream Co. of Los Angeles to represent an investment of $500,000 each. This is in line with the expansion program announced by the company which will more than double the production, payroll and size of the existing Globe ice cream plant at Hill and Jefferson Sts., Los Angeles. The announcement comes from A. A. Comey, vice-president and general manager. There are three acres, covering an entire block in the Beverly Hills section of Los Angeles, which will be the site of one of the plants, the first unit of which will cost $250,000 and will include two buildings, one six stories and basement in height, 100x100 feet, and the other two stories in height, 100x 200 feet. The site itself was bought for a consideration of $75,000.

The second unit of equal size will be constructed at a cost of $250,000 after the first unit is completed. The present schedule calls for both units to be completed and in operation within the next twelve months.

The site for the Los Angeles harbor plant has been selected, but the exact location of the plant has not been made public. The company says that this plant will be an exact duplication of the Beverly Hills factory. Mr. Comey has been active head of the business since the parent institution was erected in Los Angeles two years ago. Among the other officials of the Globe Ice Cream Co. are Marco H. Hellman, Irving H. Hellman, Will E. Keller, C. A. Fellows, Carl Leonardt and other prominent business men.

The main plant of the Globe Ice Cream Co. represents a million dollar layout, and employs 120 people, and has a monthly payroll of $25,000, and every thirty days spends $105,000 in the city of Los Angeles for raw products to be manufactured into ice cream and ice.

Karl B. Mory, formerly secretary of the Wisconsin Association of Ice Cream Manufacturers, but now connected with the industry in the East, recently sent us a photo of a fleet of trucks acquired by the Rochester Ice Cream Co., Rochester, N. Y., the firm of which he is sales manager.

ZIPP'S ORANGE FREEZE

—take a tip, buy from Zipp!

HIGHEST QUALITY for 38 YEARS

When at the Milwaukee Convention make our Booth No. 183 your headquarters. Come in and get better acquainted and don't fail to see ZIPP'S ORANGE FREEZE.

For imparting that true orange flavor to your Ice Cream, Ices and Sherbets it has won its FAVOR through its FLAVOR.

ORANGE is becoming a more popular flavor every year.

THERE IS A DIFFERENCE IN ORANGE FLAVORS.

You have tried the rest, now try the BEST.

Our scientific process eliminates that Terpeny flavor, yet retains the whole orange flavor so commonly lost in terpeneless flavors.

Come in for a demonstration, as seeing is believing.

Manufacturers of Illinois Getting Ready for Jubilee

Twenty-fifth Anniversary of Oldest Organization to be Celebrated Next Month

ICE cream manufacturers of Illinois are getting ready to do themselves proud next month when the silver jubilee of the Illinois Association of Ice Cream Manufacturers will be held in Chicago. These festivities which will mark the twenty-fifth annual meeting of the oldest association in the industry will be held October 28-29, Hotel Sherman, Chicago.

Secretary Loewenstein has announced a tentative program of up-to-the-minute subjects. These subjects will deal with the various problems confronting ice cream manufacturers of Illinois, including refrigerated cabinets and fountains, service charges, motor truck delivery, co-operative advertising, cost accounting and Bulk Goods vs. Package Goods.

The business proceedings of the convention will be punctuated by a banquet, different forms of entertainment, and a dance, all of this taking place on the evening of Tuesday, October 28. Association officials have asked their members to bring along the ladies, impressing the fact that this convention will be a real silver jubilee.

ASSOCIATION officials throughout the ice cream industry are extending congratulations to the officers of this veteran association. There is no doubt that it will be the most spectacular convention in the history of the Illinois association. Illinois manufacturers and friends from many states are making reservations.

It would be difficult to estimate the great influence the association has wielded for the advancement of the ice cream industry of Illinois. This convention is sure to be one of the outstanding ice cream events of the year.

DEFINITE ARRANGEMENTS FOR MICHIGAN CONVENTION.

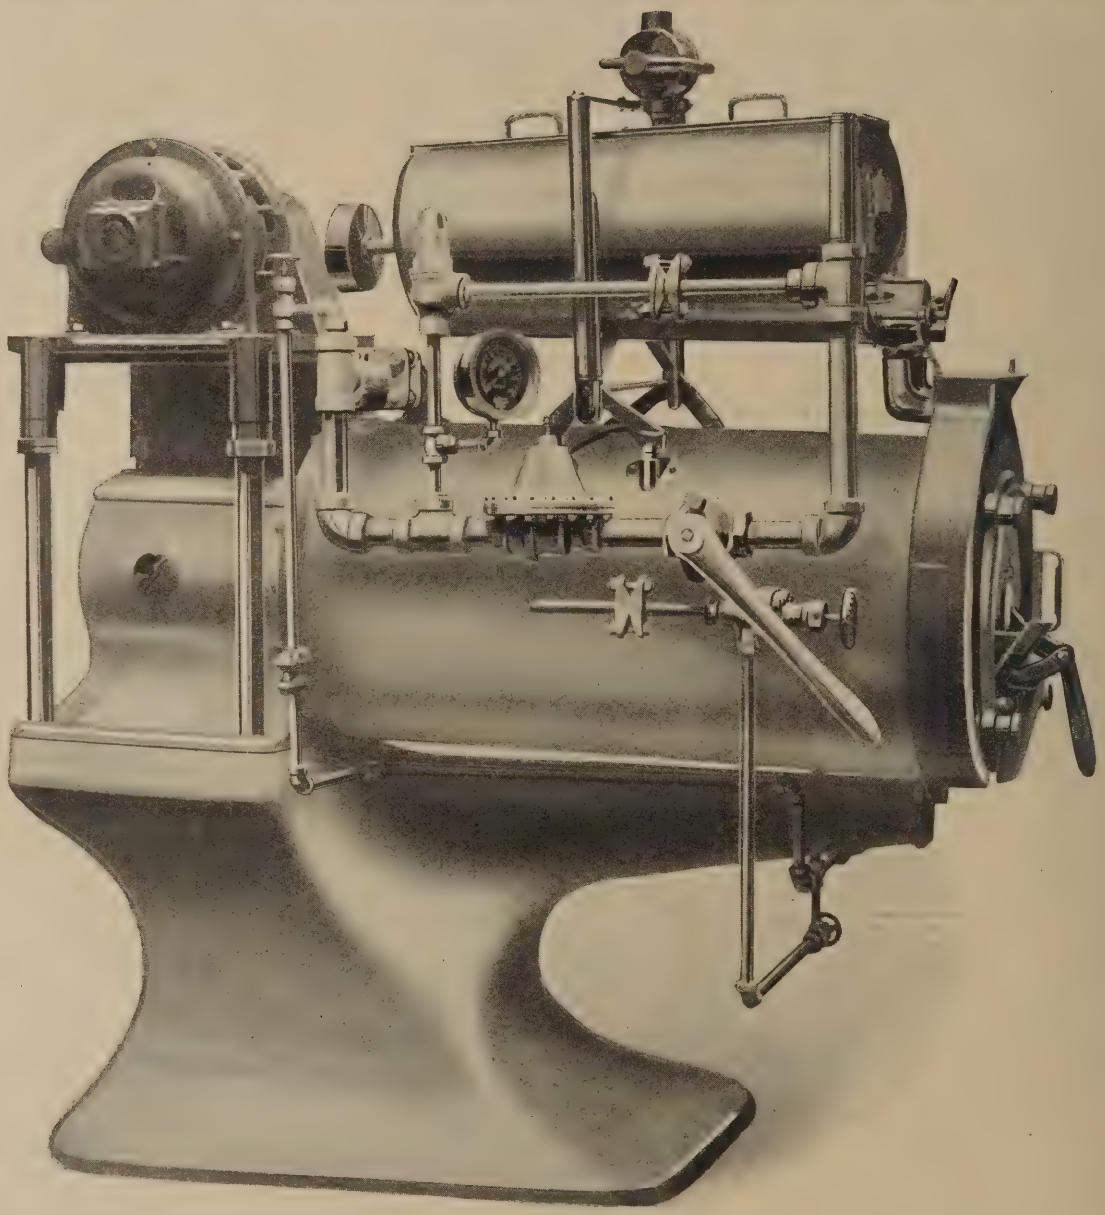
All arrangements have been made to hold the next annual convention of the Michigan Allied Dairy Association at Lansing, Mich., on February 2, 3, 4, 5 and 6, 1925. The convention will be held at the Michigan Agricultural College in connection with Farmers' Week.

C. J. Yuncker, president of the Michigan Dairy Boosters, advises that exhibits will be held in the Armory building. Headquarters for his association will be at the Kerns Hotel, and reservations now can be made. The president of the Boosters states that reservation should be made at an early date, as all hotels will be crowded during the convention week. A diagram of floor space will be shown in an early issue of The Ice Cream Review. There is space for only 56 booths on account of lack of other larger buildings. Many interested in the activities of the Michigan Dairy Boosters have formed the idea that the Boosters will hold their convention at Grand Rapids. Lansing is the city decided upon by the association.

There Are No IFS *or* ANDS About It

DREW'S EGG YOLK will produce a better ice cream that will boost your winter gallonage and keep your factory running nearer capacity during the otherwise dull winter months.

The wisdom of your using DREW'S EGG YOLK will be reflected in your statement of net profits at the end of the season.



Let the good judgment of some of America's largest ice cream manufacturers guide you. Write for particulars today.

"WELCOME SIGN" HUNG OUT AT MILWAUKEE FOR ICE CREAM MANUFACTURERS BY DAIRY SHOW OFFICIALS.

(Continued from page 8)

portance to all, no matter what their particular line may be. It is of importance not only from the standpoint of business but from the broader view of increased health to the community.

"One important aspect of the exposition is its broad appeal to businessmen. The businessman is beginning to clearly see the great tieup between the dairy cow in the field and barn, and the operation of his own business, be it factory, wholesale store, or retail organization. The fact is becoming apparent to him that his own prosperity, the buying power of his clientele, will depend to a tremendous extent on the continued prosperity of the farmer.

"The ice cream man is essentially a businessman. He is a manufacturer, a wholesaler and a retailer, as a rule, all in one. He has the viewpoint of the man of business, and he can see in this dairy exposition values that might not otherwise be apparent."

The Ice Cream Review finds it possible to forecast "big doings" for the ice cream men at the dairy exposition. Many manufacturers will come just to see who else will be here and to find out what all has been done toward making the exposition of interest to members of their industry. Others will come for the latest and most advanced ideas in proper machinery, equipment and supplies for the production of America's greatest food dessert. Everybody is sure to profit.

FLORIDA FACTORY SOLD.

Announcement was made recently of the purchase of the DeLand Ice Cream Co. of DeLand, Fla., by T. Reed and his daughter, Miss I. Reed, who will give the management of the factory their personal attention.

Much new machinery will be installed, it is reported, and officials say that only the best grade ingredients will be used in the manufacture of a quality ice cream.

OFFSETTING PUBLIC MISREPRESENTATION THROUGH ADVERTISING.

In these days when so many attacks upon ice cream, which is often included under the blanket heading of sweets, are creeping into the newspapers, the ice cream manufacturer who can cite the hospitals which are using his product is not only paving the way for more sales but is doing the entire industry a benefit. Advertising of this nature is being done by the Breyer Ice Cream Co. of Philadelphia over the signature of Henry W. Breyer. An example is:

"Hospitals, for good reasons, are places where strictness is ever evident.

"Cleanliness, freshness, purity and simplicity are rigorously demanded always, especially where food for the patients is concerned.

"It is extremely gratifying to me, in the light of these facts, to know that Breyer's ice cream is the choice of hospitals such as Jefferson, Hahnemann, University, Samaritan, Episcopal, Frankford, Medico-Chi and about thirty others in Philadelphia."

It is hard for the average man to picture just what you mean when you say you sold so many thousand gallons of ice cream within a given period. The Breyer Ice Cream Company tells the public in Washington, D. C., that within a year enough Breyer's ice cream is made to give a regular portion to nearly every man, woman and child in North and South America.

"Did you get yours? Then make up for the lack right away. Get a big plate of it, and take some home to the rest of the family."

The Moore Brothers Ice Cream Company of Oil City, Pa., ran an advertisement occupying almost an entire page on the subject of ice cream and health. It was addressed to doctors and nurses. The company offered to send to the commissary department of any hospital or institution a sample of its ice cream for comparison with other brands.

FRINGEMENTS

Original

Dry Zero Universal Ice Cream Cabinets

Nothing proves the value of an article so much as the effort others make to imitate it.

Think of the concerns that have tried and failed to emulate the "flivver." They have failed because their effort to imitate the basic product or principle of construction has been impossible of reproduction within the originator's rights.

Thus imitations that are forced to circumvent originator's rights become cumbersome, lack basic quality and are uneconomical at any price —besides always subjecting the purchaser of such imitations to the possibility of prosecution and damages in infringement suits.

Buy the original article.

ULATION CO.

50 East 42nd Street
NEW YORK

DIXIE FLYERS' PUBLICITY CHIEF VISITS DAIRYLAND.

C. Mortensen, chairman of the publicity committee of the Dixie Flyers, was extending himself to the utmost in plans to advertise the fact that the New Orleans ice cream convention in December will be an event well worth while the attention of ice cream manufacturers in all parts of the country.

C. MORTENSEN.

In naming Mr. Mortensen head of the publicity committee, President Benners of the Dixie Flyers selected a veteran member of his organization, and a man who has done some vigorous and progressive work in the ice cream industry in the South for many years. Mr. Mortensen was in Milwaukee last month long enough to let folks know that his committee is right on the job. He was spreading news of the Southern convention at every step in Wisconsin.

While in the city he was the guest of The Olsen Publishing Company, officials of which had the pleasure of showing him through the home of The Ice Cream Review, letting him see The Ice Cream Review actually in the making as it traveled from printers to pressmen and back to bindery men and mailing employees. He left no doubt in the minds of Milwaukee friends that the New Orleans convention will not profit from lack of publicity.

It is generally known that the Southern Association of Ice Cream Manufacturers will hold its annual convention in connection with the exposition of the Dixie Flyers on November 14 and 15, and the members will spend the following day, Sunday, in New Orleans, taking in the sights, and be on hand for the opening of the convention of the National Association of Ice Cream Manufacturers in that city the following Monday, November 17, continuing through November 19. This will be the South's greatest ice cream event.

CALIFORNIA FIRM PLANS NEW PLANTS.

The Globe Ice Cream Co., Los Angeles, according to A. A. Comey, vice-president and general-manager, has purchased approximately three acres of ground in the heart of Beverly Hills, Calif., industrial section. This property is exceedingly well located. It has a frontage on Santa Monica Blvd. of 336 feet; on Alpine St. it has a frontage of 270.29 feet; on Third St. a frontage of 346.28 feet; and at the rear, facing the Pacific Electric railroad tracks, a frontage of 375.12 feet. This property is situated on the corner of Santa Monica Blvd. and Alpine Drive, and the purchase price paid for this property was $75,000.

According to Mr. Comey, the Globe Ice Cream Plant No. 2 will be erected just as soon as the plans and specifications are completed. The plans are now being drawn.

The first unit of the Globe Ice Cream Plant No. 2 will be erected in Beverly Hills at a cost of approximately $250,000, not including the $75,000 paid for the ground. The new factory will be a credit to Beverly Hills. The Globe Ice Cream Plant No. 2 will be similar in design to the Globe Ice Cream plant now located at the corner of Jefferson and Hill Sts., Los Angeles. No expense will be spared to make this one of the finest ice cream and ice and cold storage plants in America. The building will be class A construction, of concrete and steel. This plant will contain the latest type of high-grade machinery for the purpose of manufacturing ice, ice cream, and for cold storage refrigeration.

Mr. Comey states that the company is seriously considering erecting a mammoth ice skating rink, in addition to a magnificent natatorium. He says delivery costs can be reduced considerably by the erection of this new Globe Ice Cream Plant No. 2 which is to be located in Beverly Hills. Heretofore the Globe Ice Cream Co. has only made deliveries in Los Angeles and close-in adjacent territory. After this new plant is erected deliveries will be made in Sawtelle, Sherman, Beverly Hills, Culver City, the West End of Hollywood, Westwood, Palms, Santa Monica, Ocean Park and Venice. Daily delivery service will prevail in all of these sections for ice cream and ice.

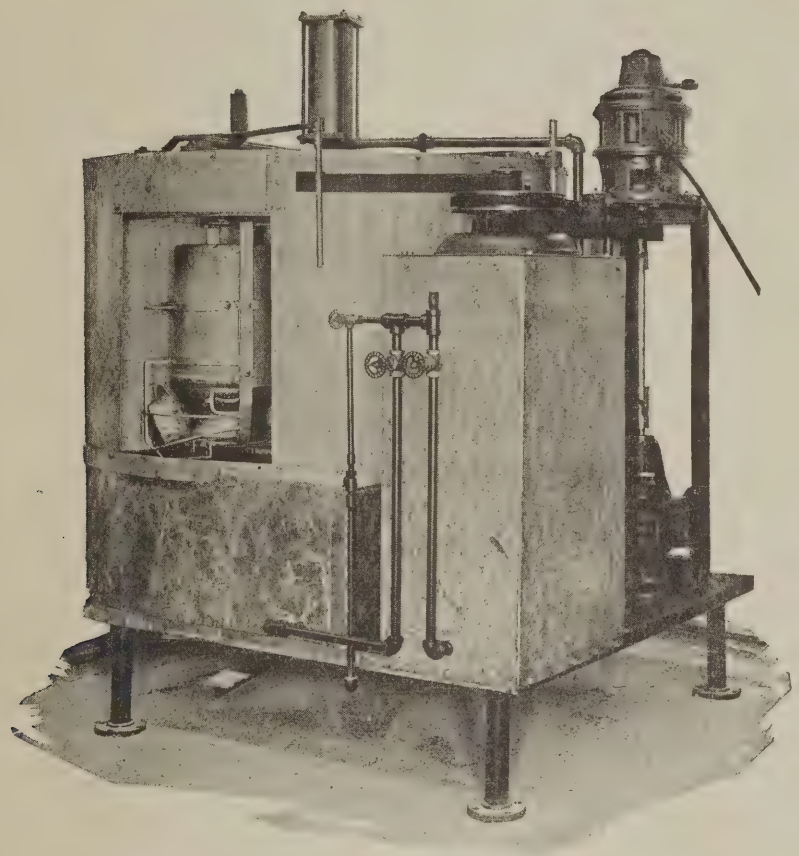
AN ARIZONA PLANT MAKING PROGRESS THROUGH QUALITY.

What is said to be one of the finest small ice cream manufacturing plants in the West is located at Tucson, Ariz., and is operated under the firm style of the Elite Ice Cream Co. Some months ago F. J. Paddock and others purchased the Puritan Ice Cream Co. and took steps to develop the field for quality ice cream in that section. Thousands of dollars were spent in refitting the plant with modern refrigeration, brine tanks, and all other modern equipment.

F. J. Paddock is also principal owner of the Lily Ice Cream Co. at Phoenix, Ariz. Mr. Paddock has had twenty-six years' experience with the Borden Condensed Milk Co. in the East and was head of the Pacific Creamery Co. at Phoenix when cotton supplanted the dairy cow in that locality. He then started in the ice cream business, four years ago.

It is reported that Mr. Paddock's early training taught him two things which have proven a boon in his present business—cleanliness and quality. With this uppermost in the minds of those in charge of the plants at Phoenix and Tucson, it is felt sure that success will come.

In a communication Mr. Paddock writes: "We are striving hard to make a quality of ice cream we can be proud of and we feel that we have been rather successful as the growth of our business will show."



The plants are equipped by a well-known Chicago dairy equipment company, and the latest style freezers, coolers, and all other machinery is now in use. Plans are being made to install machinery for making their own ice, adding on cold storage rooms in addition to their hardening rooms.

The Phoenix plant has a capacity of 750 gallons daily, but with new machinery recently added, it is felt that the company will be able to double this amount should the occasion arise.

The ANCO Rotary Can Washer Is Proving a Great Success

IT HAS incorporated the most thorough cleansing features of expensive types of machines but is moderately priced, occupies comparatively little floor space and is adaptable for small, medium and large requirements.

The exceptional serviceability of these machines may be largely attributed to the method in which washing sprays, sterilizing sprays, steam and water sprays are applied. They are raised and lowered in the cans, while the cans are revolving, so that high pressure streams of water, etc., are directed directly against each square inch of the cans' surface. This insures PERFECT CLEANING.

The Allbright-Nell Co.,
Chicago, Illinois.

Gentlemen:

Since installing your machine, we have used it constantly, cleaning several hundred cans daily. These cans have been well cleaned and dry when taken from machine. We have washed some very dirty cans, and have had good results.

With best wishes for success, we beg to remain,

Yours very truly,
UNITED DAIRY COMPANY.
(Signed) Louis G. Glick.

THE ALLBRIGHT-NELL CO.

HISTORY OF THE DAIRY INDUSTRY IN COLORADO.

(Continued from page 136)

stock. Sons and grandsons of Sir Pietertje Ormsby Mercedes, King Valdessa, King Segis Pontiac Count, Piebe Laura Ollie Homestead King, and Matador Segis Walker have found their respective ways into the hands of wise and far-sighted Colorado breeders.

Colorado's producers in the Holstein breed have have made history not only in Colorado but nationally—Dr. Hubert Work's cows, Lady Perfection Korndyke and Changeling Tidy Abbekirk Wayne are both 40 pound cows while Lady Perfection also has a 1,000-pound butter record. Hall Brothers in the earlier days produced that outstanding cow, Dutchland Hengerveld Ascalon who even today holds the state record and is listed among the 85 Holstein-Friesian cows that have produced over 1,000 pounds of butterfat.

In the Jersey breed, Colorado can look with a great deal of pride to that fountain head of the financial family, Financial Countess, at one time the world's champion cow of the breed, who is a Colorado cow, owned and developed by C. E. Parfeit of Golden, Colo. Other prominent early Jersey breeders who have done much to help this breed in Colorado are A. M. McClennahan of Greeley, George La Grange of Plateau City and J. D. Pancake of Loveland.

Guernseys are just begining to take their place in Colorado. J. W. Purvis of Johnstown has bred Guernseys for many years with a good deal of success. E. J. and Clark Bender of Berthoud considerably helped in the advancing of this breed and D. H. Parker of Greeley has done much to place good Guernsey bulls on farms where they can do the most good.

In grade cattle more importations have been made from Wisconsin than from any other state. This stock has mostly proven to be highly desirable and well worth the price, when placed in the hands of reliable breeders and progressive dairymen.

The Sintons at Colorado Springs, H. Brown Canon of Denver, Asa T. Jones Holland Dairy at Colorado Springs and the American Beet Sugar Company of Lamar have in the earlier days been the centers of breeding and distribution of Holstein-Friesian cattle.

No large Jersey herds have yet been developed and Ayrshire cows have only been established in three or four isolated spots. One excellent Ayrshire herd has been maintained for some years at Steamboat Springs by Conrad Reister and Sons.

One should not failt to mention the dual purpose of Milking Shorthorns. This breed has been a big factor in getting dairying started in many of our more sparcely settled sections, especially in the mountain and dry land sections since the advent of the cream station and centralizer creamery. Chief among the Milking Shorthorn breeders are C. H. Hinman at Golden and the Pine Valley Farms at Colorado Springs.

The prospects for future development are excellent. Colorado is ideally situated for the raising of dairy cattle. Alfalfa is abundant and the climate is mild, doing away with the expense of extensive barns.

The market to the Pacific Coast is developing rapidly, giving a big outlet for high quality butter. In addition, milk and ice cream are being shipped to the states on the north, south and west.

There is an increased interest in cheese so that the near future should see a big development along that line. With the present and prospective markets, the dairy output of Colorado should be nearly double in the next ten years.

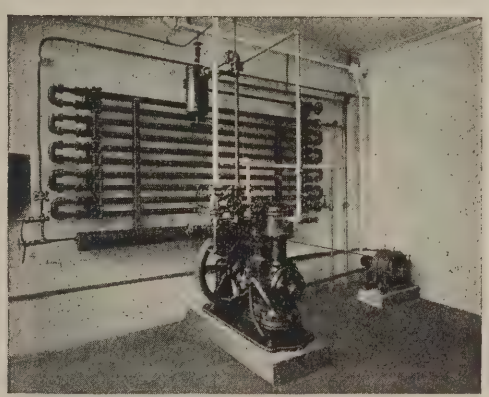
Tubs and Cans as Salesmen

In the Ice Cream and Dairy Industries, paint has two important functions—protective and selling.

The slap of the brine, the hot kiss of the sun, the icy breath of "Jack Frost", washing powders and the continual scrubbing soon wear away ordinary paint—and the tub or can it is supposed to protect, is exposed to the ravages of the elements.



Derycote
PAINT YOUR PERSONALITY ON YOUR PACKAGES

MEMBER

successfully withstands the abuse of handling and the inroads of the weather. Its protective value is very high. It retains its brilliant finish for months, guarding the soundness of your containers and giving them positive and optimistic sales appeal.

THE NATIONAL PAINT & VARNISH CO.

8707-8709 Kinsman Road CLEVELAND, OHIO, U. S. A.

Look carefully into details before you buy. The Frick machine has sub-base, outer pedestal bearing, extra long stuffing box with self-adjusting packing and automatic lubricator, forged steel crank shaft and connecting rods, force feed internal lubrication for piston pins, leak-proof piston rings, multiple cushioned valves, fully enclosed water jacket, safety relief valve, safety sight oil gauge, full size by-pass, and large external scale trap.

Mechanical Refrigeration

Has proved itself a necessity in the dairy business. The only question for you to answer is, "What refrigerating machine shall I buy?"

The answer is, "That machine which will give you the most reliable cooling service, at least cost, for the longest period of years."

Investigate for your information the Frick Enclosed Refrigerating Machine. Bulletins showing some of the 4,300 installations will be gladly sent.

A user says, *"Some three years ago, we, the Mindoro (Wis.) Creamery Association, installed one of your Frick Refrigerating plants at our creamery. This plant has given us entire satisfaction in every way."*

Brief History of Dairy Industry of West Virginia

Dairying Got Foothold Between Skirmishes with the Indians

*By H. O. HENDERSON**

WHEN the first settlers settled Virginia they brought with them their dairy cows. Later settlers brought still more cows and as the population of Virginia increased and the settlers went farther and farther west until they came into the West Virginia hills, they still took with them their cows. And so today in most of West Virginia we have some of the decendents of these early importations known as "native stock." These first cows which were brought over were no doubt largely of Shorthorn stock as the native stock are red in color.

H. O. HENDERSON.

The early settlers had a hard time as the men no doubt had to keep Indians off while the women did the milking. This old habit still prevails as, very often, when going through the country, you can see the men leaning on a stick in lieu of a gun while the women do the milking in a small dipper using one hand to hold the dipper and the other to do the milking. In this position they are much better situated to flee in case of alarm. This, however, is only in those parts of the state where dairying is in its infancy.

The herd of dairy cows which has been in the state the longest is the Jersey. In fact, in point of numbers, they have always lead the state. The Jerseys are scattered in almost equal numbers all through the state. We find them especially numerous in the northern, eastern and central parts of the state but Jersey herds can be found everywhere. Although the Jersey breed is so well scattered and in larger numbers than any of the other breeds, nevertheless, we cannot point to one man or even to a group of men who has done more for the breed than any other. We have today no extremely large herds nor any herds which are particularly outstanding, although we have many very good farmer herds. Among the leading herds of the state at the present time which have gained prominence through registry of merit testing are those of H. C. Lamp, Shepherdstown; R. C. Ringgold, Shepherdstown; S. B. Tallman, Washington; J. C. Russell & Son, Williamstown; D. W. Coffield, West Alexandria, and Ray Ward, Elkins. H. C. Lamp holds the state record with his cow Love's Golden Fern, who produced 12,902 pounds of milk and 670.34 pounds of butterfat in one year.

The Jersey breeders are wide-awake and are making great progress with their breed. They have a county organization in five counties. They have helped organize seven Jersey calf clubs in the state. In these ways they are increasing the interest in their breed and insuring Jersey breeders in the future. Interest in registry of merit testing is also increasing rapidly. Each year finds some new breeder entering this field of work. Up until 1920 not a single Jersey breeder had done any registry of merit testing. Since that time 16 different breeders have done some testing. This shows the interest that has been shown in the development of the breed in the last few years.

THE Guernsey breed has also been making rapid strides, especially in the western panhandle section. This is due largely to the influence of Col. Ogelbay who owns and operates Waddington farm, a large dairy farm near Wheeling. Col. Ogelbay has a herd of from 75 to 100 head of Guernseys which has been headed by the famous bull Imp. Border Raider. This herd is one of the leading Guernsey herds in the country. Many records have been made at this farm. Some of the most famous cows in the herd are "Milford of Bethany" who produced 13,727.7 pounds of milk and 708.8 pounds of butterfat in 305 days, at that time the world's record in class DD, also "May Star of Waddington" who produced 16,014.9 pounds of milk and 823.29 pounds of butterfat in class A. Part of this herd was moved to the Bethany College Farm, where a large herd has been developed. From these herds many other herds have been started. Most of these are just starting but in a few years there were a quite a few herds of Guernseys in this state. Two years ago the Guernsey breeders organized into the Boarder Raider Breeders' Association and since that time have done much to advertise their breed. They have organized and sponsored a live Guernsey calf club. Each year a new calf club is organized. The members show their herds at the West Virginia State Fair at Wheeling each year and in this way have done much to increase the popularity of their breed. Several of their members have done advanced registry testing. The Guernsey breed under the leadership of this live organization is sure to develop into one of the leading breeds in the state.

SEVERAL years ago, a young attorney in Wheeling by name of Lawrence Reymann became interested in the Ayrshire breed of cattle. He purchased a foundation herd and put them on Hilltop Farm just outside of Wheeling. From this foundation sprang one of the leading herds of the country. Lawrence Reymann was a real livestock man and breeder. When he chose his foundation stock he chose wisely. When he used a bull he had some object in view, so that at the time of his death which occurred in 1912 he had developed one of the leading producing and show herds in the country.

C. E. ROGERS

8731 Witt Street **Detroit, Mich.**

At the National Dairy Show in 1911 he ran away with most of the blue ribbons. Among the famous cows which he has produced, "August Lassie" stands at the head. She produced 19,582 pounds of milk and 831.5 pounds of butterfat in one year. This record still stands high in the Ayrshire list.

Later, on account of disease, he moved part of his herd to a farm at Wardensville. After his death the home farm was carried on by his brother, Paul O. Reymann, while the farm at Wardensville with about 100 head of pure bred Ayrshires was given to the West Virginia Agricultural Experiment Station as a memorial to Lawrence Reymann under the name of Reymann Memorial Farm. This herd has now grown to about 175 in number. Recently most of the animals from Hilltop Farm were taken over to Wardensville where a long-time breeding experiment will be conducted in co-operation with the United States Department of Agriculture. This is the most extensive breeding experiment ever attempted. The results should be well worth while, as the foundation sires of this herd are the three leading sires of the Ayrshire breed.

From these two foundation herds have come most of our Ayrshires in West Virginia. There are now several other herds starting and in a few years there should be many more Ayrshires than at present.

The Holstein-Friesian breed is probably the youngest breed found in the state. Up until after the late war there were very few herds of Holsteins in West Virginia that had gained any prominence. Since that time, however, there has been a rapid development in the Holstein breed. During the years 1921-1923 there were shipped into West Virginia at least 30 cars of Holstein cows. Today in point of numbers, the Holstein will rank second only to the Jerseys. Like the Jerseys, however, there has been and still is no outstanding Holstein herds in the state that have done any amount of testing. Some of the leading herds are those of L. E. Smith and Harry Woodrum, both of Charleston; Ernest Ward of Ona, and L. V. Harner of Morgantown. The breed is scattered all over the state. There is one Holstein calf club at Huntington.

WEST VIRGINIA is a great industrial center. Over most of the state they must depend upon outside sources for their dairy products, almost entirely for their butter and cheese and quite largely for milk and cream. This has kept the cost of milk quite high so that there are very few creameries or cheese factories within the state. Several years ago promoters started numerous stillborn creameries in all parts of the state. These have been quite a hindrance to the dairy industry as it has, to a certain extent, made the dairymen lose faith in the dairy industry. However, there are several very healthy creameries within the state or along the border of the state where much of our cream is sent. Cream shipping stations in the more rural sections have been increasing rapidly in numbers.

One of the phases of the dairy industry which has been growing fast is the ice cream industry. It seems that J. T. Swager of Clarksburg in 1884 was the first man to go into the ice cream business on a commercial scale. From that time on, the business has grown rapidly. The largest ice cream company is the Imperial Ice Cream Co., which was organized in 1911 at Parkersburg. It has extended its business quite rapidly and now owns 16 plants, most of which are in West Virginia. It is producing around 3,000,000 gallons per year at present.

MANY milk plants have sprung up within the last few years which give to the larger cities a good supply of pasteurized milk. The United Dairy of Wheeling, The American Creamery of Parkersburg, The United Dairy of Clarksburg, The Valley Belle of Charleston and the Sanitary Milk Co. of Morgantown are among the largest.

The outlook for the future in the dairy industry in West Virginia is indeed good. The coal business is just in its infancy. To remove the coal will require men. These must be supplied with dairy products. This means that West Virginia will always have a good market for her dairy products. Good roads are also being developed in all parts of the state. Hitherto many sections could come to market only part of the year. This is changing very fast. Good roads are going to all parts of the state and opening up markets not dreamed of ten years ago. It looks as if West Virginia was going to open up and get the contagion of its neighbor states, Ohio, Pennsylvania, Maryland and Virginia and develop into a real dairy state.

If dictating machine companies would advertise their machines in women's magazines as "skirtless stenographers" they would greatly increase sales.

SOUTHERN CONVENTION—NEW ORLEANS, NOVEMBER 14-15, 1924.

Early History of Dairying in Illinois

*By E. A. RUEHE**

THE history of dairying in Illinois is linked closely with the history of the state. About the year 1835 Illinois began to be settled by Eastern people. These people brought in cows and soon made butter and cheese in small quantities for home consumption. This was especially true with those settlers that located in the northeastern part of the state. However, the settlers in southern Illinois did not trouble themselves with milking cows and made little or no butter.

As dairying developed in the northern part of the state, the amount of butter and cheese made increased beyond the amount needed for home consumption and the surplus of these products was taken to the general store and exchanged for "store pay," Much of this was packed and shipped to Eastern markets, and as early as 1847 Mr. Town of Elgin made shipments of butter to New York.

In 1852 Phineas H. Smith, who lived two miles east of Elgin, conceived the idea of shipping milk to Chicago. He purchased some cows and on February 12, 1852, he shipped his first eight-gallon can of milk to the old City Hotel. This was the first attempt at exclusive dairy farming in Illinois. This venture proved to be so profitable that Mr. Smith rapidly increased the size of his herd, but he was not able to keep the supply up to the demand. His neighbors became aware of his profitable business and soon there were many engaged in producing and shipping milk. For the next ten years dairying increased until the supply of milk exceeded the demand, and the prices paid for milk decreased to such an extent that those engaged in it sought other avenues for marketing their product. It seemed almost useless to attempt to market it as butter and cheese, because of the bad reputation the Western dairy products had in the Eastern markets. However, despite this unfavorable condition there were some men who believed that Illinois could manufacture products equal in quality to those manufacturered in the East and they were determined to make a trial.

THE first creamery "west of the lakes" was built in Elgin in 1870, and J. H. Wanzer was employed as superintendent. It began operations late in the season and consequently did not make a great deal of butter the first year. However, this factory made 80,000 pounds its second year. About this time many factories were engaged in the manufacture of skim milk cheese, and along with this came the development of the manufacture of butter. Hence, many of the factories made both butter and cheese. In 1883 there were about 400 creameries and cheese factories in the state. In 1885 the first creamery in southern Illinois was opened at Sparta, Randolph county.

The paper of G. E. Morrow, read at dairymen's meeting held in Utica, N. Y., in January, 1875, on the subject of "Dairying in the Northwest," presents some interesting information. The "Northwest" to which he refers was confined to the northern part of Illinois, about one-fourth of Wisconsin, and parts of Iowa and Minne-

sota. He states that Elgin was the center of the leading dairy district of the Northwest and that the sales made at that city for the year 1874 aggregated 3,500,000 pounds of cheese and 150,000 pounds of butter, and that the Illinois Condensing Factory at Elgin, received approximately 6,800,000 pounds of milk. He also makes a statement which it seems is quite applicable to conditions existing this past year. The statement is as follows: "It is undoubtedly true that no class of Western farmers of equal number, and possessing no greater capital have been more successful during the past ten years than have been the dairymen. They have felt the hard times less than most farmers."

In reading some of the papers presented at some of the early meetings of the Illinois State Dairymen's Association, one is convinced that the leading dairymen of years ago were just as much interested in the proper feeding of their cows as our leaders are today. To be sure, there were far less facts known about feeding then than now, yet they realized their problems. The paper read by E. J. Oatman of Dundee, Ill., at the annual meeting of the Illinois State Dairymen's Association held at Dundee, December 14-16, 1881, on the subject of "Ensilage," was a serious plea for the use of silage in the feeding of dairy cattle.

OATMAN BROTHERS of Dundee built the first silo in the state of Illinois. It was a concrete pit silo about 40 by 46 feet inside diameter and 20 feet deep. In his paper Mr. Oatman gives the benefit of his first year's experience with silage, together with figures showing the great saving he had made by ensiling his corn, and he tells of the great benefits derived by his new feed. In concluding he made the following statement: "In concluding, allow me to say that we feel certain that no dairyman, in particular, can afford to be without a silo, and we believe the day not far distant when the exception among wide-awake, practical dairy farmers will be the one who does not rejoice in the possession of a large enough and well-filled silo." This statement need not be considered as being 43 years old. It is as true today as it was then. Much credit is due Mr. Oatman, because he was the one that really brought "cow kraut," as it was then jokingly called, to the state of Illinois.

Has Illinois developed as a dairy state? In answer to this, let us compare the growth of 50 years, 1870-1920:

(Census Figures)

Year	No. Milk cows on farms	Milk gallons produced	Butter pounds	Cheese pounds	Number silos
1870	640,321	9,258,545	36,083,405	1,661,703	0
1920	957,313	370,486,981	69,685,255	6,412,701	30,000

The above figures show that Illinois has made growth as a dairy state in the past 50 years. What can be predicted for the future? One is hardly hazarding a guess when he makes a statement that the total number of dairy cattle in the state may not be greatly increased. However, there is no doubt but that efficiency of the dairy cattle will be greatly increased through better methods of selection, breeding and feeding. Futhermore, the dairy cow will demonstrate her ability to profitably fit into the diversified system of farming. There is no doubt but that the dairy cow will also prove her worth as a profitable market for legumes, and thus fit into the well-planned Illinois system for a permanent agriculture.

You'll make better ice cream if you subscribe for "The Ice Cream Review." It is a standard authority.

CERELOSE

CERELOSE is a pure white refined corn sugar which has been found to be of advantage to ice cream manufacturers for use in conjunction with cane sugar in the proportion of 25 to 50% Cerelose instead of 100% cane sugar, for the following reasons:

1.—Cerelose emphasizes the richness of the butter fat with the result that Cerelose develops the natural flavor of ice cream.

2.—Cerelose produces a smoother cream.

3.—Cerelose is the new solid builder for ice cream because it improves the body and texture. It will not crystallize nor form sandy cream.

4.—Ice cream made with Cerelose is more digestible than when made entirely with cane sugar because Cerelose is a dextrose sugar being directly assimilated by the blood, therefore, more ice cream may be consumed, particularly by infants and invalids.

5.—Cerelose is approximately 25% cheaper in price than cane sugar.

Cerelose should be used in the same manner as cane sugar, the amount depending upon the type of cream desired. 25 to 50% is recommended.

Southern Association Adopts Symbol of Quality

High Standards of Quality Production Sought in Ambitious Plan Launched by Dixie Association

THE Southern Association of Ice Cream Manufacturers has created wide interest in the industry by a carefully-worked-out plan to promote quality production among the membership. The plan now being carried out in the association is expected to have wide-spread interest among the ice cream manufacturers in the Southern states, and in addition, no doubt, will serve to increase the strength of the Southern association.

It was two years ago that the Southern Association of Ice Cream Manufacturers first went into the matter of raising production standards. This was carefully discussed at the New Orleans convention in 1922. A committee took the matter in charge at that time, when the convention president, M. J. Costa, had outlined in striking manner the benefits to accrue from this step, and referred back to the association convention at Little Rock last year.

During the last several months the officials of the association have been working on the symbol of quality to be used in advertising ice cream produced within the membership of the association. The association is working out plans whereby every member will be expected to be guided by the symbol of quality. This will entitle him to the privilege of displaying the association symbol of quality, as shown in the proto-engravure shown here. The present engravure shows the symbol of quality in transfer form. The outline of the symbol can be taken from the piece of wax paper to which it is attached and placed in the windows of dealers, to be used on street car signs, and in various other ways to advertise quality ice cream produced under the standards of the Southern association.

It is the hope of the officials of the association at this time to create more confidence in the product manufactured by its members, and thereby serve to increase the consumption of ice cream.

AN EXCLUSIVE account of the quality standardization plans of the Southern Association of Ice Cream Manufacturers appeared in the January, 1924, issue of The Ice Cream Review, immediately following the Little Rock convention last year, at which directors, committeemen went into the matter at great length.

At this time it is worth while to repeat a remark made by President M. J. Costa at the New Orleans convention in 1922, when the matter first came up for discussion by the directors, the convention president stating: "My idea is for this seal to be a smybol of high-grade ice cream. The committee would have adopted a standard of quality and then have the members pledge themselves to maintain that standard."

There is no doubt but that every progressive manufacturer in the South go with his happy step toward upholding the industry against products that would be detrimental to the industry at a whole.

The standardization committee was composed of Benjamin C. Brown, New Orleans; M. J. Costa, Athens, Ga.; W. J. Barritt, Tampa, Fla.; John Kloecker, Lexington, Ky.; and J. W. Clopton, Decatur, Ala.

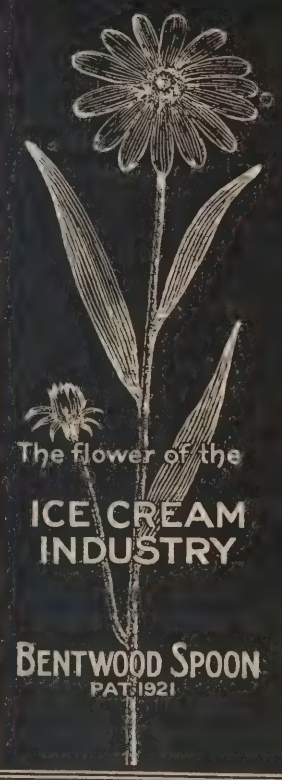
Program of Events at New Orleans in November

Southern Association of Ice Cream Manufacturers, annual convention, Friday and Saturday, November 14 and 15.

Dixie Flyers' Show, Friday and Saturday, November 14 and 15, in conjunction with Southern association's convention. Breaks up Saturday evening, November 15.

Entertainment for Southern Association of Ice Cream Manufacturers, Friday and Saturday, November 14 and 15, auspices of Dixie Flyers.

Entertainment for ice cream manufacturers, Sunday, November 16, auspices of Dixie Flyers.



National Association of Ice Cream Manufacturers, annual convention, Monday, Tuesday, Wednesday and Thursday, November 17 to 20, inclusive.

Entertainment of ice cream manufacturers of the country by The Association of Ice Cream Supply Men, Monday, Tuesday, Wednesday and Thursday, November 17 to 20.

Boat trip to Havana and the Canal Zone, beginning November 22, auspices National Association of Ice Cream Manufacturers.

Dairy Refrigeration

Terms Commonly Used in Study of Mechanical Refrigeration

By F. B. FULMER

THE study of mechanical refrigeration requires that certain terms be used in connection with the process. These terms apply to the action of the liquid refrigerating media used and the vapors that may be formed from it. The terms with which we have principally to deal with are:

(1) British Thermal Unit.
(2) Mechanical Equivalent of a Unit of Heat.
(3) Specific Heat.
(4) Latent Heat.
(5) Absolute Pressure.
(6) Absolute Temperature.

A British Thermal Unit (abbreviated B.T.U.) is the standard unit of heat in this country, and represents the amount of heat necessary to raise the temperature of one pound of pure water one degree Fahrenheit, the water being at a temperature of 32 degrees; it also represents the amount of heat that is given up by one pound of water in cooling from 33 to 32 degrees.

The Mechanical Equivalent of a unit of heat is represented by the energy necessary to raise a weight of 778 pounds one foot high, or a weight of one pound to a height of 778 feet. Dr. Joule of England found by means of a suitably constructed agitator placed in water and actuated by a falling weight as stated above, that the friction generated was sufficient to heat one pound of water one degree Fahr.

Specific Heat is the number of B. T. U. necessary to raise the temperature of any specified substance one degree Fahr., or it may be expressed as the capacity of different substances for heat. As water has (with two exceptions) the greatest capacity for heat, it is taken as the standard of comparison, and its specific heat at 32 degrees Fahr. is unity, or 1.000. Alcohol is said to have a specific heat of 0.659 and mercury 0.033, hence in raising two pounds of these substances from 32 degrees Fahr. to 42, or through a range of 10 degrees, the water will absorb (2×10×1.000=) 20 B. T. U., the alcohol will absorb (2×10×0.659=) 13.18 B. T. U., and the mercury (2×10×0.033=) 0.66 B. T. U.

A crude experiment to illustrate the comparative specific heat of water and alcohol can be made by placing equal amounts of them in separate test tubes and bringing them to the same temperature; the B. T. U. can be represented by ordinary friction matches. The test tube containing about one-half of a tablespoon full of water is held in an inclined position of about 45 degrees and a lighted match held under the lower end so that the heat from the flame will heat the water. If it requires seven matches to cause the water to boil, the alcohol in the other test tube will boil soon after the fourth match has started to burn.

TEMPERATURE and pressure also have an effect on specific heat. The variation in the specific heat of water at different temperatures is rather small and can be passed unnoticed for all practical purposes, but in the case of certain oils and gasses it is considerable; for instance, a certain mineral oil that has a specific heat of 0.45 at 80 degrees Fahr. will have a specific heat of 0.482 at 120 degrees Fahr. The liquid ammonia so largely used as a circulating media in mechanical refrigeration, under a pressure of 28 pounds per square inch, will have a specific heat of 9.508 and by increasing the pressure to 90 pounds per square inch the specific heat will be raised to 0.532. Another point in connection with the specific heat of mineral oils is the fact that as the specific gravity (the relative weight when compared with water) of the oil "increases" the specific heat "decreases." Also, in the case of paraffine waxes, the higher the melting point the lower will be the specific heat.

Latent Heat is the hidden or insensible heat absorbed when a solid is changed to a liquid, or a liquid is converted into a gaseous state. (Sensible heat is the heat recorded on the thermometers.) Latent heat is supposed to represent the energy necessary to overcome the forces of nature that hold the substance in form before it is changed from one state to another. There are two kinds of latent heat, one being the latent heat of liquefaction and the other the latent heat of vaporization.

PATENT heat of liquefaction can well be illustrated by the melting of ice. If a pound of ice at a temperature of 32 degrees Fahr. and a pound of water at 33 were placed in dishes of the same size and shape and set in a room free from draughts, where the temperature remained stationary at 50 degrees Fahr. we would find that it would take the pound of ice approximately twenty-one and a half times as long to melt and heat up to 40 degrees Fahr. as it did the pound of water to heat up to the same temperature.

It is quite evident that as the ice and the water have been exposed under the same conditions, to the same temperature, they have been absorbing heat at the same rate; as the temperature of the ice in passing from 32 degrees to 40 degrees required twenty-one and one-half times as much time as the water required in passing from 33 degrees to 40 degrees (or a raise of 7 degrees), the ice must have absorbed (21.5×7=) 150.5 degrees of heat, but as only (40—32=) 8 degrees of this was registered by the thermometer, it remains that the latent heat of liquefaction must be (150.5—8=) 142.5 degrees Fahr.

Another experiment would be to take 5 pounds of water at a temperature of 80 degrees Fahr. and add one pound of dry, finely chipped ice and rapidly stir the ice into the water and when the ice was all melted the temperature of the water would be about 48 degrees Fahr. The one pound of ice at 32 was converted into water at 32 and then warmed to 48 by the heat contained in the 5 lbs. of water, so the water was cooled (80—48=) 32 degrees and the total work performed was (32×5=) 160 B. T. U. The water from the ice was heated (48—32=) 16 degrees, hence the total work performed on the water was (160—16=) 144 B. T. U. the results of the above described experiments may not be accurate within a degree, and different authorities may give slightly different figures for the latent heat of ice. However, the committee of the American Society of Mechanical Engineers appointed to formulate a standard for refrigeration work adopted 144 B. T. U. to represent the amount of heat required to melt one pound of ice, and this figure is quite universally used in the United States at the present time.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

You Can Buy the Lifetime Services of the Best Advertising Man for the Cost of A Good Dinner

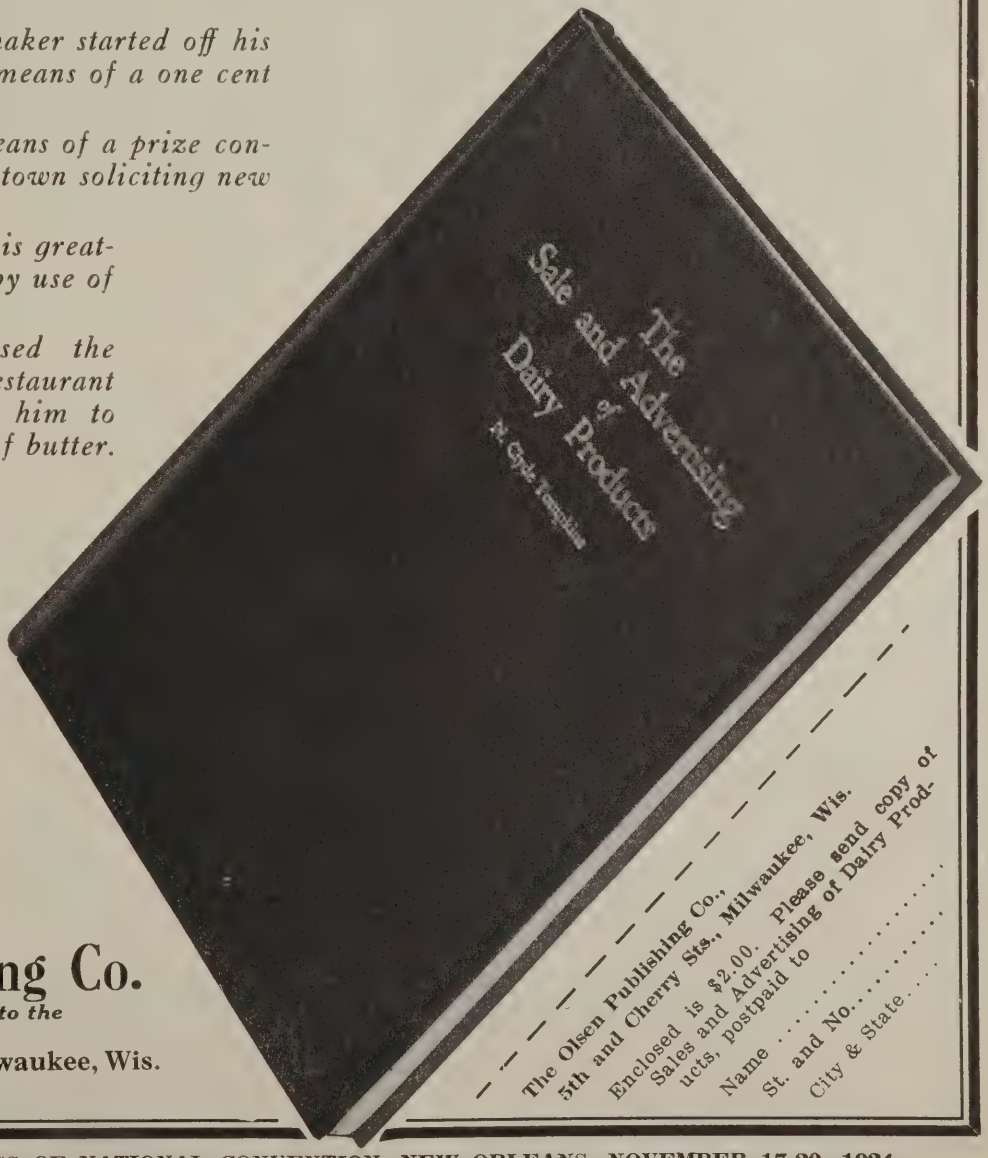
In fact in the book entitled "The Sale and Advertising of Dairy Products" you get far more than the experience of one man. You secure the experience of scores of concerns in the milk, ice cream, butter and cheese industries. They tell you the advertising and sales plans they have found which have been successful—plans which anyone can use to increase their sales of ice cream and dairy products.

It tells how one ice cream maker conducted a popularity contest at small expense and had everyone in town talking about him.

Another ice cream maker started off his season with a bang by means of a one cent sale.

A milk dealer, by means of a prize contest, had every child in town soliciting new customers for him.

Another milk dealer is greatly increasing his trade by use of telephone sales-ladies.



A creamery increased the trade of their best restaurant customer by inducing him to feature a one cent cube of butter.

Another one created much interest by means of a prize candy contest, etc., etc.

The above are but a few of the hundreds of sales creating ideas that are fully explained — any one of which are worth several times the cost of the book. In addition, the book has scores of charts, illustrations and samples of business producing advertisements.

Hundreds of copies of this book have been sold to date. No doubt your competitor has one or more copies and is using it to help build up his business. Here is your opportunity to learn how progressive concerns everywhere are advertising and selling their products.

The book contains over 100 pages, handsomely bound in blue cloth, with gold lettering, and is profusely illustrated.

DAIRY REFRIGERATION.

(Continued from page 184)

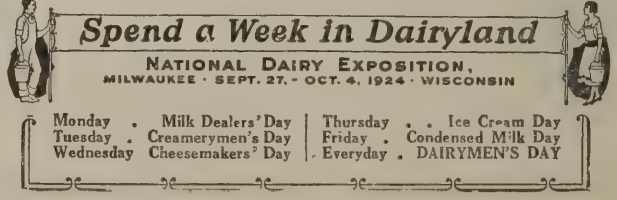
IT IS the custom to rate the capacity of all mechanical refrigeration plants in "tons of refrigeration" which means the equivalent of the cooling effect accomplished by the melting of one ton of ice in 24 hours, unless otherwise specified. A ton of refrigeration, then, is the equivalent of (144×2,000=) 288,000 B. T. U.

Latent Heat of Evaporation: If pure water is heated in an open vessel at or near sea level, it will be found that the temperature cannot be raised above 212 degrees Fahr., and not matter how long the heat may be applied the temperature of the water will remain stationary, although it is constantly receiving additional heat.

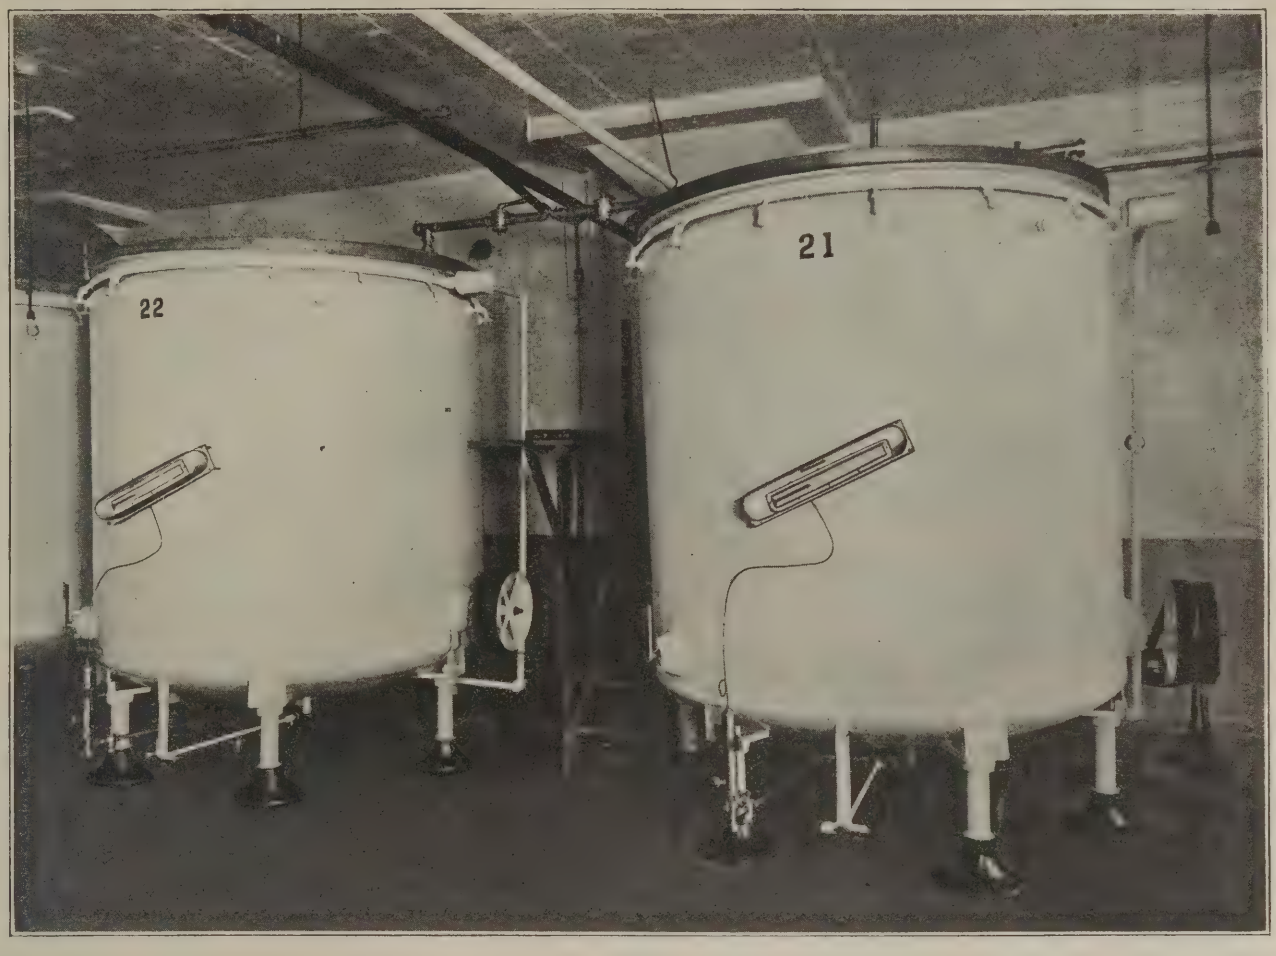
If one pound of steam at 212 degrees Fahr. be condensed in 5.37 pounds of water at a temperature of 32 degrees Fahr. there will then be 6.37 pounds of water having a temperature of approximately 212 degrees Fahr. The pound of steam in being converted into water has heated 5.37 pounds of water through (212—32=) 180 degrees Fahr. without having its temperature appreciably lowered. The heat energy of one pound of steam which was absorbed by the 5.37 pounds of water, was therefore (180×5.37=) 966.6 B. T. U., which amount of heat would raise 966.6 pounds of water from 32 to 33 degrees Fahr.

THIS large amount of molecular energy explains why a scald from steam is so severe and penetrating. It also shows the large amount of energy that is necessary to be used in breaking up the chemical affinity (forces of nature) of the compound and resolving it into its elements. Water is composed by weight of 2 parts of hydrogen and 16 parts of oxygen, and when the chemical affinity of these elements is broken they separate into two gases.

From the above it is evident that to convert one pound of ice at 32 degrees Fahr. into steam at 212 will require:



Ice at 32 to water at 32 (latent)	144	B.T.U.
Water at 32 to 212 (sensible)	180	B.T.U.
Water at 212 to steam at 212 (latent)	966.6	B.T.U.
Or a total of	1290.6	B.T.U.



which is an amount of heat that would be sufficient to reduce about 2½ pounds of cast iron, or about 9 pounds of silver to the molten state.

GLENVILLE CO. NOT OUT OF BUSINESS.

Declaring that a report is afloat that the Glenville Ice Cream Co. of Cleveland has discontinued business, a bulletin has been issued by the Ohio Association of Ice Cream Manufacturers in which this report is denied. The association has been informed that there is no foundation for this report and has asked that each member assist in the refutation of the rumor. The Glenville Ice Cream Co. still is "alive and is doing business" in Cleveland, the bulletin says.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

Sanitary Ice Cream Truck

The Sanitary Ice Cream Truck facilitates handling cream from freezing to hardening room.

Will handle any size can in common usage. Avoids accidents in handling, as the operator does not touch the cans until he reaches the hardening room.

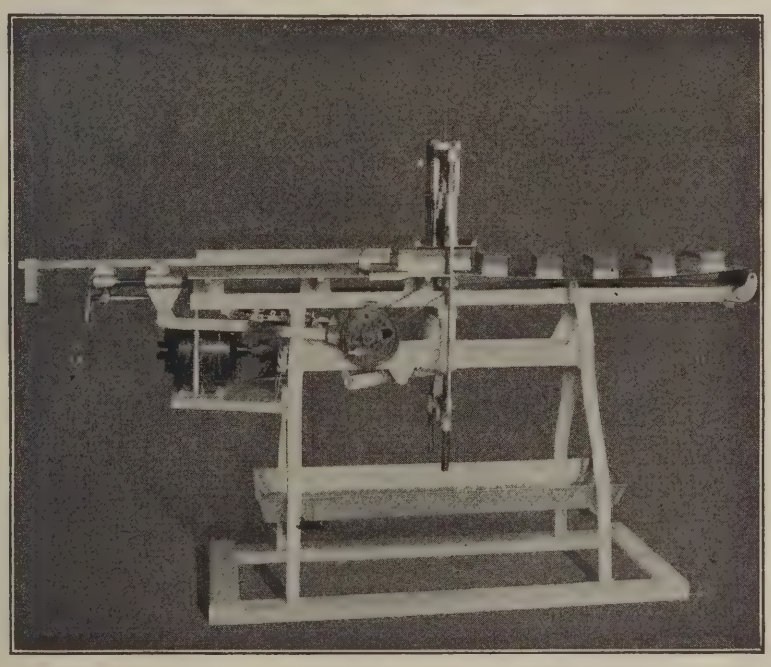
The truck can also be used in taking cans from the hardening room.

One man with truck will handle the cream from the freezers as fast as it will flow, no helper being necessary.

Substantially built to stand usage, nothing to get out of order. Can container revolves on a thrust roller bearing and is easily turned.

Made in two sizes. Style A, capacity six 5-gallon cans. Over-all dimensions, diameter 28½ inches; height, loaded with 5-gallon cans, 26 inches.

Style B, capacity four 5-gallon cans. Over-all dimensions, diameter 23 inches, height loaded 26 inches.



PRICE, STYLE A $50.00 **PRICE, STYLE B $45.00**

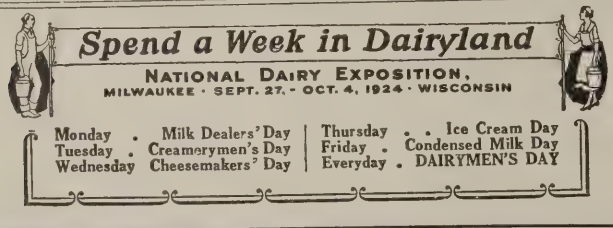
MENTION "THE REVIEW"—IT IDENTIFIES YOU.

R. J. DECY PASSES.

R. J. Decy, first president of the Association of Ice Cream Supplymen's Salesmen's Club, and widely known in the ice cream industry, died at his home in New York City on July 31. He was Eastern representative of The Ice Cream Review.

R. J. DECY.

Death came as a result of a stroke in Mr. Decy's office. He passed away shortly after reaching his home, a few hours after the stroke came.



Mr. Decy was a veteran member of the ice cream industry. He had a varied experience in the industry, having in his time been connected with some of the leading supply houses in the country, in addition to having been in business for himself.

⚜

GEORGIA PLANT OPENED.

Hundreds of residents of Americus, Sumter, Webster, and other surrounding towns were each served with delicious ice cream and butter sandwiches at the formal opening staged by the Americus Ice Cream and Creamery of Americus, Ga. The plant was prettily arranged for the occasion and every detail of its operation was minutely explained to all callers. Several attractive girls assisted Manager I. E. Wilson and President Wilson in entertaining their guests.

Officials are very enthusiastic over prospects for the future, and have expressed their confidence in making a real success of this venture. Farmers from five counties delivered milk to the new company during its first week in business.

LONDON HAS HOUSE-TO-HOUSE DELIVERY OF ICE CREAM.

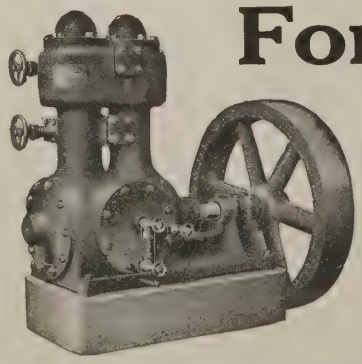
A new departure in the retail sale of ice cream has been initiated in London within the last three months. In place of the consumer purchasing ice cream bricks from the makers at the shops, a London firm has now organized a method of house-to-house delivery, states Alfred Nutting, clerk in the American consulate-general in a report received in the department of commerce. This ice cream, "identically with the world-famed American cream ices, contains a large percentage of pure cream," states the manufacturers, "and must not be confused with the mixture of frozen corn-flour or custard often sold as ice cream." House-to-house delivery is made by means of distribution in insulated chambers fitted between the side wheels of tricycles (push), of which the firm has instituted a fleet of 400 around London, supplies being, of course, sent to fixed depots from the factory, whence each distributor draws his supplies.

Householders desiring to purchase the ice cream place a card in the window bearing the initial letter of the manufacturers. Delivery by the salesman is made two or three times a day, while orders can be given to him for deliveries to be made at a future time as desired. Special terms are made for quantities to hotels and boarding houses.

The standard cream bricks are wrapped in greaseproof paper and enclosed in a carton. Brickettes are wrapped in similar paper, as are also the chocolate bars, while the tubs consist of small cardboard (waxed) pails with a card disc on top.

So far as is known, but one London firm has instituted this house-to-house delivery of ice cream. However, it is merely an extension of the delivery method previously used to supply restaurants, hotels, etc., by way of securing popular sale of the firm's product.

⚜



SCOUTS ARE TREATED.

Boy scouts, to the number of 400, were given a treat on July 14 when they were the guest of the Furnas Ice Cream Co. of Columbus, O., on an excursion to Columbus on a special train at the expense of the company. Four hundred scouts were on the excursion, going from Lancaster to Columbus, O. After inspection of the company's plant followed a luncheon and later there was a trip through the state penitentiary.

To bring the kids in for dinner: Shout lustily: "I wish I could get somebody to go down to the corner for some ice cream."—San Francisco Examiner.

For Lasting Satisfaction

York
Refrigerating
Equipment

One reason why there are so many installations of York Refrigerating Equipment is that its satisfactory working condition does not pass with the seasons. York Equipment does not mean satisfaction until the first signs of wear show up, but a year in year out dependable service that stands the strain of rush seasons without injury to its long life.

Let us show you just why York Equipment lasts longer.

Indoor Season is Ice Cream Season

With September comes the vanguard of the long indoor social season; parties, banquets and other functions abound, and none is complete without ice cream. Fancy brick and bulk creams are in big demand—in fact, fall time is harvest time in more ways than one.

REYAM-BRAND TRADE MARK GUARANTEES SATISFACTION

THE ASSOCIATION OF ICE CREAM SUPPLY MEN MEMBER

Tutti Frutti Mixture

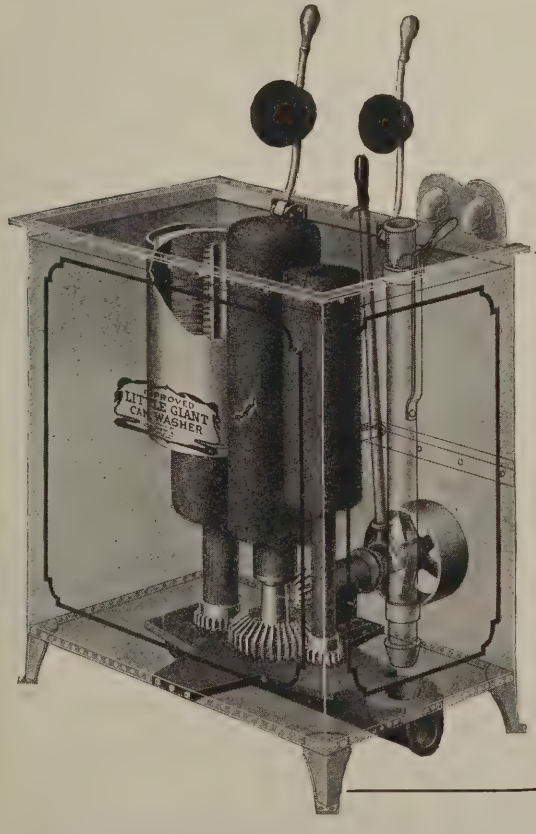
still leads the procession in quality. Its brightness, rich flavor and wonderful keeping qualities make it favored for bulk fruit creams, fancy brick creams, and mixed fruit ices. It positively will not freeze hard.

Reyam Fruit Custard

No mixing or lost time, but high-grade results when you use Reyam Fruit Custard; ½-gal. contains all the color, fruit and flavor needed for a forty-quart mix. Let your trade judge.

New Crop Cold Process Peach

Wins instantly through its rich peach flavor and golden color; will not freeze hard in mix. No. 10 cans up to 50-gal. barrels.



Cold Process Red Raspberries
Cold Process Strawberries
Whole and Broken Maraschino Cherries

New Crop packed in No. 10 cans and up to 50-gal. barrels.

New Crop— No. 10 Cans Extra Crushed Hawaiian Pineapple. No. 10 Cans Unsweetened Pineapple Juice. *Now Ready*

Lake and Sheldon Streets CHICAGO, ILL.

Replies to Inquiries

Dear Sir:—I am using, at present, the following:
70 gals. 3.5 milk.
8 lbs. sweet butter.
50 lbs. skim milk powder.
100 lbs. sugar.
40 lbs. sweetened skim cond. (40% sugar, 28% MSNF)
5 lbs. gelatine.
93 lbs. water.

I pasteurize at 140 degrees for 30 minutes, then viscolize at about 2,500 lbs. pressure and age for about 24 hours. I will watch for your answer in the next issue of The Ice Cream Review. I always read all the questions and your answers in your department with much interest each month.

Reply: I have analyzed your mix and you will find the calculations given below in table one. You will notice that your mix tests about 9.5 per cent butterfat and a little better than 11 per cent serum solids. This makes a very nice balanced mix, except I would suggest the use of a little more sugar so as to increase the total solids to about 34 per cent. You are now using about 12 per cent of sugar. You could easily increase that and you would find I believe it would give a little more body to your ice cream.

Table 1.

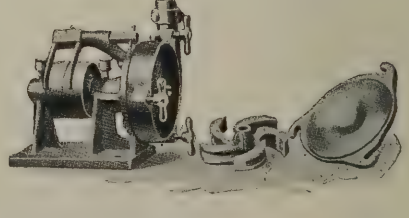
Ingredients	Fat	Serum Sol	Total Sol.
70 gal. or 602.0 lbs. 3.5% milk	21.07	51.71	72.78
85.0 lbs. 84% butter	71.40	.....	71.40
50.0 lbs. skim milk powder	.....	47.50	47.50
100.0 lbs. sugar	.....	.....	95.00
40.0 lbs. sweet cond.	.....	11.20	27.20
5.0 lbs. gelatine	.....	.....	4.75
93.0 lbs. water	.....	.....	.....
975.0 lbs. mix	92.47	110.41	318.63
Per cent	9.48	11.32	32.6
Per cent sugar	11.9	.....	.....

* * *

Dear Sir:—Would be very much pleased to have you tell us how to mix our batch to get 12 per cent fat. Here is our formula:
Sugar, 12.0 per cent.
Gelatine, 5 per cent. How much water to melt gelatine.
Milk solids not fat, 10.5 per cent.
Total solids, 35.0 per cent.

Would like to mix 30 gallons condense at one time. We have the following materials at hand: 8 per cent plain condensed, 3.5 fresh milk, fresh skimmed milk, **no** skim milk powder. We prefer 22 per cent cream. Could get it some heavier if necessary. What overrun would be O. K.?

Reply: Taking your suggestions in your letter I am indicating below in table one an 800 pound mix, using the 30 gallons of condensed milk as a basis to build up the formula:



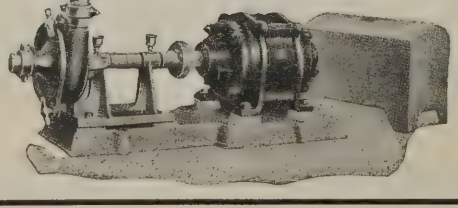


Table 1.

Ingredients	Fat	Serum Sol	Total Sol.
30 gal. or 276.0 lbs. 8% cond.	22.08	40.68	71.76
96.0 lbs. sugar	.....	.....	91.20
4.0 lbs. gelatine	.....	.....	3.80
320.0 lbs. 22% cream	70.40	22.21	92.61
104.0 lbs. 3.5% milk	3.64	8.92	12.56
800.0 lbs. mix	96.12	80.81	271.93
Per cent	12.00	10.1	33.99

You will notice that your mix will test 12 per cent butterfat; the serum solids, however, is not quite 10.5 per cent, and the total solids lacks 1 per cent of being 35 per cent. In order to increase your serum solids it would be necessary to use a little skim milk powder and your total solids could be increased by using 13 per cent sugar instead of 12 per cent. It is not necessary to use any water to melt the gelatine. The best method I know of is to mix the gelatine with a part of the sugar and introduce it into the batch while pasteurizing.

* * *

Dear Sir:—We are enclosing a copy of the formula of our mix, and ask that you find our trouble and set us right, as we are unable to get more than 85 per cent overrun, try as we will:

Milk Pumps of Quality
BELT AND MOTOR DRIVE
Capacity 1,000 to 70,000 lbs. per hour
Refuse a Substitute

The Centrifugal Pump that does not churn or froth mix; absolutely sanitary. Gives Universal satisfaction.
Write for Milk Pump Circular
R. G. Wright & Co., Buffalo, N. Y.

20 gallons 20% cream.
40 gallons 4% milk.
4 gallons 8% evaporated milk.
2½ lbs. gelatine dissolved in 2 gal. cold water, then hot bath.
80 lbs. cane sugar.

Reply: In table one I am indicating the composition of your mix where you will notice that the per cent of butterfat is less than 8 per cent, your total solids 27 per cent and the serum solids about 7 per cent:

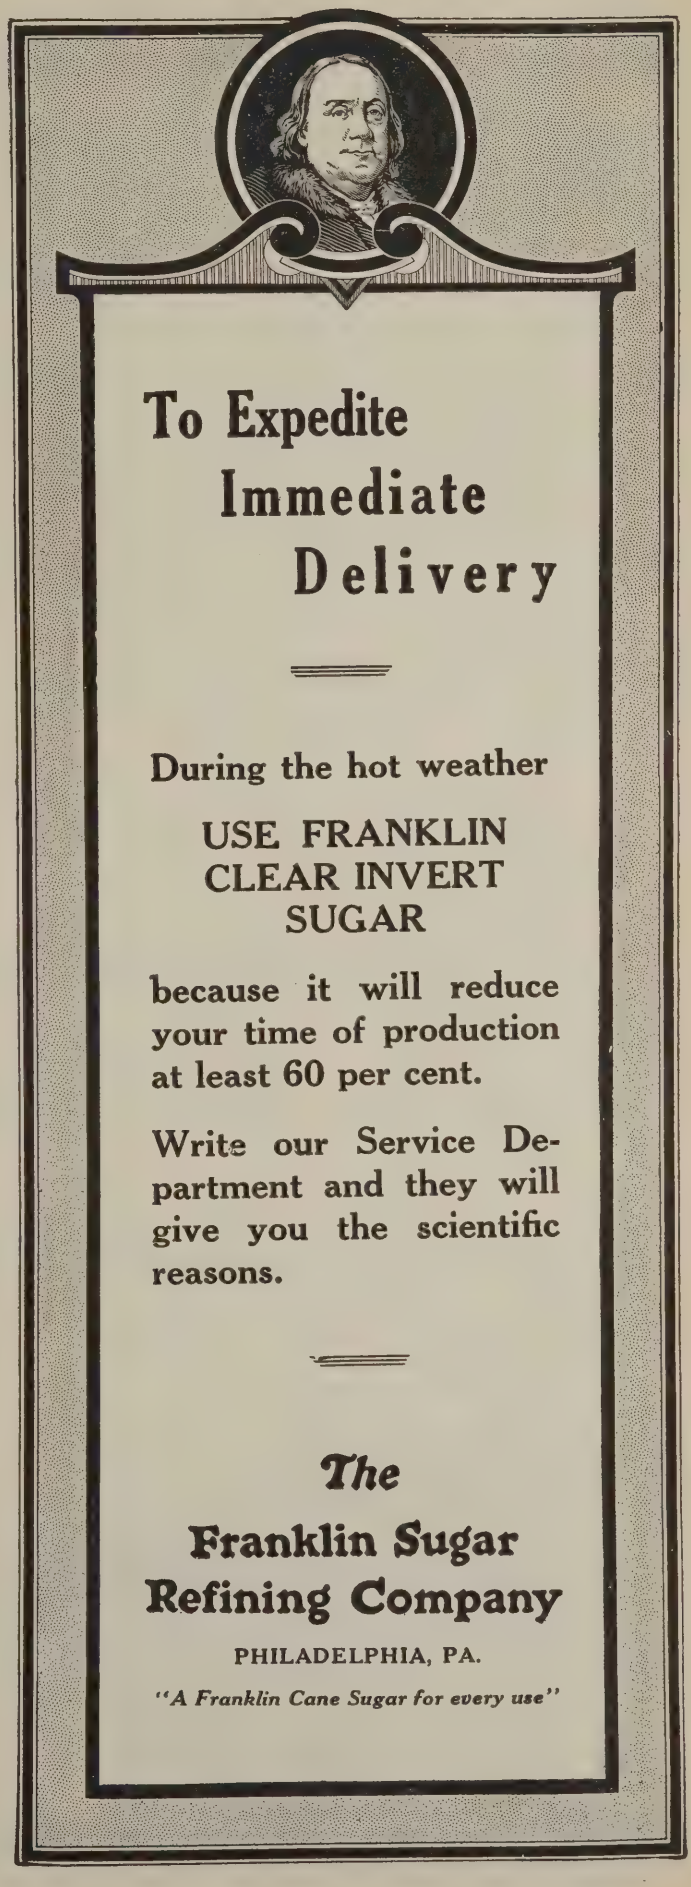
Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
20 gal. or 168.0 lbs. 20% cream	33.60	11.96	45.56
40 gal. or 344.0 lbs. 4% milk..	13.76	29.39	43.15
4 gal. or 35.2 lbs. 8% evap.	2.81	6.33	9.14
80.0 lbs. sugar	.....	.....	76.00
2.5 lbs. gelatine	.....	.....	2.37
16.7 lbs. water	.....	.....	.....
646.4 lbs. mix	50.17	47.68	176.22
Per cent	7.86	7.38	27.27
Per cent sugar	12.3	.....	.....
Per cent milk solids.....	15.24	.....	.....

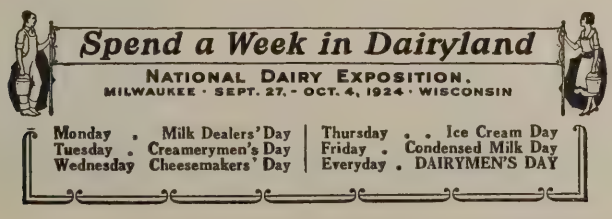
There is no doubt that most of your difficulty is due to the low total solids of your mix. If you desire to make an 8 per cent butterfat ice cream I would suggest that you bring your serum solids to at least 11 per cent or 12 per cent. I would also increase the amount of sugar to 13 per cent or 14 per cent. Another difficulty you have with your low overrun is the vertical freezer. I do not believe you can get better than 85 per cent overrun with this type of freezer. A horizontal type of machine is much better for getting the overrun.

If you desire to have me fix up a mix for you according to the suggestions, I shall be glad to have you advise me as to whether or not you can get any condensed milk or skim milk powder in addition to your evaporated milk.

* * *



Dear Sir:—We have only a small ice cream trade, but would like to turn out an extra fine quality with the materials we have at hand and our present equipment. We have a CP continuous disc freezer, several years old, and no homogenizer, emulsor or viscolizer. Our freezer is cooled by ammonia piping in the brine.



At all times we have plenty of sweet cream testing 35 to 40 per cent, and milk testing 3½ to 4 per cent. We would like to make an ice cream testing 14 per cent butterfat and 14 per cent sugar from the milk and cream, together with skim milk powder and the necessary gelatine.

The following ingredients were used in our last batch: 28 lbs. sugar, 132 lbs. cream testing 21.3 per cent, 6 lbs. skim milk powder, 33 lbs. water and one lb. gelatine. All were pasteurized to 150 degrees and held for 30 minutes, the gelatine being first dissolved in boiling water and added to the balance of mix when it reached the same temperature. The mix was then cooled down to 40 degrees and held 40 hours, when it was placed in freezer which was down to 8 degrees F.

The chief fault with the above ice cream was that it was not smooth enough to suit us. How can we improve that feature?

Reply: I have analyzed your mix batch as indicated

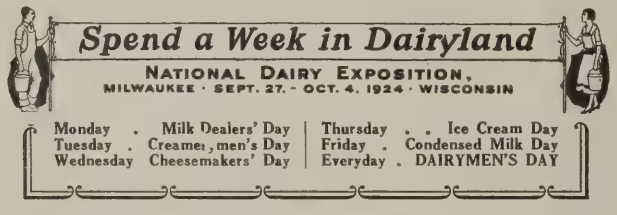
in your letter and you will find the calculations given below in table one. This analysis shows that your ice cream mix is well balanced, and you should have no difficulty getting a satisfactory product.

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
28.0 lbs. sugar	.....	.....	26.60
132.0 lbs. 21.3% cream	28.11	9.25	37.36
6.0 lbs. skim milk powder	.....	5.70	5.70
1.0 lbs. gelatine	.....	.....	.95
33.0 lbs. water	.....	.....	.....
200.0 lbs. mix	28.11	14.95	70.61
Per cent	14.055	7.47	35.3

You stated in your letter that the principal fault with your ice cream seemed to be that it was not smooth enough. If you had a viscolizer or homogenizer you would have no difficulty with coarse ice cream. I would suggest that you try a little of the improver, as I believe that would help make your cream a little smoother. About one ounce of the improver for every ten gallons of mix should be sufficient.

The sample of gelatine which you sent us for analysis proved to be of a satisfactory quality and one pound in your 200 pound batch ought to be sufficient gelatine.



The ordinary commercial cheese color is usually used for securing the light cream color in ice cream. It is also possible to secure a special color called a cream shade color, which you can secure from your regular supply houses.

* * *

Dear Sir:—Will you kindly analyze and advise me regarding the following mixes, also where I can buy your book regarding mixes?

6 bal. cream, 28%.
3 gal. condensed, 2%.
1 gal. evaporated, 8%.
½ gal. water to dissolve gelatine and mix meloine.
9 lbs. sugar.
8 ozs. gelatine.
2 ozs. meloine.
3 ozs. vanilla extract.

6 gal. cream, 28%.
2 gal. condensed, 2%.
2 gal. milk, 4%.
½ gal. water.
11 lbs. sugar.
8 ozs. gelatine.
2 ozs. meloine.
3 ozs. vanilla extract.

We get our condensed from —— and I think they claim 33 per cent solids. We use Libby's evaporated.

Reply: I am glad to indicate below in table one and table two the caluculations showing the composition of these two mixes:

Table 1.

Ingredients	Fat	Serum Sol	Total Sol.
6 gal. or 49.8 lbs. 28% cream	13.94	3.19	17.13
3 gal. or 27.6 lbs. 2% cond...	.55	8.55	9.10
1 gal. or 8.8 lbs. 8% evap...	.704	1.58	2.288
9.0 lbs. sugar	.....	.....	8.55
.62 lbs. gel. & meloine	.....	.....	.59
4.17 lbs. water	.....	.....	.....
99.99 lbs. mix	15.194	13.14	37.658
Per cent sugar	9.00	.....	.....

Table 2.

Ingredients	Fat	Serum Sol.	Total Sol.
6 gal. or 49.8 lbs. 28% cream	13.94	3.19	17.13
2 gal. or 18.4 lbs. 2% cond...	.36	5.70	6.06
2 gal. or 17.3 lbs. 4% milk...	.688	1.47	2.158
11.0 lbs. sugar	.....	.....	10.40
.62 lbs. gel & meloine	.....	.....	.59
4.17 lbs water	.....	.....	.....
100.39 lbs. mix	14.988	10.36	36.338
Per cent sugar	11.00	.....	.....

You will notice that the mix in table one shows 9 per cent sugar while the one in table two shows 11 per cent. It occurs to me that ice cream made according to mix number one would hardly be sweet enough for a commercial product. Most ice cream factories are now using 13 per cent and 14 per cent sugar while still a number are using as little as 12 per cent.

If I can be of further assistance to you I shall be glad to have you write. The "Ice Cream Mix" booklet can be secured from The Olsen Publishing Co., Milwaukee, Wis. Price, $1.00.

TEXAS FIRM REPORTS INCREASE.

The Mercedes Creamery, Mercedes, Tex., reports an increase in ice cream and butter sales of more than 300 per cent over a year ago. The steady increase in business has compelled this company to enlarge its plant and add new and up-to-date equipment. The old ice making equipment was sold to an ice company in Mercedes, and a new 7x7 Frick machine was installed to replace the old equipment.

A new forty-quart freezer, one two hundred-gallon pasteurizer and a 1,000-pound churn were added to the present equipment. The new equipment will all be motor driven. The building has been completely remodeled and a new hardening room has been added.

J. R. Barry, manager, advises that an automatic crowning machine and a liquid bottle washer have also been added, as well as a new carbonator to their bottling department.

The Choicest Wood for Richmond Tubs

Only the choicest white cedar trees from this gigantic swamp of a hundred thousand acres are used in fashioning the Richmond White Cedar Tub. Only a wood with tremendous moisture resisting qualities could survive under conditions like these. It's this extraordinary quality of wood that makes Richmond White Cedar Tubs so economical.

NOTES OF THE TRADE

News of Interest Concerning What Our Readers and Advertisers are Doing to Develop the Industry. We Invite Correspondence Relative to New Products and New Equipment.

TURNBULL COMPANY'S NEW DAYLIGHT PLANT.

The new daylight factory of the W. W. Turnbull Cone Manufacturing Co., Chattanooga, Tenn., was erected at a cost of about $60,000. The company now is in its new quarters.

It is a four-story-with-basement building, of reinforced concrete and brick construction, completely equipped with a sprinkler system and well ventilated, an attractive building.

The first floor is used exclusively for shipping. On this floor there are four loading platforms, two of these being directly on the railroad, giving excellent facilities for handling carlot shipments. Each floor and the basement is reached by a system of stairways and elevator.

The second floor and basement will be used for storage purposes only, there being storage space on the second floor alone for over fifteen carloads of flour, sugar, etc., as well as a couple of million cones.

The third floor will house the machine shop, where Turnbull's automatic cake cone machines will be assembled and made ready for shipment. This machine shop is fully equipped, and when working to full capacity will be able to turn out one double capacity machine every ten days, each machine capable of baking around sixty thousand cake cones every twenty-four hours. The Turnbull Cone Machine Company manufacture the only fully automatic cake cone machine on the market today.

The fourth floor will be used for baking Turnbull's Peerless and Sweet Clover cake cones, which are very popular over the Southeastern states, officials say. This new factory gives the Turnbull Cone Machine Co. a daily capacity of a million cones.

NEW ICE CREAM CABINET.

The Brine Well Cabinet is a new article put on the market by the Stout Mfg. Co., Milwaukee. According to the manufacturers this new cabinet is thus named because the container in which the ice cream cans or bricks are placed sets down into a well of brine, the upper two-thirds only being surrounded by ice. This utilizes the brine, taking advantage of its refrigerating value to save from one-third to one-half of the actual ice packing. In practice one-third less ice and salt are needed for the first filling of this cabinet than for the usual styles, and subsequent replenishment requires much less ice and salt than ordinarily—one-fourth to one-half less, they say.

The insulation is of corkboard. The upper two-thirds of the walls are 3 inches thick and the lower one-third 6 inches thick. The bottom is 4 inches thick.

The main holder or compartment tank is removable. The ice cream cans are set into the compartments or the bricks piled directly into them as they are clean and no ice or brine gets into them. All compartments may be used either for cans or packages—no changes necessary.

Raised ribs in the metal liner support the holding tank sufficiently above the bottom of liner to permit the brine to circulate under the tank. It is this continual circulation of the brine as it drips down from the ice above that makes possible this drastic reduction in the depth of the ice pack itself.

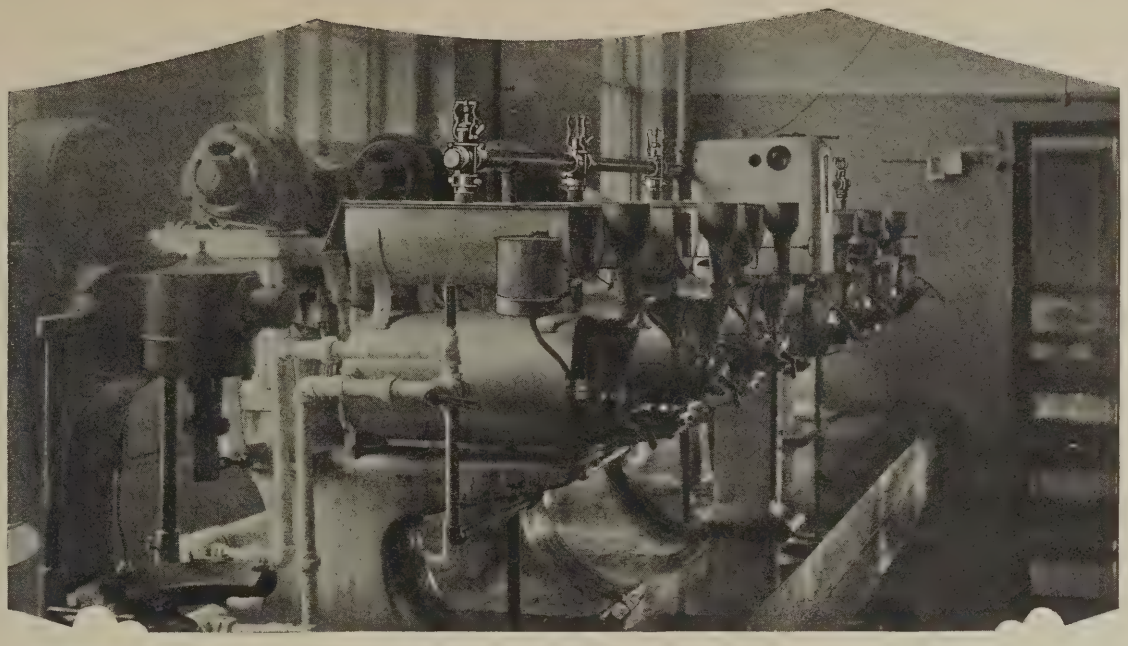
* * *

NEW TABER SANITARY MILK PUMP.

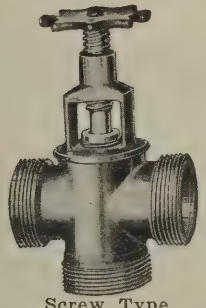
Members of the ice cream industry probably recall when the first rotary sanitary, dissectable milk pump was put on the market by the Taber Pump Co. It is a great many years ago, and officials say it has stood the test.

"Through the development of many problems and applying them, a sanitary milk pump of the rotary type has been developed which we are now offering to the trade," says a recent announcement from the company. "It is the type 'R,' dissectable, bronze sanitary milk pump, which is so constructed that smoother operation is obtained than the older forms of rotary pumps. The casing is circular in bore, and the vanes are held in place through the medium of a spacer ring, which combination permits the pump to operate at almost any speed without noise."

One of the distinctive advantages claimed for this pump is that it has high suction lifting properties, thus making it particularly desirable where mix must be drawn from a lower to a higher level on the suction side.



"The accessibility and dissectability of the pump is described as marvelously simple." It can be dissected and reassembled within two or three minutes, officials say.



* * *

NEW REGENERATOR COOLER AND HEATER BULLETIN.

The Creamery Package Mfg. Co., 61-67 W. Kinzie St., Chicago, announces the publication of a bulletin covering the Progress and Alaska regenerator coolers, heaters and preheaters.

The Progress unit described in this bulletin is an enclosed tube-within-a-tube outfit. The cold or raw milk is pumped through the tubes, entering at the top, while the hot

THE SHIMP MANUFACTURING CO.
2609 Stevens Avenue Minneapolis, Minn.

QuickOpeningType

pasteurized milk is pumped through spaces surrounding the tubes and inside the outer tubes, thus giving up its heat to the cold incoming milk, which in turn is warmed up to near the proper pasteurizing temperature.

The Alaska unit is described as a continuous surface outfit, the incoming cold, unpasteurized milk enters the lower tube of the bottom regenerative section and passes upward inside of cooler, coming out at the top tube and going direct to the pasteurizing heater. The hot milk from the pasteurized holder enters the top trough and flows down over the outside surface of cooler. A similar action is obtained used with cream in creamery.

Either of these machines are extremely economical for use in milk bottling plants, creameries, milk condenseries or ice cream plants. A copy of the descriptive bulletin may be secured by mentioning this publication and addressing the manufacturers.

* * *

NEW ICE-LESS SHIPPER AND DELIVERY PACKAGE.

Announcement is made this month by the Canvas Products Corporation of the addition to their line of a new ice-less packer made from hardened canvas and insulating materials.

The officials of this company claim that this packer will make a revolutionary change in the shipping business; and will make a radical cut in expenses of delivery of cream to the customer.

This packer weighs less than eight pounds; no ice, salt or packing required. It is claimed the smallest container on the market, being less than 24 inches in height and 12 inches in diameter. This feature, it is claimed, makes it convenient for handling, carrying, less storage space required to care for them, and increases the capacity of the truck by 300 per cent.

The manufacturers report that a number of large ice cream plants have been trying out these during the past summer, and some are said to pronounce them "a wonder for refrigeration and ease of delivery and economy."

* * *

FREE INSTRUCTION ON ICELESS VACANIZERS.

Fred W. Wolf of the American Vacanister Company, 550 W. Lake St., Chicago, announces that he has a laboratory with Ice Devices Service, Inc., and is offering to any and every wholesale ice cream manufacturer free instructions

regarding the manufacture of iceless city delivery vacanisters. Mr. Wolf states that these vacanisters consist of a couple dollars worth of sheet metal stuffed with insulation and can be made in a short time by the ice cream manufacturer or by a tinner.

Mr. Wolf further states that by the use of the vacanister the delivery can be made 100 per cent iceless, thereby enabling the ice cream manufacturer to sell all his ice and save on buying salt.

* * *

Anderson Bros. Mfg. Company, Rockford, Ill., has arranged to have its Eskimo pie machine sold exclusively in New Zealand and Australia by Chas. B. Colby, Sydney, N. S. W., P. O. Box 1223, or Aukland, N. Z., P. O. Box 1443.

* * *

In the course of a trade bulletin recently issued, Gordon L. Moumblo, sales manager of the Turnbull Cone Machine Co., Chattanooga, Tenn., points out that the public has begun to "realize that the ice cream cone is the sanitary way to serve ice cream."

GORDON MOUMBLO.

"Today there are millions of women, children and brawny workmen all the way from the golden gates of California to Portland, Me., and south to the sun-kissed shores of Florida eating ice cream cones," says Mr. Moumblo, "and today we are face to face with a universal demand for pure-cake cones, which should not be confused with the so-called sugar cone or wafer cone, which are little better than baked paste, indigestible, unpalatable, and in most cases unfit for food and in which there is no sugar, as sugar can only be baked in cake cones.

"Almost without exception throughout the whole Southland today, quality cones predominate. Dispensers of ice cream who are indifferent as to the quality of ice cream cones that their products are served in must change their attitude."

Mr. Moumblo concludes his bulletin with the statement that it is up to ice cream manufacturers to give undivided attention to the dual question of quality and service. Every sale and purchase, every business alliance, should be based on these two things, he said.

* * *

REPRESENTATIVES ANNOUNCED.

The American Engineering Company of Philadelphia announces the following representatives for the sale of its Juruick ammonia compressor, which is claimed to be used extensively in refrigerating plants: Atlantic City, N. J., Mack Machine Company, 327 N. Indiana Avenue; Hollywood, Los Angeles, Calif., Climax Engineering Company, 1001 Orange Drive; Charlestown, Mass., Wright-Ziegler Company, 50 Spice Street; Louisville, Ky., Standard Milk Machinery Company; Davenport, Ia., Brooks Electric Appliance Company, 204 E. Fourth Street; Rochester, N. Y., Harrison Machine Company, 144 Platt Street; Detroit, Mich., L. L. Priskey, 108 S. Manistique Avenue; Allentown, Pa., American Refrigerating Co., 933 N. 27th Street.

* * *

"HAVACONE" DIRECTORS ELECT OFFICERS.

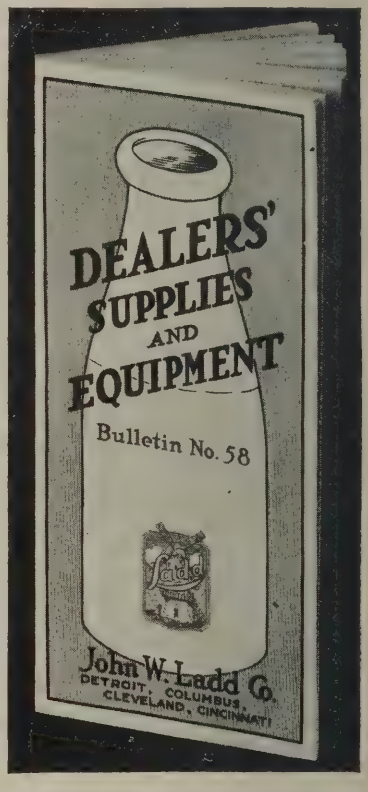
The Cone Company of America made announcement on August 19 of a meeting of the directors of that company at which the following officers were elected: J. R. Wells, president; R. F. Lawton, first vice-president and treasurer; H. Lapat, second vice-president and Chicago manager, and R. J. McCreery was appointed secretary.

These adjustments were made necessary by the recent death of the former president, William S. Camp. George K. Morrow, president of the Gold Dust Twins Corporation, was elected a director.

* * *

GIFFORD-WOOD BULLETIN.

The Gifford-Wood Co., Hudson, N. Y., recently issued a bulletin describing its new portable flight conveyor. In the bulletin this conveyor is described as being particularly designed for handling lumpy materials. The manufacturers claim it will pay for itself in a short time in the saving of time and labor.



* * *

PRICE BULLETIN ISSUED.

The John W. Ladd Co., with offices in Detroit, Columbus, Cleveland and Cincinnati, has ready for distribution its new milk dealers' bulletin which is being sent to the trade.

If a reader of The Milk Dealer discovers that he has not received a copy, he is invited to write one of the Ladd offices.

The price bulletin includes lots of valuable information and virtually all equipment and supplies are for the average milk dealer and consequently will be of much value to the milk dealer and dairyman, officials believe.

* * *

H. T. HALL MAKES NEW CONNECTION.

H. T. Hall has associated himself with Delft gelatine, and in future will be calling upon the trade in New York, Pennsylvania and Ohio. Mr. Hall for many years was connected with the Milligan & Higgins Gelatine Co. of New York City, and is well known and highly regarded in the food gelatine industry.

MONTGOMERY-WASHBURN CO. Saugerties, N. Y.

PAT. APPLIED FOR

CHOCOLATE TO THE FRONT.

"Chocolate is it," says Louis Runkel, president of Runkel Bros., of New York and Chicago, manufacturers of cocoas, chocolate and coatings. Mr. Runkel heads a company that has, for over 50 years, manufactured chocolates and cocoas for ice cream manufacturers, confectioners and grocers, exclusively, and he sees chocolate coming steadily to the front as a flavor for ice cream. Good ice cream can be made better only when a good quality chocolate is used. Good chocolate not only adds to the flavor of the ice cream, but it adds to its food value. Use good chocolate. It is a sure winner of bigger sales, says Mr. Runkel.

PARAGRAPH OMITTED IN RESOLUTIONS ON NATIONAL ADVERTISING.

The article appearing on page 16 of this issue of The Ice Cream Review, regarding national advertising ice cream, does not give a full sense of the resolutions on this subject adopted at the meeting of the committee on national advertising from the National Association of Ice Cream Manufacturers, held in New York last month.

A. E. Dixon, secretary of the North Carolina Ice Cream Manufacturers' Association, sent out a copy of the resolution last month. It was from his bulletin that the article on page 16 was written. Just before this issue was to go to press we received from Mr. Dixon a corrected bulletin, in which it was pointed out one paragraph of the resolution was omitted in the first bulletin. The complete resolution reads as follows

"This meeting hereby endorses the making of an attempt on the part of the Advertising Committee of the National Association of Ice Cream Manufacturers, and on the part of the proper officers and committees of and as a result of such subsequent action to that end as the Association of Ice Cream Supply Men may officially take as a result of this motion, to ascertain among the memberships respectively of the National Association of Ice Cream Manufacturers, and the Association of Ice Cream Supply Men if definite support may be obtained for carrying out the national advertising of ice cream for one year through such sound plan as may be determined upon, according to the following basis:

"One-half cent per gallon contribution from manufacturers whose production totals 40 per cent of the country's estimated annual commercial gallonage of 260,000,000:

"One-half of one per cent of gross annual sales contributed by such number of supply companies as, in approximate figures, have total annual sales equivalent to 40 per cent of the estimated gross annual sales to the ice cream industry by members of the Association of Ice Cream Supply Men."

BENDFELT IS CHAIRMAN.

In last month's issue of The Ice Cream Review we published a list of members of the National Dairy Association reception committee representing the Wisconsin Association of Ice Cream Manufacturers. We stated that J. D. Hughes is chairman. This was an error. Walter Bendfelt of the Bendfelt Ice Cream Co. of Milwaukee is chairman of the committee.

⚜

ICE CREAM EMPLOYEES ENTERTAINED.

The White Mountain Ice Cream Freezer Co. of Nashua and Milford, N. H., was host to its seventy-seven employees at an outing at the Lawrence Hotel in Hampton Beach recently. John P. Connors was congratulated upon the splendid arrangements he and his committee has made, and it is reported that a good time was had by all. William Griffin and Garrett Rogers were also on the arrangement committee.

⚜

It is a good thing many employees are on the payroll at invoiced value in the place of their self-estimated worth, else their firms would go busted.

WASHINGTON—MAINE

News From Far and Near

CALIFORNIA—FLORIDA

Phoenix, Ariz.—Charles P. Mullen of Tempe has been made receiver for the Polar Ice Cream Company of Phoenix.

Little Rock, Ark.—F. T. Watson, treasurer of the National Ice Cream Co., has announced plans to improve the plant. This action followed the filing of deed of trust for $50,000 in circuit court by the Southern Trust Co., which includes the first lien mortgage on the present plant. The deed is in the form of 50 bonds of $1,000 each, which mature on March 10, 1929.

McGehee, Ark.—The Velvet Ice Cream Co. will open a branch factory at McGehee about the fifteenth of August, according to an announcement made recently by Charles Hooberry, manager of the company. The new factory at McGehee will have a capacity of 1,200 gallons a day and will supply the outlaying territory with frozen products throughout the year, it was announced.

Suffern, Cal.—The Cervieri Ice Cream Co. has been incorporated with a capital stock of $20,000. J. C. Griffin is the attorney.

Tampa, Fla.—The Peerless Ice Cream Co. of this place is building a large addition to its ice-making and refrigerating plant, with storage capacity sufficient to accommodate 800 gallons of ice cream. The company has bought machinery and expects to complete installation soon.

Harvard, Ill.—A half interest of the ice cream business of F. E. Kellogg has been purchased by Edward Armock, who will have active charge of the business.

Anderson, Ind.—The Kruesch Ice Cream & Bottling Co. was capitalized for $75,000. Directors are Luther F. Pence, T. C. Werbe, D. J. Noland, N. M. McCullough and Benjamin F. Alford.

Kokomo, Ind.—Having recently expended several thousand dollars in improvements and replacements, the directors of the Kokomo Sanitary Milk & Ice Cream Co., at a recent meeting, made plans for still further improvements that involve the expenditure of considerable sums of money. The directors reported business to be unusually good, considering the unfavorable temperature which has prevailed this summer.

Wilmington, La.—The Louisiana Milk Products Co., Inc., was recently organized to deal in a general wholesale and retail business in ice cream. The capital is reported as $350,000.

Cumberland, Md.—Speelman-Couch Ice Cream Co. has been allowed permission by the state tax commission to change its name to the Cumberland Ice Cream Company. James P. McClurg, president of the company, made the application.

Malden, Mass.—The Atlantic Ice Cream Co. has been incorporated with capitalization of $20,000 by Geo. H. Chopelas, Dennis T. Chopelas, Geo. D. Makrys and Apostle C. Makrys.

New Bedford, Mass.—The Made-Rite Ice Cream Company has been granted a charter for the manufacture of ice cream, being capitalized for $100,000. The incorporators are Homer J. Messier, Mae T. Messier, and Bertha Rocheleau.

Minneapolis, Minn.—A new and up-to-date ice cream plant has been established by the Baudette Dairy Company. Messrs. Sorenson are the proprietors, and they say other improvements will be made to enlarge the capacity of the plant.

St. Paul, Minn.—A victory was won by ice cream manufacturers of St. Paul and one from Minneapolis, the case involving a charge by the St. Paul bureau of health that the manufacturers were dispensing ice cream containing less than 12 per cent of butterfat. The case was dismissed.

Vicksburg, Miss.—The City Ice Cream Co. was capitalized at $50,000. J. M. Button, J. L. Blackwell and others are the organizers.

Macon, Mo.—The Crystal Lake Ice Co. is installing machinery at their ice house at Crystal Lake for manufacturing ice cream. The company will do only a retail business and plans to be in operation in a short time.

St. Louis, Mo.—Eugene Seltzer, manager of the Blue Ribbon Ice Cream Co., was held up by four automobile bandits and robbed of between $800 and $900 in cash and a lot of checks from the safe of the company.

Bridgeton, N. J.—Howard L. Bodine has established an ice cream factory at 122 Marian St.

Camden, N. J.—J. P. Hauck has begun manufacturing ice cream at his confectionery store at 723 Broadway.

Dover, N. J.—The Creamo Ice Cream Company has been incorporated to manufacture ice cream.

Elizabeth, N. J.—The manufacture of ice cream will begin in the old Peter Breidt City Brewery, which has been bought by Peter Dunne, Inc., of West New York, for $350,000. The new firm will operate under two heads, the American Beverage Company, which will make soft drinks, and the City Products Company, which will manufacture ice and ice cream.

Richfield Park, N. J.—Hackensack Food Laboratories have been incorporated to deal in food products, capitalization being $50,000 preferred stock.

Chehalis, N. M.—The Gloria Ice Cream Co. has increased its stock from $100,000 to $200,000.

Batavia, N. Y.—The Hoeffler Ice Cream Co. of Buffalo has purchased a site on South Swan St. for the erection of a brick building for a distributing station for ice cream.

Dunkirk, N. Y.—The branch plant here of the Wheat Ice Cream Co. has been established in new quarters. The business is in charge of Joseph Sappelt.

Manhattan, N. Y.—The Original Roasted Ice Cream Co. with capital of 10,000 has been organized by H. Rubinroth, J. Goldman and A. Steiner.

New York City—Through its subsidiary, the Rieck-McJunkin Dairy Company of Pittsburgh, contract has been made for the National Dairy Products Corp. to acquite through stock ownership the W. E. Hoffman Co., Tryone, Pa.; Hoffman Brothers, Altoona, Pa.; Hoffman & Runk, Philipsburg, Pa.; and Hoffman Ice Cream Co., Barnesboro, Pa. The business of all these companies is exclusively ice cream and the aggregate annual gallonage is in excess of 550,000 gallons. No financing will be necessary on the part of the National Dairy Products Corporation, as the cash necessary to complete the purchase will be provided by the Rieck-McJunkin Dairy Company from out of its treasury.

New York City—The National Dairy Products Co. has completed negotiations for the acquisition of a large ice cream manufacturing concern.

Trumansburg, N. Y.—The Valley Farms, Inc., of New York City, has bought the Sanitary Ice Cream and Milk Co., which has conducted an ice cream and dairy products business in Ithaca for a number of years. The new owners will continue the business and make many improvements on the property, it is reported.

Suffern, N. Y.—Cervieri & Co. have been incorporated with a capitalization of $30,000 by J. and J. A. Cervieri.

Dayton, O.—The Telling-Belle-Vernon Company of Cleveland has absorbed the Velvet Ice Cream Company of this city, and the local property will be sold and a new plant will be erected on another site.

Steubenville, O.—Bruner & Kock have purchased the brewing property on Adams and 9th Sts. They will begin the manufacture of ice cream on an extensive basis after new machinery has been installed.

Dover, Pa.—The Creamo Ice Cream Co. has been chartered with capitalization of $30,000 by B. W. Ellicott.

Emporium, Pa.—Operations have begun on the new plant of G. A. Vogt, who recently opened an ice cream manufacturing business. The plant was erected on a small scale, but is equipped with new and modern machinery and appliances.

Oakmont, Pa.—The Reinhold Ice Cream Company's plant here was almost totally destroyed by fire recently. The loss is estimated at $50,000.

Punxsutawney, Pa.—A part of the old Elk Run Brewery, formerly used by the Jefferson Ice Cream Co., with a new brick addition, is the home of the Mahoning Ice Cream Co., a consolidation of the Raffetto, Johnson and Jefferson Ice Cream Companies. Modern equipment has been installed.

Lebanon, Tenn.—Another ice cream plant has been opened. J. C. Anderson is proprietor of the new plant, which is owned and operated entirely by local capital. He will have associated with him in the new enterprise his father, W. H. Anderson.

Big Springs, Tex.—Damage to the extent of $1,000 was caused to machinery and plant when fire broke out at the Big Spring Ice Cream Factory.

Ft. Worth, Tex.—Extensive improvements recently were made by Shaw Brothers, who do an extensive ice cream manufacturing business. The company spent $50,000 on new machinery, and a new ice vault which cost $15,000.

Houston, Tex.—Irvin Ice and Ice Cream Company has been incorporated with capital of $100,000 by W. H. Irvin, A. A. Slaughter and John Neethe.

Hazelwood, Wash.—The Hazelwood Co. reports record production and sales of ice cream. Despite unfavorable weather, the production of the product has grown, it is stated. The ice cream department of the company has been worked to capacity.

Ripon, Wis.—The business of the Ripon Ice Cream & Beverage Co. has doubled in the past year and in order to meet the demands another freezer room and freezing equipment will be added.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

SUPPLYMEN STUDY ICE CREAM TECHNIQUE AT PENNSYLVANIA SHORT COURSE.

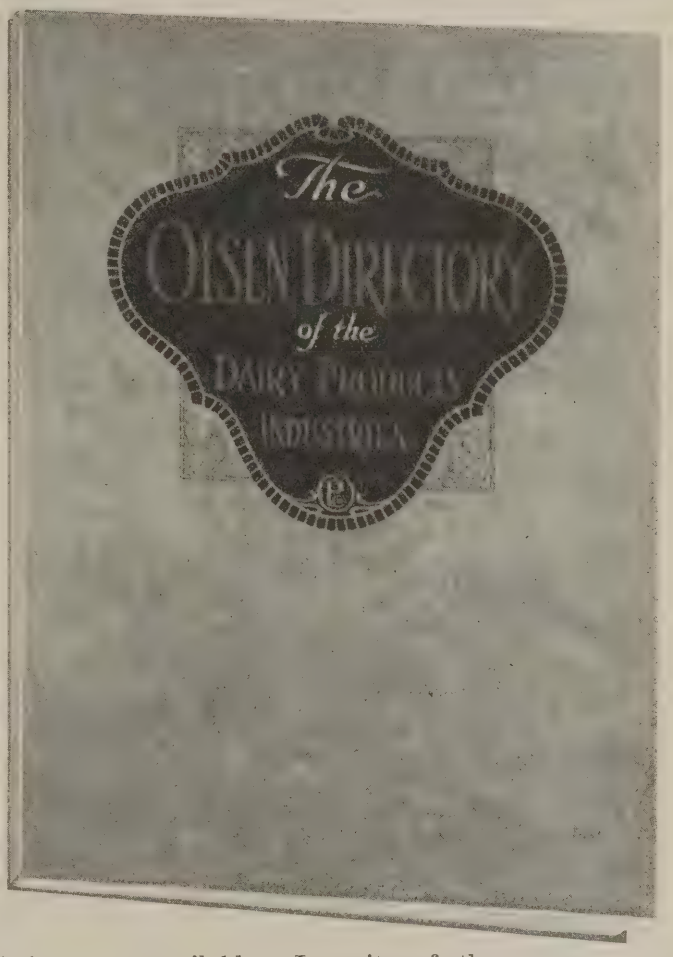
A special course in dairy manufacturing for dairy supply salesmen, offered for the first time by the dairy husbandry department of the Pennsylvania State College, was attended by 29 salesmen from seven states, representing 14 different firms. Starting August 18 with an address by Professor A. A. Borland, head of the dairy department, and continuing for two weeks, the men were put through an intensive course, dealing with all phases of dairy manufacturing, especially ice cream making.

The regular staff of the dairy department was assisted in giving the course by several outside speakers, including, Prof. W. B. Combs of the University of Minnesota, N. M. Thomas, president of the salesmen's club of the Ice Cream Supply Men's Association, J. B. Morse of the Cherry-Bassett-Winner Co., C. A. Rogers of the C. E. Rogers Co., Detroit, Mich., J. A. Cross of the Mojonnier Co., Chicago, Ill., Mr. Tower of the Bristol Instrument Co., Philadelphia, B. B. Mason of the Ohio Farm Bureau Federation, Columbus, Ohio, Prof. A. J. Wood, head of the mechanical engineering department, Pennsylvania State College, G. M. Foulkrod, assistant professor of farm machinery, and H. G. Niesley, professor of agriculture economics also from the Pennsylvania State College.

Top row — Left to right — Profs. C. H. Dahle — M. H. Knutsen—W. D. Swope—I. R. Knapp—A. A. Borland—F. P. Knoll—W. H. Combs—W. H. Martin—W. T. Wolfenden.

Second row—Left to right (from top)—S. E. Swanker—E. B. Van Dusen—T. V. Kennedy—R. L. Adolph—J. I. Martin—H. L. Trimby—J. J. Clark—L. Eyring.

Third row—Left to right (from top)—H. H. Simpson—J. A. Wildermuth—J. W. Stevens—Frank L. Carroll—A. W. Johnson—Eli Rosenbaum—L. W. Von Losberg—A. E. Clawson—A. J. Hulsebosch—S. L. Plank.



Bottom row—Left to right—W. G. Royer—R. S. Damuth—N. M. Thomas—Robert Rosenbaum—C. Robert Fickes—F. S. Key—Charles Blake—W. R. Magurie—Edward F. Hasselfeldt—H. F. Strecker.

During the first week the salesmen formed an organization called the Micro-Organisms. Officers were elected and several meetings held during the two weeks. A banquet at the University Club was one of the most important events leading up to the close of the course. At this time the organization expressed their appreciation for the efforts put forth by the faculty by presenting them with hand bags. Further evidence of their interest in the college was shown when their president, C. Robert Fickes, announced that they would offer to an ice cream maker, to be selected at a later date, a scholarship to the winter short course at the Pennsylvania State College. The details pertaining to the selection of the man for the scholarship are to be announced later.

The course closed Friday, August 29, with a round-table discussion of the work presented during the two weeks. It was the unanimous opinion of those present, that it would be repeated next year. Plans are now under way to offer the course in August, 1925. The Micro-Organisms, consisting of 30 charter members, voted to hold their next annual meeting in February at Rochester, N. Y.

FIRST COMPREHENSIVE LISTING OF DAIRY PRODUCTS MANUFACTURERS IS OFF THE PRESS.

With the dairy industry divided into so many divisions, each more or less inter-related yet distinctive in itself, a complete listing of the names and addresses of concerns engaged in the various divisions of the dairy industry has been very difficult to compile. In fact, before the publication of The Olsen Directory of the Dairy Products Industries, no practical comprehensive listing was available. In spite of the many, many thousands of names listed and subdivided in The Olsen Directory, there are no doubt some that may not have been included in spite of the months of efforts to make this directory 100% complete. The Olsen Publishing Company will appreciate hearing from any concern that finds itself not listed in this directory, together with information as to the products manufactured.

This direcory is invaluable to any concern selling to the dairy products industries, and copies will be mailed at once on receipt of remittance to The Olsen Publishing Co., 5th and Cherry Sts., Milwaukee, Wis.

A woman with a sharp tongue will soon cut herself off the payroll.

OHIO CUTTING DOWN LEAD OF THREE RANKING ICE CREAM STATES.

Ohio made larger gains in the ice cream production in 1923 than any of the three states which produced a larger gallonage, according to a bulletin recently issued by the Ohio Association of Ice Cream Manufacturers, from the association's headquarters, Columbus, O.

Production figures for 1923 give Ohio fourth place in gallonage, the Buckeye state being led by Pennsylvania, with a production of 34,100,000 gallons; New York, 20,527,000 gallons, and Illinois, 13,233,000 gallons. Ohio produced 12,768,000 gallons of ice cream in 1923, against 11,140,000 gallons for 1922.

Ohio's gain in production over the preceding year was 14.6 against a gain of 12.7 for the state of Pennsylvania, a decrease of .89 for the state of New York, and an increase of 6.8 for the state of Illinois.

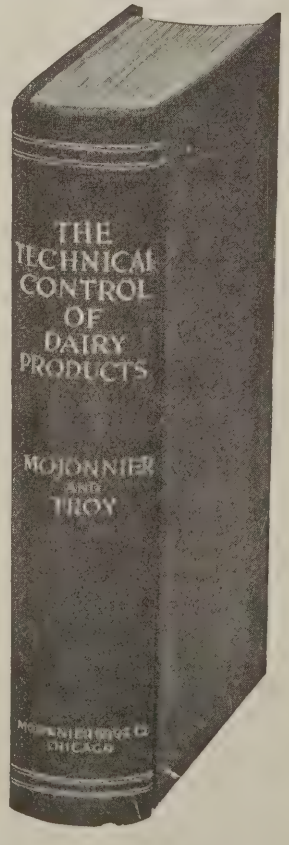
California's increase, however, was greater than that given for Ohio, the Golden State, now in fifth place, being credited with an increase of 19.2 over production of 1922. California ice cream manufacturers produced 8,865,000 gallons in 1923 against 7,438,000 in 1922.

Kentucky leads all states in increase of production, according to figures compiled by the department of agriculture. The Blue Grass State is shown as having an increase of 32.4 per cent over 1922 production.

Montana comes next with an increase of 32.3 per cent, producing 491,000 gallons of ice cream in 1923 against 371,000 in 1922. Massachusetts' production showed an increase of 29.6 per cent over 1922. Minnesota, 26.5 per cent, South Carolina, 36 per cent, Wyoming, 28.7 per cent, Mississippi, 30.9 per cent, West Virginia, 17.5 per cent, Oregon, 16.2 per cent.

ICE CREAM'S UNIVERSAL APPEAL.

In speaking of the universal appeal of ice cream, it is interesting to know just how ice cream was taken by the three little members of the race of white Indians discovered in the Isthmian jungles by Richard O. Marsh, who recently were brought to New York. Of course, ice cream was a dish these children had never even heard about, much less eaten.



Here is the interesting account that the New York World gives of the first time these chaps sat down to a table before dishes of ice cream:

"Gloomy enough they were when they were led into the Waldorf apartments, splendid with mirrors and ornate chandeliers, to seats at a table shining with glassware and silver. But by the time they reached fish they were almost hilarious, and finally when that pyramid of ice cream came in, with whipped cream all over it, they lighted up with smiles. Little Chepu had a bad moment. It struck him apparently, when the waiter was just serving Marguerite, that there mightn't be enough for him. His face clouded over the midst of a smile. It didn't relax again until his plate was full."

No further proof could be necessary that ice cream is a dish carrying universal appeal, and it should be an incentive to the members of the ice cream industry to know that their product is something everybody likes, and everybody can be made to eat more of, with a proper effort on the part of the ice cream manufacturer.

The young fellow who has a coffee and doughnut breakfast down in town, an armchair lunch, and eats a delicatessen dinner out of paper bags when he gets home in the evening, nine times out of ten has married some poor girl because she was a good dancer.

— An Encyclopedia on
Dairy Products Manufacturing

Covers every known angle of Dairy Products Control in plain simple English so that any ordinary manufacturer of dairy products can understand it. No matter what products you make

You Need This Book

It would take four magazine pages to just outline the contents of the many chapters.

Everyone striving for success in the dairy products business needs these 900 pages of information. Much of the material in this book has never before been published.

WANT DEPARTMENT

2c A WORD

15 cents extra for blind address to cover postage

It Pays to Advertise

Orders for this Department must reach our Office not later than the 25th of the month. Orders received after that date will be carried over to the following month's issue.

NOTE: Names and addresses of advertisers using blind addresses cannot be furnished direct from this office. The advertiser can be reached only by using the key number and addressing your reply care of "The Ice Cream Review."

NOTICE.

The Ice Cream Review disclaims any responsibility for the reliability of parties advertising in the Want and For Sale Department, nor for the truthfulness of statements made in such advertisements. In answering such ads, ask for references if parties are unknown personally, before sending money. Our subscribers are requested to assist us in keeping unreliable parties from advertising by reporting any suspicious dealings.

HELP WANTED

WANTED — Young man not over 40 years of age as assistant to general manager of one of the largest ice cream plants in the country. We prefer a man who has had some experience in the ice cream business, although a record of successful accomplishment in other lines would warrant consideration. The position requires hard work, long hours, 7 days a week during the summer months. We want a man who knows how to work and can show others how; who will be loyal and instill it in others; who is looking for an opportunity—not just a job. This is a real opportunity for a wide awake, aggressive and forceful man, with an understanding of the human element which is so absolutely essential to success. If interested please give all particulars of yourself, positions held and salary desired. Applications held in strict confidence. Address: R-414, The Ice Cream Review. 9-24

WANTED—One of the largest ice cream plants in the Middle West is in need of a real man to act as assistant production superintendent. The man we want must not only know how to make good ice cream theoretically but practically. He must be a leader, a man who is active and alert and who can pep up the entire organization; who will be aggressive and forceful and still command the respect of the employees through his education and guidance. There is no better or more progressive firm in the country than the advertiser and the position offers exceptional opportunity, therefore we want an exceptional man. Position will be open any time, until we find the right man, either now or in the fall. If you think you can fill our requirements please state in reply your personal history, positions held and salary expected. All applications will be held in strict confidence. Address R-413, The Ice Cream Review. 9-24

WANTED—Salesmen with Advertising Ability—We shall need two or three additional salesmen, to start October 1, to act as our permanent territorial representatives in different parts of the country. We sell the "Kist" line of ice cream flavors and supply our customers with a complete, comprehensive, monthly advertising and merchandising service. Our salesmen must be well educated, and must possess advertising experience and executive ability, which will enable them to assist and inspire our customers to sell, advertise and merchandise "Kist" flavored ice cream, ices and sherbets according to the plans and advertising material we supply each month. Men without these qualifications do not make good with us.

Salary and expenses for minimum amount of business. Bonus on all over minimum. An ambitious worker can make $5,000 per year or more. Fine chance for advancement. Men preferred between 28 and 35, now employed, **who are willing to stay out on the road** and who are looking for a better opportunity. Write a brief account of yourself in your own handwriting, stating your advertising experience and territory you prefer and we will send application blank. All negotiations confidential. Do not call until requested. Citrus Products Company, 54 E. Kinzie St., Chicago, Ill. 9-24

WANTED—A man with experience to take charge of candy factory as manager. Address Lee Lewis, Inc., 542 South Fourth St., Louisville, Ky. 9-24

WANTED—Flavoring extract and fruit salesman. One who is acquainted with the ice cream trade in Illinois and Indiana and adjacent territory. Good opportunity for right man. Communications strictly confidential. Address: R-471, The Ice Cream Review. 9-24

WANTED—Ice Cream Supply Salesman—Party with long experience in the manufacture of ice cream supplies of every description and a keen young business man wants to meet a high powered salesman who can sell these products, with a view of forming a connection for the manufacture and sale of ice cream supplies. Capital not a requirement. Only consideration ability to sell meritorious foods and to appreciate the significance of this opportunity. Address: R-485, The Ice Cream Review. 9-24

WANTED—Manager who can qualify as to ability and character for plant doing at present fifty thousand gallons annually. Output can be doubled under proper management and with proper effort being expended. Want man who is able to purchase a substantial interest in business, as we think this will guarantee his efforts. This is a splendid opportunity for the right man. Address: R-516, The Ice Cream Review. 9-24

BUSINESS OPPORTUNITIES

WANTED—Partner in ice, ice cream and butter plant in Ohio. Must be active man who is willing to work and learn by his experience. Must have at least three thousand dollars, balance will pay out of business. Plant will invoice at least $20,000. Or will sell to responsible party on trial for six months. Part cash and liberal terms. This ad will appear only one issue. Address: R-527, The Ice Cream Review. 9-24

POSITION WANTED

POSITION WANTED—As first ice cream maker with 15 years experience. Can come at once. Address H. F. Clark, Medford, Wis. 9-24

POSITION WANTED—Capable of managing a small plant. Laboratory and inspector's experience. Employed. Address: R-453, The Ice Cream Review. 9-24

POSITION WANTED—As salesman for some ice cream supply house. Have 15 years experience in manufacturing of ice cream. Can furnish references. Address A. L. Parish, 1331 E Cumb Ave., Middlesboro, Ky. 9-24

POSITION WANTED — As manager of large creamery or ice cream business, wide experience in both lines and thoroughly competent to handle any size plant. Address: R-517, The Ice Cream Review. 10-24

POSITION WANTED — Man with wide experience in ice cream and creamery business desires connection with an ice cream plant that needs experienced and efficient management. Started business with which now connected. A stock company. Have built same to sales aggregating in excess of three hundred thousand dollars annually. Will satisfy most skeptical with bank and other references. Would invest some money when all concerned are satisfied it would be mutually agreeable. Must have salary commensurate with position of this kind. Address: R-484, The Ice Cream Review. 9-24

"COLONIAL" SALESMEN GIVEN PICNIC.

The sales force of the Colonial Ice Cream Company of Philadelphia, accompanied by the families of the members, enjoyed a picnic and outing at Richards Farm during the middle of July, as the guests of A. P. Grunwald, first vice-president and general manager. The arrangements were supervised by A. J. Clemmons, sales manager.

NEW ICE CREAM PLANT AT BIRMINGHAM.

The American Ice Cream Co., Birmingham, Ala., was recently organized for the manufacture of ice cream. Modern equipment has been installed in the new plant on Fourth Avenue.

William Hogg, who is reported to be a well-known young business man, will act as plant manager. Mr. Hogg has been connected with an ice cream company in Brooklyn for the past two years. Officials of the company advise that their plans call for the erection of a much larger plant at the end of the summer season.

AFRICANS AFTER ICE CREAM MACHINERY.

Announcement has been made of plans by an official of a cold storage company of South Africa to visit the United States to study refrigerating equipment and machinery for the manufacture of ice cream. Upon his arrival in this country it will be possible to get in touch with him through the New York district office of the bureau of foreign and domestic commerce, 730 Customhouse.

CONVINCED of the importance to the industry of the 1924 Convention of the National Association of Ice Cream Manufacturers, The Association of Ice Cream Supply Men assumes the liberty of recommending to all manufacturers in every section of the country attendance at the sessions.

Matters of major interest to the ice cream business will be discussed---in a sense, through this Convention, the industry will consider its own health and come to practical conclusions concerning trends and methods affecting its immediate future.

For the separate good of each manufacturer, for the aggregate good of the industry---attend the Convention!

The Convention City is New Orleans—uniquely attractive of American cities, in many respects the capitol of the charming and the pleasant Southland. The dates are November 17th to 20th inclusive. The Convention Hotel is the Roosevelt. Aside from the Convention there will be, socially, many things to make each day memorable.

OCTOBER 1924

THIS issue of The Ice Cream Review is dedicated, particularly, to the ice cream manufacturers of Illinois. The Illinois Association of Ice Cream Manufacturers will celebrate its Silver Jubilee convention on October 28 and 29. Members will join hands in making it the biggest and best ever held.

The ice cream industry in the Sucker State is an important one. The second largest city in the Union, along with several other big cities, furnish large opportunities for sales of The National Dish. The future looks bright for the industry in that state.

Illinois manufacturers make good ice cream, too. The state is a great dairy state, and there is always a plentiful supply of "makins" close at hand. They are progressive, too, and they always hold good conventions. This year they will tear the lid off and put on a convention that no Illinois manufacturer can afford to miss. They want manufacturers in other states to meet with them. We are authorized to extend an urgent invitation to those living in other states, especially border states, to come and help them celebrate their Silver Jubilee.

The Ice Cream Review extends heartiest greetings to the ice cream manufacturers in Illinois. This is a new industry, as the big industries of the country are measured, and a state association of ice cream manufacturers that has successfully functioned for a quarter of a century is entitled to heartiest congratulations. Illinois! Illinois! We are all proud of you!

ICE cream manufacturers who visited the National Dairy Exposition in Milwaukee, and exhibitors of supplies and equipment for the ice cream industry who displayed their wares there, are happy. They went home feeling that they were well repaid. The supply men did a wonderful business and there were many new things for the manufacturer to see and to learn.

One supplyman remarked, in the writer's presence, "I have met more ice cream men and done more business than ever before at a National Dairy Show. My firm was undecided about making an exhibit, but decided to do so at the last minute. They are tickled to death that they did. We have done a wonderful business."

We are, of course, highly pleased that the ice cream men who spent money and time to come to Milwaukee found it worth while. We strongly urged them to come, feeling that they would find their support and patronage of the dairy show very profitable to them. No one likes to back a "flivver," but all can find pleasure in backing a winner. We feel almost like adding, "We told you so."

It was not hard for us to get enthusiastic about the dairy show. Its appeal to dairymen everywhere, to "Spend a Week in Dairyland" found a loud echo in the Review office. We are right here in the Heart of Dairyland. It's our home and we are always ready to boost for it.

Many of our friends found time to visit our big publishing and printing plant. We wish more could have found time to come. We tried to make all who came feel at home, and we deeply appreciate their visits.

New friendships were established, and old ones strengthened, among the ice cream folks who spent a few days or a whole week in Dairyland early this month. Surely it was all well worth while.

WE ARE sure that ice cream men who attended the National Dairy Exposition better understand the relationship of their industry to the entire dairy industry than they ever did before. Ice cream men who feel that their interests are separate and apart from the interests of other dairy branches fail to get a proper perspective of the dairy industry as a whole. Fortunately there are few such, and their numbers are growing smaller each year.

It is becoming generally understood that what helps or injures any branch of the dairy industry helps or injures all other branches. Ice cream is a dairy product

and the ice cream business depends for its success upon the right attitude of the consumer towards dairy products. The consumers of this country are comparatively stingy in their purchases of all kinds of dairy products. Agencies are hard at work to popularize these products so that the consumption of them will approximate their consumption in other civilized countries. True, this country leads in the consumption of ice cream, but it lags in the consumption of other dairy products. Even the consumption of ice cream should be three times what it is now in this country.

Problems which concern the entire dairy industry deeply concern the ice cream manufacturer. That is the reason we have always urged ice cream manufacturers to never forget that their industry is an important branch of the dairy industry, just like the butter, cheese, milk, and other branches

⚜

FIRST on the convention horizon is the joint meeting of the Pennsylvania and New Jersey manufacturers, to be held in Newark on October 14, 15 and 16. An interesting program has been arranged, and our readers in those states will do well to be there. Jump in and help solve the big problems.

⚜

THE next big national event in the dairy business of special interest to ice cream manufacturers is the New Orleans convention. The eyes of the industry are turned in that direction.

Some confusion seems to exist regarding events which will make up a busy week in the Crescent City. Now, let's get them straight. The Southern Association of Ice Cream Manufacturers will hold forth in annual convention on Nov. 14 and 15. The Dixie Flyers, an affiliated organization of supply men, will stage a machinery and supply exhibit in connection with the convention of the Southern association.

The 24th annual convention of the National Association of Ice Cream Manufacturers will open on the Monday following. The dates are Nov. 17, 18, 19 and 20. The officers and members of the Association of Ice Cream Supply Men are co-operating with the officers of the "National" to make the convention a success.

Many ice cream manufacturers will, of course, plan to attend both conventions, thus lending their support to both organizations and these will also enjoy the display of machinery and supplies arranged by the Dixie Flyers.

This big gathering of ice cream men in the important city of New Orleans will attract unusual interest. It promises to be the most important gathering ever held, inasmuch as there are so many big problems to be considered, some of which should be solved before another summer season rolls around. If you haven't decided whether you are going, now is a good time to do it. Give New Orleans the benefit of the doubt and be there. You will never regret it.

THE splendid success of the National Dairy Exposition in Milwaukee, especially from the standpoint of the exhibitor of dairy plant machinery and supplies, carries a lesson for the industry which should not be overlooked. Buyers and prospective buyers came from all sections of the country. It was a busy but happy bunch of exhibitors who packed up at the close of the show and went back to their homes.

This is the lesson it taught; buyers can be attracted by the right sort of publicity. Men will spend money and time to respond to the right kind of advertising. They are attracted by agencies in which they have confidence.

We believe we are but stating a fact when we say that the recent National Dairy Exposition received more publicity through our several trade publications than through all other similar publications combined. This, perhaps, was but natural, inasmuch as the big function was held in our home town. We put our whole organization back of the big effort to induce dairy products manufacturers everywhere to come to the show.

They came. Some of them couldn't be away from home long enough to "Spend a Week in Dairyland," but the majority stayed two or more days. They were intensely interested in the new equipment and supplies. They bought freely, and business contracts were made the fruits of which will be felt for months and years to come. Many friends told us that they came to the show on the strength of our "say-so." They told us on leaving that they were abundantly repaid for coming.

We believe all this emphasizes the importance of publicity in promoting this great industry. It shows what advertising can do when properly applied. It proves the strength of printer's ink.

Our friends have gone back to their homes. They have returned from Dairyland and we are mighty glad that they found their stay in it so profitable and pleasant. We shall stay right here in the "Heart of Dairyland" and continue our most earnest efforts to help these friends, scattered all over the country, to boost their business. We are strengthened in our conviction that the publicity we are giving to the industry is a job worth while. The industry needs lots more of the right sort.

⚜

THESE are highly interesting days in the ice cream industry. Men and women interested in it, who attended the National Dairy Exposition, were unanimous in the opinion that the next few months are filled with important possibilities. There are several vital problems demanding attention, and these problems will be at the fore in New Orleans and at the state conventions. The solution of these problems will require wise counsel, and ice cream manufacturers everywhere owe it to themselves and to their industry to take interest in the coming conventions.

Manufacturers who are in the habit of attending conventions will not need urging. They will surely be at their state, regional and national conventions this year.

but there are many who do not have the habit. These men should turn over a new leaf. They need what they can learn about these problems. They can use the knowledge in their business.

The industry needs their presence at these conventions when these problems are discussed. This should be a big convention season. Six months hence, when the conventions shall have been held, we shall all know more about the question of furnishing the dealer with refrigeration, for instance. All should sit in when this big problem, along with others, is considered. A definite program should result—a program that manufacturers everywhere can follow. If the best program is to be mapped out it must be the result of much serious discussion and thought. Yes, these are serious times for the industry, men, and your help and counsel are needed. Resolve, right now, to meet your fellow manufacturers at the conventions.

GEE, but it seems good to get a full night's sleep again! At this writing we have had two of them. We haven't caught up yet, bu in a few days now things will be about normal again in this shop. We are going to try to lay in an extra supply to last through the convention season. You fellows who have been right in the midst of big functions in your home towns that continued for a week or more know how we feel. We like "company," and lots of it. We got it. Company's gone now and while we enjoyed them—hundreds and thousands of them—we are glad that they are back home. We are sure they are, too.

MACHINES do not decide quantity production. The consumers are the people who have the "say-so" as to how much the output shall be. It is interesting to note how many industries have, in late years, developed well established standards for grade and quality of the products with which they are concerned. Ice cream, butter and milk are among thirty-six commercial products for which standards have been set.

Among other commodities governed by quality standards are baking goods, cocoa and chocolate, cotton, gelatine, grain, jewelry, macaroni, malleable castings, paving bricks, pickles, soda water flavors, tin plates, and wool blankets.

With such a wide range of products as these, it is easy to understand that the foundation of an industry so related as ice cream is to public welfare, is quality.

MUCH ice cream is built as a tailor builds a suit of clothes. The buyer fixes the price and then the suit of clothes is made to fit that price.

The tailor knows that he can reasonably expect to sell a certain number of suits at a certain fixed price. He buys his materials and establishes his rules of workmanship so as to make his desired profit. He is meeting competition and the limitations of the consumer's income in doing so.

Too much ice cream is made that way. Instead of the manufacturer making as good ice cream as he can he makes it to fit a price. He knows that he must keep the manufacturing cost per gallon down to a certain price in order to have a profit left after paying selling and delivery charges. He must limit the amount of butterfat he uses and he must buy other ingredients at a price which will keep him within the cost schedule.

After doing all this he must use good salesmanship to keep up his gallonage where it is possible to make some money. He must talk "quality" to his customers and his prospective customers, but he knows he hasn't as good ice cream as he might make. He can't believe in his own product and the salesman that can't do that is mightily handicapped.

How long is it going to take before ice cream manufacturers the country over will learn that people will eat more good ice cream than the other kind, and that each one will do more business when folks eat more ice cream?

BULLETIN OF EVENTS

Association of Ice Cream Manufacturers of Pennsylvania and New Jersey—Eighteenth annual convention, Newark, N. J., October 14, 15 and 16, 1924. Convention headquarters, Robert Treat Hotel. Secretary, J. W. Neuman, York, Pa.

Southern Association of Ice Cream Manufacturers—Twelfth Annual Convention, New Orleans, November 14 and 15, 1924. Secretary, J. W. Clopton, Decatur Ice Cream & Creamery Co., Decatur, Ala.

Metropolitan Ice Cream Manufacturers Association—Annual convention, Newark, N. J., October 14, 15 and 16. (Tentative dates.) Secretary, W. H. List, 596 Market St., Newark.

Illinois Association of Ice Cream Manufacturers—Silver Jubilee Convention, Chicago, October 28-29, 1924. Hotel headquarters, Hotel Sherman. Secretary, N. Loewenstein, 155 N. Clark St., Chicago.

National Association of Ice Cream Manufacturers — Twenty-fourth Annual Convention, New Orleans, La., November 17, 18, 19 and 20, 1924. Convention headquarters, Hotel Roosevelt. Secretary, L. Loewenstein, 155 N. Clark St., Chicago.

Louisiana Association of Ice Cream Manufacturers—Annual convention, November 21, 1924. New Orleans, La. Secretary, N. F. Manning, Monroe.

Texas Ice Cream Manufacturers' Association—Annual Convention, Dallas, December 3, 4, 5, 1924. Secretary, A. J. White, San Antonio.

Georgia Ice Cream Manufacturers' Association—Annual Convention, Augusta, Ga., December 2, 1924. Convention headquarters, Richmond Hotel. Secretary, Sam Marshall, Marshall Ice Cream Co., Albany, Ga.

Indiana Manufacturers of Dairy Products—Annual convention, Indianapolis, December 4. Secretary, R. L. Hammond, 306-07 Chamber of Commerce Bldg., Indianapolis.

Oklahoma Association of Ice Cream Manufacturers—Annual Convention, Tulsa, December 8-9-10. Secretary, W. M. Hawk, Tulsa.

The Association of Ice Cream Manufacturers of West Virginia—Annual Convention, Clarksburg, December 9 and 10. Convention headquarters, Hotel Waldo. Secretary, C. F. Jamison, Huntington, W. Va.

Pacific Slope Dairy Show—Exposition under the auspices of the California Dairy Council with co-operation of dairy councils of the Western states and dairy divisions of the agricultural colleges and departments of the Pacific Coast states, Oakland, Cal., December 10 and 16 inclusive. Secretary-manager, Sam H. Greene, 216 Pine St., San Francisco.

Pacific Ice Cream Manufacturers' Association—Annual convention, Oakland, Cal., December 10, 11 and 12. Secretary, Bert H. Walker, Tacoma, Wash.

California & Southwestern States Ice Cream Manufacturers' Association—Annual convention, Oakland, December 10, 11 and 12. Secretary, Jay Kugler, 57 Post St., San Francisco.

Supply Men of the Pacific Coast Ice Cream Manufacturers' Association—Exhibition in connection with joint convention of Pacific Northwest, Pacific Coast and Southwestern States, City Auditorium, Oakland, Cal., December 10, 11 and 12.

Kansas Association of Ice Cream Manufacturers—Annual convention, Topeka, Kansas., December 16, 17 and 18. Convention headquarters, Hotel Kansas. Secretary, B. T. Perkins, Pittsburgh, Kans.

Arkansas Ice Cream Manufacturers' Association—Annual Convention, Little Rock, some time in December, 1924. Convention headquarters, Hotel Marion. Secretary, Charles Hooberry, Pine Bluff.

North Carolina Ice Cream Manufacturers' Association—Seventh Annual Convention, Charlotte, January 13-14, 1925. Secretary A. E. Dixon, Fayetteville.

New England Association of Ice Cream Manufacturers—Annual convention, January 21-22, Hartford, Conn. Secretary, W. P. B. Lockwood, 51 Cornhill, Room 401, Boston, Mass.

Michigan Dairy Boosters—Exhibition in connection with convention of the Michigan Allied Dairy Association, Lansing, February 2, 3, 4, 5 and 6, 1925. Exhibition headquarters, Kerns Hotel. Secretary, C. J. W. Smith, 502 Lenox Ave., Detroit.

Michigan Allied Dairy Association—Annual convention, Lansing, February 2, 3, 4, 5 and 6, 1925. Convention headquarters, Michigan Agricultural College. Secretary, R. F. Frary, Lapeer.

1919

1919 was the year that marked the greatest change and improvement in ice cream can construction.

That was the year the Electric Weld can was brought out.

Because of its freedom from leaks, the easy and economical retinning features, neat form of construction, strength and splendid sanitary features—it immediately became popular.

It will pay you to consider the Electric Weld for 1925.

Ice Cream Manufacturers of Nation Prepare for Mighty Gathering at New Orleans

Many Important Matters to Face New Orleans Sessions

Tentative Programs on Pages 136, 137 and 138

SOUTHERN ice cream representatives at the National Dairy Exposition were extraordinarily active in promoting the coming New Orleans conventions. The Dixie Flyers will have a startling exhibition in connection with the Southern convention, November 14 and 15, according to President Harry A. Benners. He expects a record attendance. He announced a special meeting of the Dixie Flyers for Friday, November 14, at 10:30 a. M., at the Atheneum, New Orleans, to receive and adopt by-laws, rules and regulations governing the organization. Other matters will be considered. At a meeting of Dixie Flyers at the dairy exposition a committee was appointed to go into the matter of by-laws and regulations. This meeting was attended by the president, past president Neil Mortensen, Byron Morris, R. C. Marine, and others prominent in the Dixie Flyers' activities.

SECRETARY A. E. Dixon of the North Carolina association has issued a bulletin in which he tells members that the Southern association secretary, J. W. Clopton, wants the North Carolina members to arrive in New Orleans the night of November 13 to be present for the morning session of the Southern association. He asks members to write Mr. Clopton at Decatur, Ala., for reservations, and "show other sections of the country a sample of Southern hospitality."

EVENTS are rapidly shaping up for what now seems assured will be the greatest and most representative ice cream gathering on record for this industry. Developments in the last few weeks, particularly in connection with the National Dairy Exposition, suggest that the New Orleans conventions of the national and Southern associations will form one of the most eventful occasions in ice cream history.

It is generally known that the national association has under advisement many new and constructive lines of action virtually affecting the industry's future, particularly in the direction of what may be termed "nationalizing" the industry. That is to say, some of these plans promise to bring about certain conditions enabling the manufacturers of different sections firmly and solidly to stand in promoting the industry's best interests.

These matters for the most part have been discussed in a general way in past issues of The Ice Cream Review. At the New Orleans convention, however, it is very likely that different committee heads will have something to put before the convention regarding national advertising, standardization and other matters of the most vital import to members of this industry. Developments have been shaping toward this end as a result of several committee sessions during the year.

Surprisingly enough, to those members of the industry who point out that the convention is to be held in a remote part of the country this year, the attendance at New Orleans is expected, by those who have every reason to know, to surpass all records. In canvassing members of the trade on different occasions representatives of The Ice Cream Review have often been cautioned not to be too hopeful for a large attendance this year. This pessism, however, finds no support among ice cream officials actually in touch with the situation.

NO LESS an authority than the secretary of the National Association of Ice Cream Manufacturers, the exceedingly alert and active Mr. Loewenstein, makes announcement that the attendance at New Orleans should break all records. The industry is accustomed to reading of where every convention is expected to be a "recordbreaker." This publication has felt its way very cautiously before committing itself in the matter. Conservative judgment, however, leads to the conclusion that the gentlemen of the Southern ice cream industry will have so fully set their hearts upon an elaborate occasion for their Northern, Eastern and Western visitors will not be disappointed. This is a conviction The ice Cream Review could not escape after weighing and considering the many conditions affecting the situation.

We find the ice cream manufacturers on the Pacific Coast on the verge of what is expected to be the greatest ice cream pageant ever undertaken in that section. The New Orleans gathering is so arranged that coast delegates easily can attend the sessions of the national association and get back home in time to look on with just pride at their own "party," so to speak.

FURTHER evidence that the New Orleans gathering will be fully representative is given by the announcement that the New England Association, probably the greatest group state association in the industry, will attend in a body on a chartered steamer. At the dairy

(Continued on page 140.)

South Invites Manufacturers of Every Section

As the date of the 12th annual convention of the Southern Association of Ice Cream Manufacturers approaches I am prompted to extend to the manufacturers throughout the Southern states and through the country at large an urgent invitation to attend the convention. Arrangements are already completed for the business session and the social features and both promise to be the best that we have ever had. You must realize that when I make this statement it means that we are going to have SOME convention, as each of those for the past several years have been a complete success.

My opinion as to the success of this convention is based on the fact that the manufacturers throughout the South have realized the wonderful field for the development of our product and they are leaving no stones upturned to develop their own business, which, of course, increases the consumption at large.

The wide awake ice cream manufacturer in the South today is no longer satisfied to operate at a small profit for a few months in the year but he is interesting himself in making his business show a profit twelve months in the year. I believe that we will be able to show our brother manufacturers from the North, East and West a thing or two in the near future and I hope that many of them will avail themselves of the opportunity of attending our meetings in New Orleans on November 14 and 15.

In this connection may I urge that each manufacturer who plans to attend the convention arrange to arrive in New Orleans on the day or night of November 13. In view of the fact that we will only hold a two-day session our meeting will open promptly at 8:30 on the morning of November 14. We realize that this is a little earlier than some of our friends are accustomed to getting out, but the boys in the South are getting accustomed to getting out early and we expect each of them to be in convention hall when the gavel sounds.

Awaiting the pleasure of seeing you and your staff at the convention, I am

Very truly yours,

J. W. CLOPTON, Secretary,

Southern Association of Ice Cream Manufacturers.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

Thats our Business

WE ADVERTISE Ice Cream. Work with many of the biggest manufacturers. Study their particular conditions, keep in constant touch with them all through the year, plan their campaigns, supply window displays, posters, mailing literature, newspaper campaigns, etc., help them to sell Ice Cream and not infrequently save them from frittering away good money unwisely. We have been doing the job for almost fifteen years and if your business does not conflict with someone we are now serving we should like to discuss advertising and selling with you. Write now, while you are thinking about it.

Methods Used by Ice Cream Companies to Develop Rural Business*

Canvass Shows How and Why Country's Business is Diminishing

AT THE request of one of its policyholders, the Policyholders' Service Bureau made inquiry among ice cream companies as to the methods employed to develop rural business. One company responded by stating that in its opinion the development of the ice cream business in rural districts is not of a profitable nature; that in some cases where there are large towns between the country districts a large route can be planned through the intervening territory that may become profitable, and that this usually works out well where it is a resort territory.

Another company states that it has not attempted development of rural business by any particular sales method.

A third company, somewhat more progressive, has its local dealers supply it with a list of all prospective users; thereupon there is sent to those on the list direct mail advertising with the dealer's name imprinted thereon.

A fourth company states that it is well situated on four railroads; with five extra branches with an interurban branch; also several trucking firms are available that cover the territory very completely. For this reason the company is convinced that it does not pay to operate its own trucks. The company employs regular country salesmen who also carry a special line of supplies. It runs a week-end special, and gives the trade weekly letters boosting the sale of the specialty and novelties, frozy fudge, picaninny freeze, or Eskimo pie, etc.

A FIFTH company writes that it covers considerable territory regularly with trucks, and besides has some salesmen working the territory. Throughout the country districts it does more or less outdoor advertising. It supplies its dealers with point of purchase advertising material, outdoor signs, stands, etc., and also has a house organ that it mails periodically to a selected list of probable consumers in small communities. One difficulty that this company experiences in the rural sections, especially in the winter time, is that so many of the small dealers are not equipped with soda fountains and that consequently it is difficult to induce these dealers to handle ice cream when the cold weather sets in. This applies particularly where icing service is not rendered, for which reason the small dealer is hardly justified in buying ice and salt in view of the small volume of business he is usually able to do during the winter months.

A RATHER complete information was furnished the bureau by a company in a relatively small city in Ohio. This company employs salesmen to make regular calls on dealers in a radius of approximately fifty miles. It has dealers as far away as 180 miles, but the territory what might be considered local is within a fifty-mile radius.

The roads in its section of the state do not permit of extensive trucking. Population is also sparse and this, too, would make delivery by automobile rather expensive. Practically all the ice cream sold to rural trade is shipped by express.

The same sales methods are employed in calling on the rural trade as those used with the city trade. The company supplies dealers with display advertising; sends notices, announcements, etc., by mail to the customers of these dealers; uses the local papers in a limited way to advertise its product and assists in whatever way it can to develop business.

Its salesmen are instructed to pass on successful methods of other dealers in the hope that the rural dealers who do not have opportunities of personal observation may have the benefit of new ideas of progressive dealers.

At distant points, places where the company is at a disadvantage in service compared with its competitors, it frequently confines its business to one dealer. This is an advantage to the dealer and is really the only way in which it is possible to secure business outside of what may be termed local territory.

It seems to this company that the best way of developing rural business or for that matter city business, too, is to educate the dealer to use modern and aggressive merchandising methods.

The following quotation by its general manager is of interest:

"The majority of merchants who sell ice cream handle it merely as a side line. The druggist is primarily a druggist and incidentally a soda dispenser. Too many of the confectioners in the small towns apparently are indifferent and unprogressive. The per capita consumption of ice cream will increase with more extensive and intensive merchandising methods, together with a reduction in price on package or carry out sales. True, many dealers are now selling ice cream at a very small margin of profit, but as a rule the gross profit obtained by the retailer is ample and in some cases prohibitive for the development of a carry out trade.

(Continued on page 88.)

Why Is Rural Ice Cream Business Diminishing?

That's an important question for consideration. This contribution to The Ice Cream Review shows business is diminishing in the country for several important reasons. Among them are increased cost of shipping, difficulty in securing icing service in winter, but one of the important reasons is many ice cream manufacturers have not full understanding of the nature of overhead expenses affecting the nature of rural business.

One company has found it profitable to maintain strategically located storage warehouses.. Other companies are following up missionary work through direct mail advertising to prospective consumers, and through keeping local dealers well supplied with display material, running week-end specials, etc.

*For fourteen years we have supplied a limited number of Ice Cream Manufacturers with Toco Tub Enamel. Increased production makes it possible to serve more of you this season.

The Ice Cream Industry Well Represented at Record Dairy Exposition

Manufacturers of Many States Attend Milwaukee Classic.
Exposition Featured by Ice Cream Exhibits.
Exhibitors Well Pleased

THE showing of the ice cream industry featured the greatest exposition in the history of the dairy industry. Ice cream men from many states gathered at Milwaukee September 27 to October 4 to see the most elaborate exhibits of ice cream machinery, supplies and equipment ever seen at a dairy exposition.

The machinery exhibits were held in the Milwaukee Auditorium. Although Thursday, October 2, was officially known as Ice Cream Day, manufacturers began gathering at the Auditorium almost as early as the very opening of the dairy industry's five-million-dollar exposition.

Officials of the National Association of Ice Cream Manufacturers represented their industry. Vernon F. Hovey, president of the national association; N. Loewenstein, secretary; S. T. Nivling, a director, and other prominent manufacturers were among those on hand. Oliver S. Jordan, president of the Association of Ice Cream Supply Men, and Charles Caldwell, assistant secretary of that organization, were present.

EIGHT directors of The Association of Ice Cream Cream Supply Men were among the exhibitors. In the fullest way possible the ice cream angle lived up to the promise of exposition officials in stating that the ice crea mmanufaceurers would find more to interest them at the dairy exposition this year than ever before.

There were 299 booths. The aisles were jambed during every day. Virtually all of the equipment used in the manufacture of ice cream was represented.

Many state association officials were present. Circulating among the delegates were members and officials of the Illinois Association of Ice Cream Manufacturers, which this month will stage a silver jubilee at its twenty-fifth annual convention.

A general meeting of the ice cream manufacturers was held in Plankinton Hall at the Auditorium on Thursday of the exposition. The discussion centered around the possiblity of organized support for the dairy exposition from the ice cream industry, and other matters were taken p. No definit decision was reached.

The exposition was formally opened Saturday, September 27, with an impressive dairy parade, this street pageant sweeping through the downtown section of Milwaukee.

The leading dairy organizations of the country were present when the band struck up "Hail, Hail, the Gang's all Here!" And from then on developments proved the gang certainly was all there.

"Special Delivery" of Ice Cream

*By L. M. DORSEY**
(Written Expressly for The Ice Cream Review.)

SELLING ice cream should not be a passive proposition on the part of the dealer, that is, if he pretends to any degree of go-getterishness in his make-up. Too many dealers, however, operate upon the time-honored principle of the spider. The spider spins a web and sits back until an unwary insect drops into its meshes. Then, and only then, he leaps into cannibalistic activity. While this analogy is not entirely pertinent to the merchandising of ice cream, it is, nevertheless, comparable with the efforts of many a dealer in his selling method. He operates a fountain in connection with his other store features. He may, and frequently does, have tables and chairs for more deliberate customers who haven't the stool-perching habit. His ice cream sales policy, however, is absolutely passive. If a person comes in and asks for ice cream he will gladly sell it to him, but, does he do anything to bring that customer into the store? Probably he does not unless he happens to be one of the progressive and aggressive merchandisers of ice cream and confectionery. If he is a druggist he often relies too much upon the fact that the American public knows it can purchase ice cream in practically every drug store. Most frequently a person who suddenly develops an ice cream craving turns to the nearest drug store to satisfy it. Well enough, but if one gives this matter a little thought one might readily perceive that the passive dealer rests too much upon this chance method of selling ice cream. The aggressive store takes this state of affairs for granted and proceeds with a scheme of merchandising which seeks to reach out and draw customers to it. Here is where the possibilities of modern salesmanship are utilized in the way of advertising methods, methods which seek to, and do, obtrude themselves upon consumer consciousness, impressing it in such a manner as to give an individuality to that particular store. Furthermore, the alert and up-to-the-minute dealer does not find it necessary to shoulder the full burden of developing that individualistic imprint upon consumer consciousness for he finds the ice cream manufacturer ready and willing to give him generous assistance, a sort of co-profitable partnership in merchandising.

THERE is one type of consumer or customer which too many dealers fail to consider or, if they do consider it, it is with a hopelessness of ever selling to it that is the quintessence of apathy. That consumer is the family. When this condition of apathy is mentioned the writer does not want the efficient dealer to feel wrathy because the condition described is not universal, but sufficiently so, however, to warrant serious consideration.

The family trade is worth going after and can be made a profitable sideline of any retail ice cream busi-

HAVE YOU TRIED The New CAN-PRO-CO ICE-LESS SHIPPERS

This bag was one of the sensations of the Ice Cream Dept. of the National Dairy Show. Many Ice Cream men can now testify to the practicability of this new method.

PATENT APPL. FOR

The Can-Pro-Co Ice-less Shipper is constructed with insulating materials having a hard canvas inner lining, and hardened outer waterproof covering of heavy duck. Double bottoms and reinforcements where the greatest wear comes, gives the container long life.

There is nothing on the Can-Pro-Co Container and Shipper to get out of order. Nothing can break. Drop them — toss them around—up-side-down—any way. Lay them flat, all while holding can full of Ice Cream.

$5.50 EACH

20-Quart Size

NO ICE
NO SALT
NO PACKING

Weighs less than 9 lbs.
Saves ½ the Express Charges.
Increases Your Delivery Truck Capacity 400%.
Preserves Ice Cream Eight to Twelve Hours.

The Can-Pro-Co Ice-less Shipper weighs less than nine pounds. The height of this container is less than 24″ and the diameter is 12″, made for regular twenty-quart cans. You can ship Ice Cream to your customers at less than half the former express charges. Think of this tremendous saving. Think of the ease of the delivery. No salt or ice. No packing. Just drop the cans of cream into the container, buckle it up and you're ready. Load your truck. Any truck will do. Pile them up like cord wood, and you'll be surprised how many you can load. One man does the work of three. One truck carries the load of four as formerly.

NOTE—Hundreds of Ice Cream Manufacturers are using these Bags on our Free Trial Offer. Send for yours.

FREE TRIAL OFFER **We will ship this new container for free trial and examination, prepaid, to any Ice Cream Manufacturer. You will be convinced, and astonished at the ease and economy of this bag, as well as the efficiency demonstrated. We will bill you in the regular way at $5.50, price of same, and if you do not find it the greatest little shipper you ever had—return it for full credit.**

ALL DIXIE IS LOOKING FORWARD TO 1924 NATIONAL CONVENTION AT NEW ORLEANS.

One of the Vessels of the Great White Fleet.

Cruise Plans After National Convention

Ship Will Sail From New Orleans on Saturday, Nov. 22 for Seventeen-Day Trip to Cuba and Canal Zone.

ARRANGEMENTS have been made with the United Fruit Company for the sailing of one of the company's finest steamers from New Orleans on Saturday, November 22, for a seventeen-day trip to Cuba and the Canal Zone. Special rates have been secured for the benefit of the ice cream men and others attending the convention.

The fare has been set at $250 and $285, which amounts include all necessary expenses from the moment the big boat leaves the pier in New Orleans until the trip is ended there seventeen days later. Each stateroom is provided with two beds instead of upper and lower berths formerly in use. Those who desire especially luxurious accommodations will be provided with cabin rooms with bath for two persons at $680 for the two. Parlor cabin rooms with bath, dressing table, etc., will also be available at $800 for two persons. A government tax of $5 must be paid by all passengers making the trip.

Many ice cream men have signified their intention of taking this cruise; and others have been urged to obtain accommodations as soon as possible through B. J. Schilling, Transportation Manager, 620 Marquette Building, Chicago.

This cruise is regarded as a unique and interesting vacation, combining the healthful, restful features of a sea voyage with an opportunity to extensive sight-seeing in foreign lands. No section of the world holds more of interest for the average American than the area bordering the Caribbean Sea. Here ice cream men will see where America literally began on that fateful day in October, 1492, when Columbus and his fellow-voyagers hove to off Watling's Island and the great discoverer formally claimed the New World as the domain of King Ferdinand of Spain. Today Havana and Panama, with their wealth of ancient ruins and traditions of discovery and adventure, are among the show places of the world.

The following tentative itinerary has been announced by the United Fruit Company, which will have general charge of the cruise:

FIRST DAY—Saturday, a. m.—

Leave New Orleans on a ship of the Great White Fleet. Saturday and Sunday at sea.
Saturday and Sunday at sea.

THIRD DAY—Monday a. m.—

Arrive Havana, Cuba. Suburban automobile trip, visiting Colon Cemetery, the Casino, race track and Marianao Beach. Time about four hours.

FOURTH DAY, Tuesday—

Trip by launch across the bay to Morro Castle and Cabanas Fortress.

FIFTH DAY—Wednesday—

Passengers will have this day free for sight-seeing trips and shopping tours at their own convenience and expense. The steamer leaves in the afternoon for the run to Cristobal.

SIXTH, SEVENTH AND EIGHTH DAYS—

Thursday, Friday and Saturday—at sea.

NINTH DAY—Sunday a. m.—

Arrive Cristobal, Panama Canal Zone. Ninth, tenth and eleventh days—Sunday, Monday and Tuesday: In Panama. Passengers will be provided with hotel accommodations at the U. S. Government owned Hotel. Washington, Cristobal, C. Z., Hotel Tivoli, Panama City, R. of P., or the Hotel Aspinwall, Taboga Island on the Pacific side. Trip across the Isthmus by auto and rail to Panama City and return is provided, going by auto to Gatun where an opportunity is afforded to inspect Gatun Locks, Dam, Spillway and control towers of the Panama Canal; thence to Panama City and return to Cristobal by rail.

A three-hour trip around Panama City, R. of P., and a two-hour trip around Colon are also included. During the stay in Panama, passengers may employ their time to suit their individual preferences. As before stated, accommodations and meals at the hotels named are included in the cruise fares and passengers have option of dividing their time among them as they see fit.

Exceptional facilities for fishing, bathing and golf are afforded; the fishing and bathing being unusually fine at Taboga Island in the Pacific Ocean, twelve miles from Panama City, where a stay may be made at the Hotel Aspinwall, while good golf is available at Gatun and Panama City.

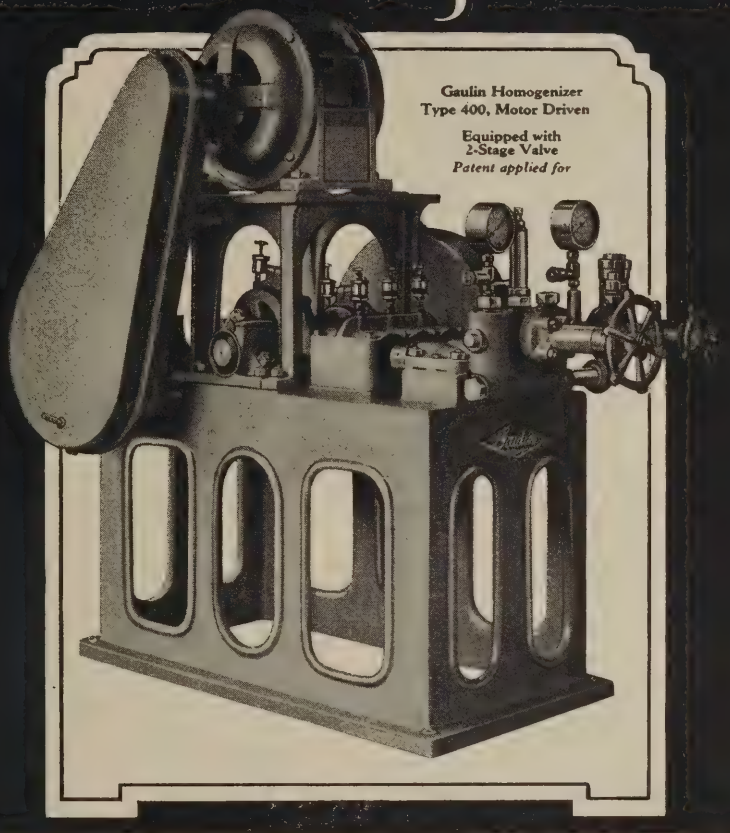
TWELFTH DAY—Wednesday 11 a. m.—

Steamer leaves Cristobal for the return voyage via Havana, Cuba.
Thursday and Friday—at sea.

FIFTEENTH DAY—Saturday p. m. —

Steamer touches at Havana, arriving and leaving the same day.

SEVENTEENTH DAY—Monday p. m.—



Arrive at New Orleans.

Gaulin TRADE MARK

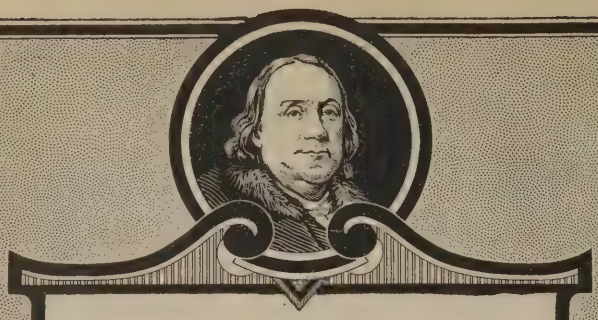
Gaulin Dependability

Gaulin Homogenizer
Type 400, Motor Driven
Equipped with
2-Stage Valve
Patent applied for

THE Gaulin Homogenizer is a *Dependable Homogenizer* and has no equal in quality or performance! Years of constant use by the leading ice-cream manufacturers the country over have proven its superiority over every other machine of its kind manufactured—they find the "Gaulin" *practically indispensable*. In length of service the "Gaulin" leads the field—*it is built to last.*

All Gaulin Homogenizers are now equipped with the Gaulin 2-Stage Valve, a recent development which insures a more thorough homogenization of the product than with the Original Gaulin Spring Valve. The dual valve feature not only increases the homogenizing efficiency over 100%, but is the only device manufactured that *positively controls viscosity.*

The results obtained by users of the 2-Stage Valve equipment have been very gratifying, and its many advantages over the single valve have resulted in its adoption as *standard equipment* in many prominent manufacturing plants where previously the single valve had been in use.



When the 2-Stage Valve was adopted we had on hand a supply of Gaulin single valves, and to those who may wish to take advantage of special prices we are offering *Genuine Gaulins* equipped with the Original Gaulin Spring Valve at substantial reductions. Prices for the various sizes will be submitted upon request.

PENNSYLVANIA AND NEW JERSEY MANUFACTURERS TO OPEN CONVENTION SEASON.

The convention season is under way.

Pennsylvania and New Jersey ice cream manufacturers last month were making preparations to meet at Newark on October 14, 15 and 16. This will be the first time the convention of the Association of Ice Cream Manufacturers of Pennsylvania and New Jersey has been held in the Nutmeg State.

The Treat Hotel will be convention headquarters. Short, snappy sessions will be the order of the convention. Secretary J. W. Neuman of York, Pa., last month had not announced the convention program, but experience has shown that this association can be relied upon

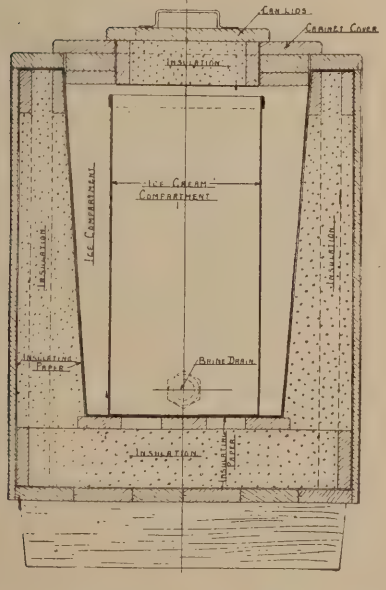
Hotel Treat.

for a highly interesting program. It will be the association's eighteenth annual convention. E. E. Rieck of Pittsburgh is president of the association.

The Pennsylvania and New Jersey manufacturers hold the distinction of getting off to an early start, their convention being the first of the season. This same month, a few days later, the Illinois Association of Ice Cream Manufacturers will hold its annual convention in Chicago.

The Metropolitan Association of Ice Cream Manufacturers will meet in Newark on the same dates as the Pennsylvania and New Jersey association, and it is assumed the two organizations will hold a joint convention.

After this convention and the Illinois gathering, the National and Southern associations will meet at New Orleans. The Louisiana state convention is slated for November 21, the only state convention thus far an-



(Continued on page 64.)

Costs Less by the year

than any other pack cabinet you can buy—

This diagram explains why A-B Ice Cream Cabinets will give 48-hour service from a single icing should emergency require. Notice how cream compartments and ice and salt chamber are fully protected against warm outside air. No wonder A-B Ice Cream Cabinets save ice — save salt — save money!

Every once in a while some ice cream manufacturer tells us he can buy other pack cabinets for less money than ours—

Forgetting that 50 to 100 A-B Ice Cream Cabinets will save thousands of dollars' worth of ice and salt every year, returning their cost many times over with a substantial profit added on—

While cheap cabinets will keep on wasting ice, wasting salt and wasting money for him—year after year.

A-B Ice Cream Cabinets are designed and built to keep cold air inside the cabinet and warm air out. A novel insulating material, tapering from a thick section at the bottom to a thinner section at the top, surrounds the ice and salt chamber. Even the lids are fully insulated, yet are feathery light.

Extending around square, perfectly dry cream compartments is the ice and salt chamber, which tapers downward from a broad, easily filled throat at the top to a narrow bottom.

A-B Ice Cream Cabinets are made in six popular sizes — 1-hole-5, 2-hole-5, 3-hole-5, 4-hole-5, 5-hole-5, 6-hole-5.

Full details and prices gladly furnished on request. Write

Stryker Cabinet

We are prepared to make immediate shipments.

THE STRYKER KOT-N-WOOD PRODUCTS CO.

Box 2307 Dept. C.

MEMPHIS, TENNESSEE

The super-structure of our Cabinets are made with 2x2" hardwood posts full length of Cabinet (note interlock of sides into posts), with three cross beams, and onto this is put our clear cypress panels.

Armco Ingot Galvanized Iron Can—Highest quality galvanized metal made. Note double thickness of top and brass valve with lock nut on both sides of the can. This prevents it from ever leaking.

This shows one-piece insulation. Its insulating qualities far surpass anything else you have ever used, and being in one piece it naturally strengthens the entire Cabinet—in other words, it makes the Cabinet a one-piece proposition. In putting our Cabinets together we first make our frame, then nail our panels to same, then our can with double top is nailed into frame, after which the Cabinet is turned upside down and our one-piece insulation is put in under pressure, after which the bottom is nailed on. This prevents the Cabinet from ever giving under the strain of packing same.

Does Billboard Advertising Pay?

Billboards Are One of 11 Next Best Ways to Actual Display of Ice Cream

*By W. A. McDONALD**

THERE are, of course, many answers to such a question. One man, the advertising man who bubbles over with wild enthusiasm for his subject, might say, "of course, billboard advertising pays, since all advertising pays."

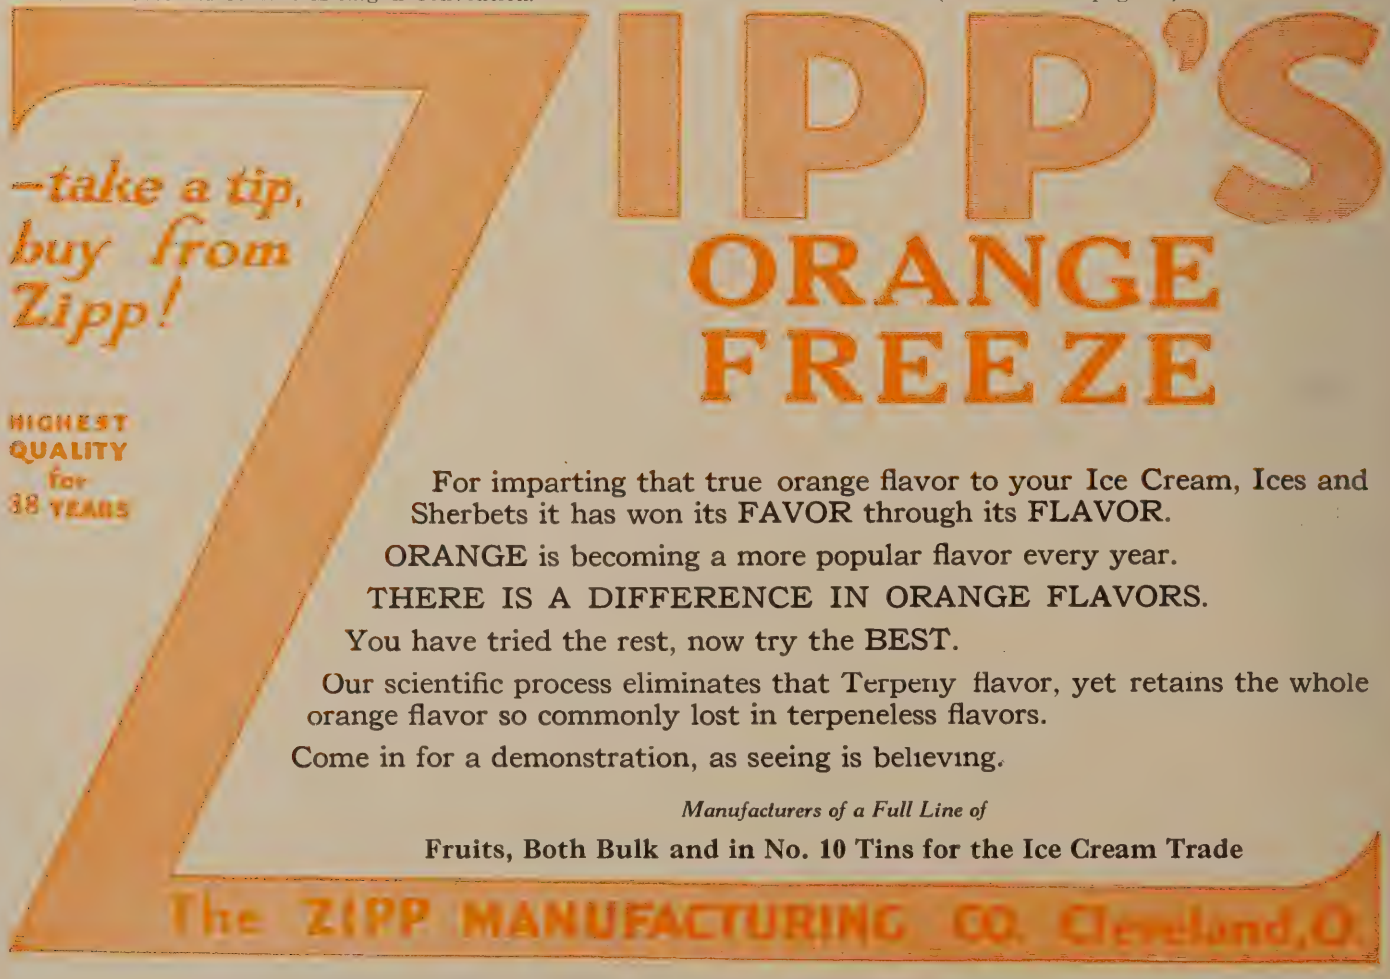
However, the answer which may be of some service to the ice cream manufacturers of Michigan cannot be made in loose terms and must be shaped to fit the merchandising problems which you face. It has always appealed to me that the proper way to tackle any advertising problem is to carry one's analysis of the situation back to the fundamental facts of our present day social conditions, and then from that point logically forward to the question of the price of the individual advertising medium which is under consideration.

It is, perhaps, superfluous to say that billboard advertising is outdoor advertising, but this fact will give you the keynote of my analysis.

Americans are essentially outdoor people. Aside from the many outdoor sports and amusements which we follow to an equal, if not greater, degree than any other people on earth, we are the owners and users of 15,000,000 motor vehicles. Billboard advertising, therefore, should fit into the scheme of our national existence very nicely. It meets the average American face to face a sufficient number of times per day, per month, and per year, to make it a medium worthy of serious consideration.

Another important fact in judging the value of advertising is the frame of mind in which it finds us. Certainly we require no profound thinking to arrive at the conclusion that our minds are wide open to new impressions while they are being relaxed by outdoor activities.

I venture to guess that people, on the average experience more constructive mental growth while they are out of doors than under any circumstances. Billboard advertising, then, catches us when we are receptive—when its message has a real opportunity to be written upon our minds.



So far, I have indicated that billboard advertising reaches us in the right place and at the right time. Both of these things are vital to the successful advertising of any product.

But we can afford to go considerably further with the analysis in order to bring out the particular advantages of billboard advertising as applied to the selling of ice cream.

AS ICE cream manufacturers, all of us are confronted with the impossibility of displaying our product. This is a serious handicap to the promotion of our business. We are forced to seek the next best way. After

Every ice cream manufacturer can profit by reading this interesting discussion.

The Idea That Built "More Gallonage"

It was new — but it was SOUND — so now it's a big success.

THERE are several scores of ice cream manufacturers in this country today who are figuring many times more gallonage for the next few months than they have ever before sold in winter. Not only do they believe that they will get this business, but they are actually planning for it and committing themselves by generous orders for materials. They act with confidence—for in the past year they have been given a great idea—a **new** idea in the ice cream business—and they have seen its results.

They have seen swift increase in gallonage to the extent of from fifty to two and three hundred per cent. They have experienced dealer co-operation such as they had never dreamed of before.

And all because carefully laid plans have placed their products in widespread public demand.

Although the execution of this idea was new to the ice cream industry, the idea, as such, was really not new at all. It was simply a plan to increase the gallonage of ice cream manufacturers by giving them good advertising and encouraging them to use it.

In putting this plan into operation it was the purpose of the Citrus Products Company, in increasing gallonage, to increase the demand for its product, Kist flavors. This company expected to increase the manufacturer's gallonage so much that the profit on the increased volume of sales of Kist Flavors would absorb the costs of the advertising materials furnished **free** to the manufacturer. And this has been the result.

One of the window posterettes for dealers, furnished free to ice cream manufacturers.

Success Almost Immediate

Today we stand with our great idea vindicated. Every month we are furnishing our customers **without charge** advertising service that would cost them thousands and thousands of dollars.

As the advertising is used the manufacturer's volume of sales rapidly and steadily increases. Re-orders for Kist flavors start coming back. Then more and more as the accumulative effect of the advertising makes itself felt. As a result, our volume is so increased that the investment in advertising matter pays dividends. And meanwhile, **our customers enjoy unprecedented success.**

Of course, this could never have worked **at all** if **Kist** Flavors themselves had not been superior flavors. The "Kist" advertising simply persuades the public to **try** your ice cream; the flavors make them **like** it, and so they **buy it again.**

Better Flavors

Some idea of how Kist flavors are pleasing manufacturers everywhere may be gained from the following letter, recently received.

"Our factory superintendent is a notorious grouch. He is reputed to be the hardest man to please in our entire organization, and from our personal observation of him, we are convinced that he usually lives up to his reputation.

"Under these circumstances, we feel that it will be of interest to you to know that he is actually enthusiastic about 'Kist' brand flavors.

"He says that he likes them because they are uniformly good, from a color as well as a flavor standpoint. Our experience in the sales end corroborates the superintendent's judgment. We have had fewer complaints this year on flavor and color than during any previous season, and attribute this entirely to the use of 'Kist' brand flavors.

"As to sherbets, 'Kist' brand flavors have placed us miles ahead of anything we have been able to accomplish heretofore.

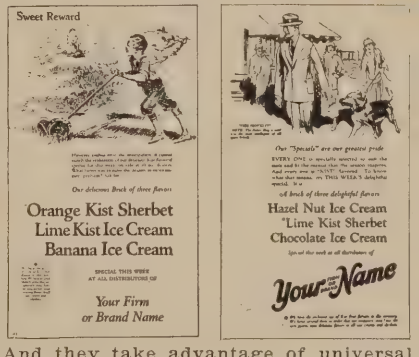
"We wish you continued success."

Kist advertisements exploit every situation in the home that calls for emergency refreshments.

They appeal to sentiment, promote the use of your ice cream as an accompaniment to every cherished family custom.

Kist Flavors are nine in all—Orange-Kist, Lemon-Kist, Lime-Kist, Raspberry-Kist, Strawberry-Kist, Pineapple-Kist, and Peach-Kist, (new this month). All are made entirely of the very best and purest ingredients.

What "Kist" Service Is



Kist service is advertising service—but that is not all. It is also formula service, merchandising service, and "idea" service. The entire proposition is contained in the "Kist Business Builder," an illustrated monthly magazine printed in two colors and sent monthly to every customer. Each issue contains:

1. Carefully selected list of Week-end Specials for the month, with formulas for producing same.
2. Reproductions of newspaper advertisements available for merchandising these specials. (Advertisements furnished free.)
3. Miniatures of special window streamers, hangers, etc., in colors for dealer's-store advertising of specials. (Streamers, etc., furnished free.)
4. Helpful articles on the advertising and merchandising of frozen products.

Each issue is sent out on the first of the preceding month. That is, the November issue is sent out October 1st.

Each customer, as he receives his copy of the magazine, goes over the list of "Specials," picks out the ones he will make, and then orders the newspaper advertisements, streamers, hangers, etc., he needs for advertising his specials, using an order blank which is enclosed in the magazine. These he receives, the streamers and hangers imprinted with his firm name and brand, in ample time for their scheduled use.

The small reproductions herewith will give you some idea of the quality of Kist Service advertisements. They are prepared by experts, illustrated by the finest artists, set up by the best typographers. Every user of them is proud of his advertising. If he paid for it himself, alone, it would cost him thousands of dollars yearly.

And they take advantage of universal human interest, romance, humor and appetite.

LET US SEND YOU A SAMPLE COPY OF THE "Kist" Business Builder

We will be glad to do this. After you have gone over it once, you can see the great opportunity for you in Kist Flavors and Kist Service. For your convenience, we present this coupon. By all means use it.

Ladies' Auxiliary to S. A. I. C. M. and Other Organizations

LADIES' AUXILIARY EXTENDS WELCOME TO NEW ORLEANS.

To all Members of the Southern Ice Cream Manufacturers' Association and Dixie Flyers:

If the ladies of your family are not members of the Ladies' Auxiliary to the Southern Ice Cream Manufacturers' Association and Dixie Flyers, do hasten to make them so.

We want all the wives, sisters and sweethearts of the members of your organization to attend the convention and become a member of our Auxiliary.

Membership will add much pleasure and comfort to the sojourn of your lady in New Orleans, and relieve you of the responsibility of looking after her during your busy days and evenings.

We guarantee that the ladies will never miss another convention if you bring them to New Orleans in November, and you will never attend another without the air of comfort and solace that your lady's company will add to your visit.

Wonderful things are being planned for the ladies this year by the Southern Ice Cream Manufacturers' Association and Dixie Flyers—please see that they are here to participate.

A check or money order for two dollars makes them a member and a guest of the Ladies' Auxiliary Luncheon, given Friday, Nov. 14, at the De Soto Hotel—from then on we take care of her until convention is over.

Send the lady's name in soon—every woman whose husband is a member of your organization should be a member of the Auxiliary.

Thanking you in anticipation of an early reply, and trusting we shall have the pleasure of greeting the ladies of your family in New Orleans,

Sincerely yours,

MRS. E. B. GEISEL, Secretary.

PACIFIC ICE CREAM SHOW.

California has invited us to participate in the greatest gathering of ice cream and allied dairy industries ever held on the Pacific coast. Your directors have accepted this invitation, it is now up to our members to show by their attendance that we thoroughly appreciate the opportunity to hold our convention with them at Oakland, Calif., December 10, 11 and 12, 1924.

The Fourth Annual Pacific Slope Dairy Show promises by far the largest exhibit of ice cream, dairy equipment and supplies ever attempted outside of the National Dairy Show. This will afford a splendid opportunity to inspect the latest machinery and methods, all of which will be in charge of competent representatives for demonstration.

The joint program is practically completed, assignments of subjects have been made to competent men, several of whom have accepted. We know you are going to be pleased with every feature of the convention, which has been arranged for your instruction and entertainment.

The dates for our meeting are not too far distant for us to advise you to make your hotel reservations. The headquarters will be at the Hotel Oakland, which

Increase Your Profits

BY INSTALLING a Roger's Automatic Ice Cream Brick Maker.

The Roger's machine operates at **four gallons a minute.** It puts ice cream in packages either solid or Neapolitan bricks. It performs its work with **far less trouble and expense** than solid bricks could be packed in the old way.

It produces a perfect three-layer brick at one operation; saves refrigeration, labor, and time; produces uniformly perfect bricks of better quality, and avoids handling.

It also supplies the public demand for "individuals"; separately wrapped — packed six, seven or eight to the quart in one, two, or three flavors. It fills a quart package at the same speed, whether with individuals or in bulk.

The Roger's Brick Maker means less labor and many extra sales in any ice cream plant —better investigate.

DID YOU EVER STOP TO THINK

By E. R. Waite, Secretary, Shawnee, Okla., Board of Commerce.

That truthful, persistent advertising gets the attention of the readers, and sets their thoughts moving toward the direction of the merchandise or service advertised in a way that brings results.

That advertising holds customers—makes new ones—and turns fussy customers into satisfied customers.

That the modern business concern knows that good advertising is worthy of the thoughts of all thoughtful people, and they read them item by item, because they show them the way to greater savings.

That the people realize that the business concerns whose names they find in the advertising columns have left nothing undone to maintain in stock the finest merchandise that is possible to be produced for the price asked.

That the scheme of life is so arranged that some have merchandise and need cash; while others have cash and need merchandise. Advertising provides the opportunity for them to meet.

That the motive power of any truthful business is truthful advertising. It is the great service that brings together the buyer and seller for their mutual benefit.

THAT ADVERTISING CULTIVATES THE HABIT OF STEADY SAVING, AND HAS STARTED MILLIONS OF PEOPLE ON THE ROAD TO FINANCIAL FREEDOM.

A New Model with

The single row Frigidaire Cabinet is made in four and six hole sizes. The compressor for the single row style comes separate from the cabinet. Air-cooled or water-cooled compressor may be used. An air-cooled unit is shown here.

Now Thirty Inches!

The new Frigidaire Cabinet is 30 inches wide and 30 inches high—a size that provides maximum serving space when installed behind the fountain. With optional air-cooled or water-cooled compressors that can be placed at either end of the cabinet or in the basement, and with the reduction in size, the Frigidaire has a wide range of utility. In the opposite cut-away cabinet the water-cooled type is shown.

DEPENDABLE

Frigidaire

New Advantages

FRIGIDAIRE Ice Cream Cabinets have been made even better. We believe that the new 30 inch model is the most satisfactory ice cream cabinet ever built. It has all the desirable features of other Frigidaire Cabinets plus smaller size and lower operating expense.

For years we have built mechanical refrigeration for household as well as commercial use. Nearly thirty-thousand Frigidaires are in use today. They are giving dependable money-saving service. Every Frigidaire is backed by the General Motors Corporation.

This new Frigidaire Ice Cream Cabinet has been built to operate at minimum cost; to make the serving of ice cream easy; and to give years of uninterrupted use.

The new model comes in the standard four, six and eight hole sizes in double rows. Also four and six hole sizes in single rows. Air-cooled or water-cooled compressors are optional. There are no extras to buy. Every Frigidaire comes complete ready for installation.

An actual test is the best way to judge the dependability and low operating cost of this cabinet. Buy one direct from the factory for trial or get in touch with any of the 2,500 Delco-Light Products dealers who handle the sale and service of Frigidaire throughout the country.

When buying new soda fountain equipment,
look for fountains equipped with Frigidaire.

SALESMEN'S SHORT COURSE A SUCCESS.

Ice Cream Supplymen Who Attended Penn State Short Course.

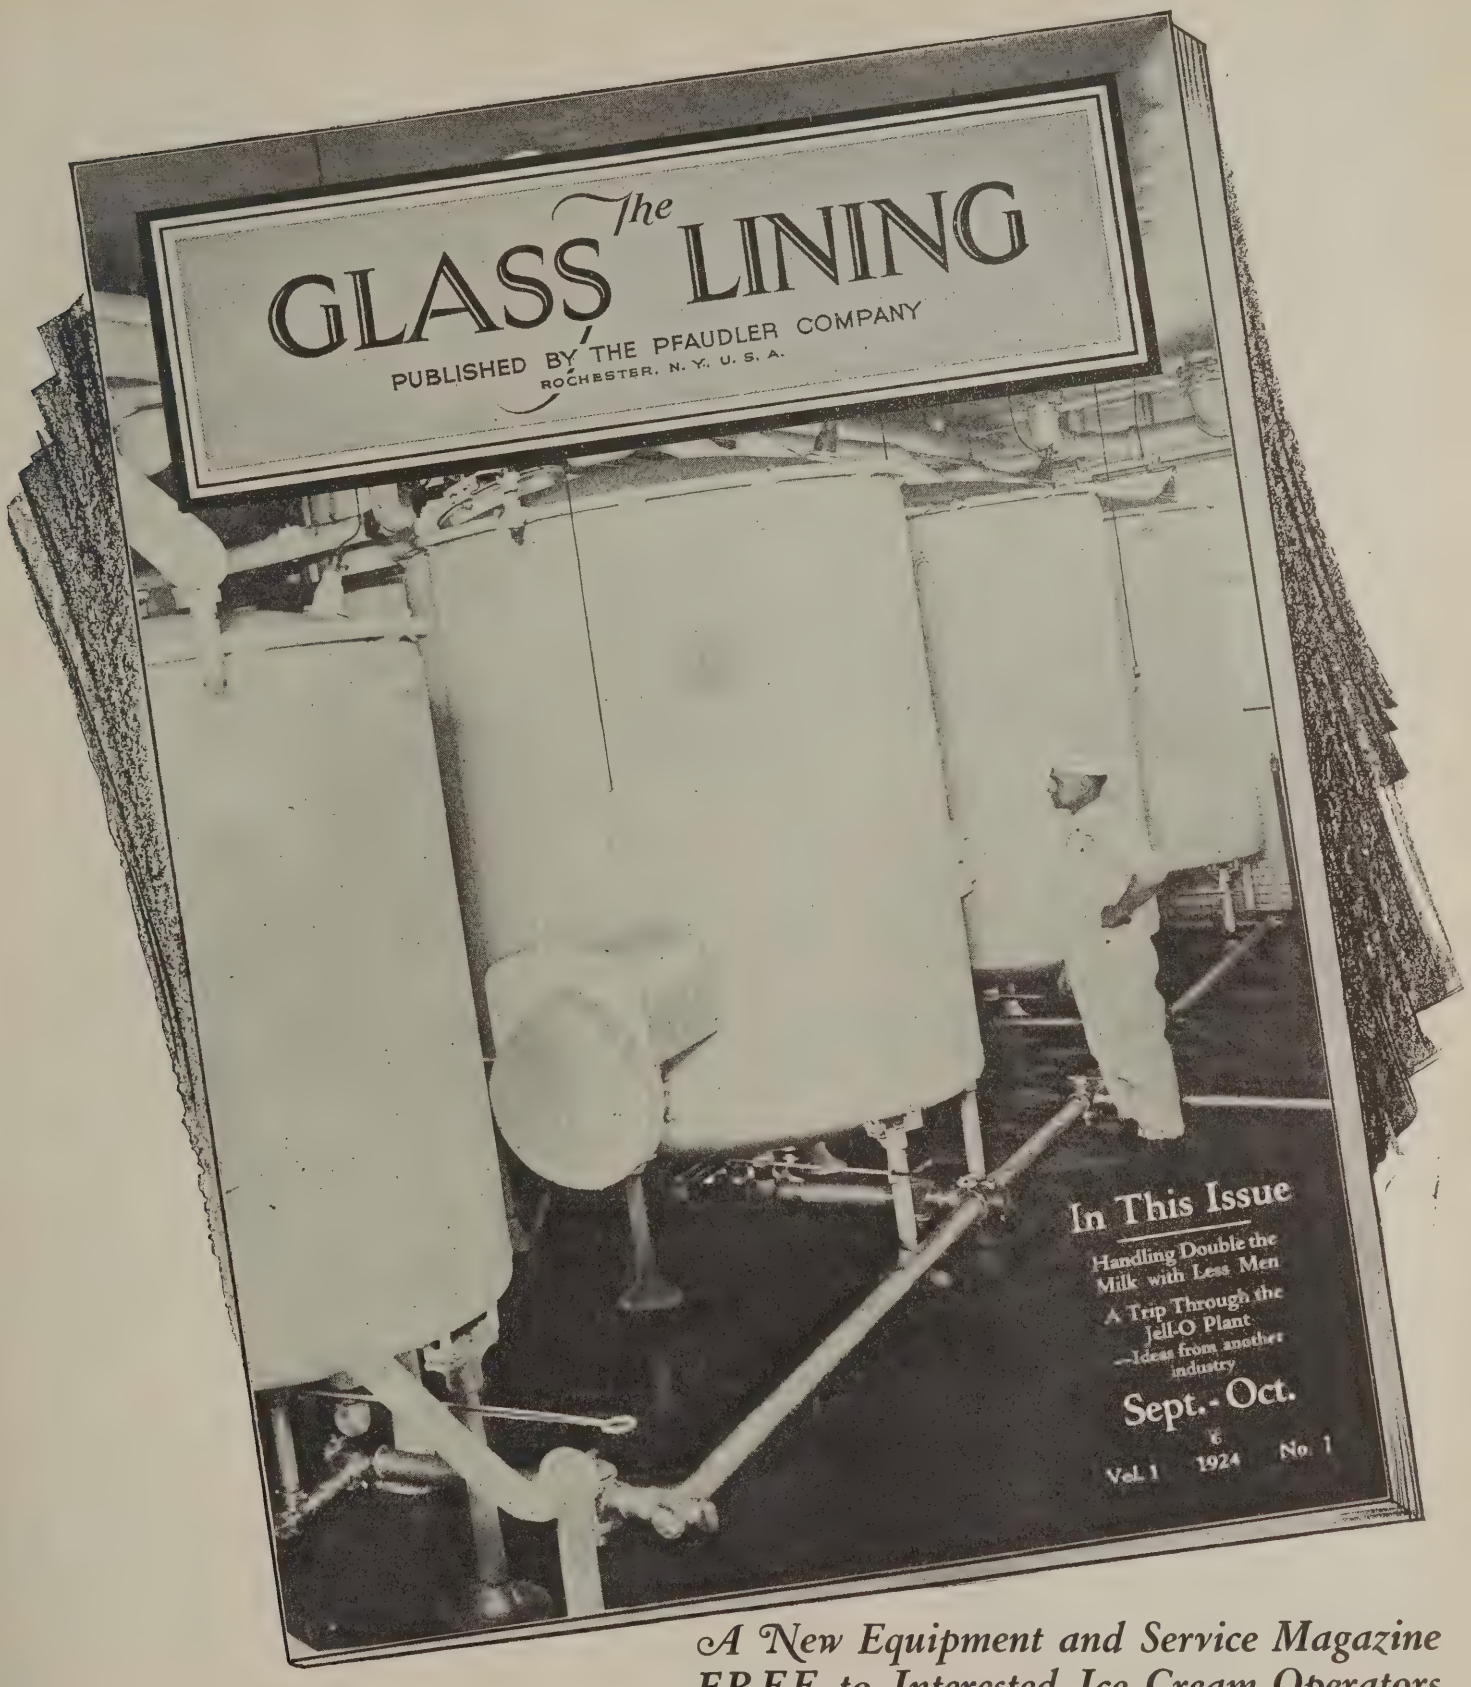
The newly arranged supply salesmen's short course at Penn State College, State College, Pa., has proved a real success, in the opinion of Roberts Everett, secretary of The Association of Ice Cream Supply Men.

"Micro-Organisms" is the chosen name of the salesmen's organization of students. "This is the first time that salesmen of supply companies have, in an organized way, begun to approach their customers' needs and problems from the scientific and educational angle," said Secretary Everett, who believes the significance of the recent short course is of real interest to the industry.

By bringing the salesman in closer touch with the actual needs of a dairy plant, it will enable him to suggest new methods and equipment that will mean more economical and efficient service in his customer's plant. It is only natural that the customer will accept these recommendations with greater confidence when he realizes that the salesman's knowledge is not based on assumption, but on actual study.

It is believed that under the auspices of The Association of Ice Cream Supply Men, the Salesmen's Club in future years will extend these salesmen's short courses to other institutions in various parts of the country, consequently encouraging a greater number of salesmen students.

Mr. Everett also has called attention to the unique arrangement for a scholarship in ice cream and related subjects at Penn State College, which is being offered by the students recently enrolled there to some one ice cream maker whose identity will be determined by chance at New Orleans.



⚜

SALESMEN OFFER SCHOLARSHIP.

At the recent dairy short course, held at Penn State College for salesmen of The Association of Ice Cream Supply Men's Salesmen's Club, the salesmen attending decided to offer a free scholarship to one ice cream maker. Any ice cream maker deciding to take advantage of this scholarship should send his name to The Association of Ice Cream Supply Men, 1328 Broadway, New York City. At the salesmen's club meeting in New Orleans, during the National Association of Ice Cream Manufacturers' Convention, all names submitted will be written on paper and put into a hat and one slip pulled out. The name of the person appearing on the slip will be given the free scholarship.

IF YOU KEEP UP WITH OUR ADVERTISERS, YOU KEEP UP WITH PROGRESS.

Replies to Inquiries

Dear Sir:—I would like for you to publish in The Ice Cream Review a formula for a good 10 per cent butterfat ice cream using the following: 20 per cent cream, 4 per cent milk, and 7.8 per cent evaporated milk.

I have one of your "Ice Cream Mix" books, but the formulas call for 25 to 30 per cent cream. At the present I am buying 20 per cent cream from the producers and would like to continue buying that way.

Reply: I am very glad to suggest below in table one a one hundred pound mix, showing the ingredients necessary. This one hundred pounds of mix should make from twenty to twenty-two gallons of ice cream, depending upon the overrun you will get in freezing:

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
14.0 lbs. sugar	.....	.....	13.30
.5 lbs. gelatine	.....	.....	.47
20.0 lbs. 7.8% evap.	1.56	3.60	5.16
37.0 lbs. 20% cream	7.40	2.63	10.03
28.5 lbs. 4% milk	1.14	2.43	3.57
100.0 lbs. mix	10.10	8.66	32.53

* * *

Dear Sir:—Would you please analyze the following mix for us, concerning percentage of butterfat, solids not fat and total soilds:

250 lbs. 3½% milk.
85 lbs. 40% cream.
85 lbs. unsweetened condensed, containing 8% butterfat and 25.5% solids not fat.
70 lbs. sugar.
3 lbs. gelatine, dissolved in 10 quarts of water.

Having recently talked with a student of one of our colleges, he recommended a formula calling for 10 per cent butterfat, 14 per cent solids not fat and total solids 33. Would you please quote us table using the materials as quoted above, so that we will have a mix containing percentages as he gave them to us, as we have been having trouble getting overrun this winter. We have been heating this mix to 140 degrees F. and running through Sharples Emulsifier, cooling to 50 degrees and holding from twenty-four to forty-eight hours and freezing same in new style Cherry freezer. Any suggestions you could offer would be very greatly appreciated.

Reply: In table one you will find the analysis of your ice cream mix, using the ingredients which you have given me. You will undoubtedly understand the calculations very easily:

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
250.0 lbs. 3.5% milk	8.75	21.47	30.22
85.0 lbs. 40% cream	34.00	4.54	38.54
85.0 lbs. 8%-25.5% cond.	6.80	21.67	28.47
70.0 lbs. sugar	.....	.....	66.50
3.0 lbs. gelatine	.....	.....	2.85
20.85 lbs. water	.....	.....	.....
513.85 lbs. mix	49.55	47.68	166.58
Per cent	9.6	9.27	32.4
Per cent sugar	13.6	.....	.....

You stated in your letter that someone recommended to you a 10 per cent butterfat mix with 14 per cent solids not fat. It would be impossible to give you a mix with these suggestions, as 14 per cent solids not fat would be entirely too high. I am, therefore, suggesting in table two a mix totaling 500 pounds in weight and which you will notice will test 10 per cent fat, 10 per cent serum solids, 14 per cent sugar and 34 per cent total solids.

Table 2.

Ingredients	Fat	Serum Sol.	Total Sol.
247.0 lbs. 35% milk	8.64	21.20	29.84
85.0 lbs. 40% cream	34.00	4.54	38.54
95.0 lbs. 8% cond.	7.60	24.22	31.82
70.0 lbs. sugar	.....	.....	66.50
3.0 lbs. gelatine	.....	.....	2.85
500.0 lbs. mix	50.24	49.96	169.55
Per cent	10.0	10.0	33.9
Per cent sugar	14.0	.....	.....

You stated in your letter that you dissolved your gelatine in ten quarts of water. I suggest that instead of

Brine pump connections, all insulated with Nonpareil Cork Covering in the Brown Hotel, Louisville, Ky. Brine cooler at right covered with Nonpareil Cork Lagging.

Here Is Your Answer

"Nonpareil Cork Covering for the pipes, of course, but what about fittings?"

Once in a while, we find an engineer who has an idea that fittings have to be insulated with some kind of wrapping or plastic material. But he changes his mind when he sees how Nonpareil Fitting Covers are made and put on, and how much better job they make.

For example, look at this work in the Brown Hotel, Louisville. You will seldom find a more complicated collection of fittings than these pump connections and yet every one of them is insulated with a Nonpareil Fitting Cover.

It stands to reason that fittings need just as good insulation as the pipes. Nonpareil Cork Covering is made for *both*. It gives you insulation that is identical all along the line—pipes *and fittings* equally protected against moisture, frost and heat leakage. For every standard fitting, screwed or flanged, you can get a Nonpareil Fitting Cover.

The insulation of fittings is one of the subjects covered in the book "Permanent Covering for Refrigerated Lines and Tanks." A copy will be sent free. Address Armstrong Cork & Insulation Company, 164 Twenty-fourth Street, Pittsburgh, Pa.

Also manufacturers of Nonpariel Corkboard Insulation for cold storage rooms; Nonpariel High Pressure Covering for steam lines, feed water heaters, boilers, etc.; Nonpariel Insulating Brick for boiler settings, furnaces, ovens, etc.; Nonpariel Cork Machinery Isolation for noisy machines and Linotile and Armstrong's Cork Tile for floors in offices, residences, etc.

Nonpareil Cork Covering

For Cold Lines, Coolers and Tanks

SOUTHERN CONVENTION—NEW ORLEANS, NOVEMBER 14-15, 1924.

dissolving the gelatine in water you dissolve it in some of the milk used for making up the mix, as that will not introduce an error into your mix, as will the dissolving of the gelatine in a lot of water.

* * *

Dear Sir:—Please advise the serum solids in 40 per cent cream. Also the weight per gallon of 42 per cent serum solids, plain skim condensed milk. The equivalent food value of several different kinds of food to a quart of good ice cream. We want to stress the food value of ice cream here and you can help us in this.

Please figure me a formula of 88 pounds of mix, using sugar 14 per cent, sweet cream is 40 per cent, plain skim condensed milk at 42 per cent serum solids, gelatine, a good grade, and water to make up the rest. Desire a 10 per cent fat and 35 per cent total solids with sugar running 14 per cent of the solids as stated above. Now, will this mix give me an approximate overrun of 100 per cent if it is aged and handled properly? We will make a raw mix dissolving our gelatine and then cooling it down so we can stir it in the mix before it congeals. Will put in viscolizer and vat **later, but can't do so now.**

Do you consider a good grade of gum a good stabilizer for a raw mix? It is much easier handled than gelatine, but if you don't think it good we don't want to use it. Please advise us frankly about this. Just one more question. We have hard water here, a little sulphur taste but not much, the sulphur taste practically disappears after the water stands a little while. Now will this hard water affect the overrun of my mix?

Does 40 per cent sweet cream weigh 8.3 pounds to the gallon?

THE NAME

LOUIS F. NAFIS, Inc.

Manufacturers of Scientific Glassware for Testing Milk and Its Products

17-23 North Desplaines St. Chicago, Ill.

ASK THE MEN WHO USE IT

Reply: First, 40 per cent cream contains 5.34 pounds of serum solids in 100 pounds of cream. It is calculated in this manner: 100 pounds of cream testing 40 per cent contains 40 pounds of butterfat. Subtracting the 40 pounds from 100 pounds leaves 60 pounds of serum. Multiplying the 60 pounds by 8.9 per cent, yields the 5.34 pounds of serum solids.

Second, one gallon of plain skim condensed milk 42 per cent solids should weigh 9.4 pounds.

Third, 40 per cent sweet cream will weigh 8.2 pounds to the gallon.

I am indicating below in table one a formula for 88 pounds of mix, as suggested in your letter. This mix ought to give you approximately 100 per cent overrun if processed and aged properly. Relative to a good stabilizer I would recommend the use of gelatine in preference to a gum:

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
12.3 lbs. sugar	.....	.....	11.70
22.0 lbs. 40% cream	8.8	1.17	9.97
20.7 lbs. 42% skim cond	.....	8.66	8.66
.44 lbs. gelatine	.....	.....	.42
32.56 lbs. water	.....	.....	.....
88.0 lbs. mix	8.8	9.83	30.75
Per cent	10.0	11.17	34.95

Relative to the hard water which you state you have and which you state has a little sulphur taste, this water would not have any effect or influence on the overrun of your mix.

* * *

Dear Sir:—Will you kindly give me a formula for a mix which you consider to be the very best commercial and practical mix to put on the market. I can obtain the whole milk here, and I will have to purchase my cream and condensed. I had thought of using 40 per cent cream, and a 5 per cent condensed and about a 3½ or 4 per cent whole milk. I want a mix of about 10 or 12 per cent butterfat if you think this a practical and commercial mix for fat contents. I had desired a total solids of about 38 or 40 per cent in order to get away from the use of gelatine if possible. Can you put me on the right track and prepare a formula along the lines set forth above or along lines which you think best?

Reply: You stated that you got some tar from a tank wagon which was used in mixing with the asphalt in building up the cork brick for your hardening room. That was, of course, a very serious mistake and I doubt if you will ever be able to get that odor out of your hardening room and there is nothing you can do to try to eliminate this odor. The burning of a small sulphur candle will do absolutely no good. About all you can do is to keep your ice cream cans covered up so that your cream will not absorb any odors.

Replying to your other inquiry, I am suggesting below in table one a one hundred pound mix made up according to your suggestions containing practically 38 per cent total solids. You will notice that it also tests 12 per cent butterfat and 12 per cent serum solids. This is absolutely as high in solids as I would advise you to go.

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
14.0 lbs. sugar	.....	.....	13.30
.3 lbs. gelatine	.....	.....	.28
24.0 lbs. 5% cond	1.2	7.72	8.92
23.0 lbs. 40% cream	9.2	1.23	10.43
38.7 lbs. 4% milk	1.55	3.31	4.86
100.0 lbs. mix	11.95	12.26	37.79

REFRIGERATION

Any Time~Anywhere

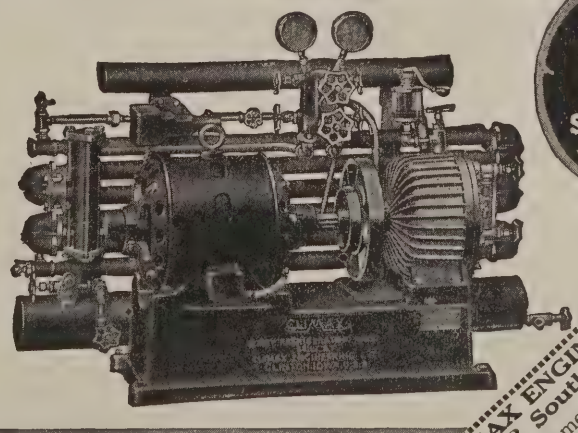
Mechanical Refrigeration is now so simple, so dependable and so economical there is really no good reason for being without it. See the performance of the Climax Model C Refrigerating Unit and every doubt will be removed. Talk with any Climax owner and he will tell you

—It is absolutely dependable.
—It keeps temperatures constantly within the seven degree safety range—below 40° and above 33°.
—It keeps foodstuffs safe from spoilage—safe from freezing.
—It requires almost no attention.
—It is always under your own control.
—It is always sanitary.
—It provides dry cold—no water soaking of foods.
—It provides odorless refrigeration—no tainted food.
—It is not interrupted by holidays.
—It is never wasteful.
—It enables you to store foodstuff in quantities at low prices, and profit by market advances.
—It protects you and builds trade.
—It is surprisingly economical.
—It operates at the turn of a switch.

Outstanding Features of Climax Model C

1—Rotary Compressor a marvel of simplicity—positive and efficient in operation.
2—Model C operated by 1½ H.P. motor. No power wasted in belts or other transmission.
3—No valves—no small frail parts.
4—Only 3 moving parts—all heavy, rugged and permanent.
5—Most compact—Model "C" size only 52" long and 21" wide, and 36" high. Weighs only 750 pounds.
6—Compressor direct connected to electric motor.
7—Continuous flow of gas through the compressor.
8—All lubricating oil confined to the high pressure side of compressor.
9—No oil can come in contact with liquid refrigerant.
10—No violent fluctuation of hands on pressure gauges.
11—Simplest starting. Just open water valve to start, close water valve to stop.
12—No throwing of electric switches—tightening of belts—or clattering of valves.
13—Nothing to forget. Shuts off automatically in case of failure of cooling water supply.
14—Particularly adapted to automatic control.
15—All parts made interchangeable.
16—Each unit factory tested before shipment to produce refrigeration in excess of its rated capacity.

CLIMAX Model C ROTARY



Driven by Gas Engine or Electric Motor

is a self-contained unit that requires but little space. Has only 3 working parts—no valves or other frail parts. It is simple to install—easy to operate, and inexpensive to maintain. If you would be interested in finding out how satisfactorily this machine will meet your needs and solve your refrigeration problem once and for all, send the coupon today.

We also make Reciprocating Type Units for larger requirements

The O. & B. **PURITY** Receiving **Vat** with Pitched Cover.

The Purity Line of Receiving Vats

ARE giving daily satisfaction in hundreds of up-to-date creameries and ice cream plants all over the country.

Like all *PURITY* equipment they are of high grade materials and workmanship. Of 5x tinplate or heavy tinned copper with heavy steel frames, they will stand *years of service.*

You need one of these sanitary receiving and storage vats. Let us tell you more about them.

Department E

CATTARAUGUS **NEW YORK**

O. & B. Purity Line Cattaraugus N.Y. U.S.A.

O. & B. Purity Twin Receiving Vat.

Dear Sir:—In our last run we used the following: 30 gallons 30% cream, 30 gallons skimmed condensed, 30 gallons 4% milk, 150 pounds sugar, 5 pounds gelatine. This mix gave us an ice cream that we believe had a much better body than the mix submitted you before; however, the overrun was exactly the same. Out of five gallons of mix we were only able to get eight gallons of finished product. We only aged twelve hours, however. Will try forty-eight hours this time.

We dislike to worry you so much in this way, but we are very anxious to get straightened out before spring, and would appreciate some information on above mix. On several occasions in aging our mix, we find little particles of ice through it. Do you think that this would hold our overrun down? Do you think it would be a good idea to heat this mix in order to melt the ice?

What do you think about the revolutions of our freezers—200 per minute? You advise that it would be a good idea to reduce our serum solids. Advise exactly how much.

Reply: I am showing in table one the calculations of fat and solids in your mix:

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
30 gal. or 249.0 lbs. 30% cream	74.7	15.50	90.20
30 gal. or 270.0 lbs. skim cond.	.....	72.90	72.90
30 gal. or 258.0 lbs. 4% milk..	10.32	22.04	32.37
150.0 lbs. sugar	.....	.....	142.50
5.0 lbs. gelatine	.....	.....	4.75
932.0 lbs. mix	85.02	110.45	342.72
Per cent	9.1	11.8	36.8
1—130 lbs. sugar			
912.0 lbs. mix	85.02	110.45	323.70
Per cent	9.3	12.1	34.9

This mix of yours is pretty well balanced except for the amount of sugar. I believe that one reason why you are not getting sufficient overrun is because you have it too heavy in solids, being almost 37 per cent total solids. Instead of using 150 pounds of sugar, I am suggesting below to use 130 pounds of sugar. This will make your total mix 912 pounds. The butterfat 9.3 per cent, serum solids 12 per cent and the total solids 35 per cent. This will give you a plenty heavy enough mix for a fine ice cream. If this mix is processed properly and aged thirty-six to forty-eight hours at a temperature of 40 to 45 degrees you should have no difficulty in getting 100 per cent overrun.

If you are still not getting the overrun after trying out these suggestions there is probably something wrong with the operation of your freezer and if you write to me about any further difficulty, I suggest you give me all the details relative to your method of freezing, giving length of time necessary to freeze, temperature of the brine and the temperature of your ice cream when you draw it from the freezer.

* * *

Dear sir:—What would be the best mix for a 10 per cent ice cream to be made from Holstein milk; that is, what to mix with 100 gallons of 3¼ Holstein milk to make the best commercial ice cream?

100 gallons of 3¼ Holstein milk, fresh
? lbs sweet butter
? lbs gelatine
? lbs chocolate flavor
? lbs sugar

What will be the output from this mix containing an 85 per cent overrun? The mix is to be run through a viscolizer and pasteurizer.

I am glad to suggest to you below in table 1 how to complete the ice cream mix using as a basis 100 gallons

Crown Fruit Products

The QUALITY FRUITS

for Discriminating Ice Cream Manufacturers

of 3¼ per cent milk. You will notice, however, that we have used in addition to the ingredients mentioned in your letter 46½ pounds of skim milk powder in order to use sufficient milk solids which you did not have without the skim milk powder. You will also notice that you should get 241 gallons of ice cream from this mix if your average overrun is 85 per cent.

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
100 gal. or 850.0 lbs. 3.25% milk	27.62	73.19	100.81
164.0 lbs. sugar	.....	.....	156.04
6.0 lbs. gelatine	.....	.....	5.70
46.5 lbs. skim powder	.....	44.13	44.13
106.8 lbs. butter	89.71	.....	89.71
1173.6 lbs. mix	117.33	117.32	396.39
Per cent	10.0	10.0	34.7

* * *

Dear Sir:—This being our first season we are in doubt as to whether our mix is proportionably correct and would like to know if you can suggest any improvement in same. For a 1,000 pound batch we use the following: 700 pounds 3.5 per cent milk, 115 pounds of butter, 140 pounds of sugar, 45 pounds skim milk powder, 5 pounds of gelatine, and 1 pound melovine. We pasteurize to 145 degrees, homogenize at 3,000 pounds, cool to 40 degrees, age 24 hours and get 90 per cent overrun.

Reply: I have made an analysis of your ice cream mix and you will find the calculations given below in table 2

Table 2.

Ingredients	Fat	Serum Sol.	Total Sol.
700.00 lbs. 3.5% milk	23.50	55.7	79.20
115.00 lbs. butter	96.60	.....	96.60
140.00 lbs. sugar	.....	.....	133.00
45.00 lbs. skim powder	.....	42.7	42.70
6.00 lbs. gel. & meloine	.....	.....	5.70
1006.00 lbs. mix	120.10	98.4	357.20
Per cent	12.0	9.8	35.04
Per cent sugar	14.0	.....	.....

There is absolutely nothing wrong with the component parts of your mix and you should have no difficulty in securing a very satisfactory ice cream.

NOW While the Time Permits

Have Your Cans Retinned

Let us quote you and finish up some samples

Thompson-Bremer & Co.

1750 Carroll Ave. Chicago, Ill.

Dear Sir:—I am using unsweetened condensed milk in this mix. Could I increase the total solids and serum solids by adding condensed milk and sugar? Will you give me three good formulas using the following ingredients?

Table one—unsweetened condensed milk, 8% fat; milk 4% fat; sugar, gelatine, butter 84% fat, and also milk powder.

Table two—Sweetened condensed milk 40 %, sugar, 4% milk, 84% butter, sugar gelatine.

Table three—Unsweetened condensed milk, 84% butter, 4% milk gelatine and sugar.

After we let our mix age for 24 hours the mix seems to get so thick that we have an awful time to get it to come out of the pipes. What is that caused from? I think that I am using too much condensed.. The above tables are all for a 12 per cent fat.

Reply: I am glad to suggest below in tables 1, 2 and 3, three standard mixes made up according to your suggestions, all of them to contain 12 per cent fat and properly balanced with serum solids and total solids.

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
14.0 lbs. sugar	.....	.....	13.30
.4 lbs. gelatine	.....	.....	.38
12.0 lbs. 8% cond. 26% T. S.	.96	2.16	3.12
2.0 lbs. skim powder	.....	1.90	1.90
10.2 lbs. butter 84%	8.56	.....	8.56
61.4 lbs. 4% milk	2.45	5.26	7.71
100.0 lbs. mix	1.97	9.32	34.97

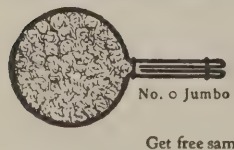
Table 2.

Ingredients	Fat	Serum Sol.	Total Sol.
7.6 lbs. sugar	.....	.....	7.22
.4 lbs. gelatine	.....	.....	.38
16.0 lbs. sweet cond. skim	.....	4.32	10.72
11.2 lbs. 84% butter	9.40	.....	9.40
64.8 lbs. 4% milk	2.59	5.53	8.12
100.0 lbs. mix	11.99	9.85	35.84

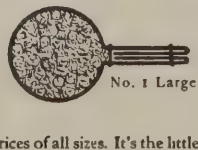
Table 3.

Ingredients	Fat	Serum Sol.	Total Sol.
14.0 lbs. sugar	.....	.....	13.30
.4 lbs. gelatine	.....	.....	.38
16.0 lbs. unsweet. cond. skim	.....	4.32	4.32
11.2 lbs. 84% butter	9.40	.....	9.40
64.8 lbs. 4% milk	2.59	5.53	8.12
100.0 lbs. mix	11.99	9.85	35.52

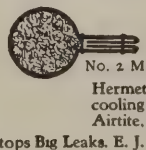
I believe you will have no difficulty in making a satfactory product with either of these mixes.



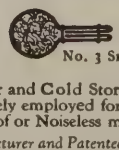
You stated in your letter that when your mix aged 24 hours it seemed to get too thick to easily pass through the pipes. You should have no difficulty in that respect with these three mixes suggested above.



* * *



Dear Sir:—Kindly criticise the following formula for mix. The first we intend to put on the market as an extra fine quality product. In your opinion is the fat content too high for a commercial grade?



Is it beyond the scope of your department to recom-

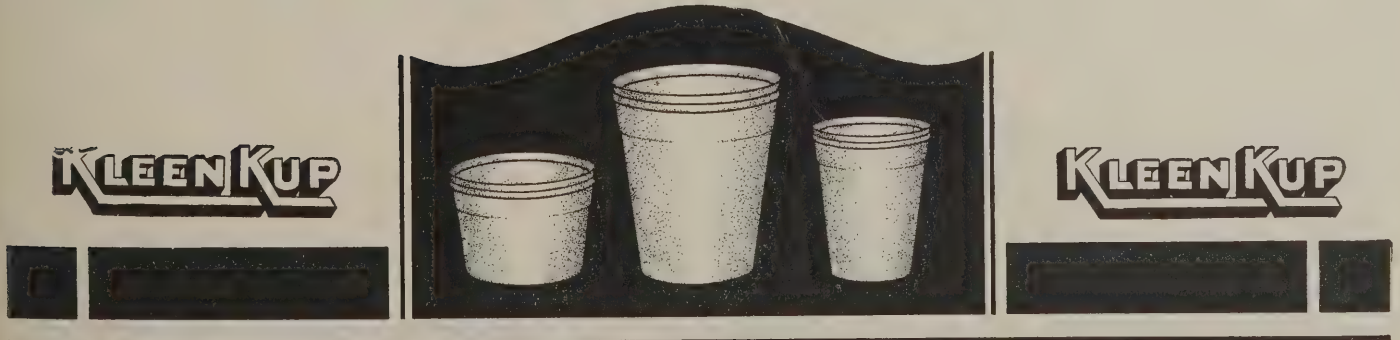
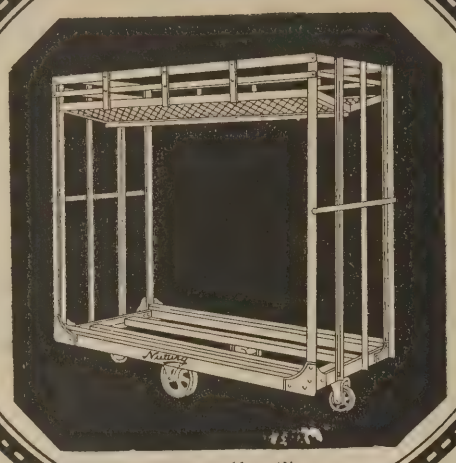
Yes! this is the package —



selected by the big fellows, in the ice cream industry, for packaged sundaes. No other paper package, compares favorably, either in construction or appearance. It's a quality package. The big fellows recognize the merchandising value of this package— they know it sells their ice cream — brings them additional profits.

The leaders in the industry are consistant users of Mono-made packages — not only in the sundae size, but the half-pints, pints, and quarts. With its great manufacturing plant, its unequalled facilities, the Mono Service Organization is the largest of its kind in the world. It has satisfactorily served the dairy interests for fourteen years.

Mono packages are better-made, correctly-made. They are packed and sealed quickly. Nest when empty — save storage space. Strong — give perfect service. Printed effectively in one or more colors with your own label or special design.



At no cost to you our package experts will assist you with your package problem. Send for samples and package suggestions. Our service covers every essential of modern package merchandising.

Nutting

Ice Cream Can Truck

Hundreds of Plants Use Them

The quickest, simplest way to handle your "empties" is provided by this Nutting truck. It saves many hours every week by speeding up can handling and moving.

Dirty cans are piled with open end out and slant upward to keep contents from spilling. Washed cans are piled with open ends in and slant down for quick draining. They are counted automatically and always ready to go. Top railing holds all covers.

Note these features. Built of structural steel. Heavily braced and riveted. Entire frame is **galvanized.** Large main wheels; ball bearing casters. **Flat faces** of wheels and casters save floors.

New Low Price. Fig. 106 (30x66 in.) Top rail included. F. O. B. Faribault or Chicago. **$52.00**
(less without cover-holding top rail)

Nutting Floor Truck Specialists Since 1891

mend vanilla flavoring or how a good blend can be produced at the factory?

Material	Weight	Lbs. fat	Total sol.
22% cream	1240	273	360
Sugar	250	...	250
Gelatine	10	...	10
3.4% milk	230	8	27
Cond. skim	270	1	73
Total	2000	282	720

Material	Weight	Lbs. fat	Total sol.
22% cream	1060	233	307
Sugar	240	...	240
Gelatine	10	...	10
3.4% milk	170	6	24
Cond. skim	520	2	140
Total	2000	241	721

Reply: Your first mix figures out 14 per cent fat and 36 per cent total solids with 12 per cent sugar. If I had any criticism on this mix of 12 per cent, it would be that you are trying to run the total solids too high and suggest that you could improve your mix and secure a better balance by reducing the concentrate skim milk so that your total solids will not be over 34 or 34½ per cent.

We have done so little work on vanilla flavor different blends of vanilla, that we are not in a position to recommend anything along this line. I have always thought it best that this matter be left largely to the discretion of each individual factory as it allowed a point where competitive factories can make their own individual flavor to the ice cream.

* * *

Reply to G. B.: After our conversation a little while ago, I figured out your ice cream mix as you gave it to me over the telephone.

You will find the calculations given below in table 1 where you will notice that the 68 pound mix figures out to contain 8 per cent butterfat and 26.8 per cent total solids, having only 10.3 per cent sugar. This low solids undoubtedly accounts for your ice cream being apparently as thin and raw as you explained it to me to day.

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
7.0 lbs. sugar	.....	.....	6.65
5.0 lbs. butter 84%	4.2	.....	4.20
16.0 lbs. evap. milk %	1.28	2.56	3.84
40.0 lbs. skim milk	.....	3.56	3.56
68.0 lbs. mix	5.48	6.12	18.25

I am suggesting below in table 2, a revision of your formula and I am making it for 100 pounds of mix which should yield 20 to 22 gallons of ice cream. I have made this mix to contain 14 per cent sugar and 34 per cent total solids. If you do not want to use the gelatine this can, of course, be left out and something else substituted.

Table 2.

Ingredients	Fat	Serum Sol.	Total Sol.
14.0 lbs. sugar	.....	.....	13.30
.5 lbs. gelatine	.....	.....	.47
16.0 lbs. evap. milk 8%	1.28	2.56	3.84
2.0 lbs. skim powder	.....	1.90	1.90
10.4 lbs. butter 84%	8.73	....	8.73
57.1 lbs. skim milk	.....	6.08	6.08
100.0 lbs. mix	10.01	10.54	34.32

I am sure, however, if you will use the ingredients as given in table 2 you will not have the difficulty which you explained to me over the telphone.

Saving Ice—Saving Salt
Saving Money on Deliveries

for the Makers of Dairy Made Ice Cream

Each of the 15 trucks in the delivery fleet of the makers of Dairy Made Ice Cream, at Paterson, N. J., delivers ice cream at the lowest possible cost per gallon. Perfect refrigeration, assured by an ABC Refrigerator Body on each truck, explains why.

ABC Refrigerator Bodies use less ice and less salt than any other refrigerator bodies. All brine is retained in the tank and circulated through coils of heavy iron pipe — again and again. This circulating principle, plus a one-piece brine tank bottom — an exclusive ABC Body feature—prevents the waste of good cold brine through running or dripping. Consequently less salt and less ice are required to keep ice cream, milk and other perishable products at the exact temperature desired.

Longer life and lower annual depreciation of ABC Refrigerator Truck Bodies are assured by their rigid, composite construction. Sills and framing are of oak and maple. Pure corkboard insulation, set between two layers of heavy, waterproof insulating paper is used. There is a copper bottom and side lining in fresh ice compartment.

ABC Refrigerator Truck Bodies are adaptable to any type or size of chassis from 1-ton to 7-ton capacity.

Dairy Refrigeration

Continuation of an Important Topic by a Recognized Authority

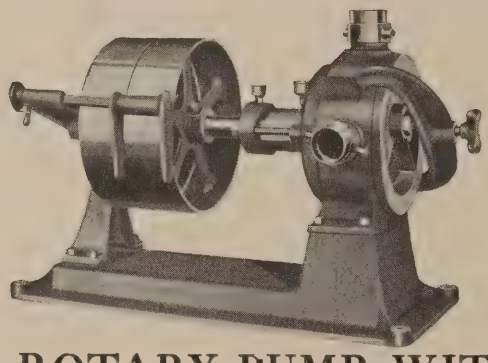
By F. B. FULMER

THE condition or state that we term cold is a negative form of molecular energy. It is supposed to represent a slower action of the molecules of any particular substance, and the slower the rate of vibration or movement, the colder the substance will be.

The production of artificial cold may be effected by three methods: Solution, Evaporation and Expansion.

Cold by Solution.

If one part of ammonium chloride and two parts of ammonium nitrate, by weight and in a pulverized form, are dissolved in three parts of pure water at a temperature of 40 degrees Fahr., a very cold solution will result. If the solution is stirred with a test tube in which a little water has been placed, the water in the test tube will be quickly frozen. A thermometer placed in the solution will register a temperature of approximately 15 degrees Fahr., which is 17 degrees below the freezing point of pure water.



If a hand full of common salt is mixed with a pint of water at ordinary room temperature and the solution is stirred with a thermometer, a fall of several degrees will be noted. The breaking up of the crystals of a solid require a certain amount of heat, and the rapidity with which the breaking up occurs determines the result. In the case of the salt crystals, the molecules at the surface, due to their velocities, have a tendency to pass off, but the attraction of the other molecules tends to hold them back and as the latter attraction is the stronger the substance retains its form for the time being. When the salt is placed in the water the attraction of the water molecules for the salt molecules aid the latter to pass beyond the attraction of the other salt molecules, but not at a rapid velocity and as the attraction of the salt molecules diminishes the attraction of the water molecules increases, after which a breaking up occurs; the one form of attraction works against the other, which results in a slow molecular action and a certain degree of cold occurs. Sugar and water will produce the same action. On the other hand if the attraction of the water molecules is much stronger than the backward pull of the dissolving molecules, as with potash or lime, the molecular velocity is increased and heat is produced in the solution by the more rapid action, hence the cause of the steaming and the apparent boiling when quick lime is "slacking." The molecular attraction is so great between water and sulphuric acid that when equal parts of those two substances are mixed at ordinary room temperatures the resulting soultion is heated to near the boiling point.

THE principle involved in producing cold by solution is put into practical use when crushed ice and salt are mixed together to freeze ice cream, or to harden and keep it firm after freezing has occurred. By mixing three parts of finely crushed ice and one part of salt a temperature of zero may be obtained. In practice for ice cream work the proportion of ice and salt is usually not more than one part of salt to eight or ten parts of ice.

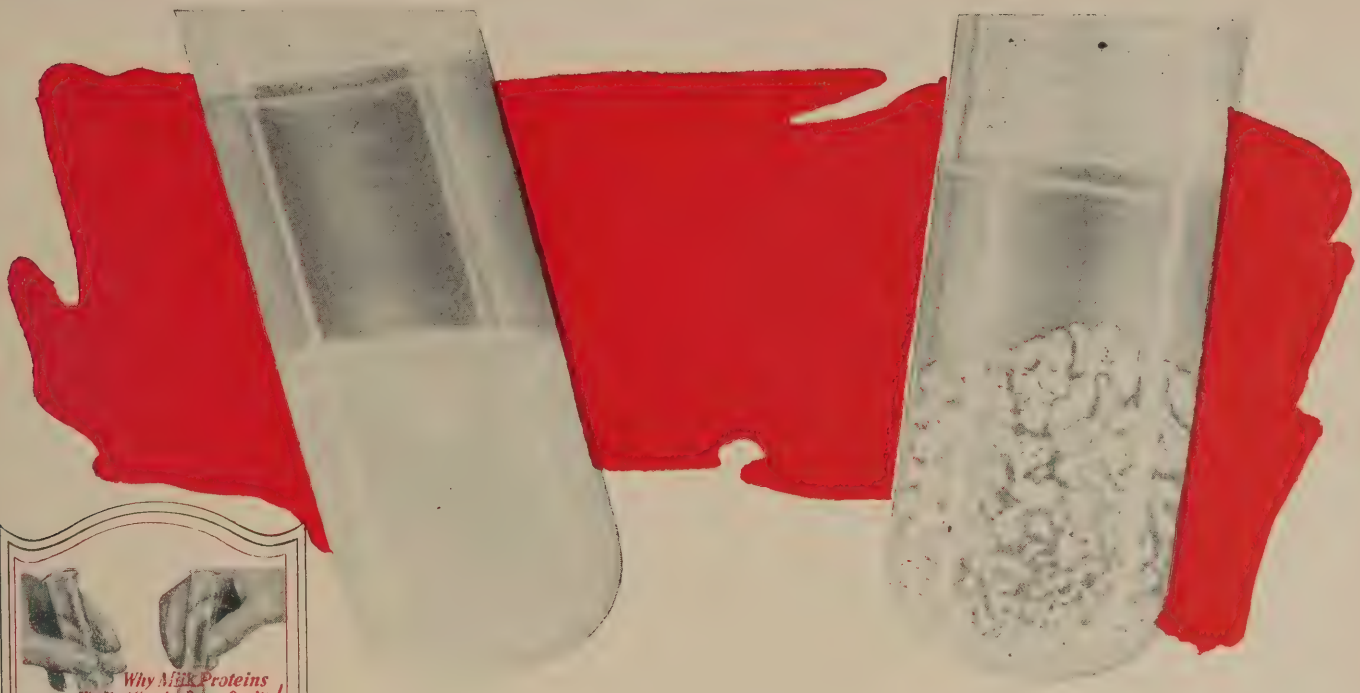
The ice used will contain a certain amount of latent (cold) energy, and the same amount of heat will be absorbed if it were allowed to slowly melt, but the attraction of the salt for the moisture contained in the ice creates an exceedingly strong chemical affinity, resulting in a rapid breaking down of the ice, which liberates the latent energy in a short period of time and accomplishes a large amount of work. A pound of ice contains 144 B. T. U. of cold energy and if it were allowed to slowly melt, covering a period of several hours the refrigerating effect produced would be very small, as it would be gradually diffused throughout the surrounding atmosphere, but when the melting is confined to a period of a very few minutes, the latent energy is concentrated and the resulting temperature may be as low as the zero point.

The result of the chemical combination of salt and ice is a strong brine with a temperature below the freezing point, depending on the degree of concentration and in some small plants this method is used in freezing ice cream. After the ice cream has been frozen it is packed in tubs or specially constructed wooden boxes, which are deep enough to allow about three inches of crushed ice and salt to be placed over the tops of the ice cream cans. The cans are placed close together and the intervening spaces are firmly packed with the ice and salt mixture. When well packed, with a three-inch layer on top, the ice cream will harden in about three hours' time.

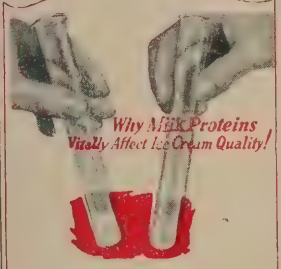
When ice cream is held any length of time by the ice pack method, care should be taken to recover as much useful work out of the brine as possible. When the brine first forms from the action of the salt upon the ice, it is near a temperature of zero, and under ordinary

A ROTARY PUMP WITH HIGHER EFFICIENCY

Operating at a low R. P. M., and with a minimum power requirement, the Viking Rotary Pump delivers an unusually high efficiency, even under extremely difficult conditions.



Built ruggedly of best materials and involving an improved pumping principle, the Viking has become the universal choice for every pumping purpose.



Could you ask for greater proof of what the Viking will do in your plant than that over 50,000 are now in successful use?

New, enlarged catalog, showing Vikings for every use, mailed upon request. Ask today.

Here are two test tubes. The milk used in each is identical. But note in the test tube on the left how Gumpert's Ice Cream Improver has worked on the *Casein, so that it is soft, fluffy and easily digested. Then note the other test tube. See what happens when Gumpert's is absent—the *Casein is tough, stringy and indigestible.

(*Casein precipitated by Van Slyke Method)

Scientific Proof That You Can Make Better Ice Cream

YOU can produce ice cream of better quality through control of a vital factor—*the soluble proteins.* In milk, which plays such an important part in ice cream production, the composition consists of from 84% to 90% water, and 10% to 16% "solids." These "solids"—the Casein or protein —are important in determining the quality of your ice cream.

Now You Can Control This Elusive Factor

Note the results shown in the test tubes. Observe what happens to the Casein (protein), when Gumpert's Ice Cream Improver is added. Just as Gumpert's Ice Cream Improver softens the Casein in milk when precipitated by the Van Slyke Method, so when Gumpert's is added to your mix *it softens the milk solids.* That's why when Gumpert's is used, it produces ice cream of a velvety smoothness and richness.

Use It 365 Days A Year

For ice cream of wonderful richness of taste, ice cream that will create a bigger demand and larger profits—unvarying quality is essential. To obtain it you should *use Gumpert's Ice Cream Improver every day in the year, winter as well as summer.* Over 2000 leading Ice Cream manufacturers are profiting by this method. They are making ice cream uniformly superior in quality.

If You

Are not now using Gumpert's Ice Cream Improver, we will be glad to send you a generous sample.

Bush Terminal Brooklyn, N. Y.

Gumpert's *Ice Cream Improver*

conditions the brine should not be drawn off oftener than twice during the day of twenty-four hours, and where care is taken, it may require only one drawing each day.

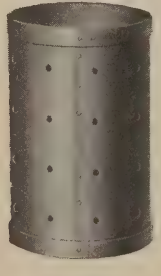
WHENEVER the human body, under healthy conditions becomes heated above its normal temperature, nature at once stimulates the functions of certain glands and the resulting action is termed perspiration: a watery substance is deposited on the outer surface of the skin, which evaporates and produces a cooling effect, lowering the temperature of the body to its normal point.

The faster the evaporation occurs the quicker the change in temperature takes place and the greater will be the cooling effect produced. The circulation of air has a marked effect on the rate of evaporation. The drying effect of the wind on the roads after a rain fall and on the wet clothing hanging on a clothes line, which soon dries in the breeze, are well known illustrations.

When a small amount of ether is placed on the palm of the hand, it will evaporate rapidly and produce a mild sensation of cold. If a current of air is forced upon the palm of the hand and the evaporation is intensified, the cooling sensation is more pronounced. By taking an ordinary floating thermometer, wrapping some cheese cloth around the bulb, saturating the cloth with ether and forcing air upon the bulb of the thermometer by blowing the breath through a milk pipette, the temperature registered by the thermometer will fall very rapidly, and if the blowing is continued long enough a temperature as low as 12 degrees Fahr. may be obtained, which is 20 degrees below the freezing point, and this in face of the fact that the breath from the body is at least 80 degrees warmer than the temperature registered by the thermometer.

THIS principle of cooling by evaporation is made use of in warm climates to keep articles of food in good condition. Boxes with open sides are set out of doors and covered with burlap and water is allowed to trickle down the sides to keep the burlap moist all the time. The wind passing through the moist burlap causes a rapid evaproation of the water and this in turn cools the air on the inside of the box which contains the articles of food. Butter will remain firm in the hottest of summer weather, milk will keep cool and sweet and evegetables will be fresh and crisp.

On the plains of tropical India where the wind blows with considerable velocity all the time, water has been cooled in large porous vessels to a very low temperature, and at night time when the vessels are placed on a layer of straw to insulate them from the earth and the rapid evaporation caused by the winds will, according to authentic reports, result in the formation of ice.



WHEN a gas is compressed a certain amount of heat is generated and the initial temperature is correspondingly raised. When the compressed gas is allowed to re-expand to its original volume it will absorb practically the same amount of heat as was generated by compression, and if no heat has been lost by radiation or any absorbed by the mechanical appliances used for compressing, the re-expanded gas will have the same temperature that it had at the beginning. This is somewhat analogous to a coil spring returning to its original position after the pressure of weight has been removed.

However, on the other hand, if the compressed gas has some of the heat abstracted from it, that was formed by the action of compression, it will have to absorb heat from some source whenever it is allowed to re-expand. The amount of heat that is absorbed will be practically the same as was given up during the cooling process. From this it follows that the lower the temperature to which the compressed gas is cooled, the greater will be heat absorbing properties when it is allowed to re-expand. This is the fundamental principle involved in mechanical refrigeration and will be considered later.

This principle is made use of when bottled drinks are put up under pressure. When the stopper is removed the confined air (or gas, as the case may be) is allowed to expand and a cooling effect is produced. If confined air is allowed to expand into a vacuum no work is done and the temperature is not changed. When compressed air is allowed to suddenly escape from confinement the water vapor that is associated with the compressed air will form icicles around the place where it escapes.

---She Waited an Hour in California for "That Delicious Velvet Walnut Ice Cream"

—Read What Mr McColl Says:

JOHN B. McCOLL
CONFECTIONER
510 MARKET STREET
REDDING, CALF

August 4, 1924

The International Company
Baltimore, Maryland.

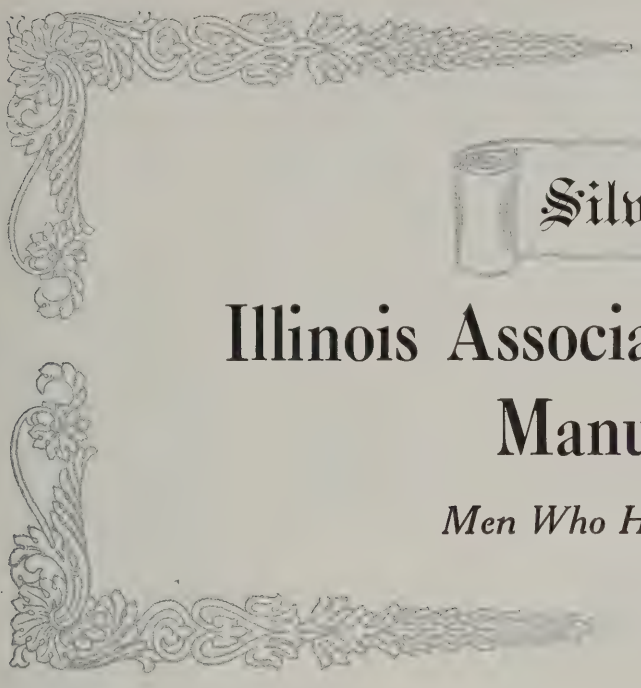
Gentlemen:

I have a strictly retail high class business, and can truthfully say that my trade is wild over Black Walnut ice cream.

A great many tourists pass through our town, which is on the Pacific Highway, only the other day a lady came in and asked "Is this the store that makes the famous Black Waluut ice cream?" I told her it was. She had heard about the ice cream somewhere in Oregon, and although going through, waited over an hour until a batch was frozen to get a dish. She thought it delicious.

Personally, I like it very much.

Very truly yours,



John B. McColl

Made with those big, plump black walnut meats, chopped and mixed with famous Velvet Black Walnut Flavor blending perfectly with the rich cream!

Illinois Association of Ice Cream Manufacturers

Men Who Have Stuck to the Guns

TAKING place this month is an event that should hold the interest and most thoughtful consideration of every ice cream manufacturer in the land. It is the silver anniversary jubilee of the Illinois Association of Ice Cream Manufacturers. Members of the industry in that state will gather in Chicago and look back upon 25 years of exceedingly constructive work.

In this issue we are relating something of the achievements of the Illinois association, the industry's oldest organization. Its record stands high as a lamppost of opportunity to ice cream men in other states.

The high position of the state of Illinois in dairy production, particularly in the manufacture of ice cream, is well known throughout the industry. Illinois holds third position in the production of ice cream. This is largely due to the good work that has centered around the activities of the Illinois association, for in its membership are men who, year after year, are constantly forging ahead with advanced business manufacturing methods and sales practices.

HOW many of us who are thoroughly sold on the association idea often have wished for some concrete example to cite to the man who does not believe in supporting his association. The men of Illinois give us a ready answer.

When a man yawns and says, "Oh, the association business is not worth while," we can reply, "See what the Illinois association has done."

An unfair competitor says, "Oh, what's the use of bothering with this association stuff? Nobody is sincere. Everybody wants all they can get." The reply can be, "Look at the Illinois association." To the man who is too busy to go to the convention we can say, "Look at the Illinois association, with a membership of men ranking right at the top of the 'big' ice cream manufacturers of the country."

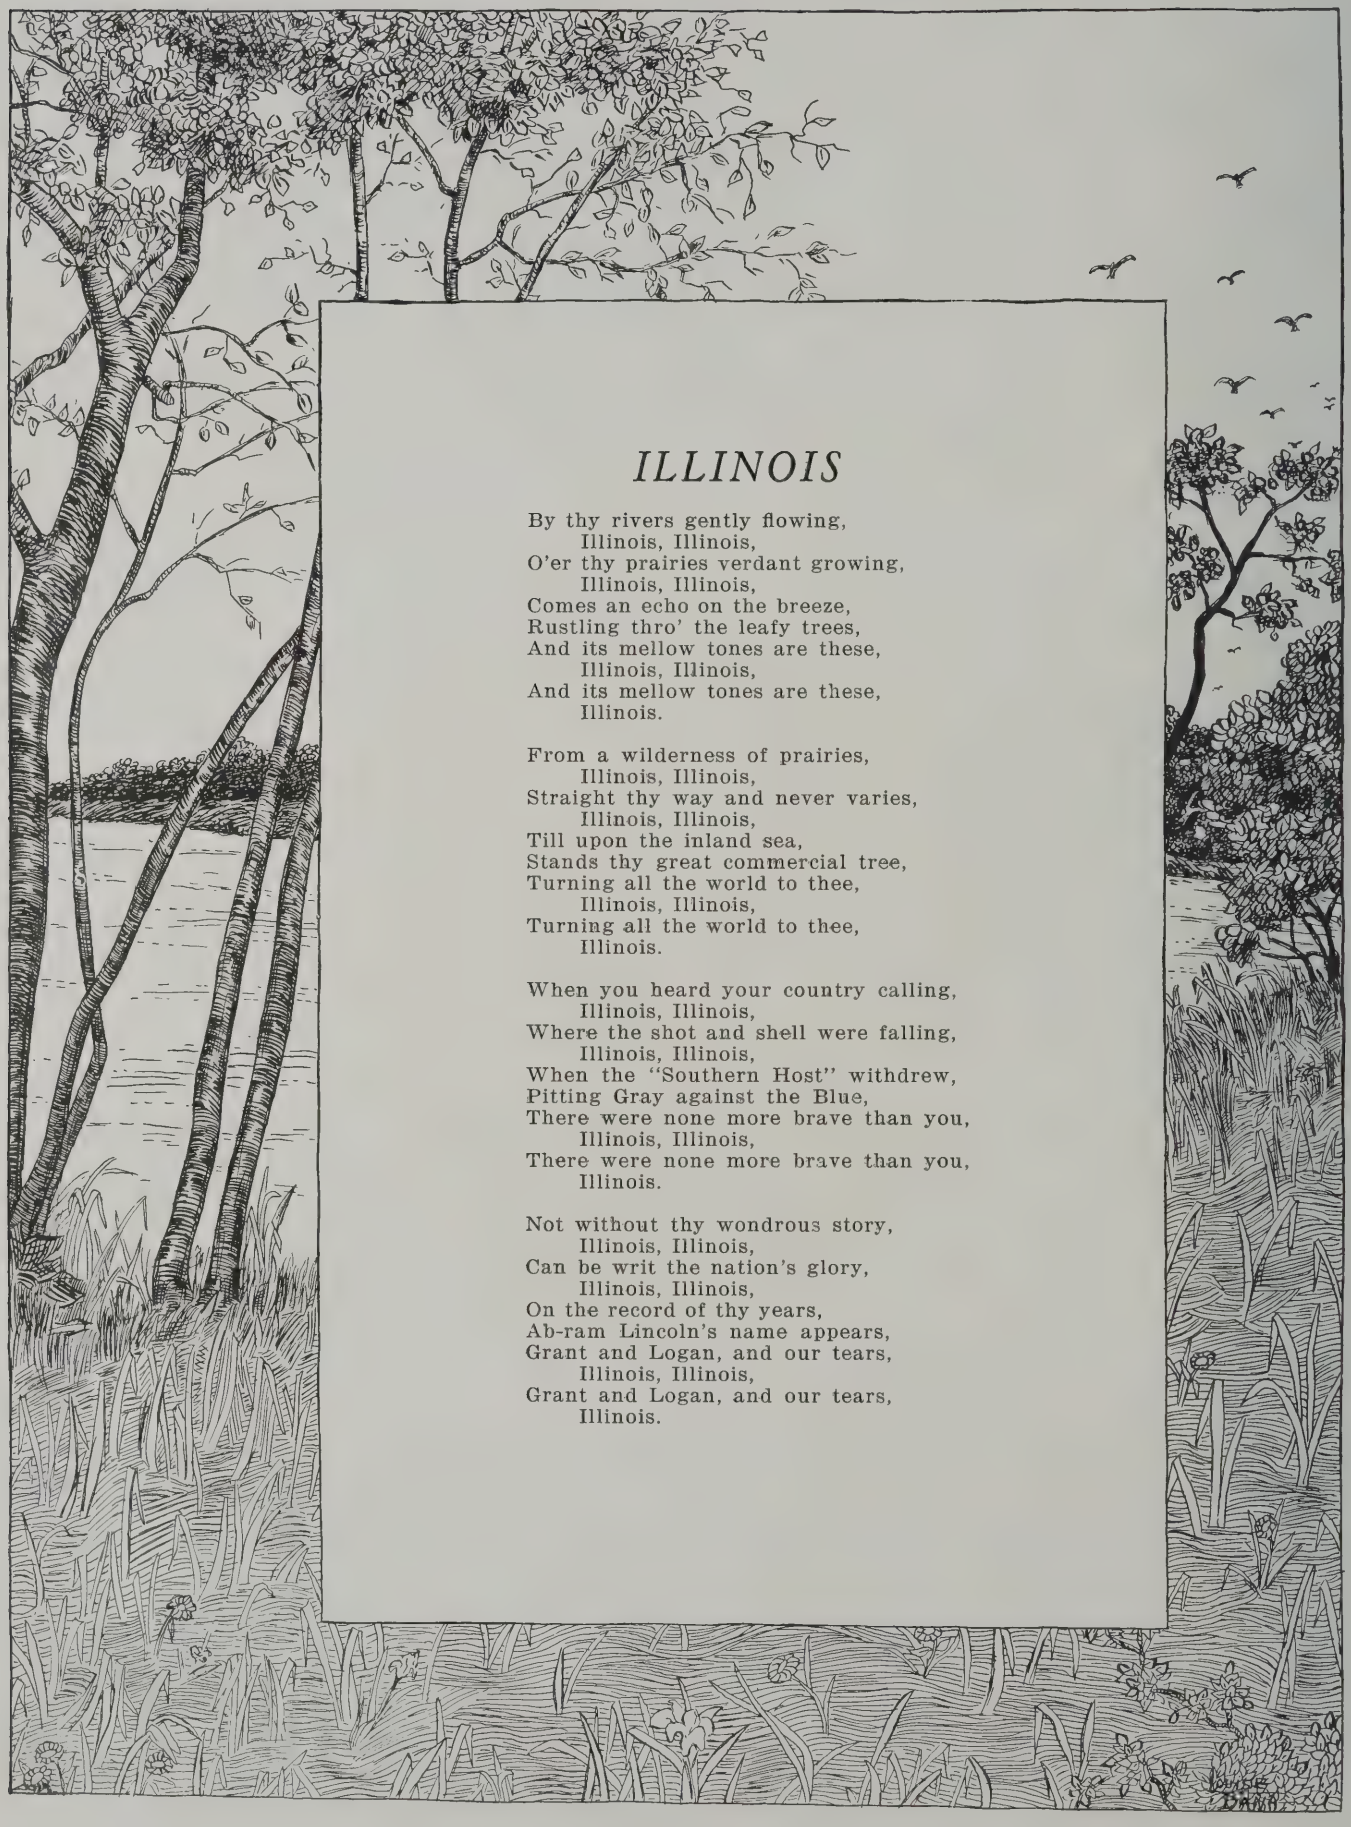
A record of 25 years of constructive service will be celebrated this month. In that space of time the Illinois association has shown the men who didn't have time to attend conventions that it was good business to take the time.

THE Ice Cream Review extends the heartiest congratulations to this singularly useful body of men. And in conveying our respects we feel sure that we speak for the industry as a whole. There is no doubt that every ice cream manufacturer who understands the importance of associated effort in work to promote this industry's welfare is deeply interested in this silver jubilee.

Through 25 years of problems and crises the Illinois gentlemen have held to faith in each other and have weathered every storm that has arisen, every wind that has blown. This is a lesson many of us should take deeply to heart. We do not know just how largely this meeting will be attended. The Illinois association, naturally enough, is expecting a large attendance from manufacturers in that state. Officials have mailed invitations to leading manufacturers in many parts of the country.

BUT it is deeply to be hoped that when the president sounds his gavel at the opening session there will be full realization among the men present that an event of great import will be about to take place.

Gentlemen of Illinois, congratulations.



Gentlemen of the silver jubilee, the ice cream industry is fully conscious of the great honor that is yours, and shares with you the great pride you must feel in this hour of high achievement.

All the world loves and honors men who stick to the guns and hold to the faith that will not be denied.

You have stuck to the guns.

You have held to the faith.

Your victory is ours.

ILLINOIS

By thy rivers gently flowing,
Illinois, Illinois,
O'er thy prairies verdant growing,
Illinois, Illinois,
Comes an echo on the breeze,
Rustling thro' the leafy trees,
And its mellow tones are these,
Illinois, Illinois,
And its mellow tones are these,
Illinois.

From a wilderness of prairies,
Illinois, Illinois,
Straight thy way and never varies,
Illinois, Illinois,
Till upon the inland sea,
Stands thy great commercial tree,
Turning all the world to thee,
Illinois, Illinois,
Turning all the world to thee,
Illinois.

When you heard your country calling,
Illinois, Illinois,
Where the shot and shell were falling,
Illinois, Illinois,
When the "Southern Host" withdrew,
Pitting Gray against the Blue,
There were none more brave than you,
Illinois, Illinois,
There were none more brave than you,
Illinois.

Not without thy wondrous story,
Illinois, Illinois,
Can be writ the nation's glory,
Illinois, Illinois,
On the record of thy years,
Ab-ram Lincoln's name appears,
Grant and Logan, and our tears,
Illinois, Illinois,
Grant and Logan, and our tears,
Illinois.

Illinois Silver Jubilee

Twenty-five Years of Constructive Co-operative Work to be Celebrated This Month by Illinois Association of Ice Cream Manufacturers. Industry Honors Oldest Association

HONORS hang high for the Illinois Association of Ice Cream Manufacturers as members of that body prepare for their association's silver jubilee, the 25th annual convention, which will be held in Chicago October 28 and 29, with Hotel Sherman the convention headquarters.

A record attendance is the outlook. Men prominent in the industry in all parts of the country are expected. A program in keeping with the spirit of the occasion, and particularly bearing upon timely trade topics, has been prepared. It will be a typical Illinois program, which is to say it will provide for an interesting and constructive convention. Men who have been identified with the association for many years, several of them charter members, will speak.

R. W. WOODHULL,
First President Illinois Association.

The oldest state association in the country, the Illinois body, long has led the way for other state organizations. Letters of congratulations have been received by officials of the veteran association from all sections.

Among the subjects to be discussed are refrigerated cabinets and fountains, service charges, motor truck delivery, co-operative advertising, cost accounting, and bulk goods versus package goods.

THIS will be one of the outstanding conventions of the year. As time draws near for the event charter members are reminded of the growth of the association since the early days, when the body used to meet, "small in numbers but great in enthusiasm," to quote Hon. Ross A. Woodhull, first president of the association, who spoke at the 1923 meetings.

At last winter's convention this man, who had the honor to be the Illinois association's first president, had much to say of the early history that will be of interest at this time. The attitude of the manufacturers in the early days was explained when Mr. Woodhull said:

"The ice cream industry was little thought of and little noticed until by force of its importance in our lives it gained recognition, and when it reached the proportion as to gain that recognition, it then received the attention of the legislators and of those charged with the responsibility of safeguarding the food supply of the people.

"THE ice cream men, I think, up to that time, were absorbed in the idea of developing their business to a profitable stage. They were not unmindful of the safeguards that they might throw around their products, but because of the lack of understanding, and the lack of appreciation of the problems that confronted those in the business, the progressive mind in shaping legislation and in drafting rules and regulatory measures were slightly in advance of the industry." However—

"As time went on, little by little, as science developed possibilities, we finally attained a point where we can measure up to all the requirements imposed upon us."

But with regard to those early problems, the first president assures all who were not in the business 20 and 25 years ago that—

"At the time of the great revelation of possibilities, scientific and otherwise, many men in business, because of limited capital, and perhaps limited understanding and limited organizations, were not in position readily and immediately to adjust themselves and meet the requirements, and it was the force of the necessity of the hour that gave birth to the organization.

"YOU know they all say that we are indifferent to the things around us until they vitally affect us, and I think that is quite generally true. I think in the main we are all selfish. I think we are all occupied with our own ambitions and desires, and we don't lend our

Illinois Industry Has Made Great Progress Through Its Association

*By L. W. ROSZELL**

THE Illinois Association, I believe, has the distinction of being the oldest state organization in existence, and was the forerunner and the basis upon which was founded the national association, the first meeting of ice cream manufacturers being held in Peoria, about twenty-five years ago. This meeting was attended by a few leading manufacturers in this section of the country. An association was formed which developed into the old Three-I Association of Ice Cream Manufacturers, meaning Illinois, Indiana and Iowa.

It later became known as the Central States Association, and out of this came the great national organization we now have; so Illinois has always been in the forefront in association matters.

I do not think that any industry can thrive without an upstanding trade organization. I believe that the ice cream industry has made greater progress since the founding of the trade organizations in the various states and the national organization than they would have made in a great many years without this stabilizing influence in that particular industry.

No man today, engaged in any business in which there is a creditable trade organization, can afford to do business without belonging to that organization, and merely belonging and paying yearly dues does not discharge the full obligation of any man to his business.

TO BE worthy of a place in the sun in any business or industry there is a certain obligation that we owe to that business of putting something into the business that is of a benefit to the industry in a general way.

Selfishness in any industry reacts directly to those engaged in it, and, in my opinion, the biggest and strongest and most solid businesses in the United States today are those in which broad-minded and broad-visioned men have put into that industry the best that was in them and have not attempted to cover up and to withhold from the business those things that go to promote better and bigger understanding of the industry in which they are engaged.

IN ADDITION to the above mentioned, a number of manufacturers and supplymen have announced their intention of making the trip, however, up to this writing have not received their direct application. All manufacturers' and supplymen's attention is called to the fact that it is necessary for them to make reservations on or before the 20th of September, after which date the unused space on this famous "S. S. Heredia" will be released for open sale to the public and it is hoped that all who expect to make this cruise will communicate with Transportation Manager B. J. Schilling, 620 Marquette Bldg., Chicago, Ill., advising reservations desired.

The above and attached in accordance with your request of recent date and trust you will give it all the publicity possible.

STEAMER LOAD GOING TO DAIRY SHOW.

Widespread Interest Indicated in Pacific Dairy Show.

Evidences of widespread interest in the Pacific Slope Dairy Show, to be held in Oakland, December 10 to 16, are forthcoming daily, according to announcement by the management.

Ice cream manufacturers and dairy people of British Columbia, Washington, Oregon and Idaho are planning to come to Oakland on an ocean liner. News to this effect has been received from J. H. Kugler, secretary of the California and Southwestern States Ice Cream Manufacturers' Association, who recently visited in Seattle and conferred with President W. S. V. Robb of the Pacific Ice Cream Manufacturers' Association.

Manager Robert E. Jones has just returned from a visit to Southern California and reports that interest in the South is just as keen as in the Northwest. Several hundred people of the dairy industry will visit Oakland from the Southern part of the state. Many of them will drive up and it is planned to have at least one special train.

Much interest is being exhibited this year in the dairy products competitive display. This department of the show will again be in charge of Professor Grover D. Turnbow of the California College of Agriculture staff. Professor Turnbow is now at work, with Dr. C. L. Roadhouse, president of the show association, on the premium list for the 1924 show. Before the opening of the Oakland exposition, Professor Turnbow will make a trip East to gather entries; and also a trip into the Pacific Northwest. Last year dairy products exhibits represented the largest assemblage of dairy products and competition in the United States. It is hoped to break a record this year.

An evidence of the widespread interest in the Pacific slope show is the fact that already inquiries are being received for entry blanks and premium lists from East-

Achievements of Illinois Association

*By F. J. BRIDGES**

AS TO what is the mission of an organization such as the Illinois Association of Ice Cream Manufacturers, and what it means to the ice cream industry of the state, would say that this organization means the same to the ice cream industry of this state as any other well organized and conducted association of manufacturers and business men invariably means to any industry.

There is no doubt that greater progress has been made in all lines of endeavor since the time that businessmen became fully aware of the value of organization. Organizations, such as the Illinois ice cream manufacturers' association, provide means for the dissemination of information of value to the industry and the individual.

It is the means by which progress is brought about for the benefit of all concerned. It means that each individual member, if they have their eyes and ears open, can save much valuable time by adopting ways and means in conducting their business as discussed in the meetings of the association, and thereby save money in the operation of their plants, which, of course, means added profit, elimination of waste and lost motion.

ANY manufacturer who will admit that he hasn't arrived at the point where he knows more about the ice cream industry than anyone else in the country should attend this and other ice cream conventions; as there are constantly new problems arising in the business and new thoughts to solve them. On the other hand, even if a manufacturer finds that on a majority of the questions his own opinion has been correct, there is a certain satisfaction in having that proved to him by contact with other straight-thinking manufacturers in the same line of business.

The Hydrox Corporation, while it has been in business for over thirty years, really dates its span of life from 1914, the year the business was acquired by the president, T. H. McInnerney.

OUR plans for increasing our gallonage are not unusual or different from what they have been in the past years; simply to keep on making the best ice cream we know how to make, giving the best service that it is humanly possible to do, and giving the dealer the highest form of merchandising co-operation.

These methods have always given us a handsome increase in our gallonage in the past and we have every reason to believe that as ice cream dealers see the effects of our policy all around them they will continue to increase our business every year to our own satisfaction.

* With the Hydrox Corporation, Chicago.

CONGRATULATES ILLINOIS ASSOCIATION OFFICERS ON ANNIVERSARY IDEA.

Jacksonville, Ill., Sept. 17, 1924.

I want to congratulate the officers of the Illinois Association of Ice Cream Manufacturers for the happy thought of getting together the manufacturers of the state and celebrating in a sane manner the Silver Anniversary of the organization. It cannot help but make a favorable impression on the public who are fast being sold the fact that ice cream is a daily food.

As I understand, the mission of the organization is to develop and broaden each individual in his membership so that the individual will reflect the spirit and standing of the association. This will be shown in his daily conduct as a citizen, who is able, ready and willing to take his place in his own community as an outstanding individual, who will take the lead in all matters that make a better city to live in.

His responsibility to the association will cause him to make a better product, to have better buildings and more modern equipment.

These are the main reasons why a manufacturer should attend the annual state convention, as every problem of his business, from advertising to refrigerated cabinets and fountains, will pass in review, be surveyed and analyzed, and every member will contribute something, and take back something in return.

I have been in the business here in this city for thirty-one years, and always try and attend all of our state conventions, and some of the national conventions, as I regard it as a simple duty for each member.

Very truly,

J. W. MERRIGAN.

STEAMER LOAD GOING TO DAIRY SHOW.

(Continued from page 54)

ern states. The first inquiry came from Fred C. Stapel of Edgar, Wis., who will exhibit.

W. B. Hopkins has been added to the staff as assistant manager of the show. Mr. Hopkins is now traveling throughout California on organization work. He is a man thoroughly experienced in the dairy industry, and has been for many years a director of the California Dairy Council.

Word has been received that San Luis Obispo county will enter the show competition this year. The exhibit will be in charge of Farm Advisor Frank T. Murphy.

Manager Jones also announced on his return from Sacramento that Sacramento county will be in again this year. The exhibit will be in charge of Jack Reid, exhibit manager for the Sacramento Chamber of Commerce.

⚜

Harry Ever was up to the exposition from Birmingham, all smiles over again being connected with the Southern ice cream industry, particularly since the South is the home of his bride, the daughter of the secretary of the Dixie Flyers.

⚜

Byron Morris was helping the Dixie Flyers talk up the New Orleans convention in November. It is noticeable that the Dixie Flyers boost just as earnestly for the success of the national convention as for that of their own Southern association. This is fine spirit. Many other people in the industry will do well to take note of that spirit.

⚜

Anyone who studies the advertisements in this paper does not have to be told that it is a profitable habit. He collects the profits daily.

Pioneering With the Illinois Association

A Review of the Association's Activities

*By JOHN T. CUNNINGHAM**

THE first association was named the Three-I's, designating the three states, Illinois, Indiana and Iowa. I attended a meeting of the new Illinois association at Joliet in 1899, and have been in attendance at every meeting or convention since. The Three-I's was afterward merged into the national association, of which I was made president at the famous convention at the old Grand Pacific Hotel in Chicago, in 1907.

Previous to this I was chairman of the food law committee, and at the time of the promulgation of the food and drugs act of June 30, 1906, was delegated to meet with the food officials at New York City.

Afterward I had an appointment with Dr. Wiley, chief of the Bureau of Chemistry, at Washington. This was the commencement of a long and expensive battle in the interests of the manufacturers as to definitions and standards for ice cream, which, to this day, evidently is not fully cleared up.

The controversy was waged on no-standard, minimum standard, definitions, and the so-called Wiley Standard, and we met with the standard officials seven different times, in seven different cities. During this time we were defending cases connected with this matter all over the country.

WE SPENT a lot of time and a lot of money. But that is history, except that I might add that it led to all this talk and argument about "the government standard." I was, as I said, chairman of the food law committee, and, for my part in the matter, was chosen as president of the national association, and was re-elected for another term.

I have been engaged in the manufacture of ice cream continuously since 1887, and have seen the industry grow from a matter of 250,000 gallons a year then, to over eleven million gallons in the city of Chicago alone.

I am pleased to say that my own business has about kept pace with this growth.

In view of the above work, which was pioneered by the "old guard," I believe that the whole-hearted support and loyalty is due both the state and national organization.

* One of Chicago's leading ice cream manufacturers.

ILLINOIS MANUFACTURERS OWE MUCH TO ASSOCIATION.

The Allen Ice Cream Company has always tried to do everything to aid and promote our state organization, and now that the twenty-fifth anniversary of this association is soon to be celebrated, we feel that we cannot say enough in trying to encourage every ice cream manufacturer of the state of Illinois to attend this convention, whether a member or not. I am sure if non-members do attend they will become so enthused with the active membership that they will become one of us.

We will, of course, be well represented, as we always are, and, while perhaps we are better listeners than talkers, we have always found there have been some lasting impressions made at every meeting of our state association.

Before closing, I might add that The Ice Cream Review is a source of much interest to us and the co-operation of this publication has no doubt helped in bringing together ideas and suggestions of ice cream manufacturers which has helped us all.

Association work is bound to put any legitimate business in a prosperous way and we know, personally, the Illinois association, with its friendship of members and co-operation, has practically doubled the gallonage in Illinois, and if the proper enthusiasm is taken in the future in this association work I am sure it can be doubled again in five years.

Yours truly,

ALLEN ICE CREAM CO.,

Per Geo. R. Courtright, Secretary.

DAIRY REFRIGERATION.

(Continued from page 44)

If a cylinder of carbon dioxide has a stop valve on one end and it is slightly opened so as to allow a small amount of the confined liquid to escape into a cloth bag, rapid expansion will follow and the intense cold produced will freeze the escaping liquid into a snowy white solid, which in turn will evaporate very rapidly, and a temperature as low as 100 degrees below zero on the Fahrenheit scale has been obtained by this method. Also, if a little anhydrous ammonia under a pressure of 100 pounds per square inch is allowed to expand through a small valve and the expanded gas is allowed to escape into the atmosphere through a small iron pipe, the cold produced by the escaping gas will form frost on the pipe in a very short time, though the pipe is exposed to direct sunlight on the warmest day in summer.

Table of Freezing Solutions and the Resulting Temperatures.

Parts of		Temperature falls from	Total fall
Snow 1	Salt 1	32 to 0	32 degrees
Snow 3	Dilute sulphuric acid 2	32 to —23	55 degrees
Snow 3	Hydrochloric acid 5	32 to —27	59 degrees
Snow 7	Dilute nitric acid 4	32 to —30	62 degrees
Snow 4	Muriate of lime 5	32 to —40	72 degrees
Snow 2	Chloride of calcium crystals 3	32 to —50	82 degrees
Snow 3	Potassium 4	32 to —51	83 degrees

The dairy industry's five-million dollar show in Milwaukee gave National Dairy Association officials much food for thought. Even at this time speculation is running high as to how great will be the interest in the 1925 exhibit. The interest is indicated by the fact that about twenty cities are preparing to open campaigns for the next dairy exposition.

NOTES ON ILLINOIS

Illinois is One of the Ranking States in Dairy Production

ILLINOIS' greatness in dairy manufacturing is indicated by dairy figures for 1923, issued by the U. S. Department of Agriculture. It is generally known that Illinois ranks in third place, just behind Pennsylvania and New York, in the manufacture of ice cream. Manufacturers of that state last year produced 12,391,000 gallons of ice cream. The creameries produced 47,249,000 pounds of butter. The state produced 5,124,000 pounds of cheese, and 2,269,000 pounds of evaporated milk.

* * *

N. LOEWENSTEIN has been secretary of the Illinois Association of Ice Cream Manufacturers since 1906. With the exception of the years 1909-10-11, when someone else temporarily discharged those duties, he has held that office continuously. He was made secretary of the National Association of Ice Cream Manufacturers when the Three-I Association of Ice Cream Manufacturers became the national association.

* * *

ILLINOIS' growth as a dairy state is indicated by figures published in the September issue of The Ice Cream Review, in the article by Prof. H. A. Ruehe of the University of Illinois entitled "Early History of Dairying in Illinois." These figures are repeated below:

(Census Figures.)

Year	No. milk cows on farms	Milk gallons	Butter pounds	Cheese pounds	No. silos

ILLINOIS conventions for many years have been noted for enthusiasm and good programs. Last year's convention was more largely attended than four or five of some of the other state associations combined. This year's convention undoubtedly will break all records for this association.

* * *

RESERVATIONS have been pouring in upon Hotel Sherman. This large hotel ordinarily has ample accommodations for a convention, but in view of the wide interest this year, it is urgent that all planning to attend send in their applications for reservations at the earliest possible moment.

car to a general movement until we, ourselves, become involved. And when the industry reached that stage in development, then the recognition on the part of all as to the necessity of organization prompted such an organization. It was small, but, as I say, those who were in that organization at the time realized very keenly the need of the hour.

"That little nucleus has grown into this splendid organization.

"Convention assemblies are a splendid thing. Were it not for the combined thought of the men in the respective activities we would not be as progressive a city os as progressive a nation as we are now. Many heads are better than one. The wise man can learn from a fool, and the fool sometimes receives an added inspiration from the wise man."

THE Three-I Association of Ice Cream Manufacturers became the National Association in 1906. The "Three-I" Association was composed of the states of Illinois, Indiana and Iowa. The Illinois manufacturers formed a separate state association in 1906, immediately after the "Three-I" Association lost its identity.

NEW ENGLAND ASSOCIATION PLANS ROUTE TO NATIONAL CONVENTION.

The September meeting was held at the Poland Spring House, South Poland, Me., on September 13, 1924. The business meeting was called to order at 2:30 p. m. by President Platt who announced the following new members:

ACTIVE:

Colonial Ice Cream Co., E. Providence, R. I.
Hartford Ice Cream Co., Hartford, Conn.
Skowhegan Jersey Creamery, Skowhegan, Me.

ASSOCIATE:

Brown Package Co., Winchendon, Mass.
Gardner, Walter J., Boston, Mass.
General Sheet Metal Works, Malden, Mass.
Shepardson Extract Co., Springfield, Mass.

The resignation of Frank Smith of Wakefield, R. I., and Ice Poles, Inc., of Boston, was read and accepted.

After presentation by the secretary of the different ways of going to the national convention in New Orleans, considering that the New York men are going over the New York Central, joining the Illinois men at Mattoon, Ill., it was voted

That the New England delegation go by the same route, joining the New York delegation at Albany.

That the October meeting be held at the American House in Boston on Wednesday, October 22, and that the meeting be devoted to the policies and distribution or handling of the iceless cabinet.

To make it an all day meeting, the first meeting to be at 10 a. m. Luncheon will be served and a meeting in the afternoon.

To invite the cabinet people to be on hand to answer questions but not for demonstration before the meeting.

Mr. Gentleman presented the advertising plan as approved by the national committee which will probably be taken up at the national convention.

The Poland Springs meeting from all indications was highly successful. There were about 125 present which included 35 of the ladies. They began to drift in Friday morning and Friday night there was a registration of 94.

Friday afternoon the golfers and would-be golfers enjoyed a round on the golf course while the others visited and enjoyed the concert in the ball room or one of the movies.

Saturday morning the golfers took a preliminary round and at 9:30 the baseball game was played, George Dooley being captain of the supply men's team and Paul Harmon, captain of the manufacturers' team. The results of the game were very close, being 21—19, in favor of the manufacturers. There were too many star plays made for us to mention. There were the usual disputes with the umpire but nobody was disqualified.

While the men were playing baseball the ladies visited the Poland Spring bottling works, library and museum.

The business meeting was called at 2 o'clock. During the business meeting Mr. Ricker gave a talk to the ladies telling them how Poland Springs had been developed, giving some very interesting Maine history. Later the ladies visited the Shaker village.

Although it rained in the afternoon a 9-hole match was played for cups offered by the Simmons & Hammond Manufacturing Company. The low score winning the match was George Kimball of the Malden Ice Cream Company. Second was George Wallace of the Creamery Package Manufacturing Company. The high score was that of Mr. Cowan.

We had a dinner in the evening served at 7 o'clock and a general good time was had. Immediately after dinner Mr. John Mulholland of Philadelphia presented the golfers the cups that they had won and also presented Mr. Harmon with a fancy milk can properly inscribed as the winning cup for the baseball team.

Adjourned from the dining room to the ball room where Miss Kuschke entertained with music and the Sunshine Girl with stories. The party broke up at 10:30.

W. P. B. LOCKWOOD, Secretary.

PENNSYLVANIA AND NEW JERSEY MANUFACTURERS TO OPEN CONVENTION SEASON.

(Continued from page 16)

nounced for next month. In December the Texas, Georgia, Oklahoma, West Virginia, California, Kansas and Arkansas manufacturers will meet, and it is expected that other associations will announce dates for this month, too. The Pacific Ice Cream Manufacturers is a regional association to meet in December. Conventions in January have been announced by the North Carolina and New England association. The Michigan dairy pageant has been set for February.

NEW ADDRESS, BUT SAME OLD STAND.

The Smith Ice Cream Co., Leaksville, N. C., has announced that the company's new address is Leaksville-Spray, N. C. This comes about because a business section located between Leaksville, N. C., and Spray, N. C., recently established a postoffice under the name of Leaksville-Spray, N. C. The Smith Ice Cream Company is doing business at its old location, and this does not involve a consolidation of offices.

Co-operating With Dealers Responsible for California Company's Growth

THE growth of the Benham Ice Cream Company, with main plant at Fresno, Calif., is largely attributed to the co-operation that company renders its dealers. The company's "advertising and dealer help department" is often called upon to accomplish some real service, which eventually means greater dealer confidence and consequent additional business. The company's annual appropriation for advertising runs into thousands of dollars, according to officials of the company, and newspaper advertising, window cards, roadway signs, and direct-by-mail cards to ice cream consumers, have proven what can be accomplished by this method, and the Benham Ice Cream Company today is a million dollar corporation, with branches located at Visalia, Hanford and Merced.

Main Plant of Benham Ice Cream Co., Fresno, Cal.

The main plant is a three-story reinforced concrete building, 120 by 190 feet, situated on H street in the heart of the city of Fresno. Three ice machines with a total capacity of 150 tons of refrigeration are in operation here, six 80-quart freezers, two 500-gallon homogenizers, five 1,000-gallon mix tanks, two overhead ice crushers for loading out route trucks, and hardening rooms with a capacity of 24,000 gallons of ice cream, together with complete laboratory apparatus, brick packaging machine, large size, automatic Eskimo pie machinery and overrun testing machine completes the equipment of this thoroughly modern ice cream manufacturing plant.

The company manufactures the ice cream mix at its home plant and then, by insulated and brine refrigerated trucks with a capacity of 1,000 gallons each, the mix is delivered to the hardening rooms at its branch plants. It is reported that the company maintains six three-ton electric trucks, with complete general electric battery charging machinery, and 41 gasoline trucks. These trucks cover a radius of 100 miles from Fresno.

The hardening rooms of the three branches have a capacity of 3,000 gallons each, refrigeration furnished by ammonia compressors with direct expansian pipe shelves. A well kept garage is maintained by each branch, and the main plant has a 100-foot square garage with a complete machine shop for repairing equipment, according to L. W. Wilson, general manager.

Visalia Branch of Benham Ice Cream Co.

The company anticipates a business of 600,000 gallons for the next year and will add one more large brine freezer, several automobile trucks and a sixty-foot addition is to be added to its branch at Visalia to increase its hardening room capacity.

Officers of the Benham Ice Cream Company are J. A. Benham, president; M. B. Wilson, vice-president, and L. W. Wilson, general manager.

Many manufacturing concerns' greatest profits come from by-products. Employee, your by-product is your idle time. What profit are you getting out of it?

Ethics in the Sale of Ice Cream

Volume Is Not So Important That the Increase in Business Should Be Made at the Risk of Introducing Into Your Business Wasteful Practices

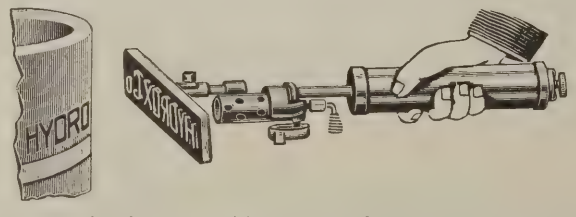
*By STANLEY M. ROSS**

WE WILL take for illustration two cities, one of which might have had far-sighted ice cream manufacturers for the last 15 years. On account of the forethought of the manufacturers in this city, they have always put out a product of high standard. By that I mean a well balanced, clean, palatable, wholesome product, not one made with the idea of adopting a kind of ice cream that would meet the price that they thought they could receive for their goods, but a product made with the idea in mind of making the best product that could be made to please the palates of the greatest number of customers. Such a product would be quite reasonably high in butterfat, and have a good standard of solids, and be compounded from all ingredients that pass the most rigid inspection for both sanitation and quality. After such product has been made, a price would be placed upon it that is fair. A city supplying a grade of cream of this kind for a period of 15 years would have a reputation from one end of the country to the other that would be enviable. The result would be a large consumption of ice cream per capita.

Who would benefit by the operation in such a city? First of all, the consuming public would have received all they had paid for. All the manufacturers in this city would have the advantage of the increased consumption per capita. Increased consumption per capita means increased sales for each dispenser. Increased sales per dispenser means a lessening of the sales expense. Since sales expense, as all plant managers know, is the major expense item, that is well worth considering.

Let us consider for a minute the other city where ice cream was made only to fit the price. If this is the case you can safely guess that the product is an indifferent one; that cheap materials have been resorted to; that oftentimes doubtful inspection has been passed, and the butterfat and solids standards will be low. Such merchants are always inclined to listen to the reports of their salesmen and dispensers and these reports are always of a nature to bring down the probable market price. If such ice cream has been distributed in a city for a period of time, the public in that city will have lost confidence in ice cream. The consumption per capita will be one-third that of the other city. The dispensers will have no interest in the sale of ice cream; the distribution expense of the manufacturer will be ridiculously high; in the end both the consumer and manufacturer have lost and lost heavily.

We need not draw on our imagination for these two cities. If it were not embarrassing, I could name a city of each kind. I am sure every man gathered here can recall to his mind such cities.



IF I have made a point on the quality of the product, I should like to pass this subject for another one. I refer to the location, size and number of dealers. Every manufacturer is anxious to increase his business as fast as he can. While volume is important, it is not so important that the increase in business should be made at the risk of introducing into your business wasteful practices. The public has a right to demand from each industry efficient operation. If we expect to keep our business in an efficient class, we muse not take on dealers promiscuously. Some dealers are profitable. Other dealers are a drain on your resources every day they handle your product. It is my opinion that it would be time well spent for each manufacturer to analyze the territory in which he expects to operate and give conscientious thought to the representation that he should have in that territory.

First of all, he does not want to have his ice cream put in every conceivable place; places that are not clean; places that have poor business methods; one stand right next to another; places that he knows can sell but a very small amount of ice cream per year. If he does this, he has a duplication of effort and a consequent increase of service.

On the other hand, he should analyze his territory carefully, select dealers who will represent him in the proper way, and have them not too frequent but in such places that the population of this territory may be adequately served. Would it not be better to go slower in the development of an ice cream business and as a result have a thorough, economical distribution system?

I want next to call your attention to a practice which I think might well come under the head of my subject. I refer to the abuse of fair business methods. By this

THE Durability and Silence of the ancient monuments have been proven by time. Those same two qualities in Emery Thompson freezers have also been demonstrated by time. And did the Sphinx ever suffer the terrible wear and tear to which a freezer is subjected. You wouldn't want a freezer to last as long as this stone face but you want it to last a long time, *for a freezer.* The Emery Thompson will.

THE DURABLE AND SILENT EMERY THOMPSON Brine Ice Cream Freezers

A number of Emery Thompson Horizontals, the last word in freezer conveniences, standing solid as the Sphinx, is a mighty pretty sight. But the rows of profitable figures they make possible on the books of many ice cream makers are a much prettier sight.

The Emery Thompson is built for long, satisfactory service, low operating cost, small labor cost, good quality output. In those respects it has been satisfying for many years. But it is also a quiet freezer. A high grade freezer for a quiet, orderly plant!—that's it. May we tell you more about the durable, silent Emery Thompson Horizontal?

I mean the plan of secret rebates; unbusinesslike practices, such as buying customers; or offering special inducements in the way of paying for space on walls which have questionable advertising value; furnishing equipment such as are not regularly furnished, etc. It would be with considerable humiliation that I could list some of the things that may have come to my attention in the last 20 years in the ice cream business. Perhaps other businesses have had these abuses, but the majority of them have cleaned them up. It is the duty of this business to clean house in this particular. When I say clean house, I do not mean for the protection of the men who may be guilty of such practices. I mean it for the protection of every man who is engaged in this industry.

I listened to a talk given by a member of the National Association of Advertisers, who has been instrumental in cleaning up the abuses that existed in their business. I wish it were possible to pass on to you in detail his speech. He likened the men within the industry who practiced these various things, to criminals. First of all, I believe he said that the man who is indolent, and does not try to be efficient, is a petty thief. By that he meant robbing the industry of its good name and its good standing before the public. The term he gave to the man who had secret rebates and did many of the things that have been done in the ice cream business, was a safe blower, or the man who carried around in his pocket nitro-glycerine and other very high explosives with which at any time he might himself be blown into atoms and everybody about him suffer. Such a man he said is the man who gives secret rebates, makes sly concessions, does various little things that he takes a chance on not being found out. "Such a man in business," said the speaker, "not only takes the chance of blowing his own business to pieces, but also takes a chance of blowing to pieces the whole industry itself and it is the duty of every man in the industry to see that such dangerous characters are run to earth and put where they can not at least damage society at large."

Now I do not want to make my remarks and my talk like ones that I have listened to. I recall one in particular who was a lecturer on the proper conduct of a farm, and in it he touched on the care of farm equipment. His talk sounded very good, yet there were a number of men in the audience who knew, the same as I did, that he left his corn plow in the field after his last cultivation and it remained there until he needed it the next summer. I am therefore making my remarks with the hope in my heart that our own companies, if they have any such faults, will be the first to eliminate them, and I would thank anybody, if they know wherein we have slipped, if they will see that their communication gets to the speaker.

Also, I do not want it understood that I am making a plea for high prices or for combinations. Many of you know what the Advertising Club of the United States has done to foster and encourage truthful advertising. You also know the tremendous salary that the moving picture industry has paid to get a man to head its association activities with no other reason than to keep its record clean in the sight of the public. Baseball, even though it may be a pastime, saw fit to secure one of the country's most prominent men to look after its business, not individually but collectively. Just so long as the ice cream industry allows itself to grow like a weed patch, with no attention being paid to the direction in which it develops, and the way it grows, just that long will it fail to measure up and fill the high place in society that it should and would otherwise attain.

Perhaps I have criticised enough. No criticism is worth as much as it should without some helpful suggestions. Criticising is like asking questions. Anybody

The Better Way To Service Iceless Cabinets

THERE has been so much loose talk about servicing iceless cabinets that the subject has been made to appear too important, a regular "bug bear." We feel therefore that a plain statement of the Nizer service policy will be welcomed by those who wish to judge the situation fairly.

The Nizer service policy requires that each ice cream manufacturer send one of his own men to our factory for thorough service training. By having this man, the ice cream manufacturer is assured that routine inspections will be properly carried out, and that reports of trouble will be followed through without delay. "An ounce of prevention is worth a pound of cure." That this Nizer policy is basically sound and entirely practical is shown by the fact that, on the average, only one service man is required for the inspection and maintenance of nearly 200 Nizers in a territory.

Many other advantages of our service policy are obvious:

(1) The service man may train any desired number of substitutes or helpers.
(2) His spare time, when less than 200 cabinets are in his charge, can be used for other purposes about the plant.
(3) He knows ice cream as well as refrigeration and can take care of the retailer completely.
(4) All information he secures, whether on cabinets or ice cream or general business, is reported back to the plant.
(5) He is directly under the supervision of the ice cream manufacturer at all times.
(6) His shop facilities in the plant mean little additional expense.
(7) The ice cream manufacturer pays practically nothing except wages for cabinet inspection and service.

The 250 or more ice cream manufacturers who operate their own service in accordance with the Nizer policy will tell you that they are fully satisfied.

can ask questions, but it sometimes takes real thought to answer them. One of the things that I think might be as instrumental in improving the industry as anything is the careful and religious attendance at meetings such as we have here today. The man who stays at home and thinks he will not pass any of his secrets on to the other fellow is very likely the man who misses ten times what he might have passed on. He neither helps himself nor helps his industry. I believe that the faithful attendance to duty at home, as some of our members might want to term it to excuse their absence, is not a legitimate excuse. They have no duty to term it to excuse their absence, is not a legitimate excuse. They have no duty larger than that of safeguarding and directing the industry in which they are engaged. They have no right to be a slacker and depend upon others.

Another suggestion I would like to make concerns the very great importance of frequent meetings of the men engaged in our business in their local communities. These meetings are very important. Many petty misunderstandings arise from the lack of such meetings. Reports from salesmen and customers are always liable to be exaggerated, not necessarily intentionally so either. How are you going to know the kind of a man you have for a competitor and whether the things you hear about him are true without meeting him occasionally face to face. It is surprising the lack of confidence that can be created just by the absence of such meetings. I am sorry to say that this thing is not true only of the small dealers. It is just as true of some of the largest dealers in the United States.

IT HAS been the writer's privilege to have traveled over a great deal of the United States and therefore to have been privileged to study the ice cream industry at first hand in a number of large cities. I know a city where a very small number of ice cream manufacturers had invested millions of dollars, all employed in the manufacture and distribution of ice cream. These men were gradually undermining their resources and hurting the business. A fight was on. The consuming public was pleased because they thought they were benefited. They were not, they were losing. The high quality of ice cream was about to be undermined also. Finally it was suggested that a meeting be called and some of the fellows who were supposed to have had horns as long as a Texas steer, were to be told to their face just what they were like. The meeting was held and, much to the surprise of everybody, nobody's horns were much longer than the other fellow's, and in fact every man present was of the opinion that it was not such a complicated affair after all and that a great many of the abuses could be eliminated, which I am told was done. Up-to-date I know of no manufacturer in that large city who actually profited out of the fight. In fact fighting is a good pastime but it is a little hard on the fighters—it is much better to be a ring side spectatoh than an actual participant.

Summing up, I would like to leave my appeal with you for a good, high-class product that would stand out in every way beyond reproach; for an efficient industry that could stand all kinds of investigation and come out with its colors flying. Such an industry the public will always support. For an industry that has no blotches of unfair practices, I would recommend as two perhaps of the most important factors in bringing about such conditions, frequent local meetings and careful and regular attendance at all state meetings, and last but not least see that you are represented at the national association meetings. Do not go to any meeting, either local, state or national, expecting to be a wall-flower and take away everything and give out nothing.

Cost of Furnishing Packing Service To City Customers

Service Charge is Important, But Should Be Fair to All

*By F. H. CLAUSEN**

SOME of us think that we could remove mountains if we first had someone to remove the hills. In the ice cream industry the hills seem to be a service charge which would be fair to both the small and large dealers. In making a service charge we shall give it much thought. The basis of every principle is a thought; it is the beginning of every end; it is the forerunner of all advancement. For success one must work, fight and think. Let us not translate this but work, think and fight. When we consider a service charge we should be fair to the dealer as well as to ourselves, not to consider a profit on the service which we render him.

The ice cream manufacturers are no doubt to blame for the conditions existing and the service demanded. Competition, I believe, has made it so, or in other words, we were more or less anxious to increase our gallonage, regardless of what the service may cost us. If a survey had been made a few years ago it would have given us the information, that in some sections of the city ice cream manufacturers were serving a drug store, a confectionery store, grocery store and two meat markets in the same block. Had we taken an actual check of the number of gallons sold in that particular block, it would have shown us that one store would have been sufficient to serve that locality, but because of over-ambition there seemed to be a movement by the ice cream manufacturers to see how many dealers they could get to handle ice cream in every block, not considering the number of gallons that each dealer would be able to dispose of.

In making a check it was brought home to us, that it is not always the well traveled road which is the right road, and therefore, we had to back track which was to our benefit rather than a detriment.

Every spring the first warm day the grocery store and small dealers call for service, they want ice cream at once. They perhaps received a few scattered calls for ice cream and feel that they do not want to disappoint anyone, because the manufacturer carries all the burden in case the weather should turn cold. In nearly every instance we were giving this dealer free service a month before the season really opened. Having no service charge the manufacturer carried the loss.

These small dealers would not show a profit until the season was nearly half over, due to the loss that we had taken the first month and in the fall instead of calling the manufacturer that he did not want to handle ice cream any more, we would serve him another month at a loss, so instead of this dealer giving us the profit we should be entitled to, he showed a loss. Do not misunderstand me that all small dealers would be in this class, because we had some small dealers who realized that they had to sell a certain amount of ice cream before they would be profitable to the manufacturer, and as soon as cold weather came they were very prompt in calling us and discontinuing service which was to our benefit.

THE man who is popular at home is a great achievement, the man who is loved by the house cat, the dog, the neighbors' children and his wife is a remarkable man, even if his name is not listed in "who is who." The ice cream manufacturers' names are not listed in "who is who," but we certainly were popular with some dealers because we gave them something for nothing and in many cases, even kept his soft drinks cold for the privilege of having a cabinet in his store. I cannot think of a better illustration than that of Miss Johnson who was very rich and Mr. James who was very poor. Between them there was a friendly acquaintance, but that was all. He was painfully aware of the fact. One evening his conversation took on an unwonted tendency and at last he said, "You are very rich, are you not, Helen?" "Yes, Jack," replied the girl frankly. "My guardian tells me I am worth a million." "Will you marry me, Helen?" No, Jack; really I could not think of it." "I knew you wouldn't." "Then why did you ask?" "Oh, I just wanted to know how a chap feels when he loses a million."

Money talks very carelessly sometimes, but we never heard anyone criticize its grammar. In agreeing on a service charge, we should not make it too high, for it would be a burden on the small dealer. If a service charge of $3.00 a week per cabinet hole was made, the man selling ten gallons per week would pay 30c for service, while the man selling thrity gallons per week would pay 10c. I believe a service charge of $1.25 a week per cabinet hole would be a fair charge to both dealer and manufacturer. We should keep in mind a

You Can Buy the Lifetime Services of the Best Advertising Man for the Cost of A Good Dinner

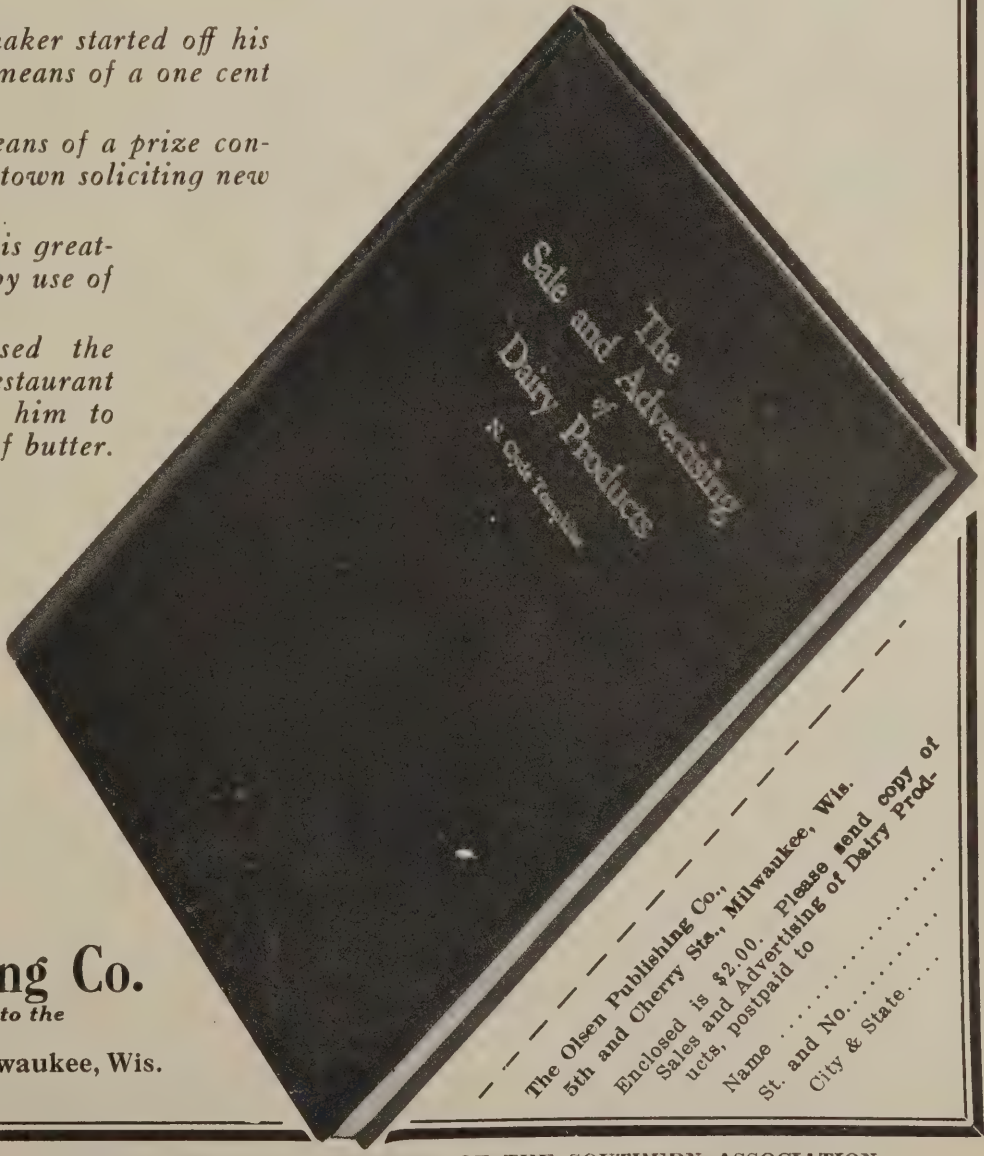
In fact in the book entitled "The Sale and Advertising of Dairy Products" you get far more than the experience of one man. You secure the experience of scores of concerns in the milk, ice cream, butter and cheese industries. They tell you the advertising and sales plans they have found which have been successful—plans which anyone can use to increase their sales of ice cream and dairy products.

It tells how one ice cream maker conducted a popularity contest at small expense and had everyone in town talking about him.

Another ice cream maker started off his season with a bang by means of a one cent sale.

A milk dealer, by means of a prize contest, had every child in town soliciting new customers for him.

Another milk dealer is greatly increasing his trade by use of telephone sales-ladies.



A creamery increased the trade of their best restaurant customer by inducing him to feature a one cent cube of butter.

Another one created much interest by means of a prize candy contest, etc., etc.

The above are but a few of the hundreds of sales creating ideas that are fully explained — any one of which are worth several times the cost of the book. In addition, the book has scores of charts, illustrations and samples of business producing advertisements.

Hundreds of copies of this book have been sold to date. No doubt your competitor has one or more copies and is using it to help build up his business. Here is your opportunity to learn how progressive concerns everywhere are advertising and selling their products.

The book contains over 100 pages, handsomely bound in blue cloth, with gold lettering, and is profusely illustrated.

The Biggest Berries Not on Top

You know how the sly grocer puts the biggest berries at the *top* of the basket.

Some corkboard is made up on the same principle. It looks pretty good *on the surface—but beneath the surface*—that's another story.

Novoid Corkboard

is not made on this principle. You can cut a piece crossways or lengthways and you'll find no green centers or crumbling spots beneath the surface. You'll find every particle of corkboard *beneath* the surface has the same rich, brown coloring that shows on the surface—that every inch of a sheet has the same high tensile strength. This honest *beneath-the-surface* value results in greater insulating efficiency, greater durability and longer life.

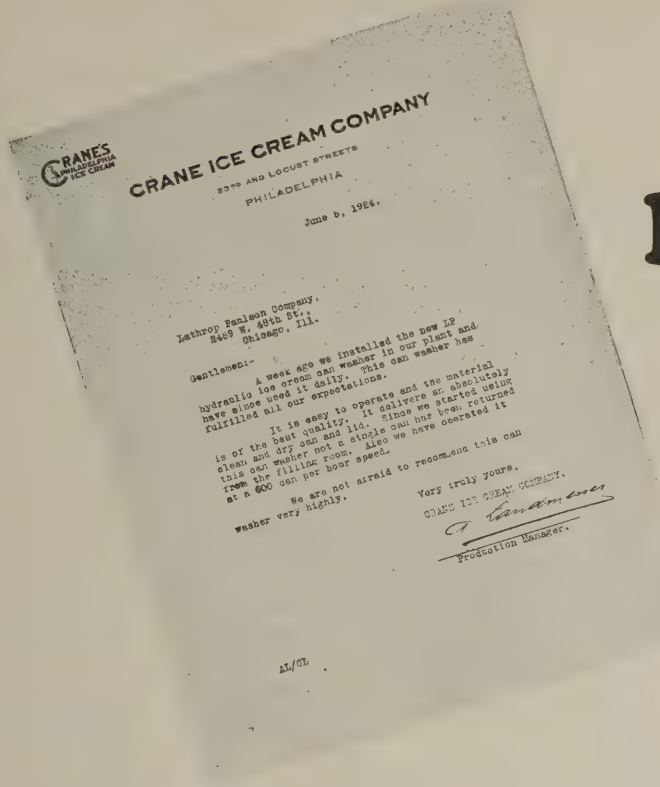
small dealers as well as a large one, therefore, this service charge should be made so that there would be the same profit on every gallon sold.

A FEW years ago it was not a question whether a dealer would use five gallons a week or thirty. There was a set price per gallon, including free packing service, and if we had not had several of the large dealers, we would have realized that something was wrong long before it was brought to our attention. Packing service advanced each year, so that it has shown a loss rather than a profit.

Until a daily check was made on each customer it was impossible for us to tell what our service charge was costing us per individual stop. A special effort was often made to get the smaller dealer to handle ice cream during the summer months, and thought that the more dealers we had the greater the profit, not realizing that every day we were giving him something for nothing. When Mr. Dealer would allow us to put in a cabinet, it was not a question whether it would be a one or two-hole cabinet, that was left to him, and of course he wanted to handle more than one flavor, thinking that the more flavors he would handle the more ice cream he would sell, but not giving it the second thought that it was doubling the cost of refrigeration. They had the idea that the ice that was on our trucks cost nothing, and it was a "free for all" or "help yourself" proposition.



Many times complaints on the quality of ice cream that has come to our and your attention, if we would have made an actual check when this dealer bought the ice cream, from which the complaint was made, you may not have been surprised to find that he had had it at least three or four weeks and in that time had deteriorated in such a way that it was not the quality of ice cream that you are in the habit of giving to the public.

Some dealers use less than 15 pounds of ice and salt per gallon, and others use as high as 110 pounds of ice and salt per gallon. It is not fair that we should render the same packing service free of charge to the man using 110 pounds of ice and salt per gallon as the dealer who is using 15.

The question might arise that in making a service charge and eliminating as many of the cabinet holes as possible, that you would have to increase your special deliveries. Some manufacturers have solved this problem by charging 50c for each special delivery if it was the fault of the dealer not taking ice cream from the driver when he stopped to pack. We may illustrate by—If the driven came to a store in the morning and the dealer had a gallon left in the can and would not allow the driver to transfer it, and before the driver could make the rounds again in the afternoon he had sold out, and called for a special delivery, in that case it would be the dealer's fault and not the manufacturer's, so a charge of 50c would be justified.

A SERVICE charge per cabinet hole automatically adjusts the dealer to the number of holes that he can profitably use, and in that way he will not handle more than one flavor unless his trade so demands. This will enable the manufacturer to keep the cost of cabinets down to a minimum.

In giving this charge a name, let us not do as one company did, call it an icing charge. Many of the small dealers misunderstood the meaning of this word and did not hesitate to agree to the price that the manufacturer asked, but the first day this went into effect he told the ice man who stopped there regularly that he had made other arrangements, so that he would not want any more ice, expecting the ice cream man to ice

CRANE'S PHILADELPHIA ICE CREAM

CRANE ICE CREAM COMPANY

33rd AND LOCUST STREETS

PHILADELPHIA

June 5, 1924.

Lathrop Paulson Company,
2459 W. 48th St.,
Chicago, Ill.

Gentlemen:-

A week ago we installed the new LP hydraulic ice cream can washer in our plant and have since used it daily. This can washer has fulfilled all our expectations.

It is easy to operate and the material is of the best quality. It delivers an absolutely clean and dry can and lid. Since we started using this can washer not a single can we have returned from the filling room. Also we have operated it at a 600 can per hour speed.

We are not afraid to recommend this can washer very highly.

Very truly yours,
CRANE ICE CREAM COMPANY.
Production Manager.

L.-P.

ICE CREAM

Can Washer

Fast, Efficient and Fool Proof.

Washes All Sizes of Cans and Covers from 5-gal. Down to Smallest. Small Cans May Be Washed Together with Larger Ones Increasing Capacity to 1200 per Hour.

Cans Are Fed in and Delivered at the Same End of Machine.

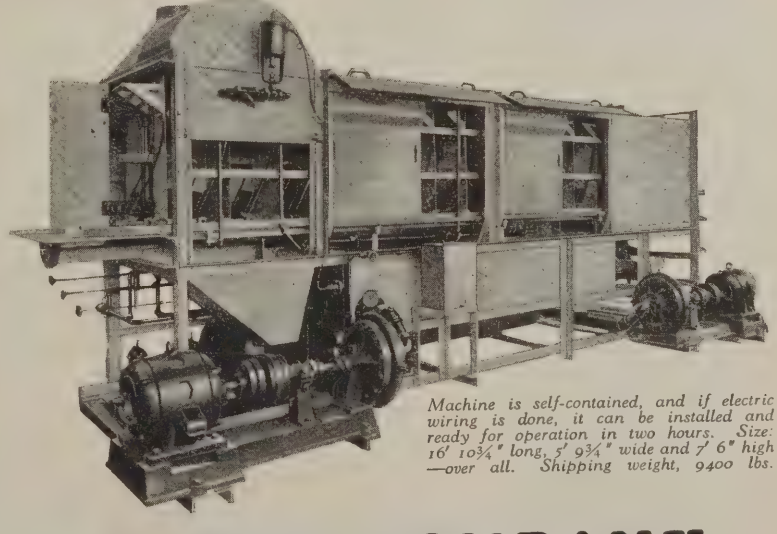
This machine embodies many of the L. P. features of efficiency, simplicity and durability which characterize L.-P. equipment.

600 Cans and Covers or Brick Pans Per Hour

Absolutely Clean, Sterile and Dry

THIS machine has two speeds—600 and 300 per hour. At the 600 speed it will efficiently wash, sterilize and dry all ordinary city and shipping cans, and at the 300 speed it cleans, sterilizes and dries the dirtiest of cans. Handled at 600 per hour, cans, brick pans and covers come from the machine **absolutely clean, sterile and dry.** Cans are washed on outside as well, freeing the cans, lids, pans and covers from brine. This machine eliminates the necessity of washing cans and covers separately. Cans which have been stored and coated with oil do not have to be brush washed. They come out ready for service, or may be piled in storage racks without danger of rust. The machine will also handle brick tanks up to 12-qt. size.

Each Can Receives 17 Distinct and Intensive Treatments



All cans are placed in machine upright. They are first thoroughly rinsed with preliminary tempered water, which thoroughly flushes out the cans, freeing them from refuse. This rinse water is caught in a separate tank and carried away. They are next washed inside and out with six separate intense soda solution treatments under 40 lbs. pressure; they are then entirely freed from soda and thoroughly drained before receiving six clear hot water washes, which are followed by scalding hot unused water rinse. Next comes the steam, inside and out, thoroughly sterilizing the cans, lids, pans and covers. They then pass over two hot air jets (the same as are used on all L.-P. Can Washers) and are delivered absolutely dry and ready for immediate service.

Only two men are required to operate the machine at maximum speed, and one man can handle the work efficiently at the 300 speed.

There are two powerful pumps operated by 10 h.p. and 7½ h.p. motors in separate units. No other power required.

The machine is sturdily constructed and heavily galvanized. Temperatures are thermostatically controlled. Soda solution is automatically controlled by L.-P. patent Soda Regulator.

This machine has passed its experimental stage. It has stood the most rigid tests in actual operation, and is sold on a results-guaranteed basis. Write for full information and names of users.

Machine is self-contained, and if electric wiring is done, it can be installed and ready for operation in two hours. Size: 16′ 10¾″ long, 5′ 9¾″ wide and 7′ 6″ high —over all. Shipping weight, 9400 lbs.

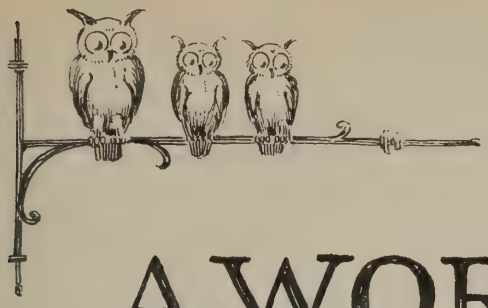
his meat box, soft drinks and also his ice box, so let us not call it an icing charge, but a service charge.

Our drivers have a daily record of the amount it takes to furnish each individual stop. When he goes into a dealer's store and sells him four gallons of ice cream, on the sales ticket he makes a notation of the number of buckets of ice it took to furnish him with proper refrigeration for that day. When he goes into the next dealer and he is not in need of any ice cream, he has another card where he keeps a record of the number of pails of ice this dealer required. Each day the tickets are turned into the office and a weekly and monthly recap made of the same, giving us the cost of the ice and salt per gallon sold to each dealer. As a result of this daily check we have been able to serve the small dealer at a profit rather than a loss.

A service charge makes a small customer pay his own way. We believe in the economical value of a service charge, and we know that we have had many objections to same, but nevertheless it has been a benefit to us.

⚜

FLORIDA ICE CREAM INDUSTRY PROGRESSING.



That the ice cream industry is progressing nicely in Florida is the opinion prompted by a communication recently received from W. J. Barritt, president of the Southern Association of Ice Cream Manufacturers.

The Tampa Dairy Co., Tampa, Fla., a partnership organization in 1912, of which concern Mr. Barritt was manager, has been succeeded by the Poinsettia Ice Cream Co. The Tampa firm has long been manufacturing its quality product under the trade name "Poinsettia" and, because of the popularity of this name, it was deemed appropriate to adopt that name as a firm style. Hence the Tampa Dairy Co., became the Poinsettia Ice Cream Co.

The company's home office at Tampa is managed by W. J. Barritt, and his associate partners are Clyde Perry, J. C. Hamlett, F. R. Hamlet and Fred Burton. This company operates four branch plants, which all report a nice volume of business; in fact, steady increase in production has compelled recent additions to the branches.

The plant at Orlando, Fla., is operated as Ambrosia Ice Cream Co., Inc., with W. J. Barritt, president; J. D. Barritt, vice-president and manager, and Clyde Perry, secretary. Officials recently let contract for the erection of a one-story reinforced concrete building at Orlando with tile walls, the entire exterior to be stuccoed, building to be of sufficient height to permit mezzanine floor upon which will be situated holding vats in order to permit gravity flow of mix to freezers. The structure will be approximately 60 feet wide by 108 feet in depth and will have a hardening room with a capacity of 4,000 gallons. Mr. Barritt reports that the building will be of the most modern construction and will be complete in every detail. Cost of building is estimated at $40,000, exclusive of machinery and hardening room.

The Pinellas Dairy Co., St. Petersburg, Fla., is also a branch of the Poinsettia Ice Cream Co., and this company has also awarded contract for the erection of a reinforced concrete and hollow tile building with pressed brick front, to be three-stories high, 60 by 120 feet. This building will not only accomodate the rapidly increasing ice cream business and have hardening room capacity of 5,000 gallons, but will also house the large wholesale and retail milk business of the company. Machinery and equipment in keeping with the size and requirements of the building will be installed, officials say. The cost of the building will be approximately $70,000, it is reported. Officials of this company are T. H. Rifley,

ADVERTISING IN THE ICE CREAM REVIEW IS A GUARANTEE OF MERIT.

Nearly 100% Popular in Chicago

Practically all the brick ice cream in Chicago passes over the platforms of "Saxmayer" Bundle Tyers.

These clever little machines have been almost universally adopted by Chicago ice cream manufacturers, who save thousands of dollars annually through their use.

Every knot is neat and uniform.

There is no waste string.

Operator needs no experience.

Does the work of several hand tyers.

Practically nothing to get out of order.

Automatically adjusts to various size packages.

Free Trial If You Wish

We would like you to try a machine for ten days, in your own plant, on your own work.

You may return it without question, if you are not convinced that you need it, and that it will pay for itself in a short time.

The National Bundle Tyer Co.

BLISSFIELD, MICH.

president and manager; Clyde Perry, vice-president, and W. J. Barritt, secretary.

A one-story hollow tile and stucco building was recently completed at Clearwater, Fla., by the Poinsettia Ice cream Co. This distributing plant, located about 32 miles from Tampa, is equipped with refrigerating machine and hardening rooms. From here the company's product is distributed to its west coast trade.

Another of the company's distributing branch plants is located at Lakeland, Fla., which is also about 32 miles from Tampa. Another hardening room was recently completed in this plant, which addition, according to W. J. Barritt, was made necessary by the increased volume of business.

KENTUCKIANS TO ATTEND NEW ORLEANS CONVENTIONS IN BODY.

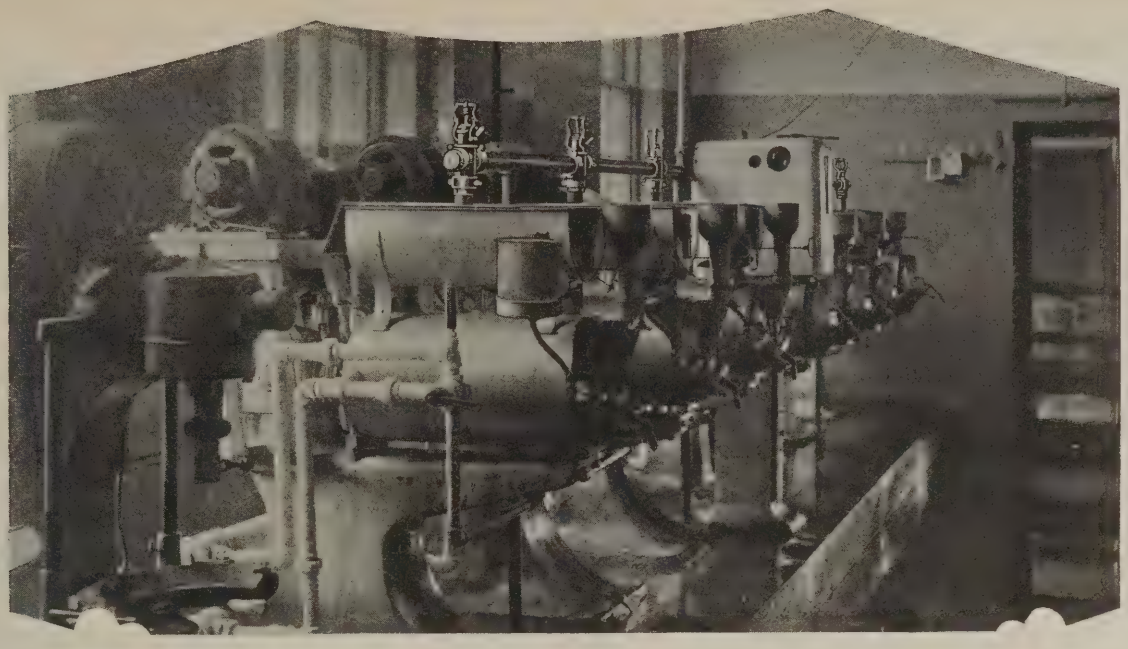
The Dairy Products Association of Kentucky has made a reservation of ten double rooms, with bath, at the Hotel De Soto, New Orleans, for the convenience of ice cream manufacturers of Kentucky who plan to attend the Southern and National conventions. Five of these rooms have been spoken for, and it is requested that Kentucky manufacturers notify this association if they expect to accompany the Kentucky party, announces General Secretary Carlton Ball.

The Louisville and Nashville railroad is offering a special Pullman attached to the "Pan-American" leaving Louisville at 11:55, noon, November 13, and arriving in New Orleans at 9:55 a. m., November 14, thus affording all the privileges of this train's de luxe equipment and service. This offer is made with the understanding that the Kentucky party be composed of a minimum of twelve persons.

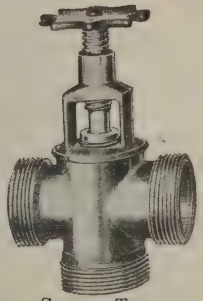
Every possible arrangement is being made for the comfort and entertainment of the ladies, both en route and at New Orleans, according to the secretary.

A NOVEL WAY OF ADVERTISING ICE CREAM.

Spare tire coverings on the backs of automobiles are employing for various purposes, usually to exploit the merits of some particular car. It has remained for one Howard Black, representing John H. Mulholland Co., to attract the attention of those who must take his dust to the merits of The National Dish. Mr. Black travels over the entire country by auto and also carries many other ice cream advertising signs.



A big strawberry sundae in colors takes up most of the space on the entire covering. Along with it are these words, "Eat More Ice Cream, It's Good for You."



Imagine, if you will, a hot, dusty day and a guy passing by and flaunting this message in your face, "eat more ice cream, it's good for you." You would stop at the next filling station and fill up on ice cream, wouldn't you?

A LONG WINTER AHEAD.

Somebody is always taking the joy out of life. Here we are enjoying "Injun Summer," totally unmindful of coal bills, when along comes a 1925 calendar to remind us that the long winter months will soon be upon us. The perpetrator of this cruel joke is the Essex Gelatine Company, but we must add, in justice to them, that they have selected a very useful calendar.

DIXIE MAIL BAG

ARKANSAS MANUFACTURERS HOLD UP QUALITY.

The 1924 season, while hindered by a late spring and severe cool spells during the summer, has, on the whole, been reasonably satisfactory.

The short season tendered to curtail sales, but due to co-operation of the members of the Arkansas Ice Cream Manufacturers' Association there has been very little price-cutting, and practically all ice cream manufacturers of the state have maintained the quality of their products, thus placing the industry on a more substantial basis from the viewpoint of the consumer.

WILL TERRY.

For several years past the ice cream manufacturers of the state have encouraged dairying among the farmers, with the result that at the present time enough dairy products are produced in the state to supply the demand of the ice cream manufacturers. This has enabled the manufacturer to improve the quality of his product, thereby increasing the demand as the consuming public prefers ice cream made from fresh ingredients.

The writer expects to attend the Southern and National convention in New Orleans, and it is probable that a number of the manufacturers of this state will also attend this convention.

Yours very truly,
TERRY DAIRY COMPANY,
Will Terry, President.

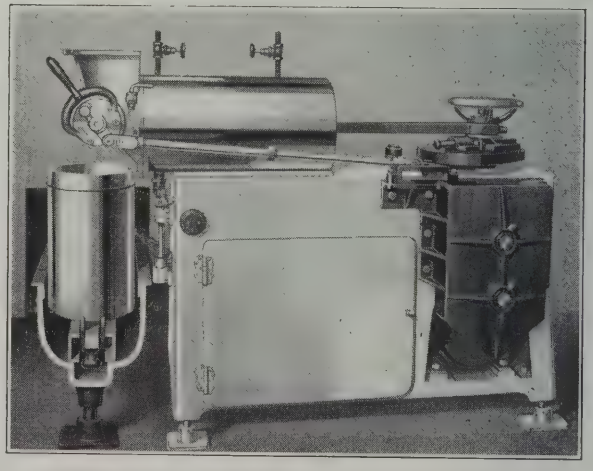
MOJONNIER ADDS *for eliminating waste in the*

Mojonnier Ice Cream Hopper, refrigerated and insulated for keeping ice cream in perfect condition. (Patented.)

Eliminating Waste



Mojonnier method of handling ice cream automatically from the freezer to the delivery truck makes "peak loads" easy and helps solve labor problems. It shortens route from freezer to hardening room from ten minutes to two and one-half minutes. It eliminates waste of over-filling the cans.

Hopper System

This hopper system may be applied to any size ice cream plant. It guarantees a minimum loss in overrun and shrinkage. It eliminates melting after the freezing process. It saves labor. It increases the output of the freezers, making it unnecessary to use freezers as filling machines.

Can Filling

Mojonnier Can Filler accomplishes two things making it an absolute necessity in every modern ice cream plant. Fills cans uniformly and prevents overfilling, so common when cans are filled by hand method. Substitutes mathematical precision for "guesswork." *Insures placing of frozen ice cream into the hardening room in a minimum amount of time.*

Mojonnier Automatic Ice Cream Can Filler. Fills ice cream cans with exact predetermined volume of ice cream. (Patented.)

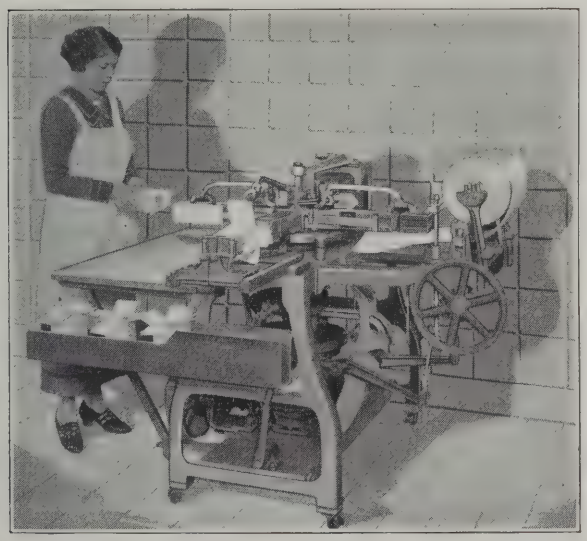
Ice Cream Conveyor



This is an entirely new, simple and inexpensive conveyor for handling either empty or filled ice cream cans. It eliminates trucks completely. It greatly increases hardening room capacity; saves refrigeration. Necessary in any size ice cream plant, enabling the smaller plants to operate with same degree of efficiency as the larger plant.

Typical installation of Mojonnier Ice Cream Handling System for three-freezer plant. Mojonnier Ice Cream Can Conveyor shown at bottom for conveying cans into or out of coolers. (Patents Pending.)

Automatic Carton Liner

This machine, with the Mojonnier Ice Cream Packaging Machine, has completely revolutionized the making of packaged ice cream. With these machines working together, packaged ice cream may be made at a cost a trifle more than bulk ice cream. Either 30-lb. or 40-lb. parchment or wax paper may be used. Parchment is fed off a roll, automatically slotted, folded and formed ready to be inserted into carton. The lined carton is delivered directly to the packaging machine at the rate of 1500 an hour, or as fast as the cartons are filled by packaging machine. In moderate sized plant, machine pays for itself the first year.

Mojonnier Automatic Ice Cream Carton Lining Machine for automatically lining "tuck end" cartons with parchment or wax paper. (Patents Pending.)

The other Mojonnier Servants:—

Milk Tester,
Vacuum Condensing Unit,
Overrun Tester, and
Packaging Machine

are well-known to the Ice Cream Industry. They, too, have been a means of greatly reducing waste in the ice cream industry.

Let a Mojonnier Engineer determine the possibility of eliminating waste in your factory.

"SPECIAL DELIVERY" OF ICE CREAM.

(Continued from page 12)

ness. The average family size for the United States is 4.3 persons and this family eats at least three meals a day, two of them according to our custom requiring some form of dessert; and infrequently that dessert takes the form of ice cream which is universally favored by young and old. How does it get to the table? Sometimes father brings it home; sometimes Jack or Jill is sent to a nearby dispenser for it; and less frequently (unfortunately so) it is delivered by a dealer. Why is it not more frequently delivered by a dealer? Simply because of delivery cost upon a small amount (one pint for the average family) allows no appreciable margin of profit. Some dealers whose methods for obtaining family trade have been described in various publications have solved in one way or another this delivery cost problem, but in all probability, in most cases, the cost is charged indirectly to advertising, good will creation, and the building up of indivduality for those dealers.

THUS far the manufacturer has not been touched upon. Let us consider his interests for a moment. The ice cream manufacturer's interest in the dealer must not stop (as has been pointed out innumerable times) at the point where he has succeeded in selling his product to that particular dealer. He must in a great many cases point out to the dealer the value of modern merchandising methods in promoting the sale of ice cream. The manufacturer's advertising and sales forces must aid the retailer in putting across to the public this particular brand of ice cream.

The fact that competition is keen in ice cream selling accentuates the idea that ice cream is not sold until the ultimate consumer has paid for his order. Therefore, the manufacturer, if he helps the retailer to increase his sales of ice cream, is surely helping himself to increase his gallonage, and consequently, activities of this sort which he undertakes may well be a part of his advertising endeavor. With this view in mind the writer suggests a method to be used by the retailer in building up ice cream sales, a plan which may well be proposed to the retailer by the manufacturer, and valuable assistance be given by the manufacturer in effectively putting it across with the public, to his and the retailer's mutual benefit.

The plan the writer wishes to set forth for consideration by the readers of this publication is not new, but, it is a plan which has latent possibilities of development, and one that should be given more universal and serious attention than has been given it in the past. It is simply the enlistment by the dealer of the services of the ubiquitous small boy and his bicycle in developing the "special delivery" family trade in ice cream. A few dealers have seen the value of this plan and have utilized it advantageously. The small boy with his bicycle can quickly deliver small amounts of ice cream upon order from the housewife. He can even solicit orders upon a commission basis for he is desirous of earning money and is willing to hustle for it. In a brief way follow some of the details which the dealer must work out for his own particular set of conditions in order to effectively put across this system of delivery.

FIRST, get the boys. This should be an easy matter for there are always bright, smart, energetic boys obtainable in any neighborhood and the bicycle is often one of his possessions. Fit the bicycle with a commodious carrier.

At the same time or a little previous to organizing the boy-bike delivery service run some newspaper advertising telling the story of the new delivery service and a list of the flavors which will be available for delivery in brick and in bulk. Emphasize the promptness and punctuality of the service which is proposed to be rendered. This advertising must be carried for some time to make a lasting impression but it need not be expensive in character. Its appeal must be directed to the housewife.

A feature which might be brought in to advantage is the week end special brick. This special may be the same one featured by the ice cream manufacturer or he may be induced to make especially for the dealer, the dealer's own combination, upon order. In the first case, the dealer would have the advantage of the manufacturer's advertising of the special, while in the second case he could develop individual expression in setting forth the merits of his own special brick, which had been made to order.

BY MEANS of the boys, place in very family mail box in the territory which is to be covered by the delivery system, a neatly prepared letter addressed to the mistress of the house; acquainting her with the service; pointing out the dessert possibilities of ice cream; describing the brand and flavors which will be handled; and emphasizing the special brick feature. Incidently state that the delivery of other articles which are sold by the dealer will be made, is requested, at the same time that ice cream delivery is made.

In the delivery work make use of some of the iceless containers which are available for carry-out trade and maintain a forenoon system of collection. At the time collection of the containers is being made the boy may be able to do some soliciting for which purpose they should be provided with order pads. For orders beyond the boy-bike capacity make use of the manufacturer's light delivery quick-service or some available means.

THE delivery end of this plan must be systematized in such a way that a boy can cover a delivery route say, between eleven and one o'clock and from five to seven o'clock, and if the territory is great enough have several routes, a boy to a route. The hours mentioned are for the two-meal periods, the limits set being the probable time within which delivery will be specialized for them. During the afternoon there will be phone orders to handle upon a moment's notice when it would be necessary for the boys to deliver in each other's territory, but in connection with the regular delivery hours, keep each boy to his own route and allow him to do soliciting only on his own route.

It goes without saying that the delivery boys should always be neat and clean. In addition, if each lad is furnished with a white coat and cap upon which the dealer's name and the brand of ice cream are attractively printed, it will do much to create interest. In this feature, the manufacturer could well afford to co-operate with the dealer by furnishing him with the coats and caps and even going so far as to launder them when needed.

These suggestions are offered for what they are worth to anyone who wishes to make use of them. They are a means of increasing the use of ice cream. They are also a means for building up service, one of the most important members of the merchandising triumvirate, **Quality, Service** and **Price. Quality** you must have, **Service** you can give, and **Price** is willingly paid for these first two if you efficiently furnish them.

DOES BILLBOARD ADVERTISING PAY?

(Continued from page 20)

reviewing all of the possible methods of tempting the public to eat more ice cream it seems likely that the "next best" is the display of beautiful colored pictures of the product. Certainly the feasting of one's eye is usually the introductory step to feasting one's inner self.

In order to clarify what is meant, let me read you the following list which gives in order of importance the various ice cream appeals which may be made to the public is display advertising:

(1) Picture of product in full colors, combined with a tempting description of its flavors and benefits.
(2) Picture of product in full colors, combined with a description of its benefits.
(3) Picture of the product in full color without description.
(4) Picture of product in one color, combined with a tempting description of its flavors and benefits.
(5) Picture of product in one color, combined with a description of its benefits.
(6) Tempting description of the product and its benefits.
(7) Picture of product in one color without description.
(8) Description of the benefits of the product.
(9) The words "ice cream," followed or preceded by the brand name.
(10) The brand name alone.

There are exceptions to this general rule, of course. Here and there you find some spectacular or extremely novel method of advertising, such as the sky writing employed by "Lucky Strike." But, generally speaking these exceptions live only as long as the novelty lasts. They cannot constitute any serious part of our permanent advertising plans. Their cost is usually proportionate to their exclusiveness, and is justified only as long as they are exclusive. Picture for yourself seventeen sky writers all at work at one time—and I can add that in view of the price the sky writers ask, you would be paying too much for one-seventeenth of the temporary attention of the spectators.

Let us consider again the list which I have just read. The biggest factors in the selling of ice cream to the public are right at the head of the list.

These important factors can be splendidly carried out in billboard advertising. I do not mean to indicate that this applies only to billboard advertising, for it does apply to certain forms of store display, direct-by-mail, street car cards, etc.

Up to this point we have seen that billboard advertising reaches the public in the right place, at the right time, and in the right way. Perhaps we can venture to say that billboard advertising should pay.

THE next question in order would naturally be "How many people can be reached per dollar of expenditure?" and "Is this cost greater or less per person than in the case of some other form of advertising?"

Frankly, I do not intend to answer these last questions specifically.

Let me say only that in the past I have used billboard advertising to promote the sale of ice cream, and have been thoroughly satisfied with my purchase.

At this point in my talk I really ought to sit down and let the next man on the program have a chance, but I don't have the opportunity very often of getting before so many men who are practically my business partners.

Therefore, there is one brief message which I wish

Self Apparent Sanitation

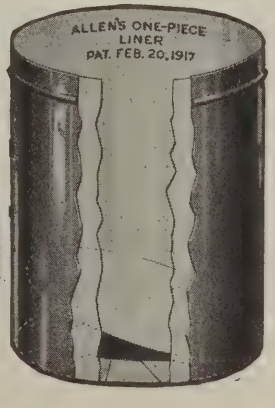
Telling the world all you do to keep things sanitary in the production and sale of your ice cream is not enough.

You must give them something to see to believe it.

ALLEN
One-Piece Sanitary CAN LINERS

are self apparent evidence that you are striving to deliver your ice cream in the most sanitary way.

Certainly ice cream packed in a rust spotted can lends no conviction toward your sanitary efforts.



Use them in all your cans.

The Allen Candy Co.

Manufacturers

to add. It concerns ice cream advertising, but covers a wider range than just billboard advertising.

It has probably occurred to you from time to time as you put out money for the advertising campaigns which carry your trade name or brand, that the other ice cream manufacturers in your territory are going to get considerable benefit from your campaign. My experience has shown me that it is almost impossible to advertise to the general public, especially in the ice cream business without benefiting your competitor.

I say, especially in the ice cream business, because our system of distribution is peculiar. In 99 cases out of 100, an ice cream retailer carries only one brand and yet he carries a thousand other items of merchandise. The traffic that comes into his store is attracted by his full line, and his average customer, while in the store, will spend much more for other items than for ice cream. Therefore, I reason that the favorite drug store, or grocery store, or restaurant of any consumer is selected from among the other stores of its kind in the neighborhood because the consumer likes the general line of products which the retailer sells. Furthermore, every consumer has a tendency or natural inclination to purchase in as few stores as possible. Perhaps this is simply a matter of laziness. A consumer buys at the most convenient point—other things being equal.

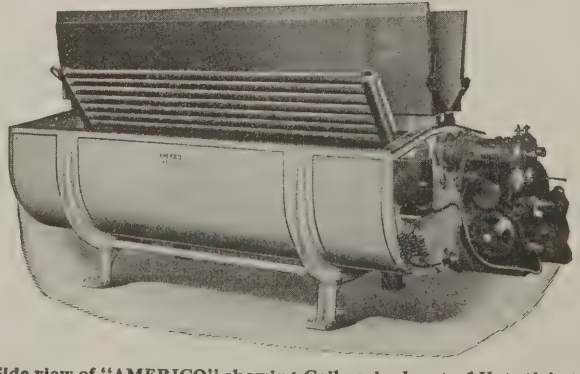
IF THE general public did not count conveniences as one of the biggest factors, then we would never in the world be able to maintain the tens of thousands of successful neighborhood stores. Consider it from another angle—If conveniences were not a big dominant factor in determining public buying, then a store located on the main street of a town would be worth little or no more than the one located on a side street.

The point I am shooting at is this, the store which will sell the most ice cream in the neighborhood is, in nine cases out of ten, the one which has the greatest numbers of customers for its whole line of products. In other words, if by display advertising I persuade Mrs. Jones to buy some ice cream she will unquestionably plan to get it the next time she is down street. In my mind's eye I can see her coming out of her house and going down the street with a shopping list in her hand or in her mind. She is counting up two or three items which she wants to buy at her favorite drug store, four or five items which she wants to buy at her favorite grocery store, and so on. When she gets to her drug store or grocery store she thinks of the ice cream. Her appetite for ice cream, so to speak, leaps to life. Perhaps, if the ice cream advertising which she saw was extraordinarily strong she will remember the brand name and ask for it. In our hearts, however, we feel that the chance of her asking for the ice cream by its brand name is very slim. Retailers will tell anyone of us, if we go to them incognito, that out of one hundred ice cream customers, there is hardly one who asks for the ice cream by its brand name.

WE LEFT Mrs. Jones standing in the store, and out of courtesy I am forced to keep her from waiting longer. Presume she is the one of a hundred and asks for "blank brand" ice cream. You know the rest of the story already. If the retailer does not carry blank brand he tells her that the brand he carries is every bit as good if not better. She believes him. In the first place he has her confidence or she would not be his general customer. In the second place, she has probably tasted every brand of ice cream in the community at one time or another, and knows that here is not any radical difference between them.

Therefore, I say, gentlemen, that the demand which the average ice cream advertising campaign stirs up is going to benefit each of the ice cream manufacturers in the city in which it is published, almost exactly in proportion to the number, location and character of their respective retailers.

TO ME the story which I have been telling means one thing—that our general ice cream advertising, those campaigns which are intended to increase the per capita consumption of ice cream, the per capita consumption of our standard product, should be joint campaigns instead of competitive campaigns.



A joint or co-operative campaign, one in which the advertisements could be signed, for instance, "Bureau of Dairy Products" would be much more effective in influencing public opinion than campaigns signed "Blank Brand" because it would appear to come from an impartial and unprejudiced source. Then, too, there would not be any money wasted on the space which is now occupied by competitive argument. Every inch under a co-operative plan would be devoted to just one purpose—increasing the per capita consumption of our products. To my mind that spells efficiency.

METHODS USED BY ICE CREAM COMPANIES TO DEVELOP RURAL BUSINESS.

(Continued from page 10)

"One of the obstacles in the path of the rural ice cream trade is the cost of ice in the average small community. Mechanically refrigerated cabinets will overcome this to some extent but the dealers in small towns who can see the advantages of such a cabinet or have the means to buy one, are comparatively few. It is our opinion that the small refrigerator unit offers the greatest single opportunity for the development of the rural ice cream business."

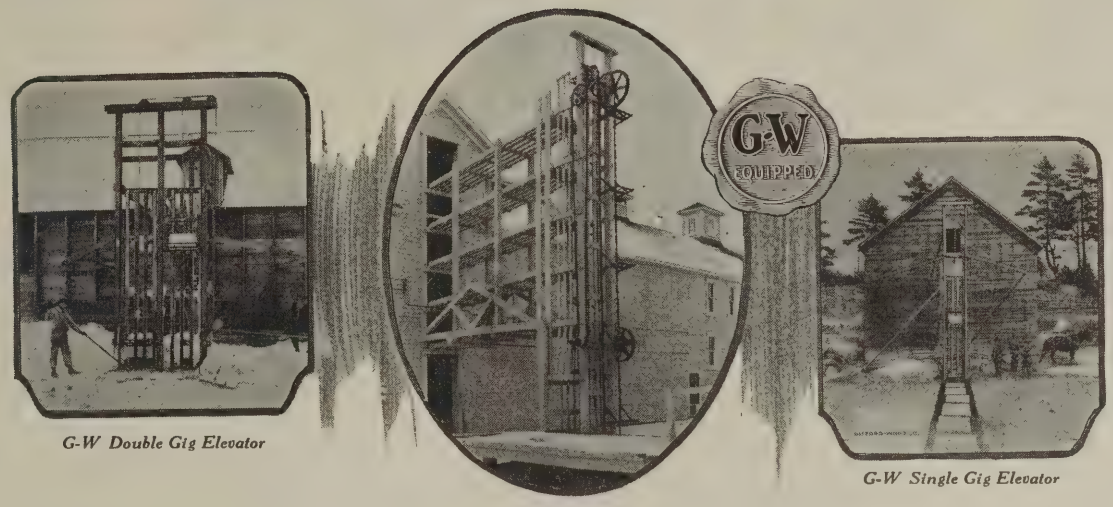
ONE of the best analyses of the rural business situation has been made for the bureau by the president of one of the most representative ice cream companies in Western New York, whose company has met the decline in rural business by establishing storage branches in strategically located smaller cities, and furnishes to the customers to whom it formerly shipped ice cream by express, a complete packing and delivery service identical in every respect with the service given its city customers, through packing trucks operated from the storage branches. . . . The letter follows:

"The rural business or as we term it in the industry, the shipping business, is gradually diminishing and it is only a question of time when the supplyng of rural dealers by express shipments will entirely cease. There are several reasons for this situation.

"First, the constantly increasing express charges and these are shortly to undergo a further increase. Second, the uncertainty of a local ice supply, due to continued open winters. These two conditions are responsible for the third, which is perhaps the most important of all, as they have made it possible for the establishment of small ice cream manufacturing plants in rural communities who are able to sell cream at a lower cost to the buyer than the city plant is able to do after taking into consideration the express charges and the expense of buying salt and ice, to keep the cream, which must be borne by the country dealer.

"To overcome this situation, our company has established storage branches in strategically located smaller cities and are furnishing to the customers to whom we formerly shipped ice cream by express, a complete packing and delivery service identical in every respect with the service given our city customers through packing trucks operated from these branches. The location of these branches has enabled us to reach into territory which it would not have been possible to cover with trucks running out of our city because of the distance involved.

"This practice has enabled us not only to maintain the country shipping business formerly enjoyed, but to increase it to a considerable extent.



"In considering the development in such a territory it is obvious that the location and operating radius of other companies engaged in the same business must be taken into consideration because these rural communities are not large enough to support several companies operating in the same field and unless care is exercised disastrous conditions can be brought about through unfair competition. As a general observation, the business of all ice cream companies is being gradually crowded in to the territory which can be reached from a central base by packing trucks."

It is rather interesting to add at this point two letters received not from ice cream manufacturers, but from ice cream supply manufacturers, setting forth what such supply manufacturers do to encourage the development of rural ice cream business:

"The business in the smaller towns and villages is usually handled by a larger ice cream manufacturing concern in a nearby town or city. In these cases we can do very little directly to assist our customers.

"Our office and factory, while suburban to the city, are in a section that might be called rural. Ice cream is delivered by several companies to the town next to us, which is one-half mile away; but it is next to impossible to have any of those companies deliver us, two or three times a week, a 12-quart can of ice cream. Where rural business may be wanted, it would seem to us that if the attitude of the manufacturers near us may be taken as an indication, that there should be a very wide field open for someone with a different viewpoint.

"Relative to the development of rural business to sup-

Accumulative Indicator

AN added and exclusive feature of the KRON Scale. Not necessary to add the separate weights—the second indicator does that for you automatically, and instantly, always giving the total at a glance. Saves work, eliminates mistakes; avoids disputes.

The American Kron Scale

Just Load and Look

WITH modern methods of making ice cream mix it is highly essential to have speedy, accurate, and practical weighing apparatus.

Speedy—to handle large batches in limited time; its action is instantaneous; it saves half or more of your weighing time.

Accurate—so that you will know that each batch contains the proper amount of each ingredient.

Practical—so that it will save labor, simplify the recording of weights, and lower your weighing costs.

The KRON Scale gives you *all* of these advantages, and speeds up the entire plant. It has no springs to put it out of adjustment. Its uncanny accuracy eliminates the possibility of dispute, and removes your weighing worries once for all.

If you will tell us briefly the capacity of your plant and your weighing requirements we shall be glad to recommend the proper KRON equipment for your use and tell you exactly what it will cost you.

There's a KRON Scale Exactly Fitted to Your Needs—Let us Tell You About It

Plan Now for Bigger 1925 Production

1925 PROMISES more than ordinary business prosperity—for you, and all of us. That, coupled with the normal year-to-year increase in ice cream consumption, means larger sales and profits for you next season.

That will require larger production; and larger production calls for additional equipment—or speedier and more modern equipment to replace that you now have.

Now is the time to plan your plant improvements, while there is time to do so leisurely—without haste or waste. If you plan to build or remodel we shall be glad to give you, through our Engineering Department, the benefit of many years of experience in just that kind of work—without cost or obligation.

We should be glad to advise you, also, in the matter of equipment, to help you select the items best suited to your needs. We may be able to offer suggestions that will reduce your equipment costs, or that will greatly improve your products or your service.

And don't overlook the economy of buying all of your equipment and supplies from a single source; we can give you everything from parchment to power plant equipment.

NORTH, EAST, SOUTH AND WEST—"REVIEW" IS LIKED THE BEST.

port our trade, we believe that many small communities are kept from the enjoyment of ice cream through the more or less restricted attitude that the larger companies take in the matter of distribution. We believe there are many opportunities for small ice cream plants—plants that may never grow big, but which do have some opportunity for growth.

"Our salesmen have learned of a number of prospective manufacturers in small places, and it has been our practice to offer them information, and the knowledge we have acquired in our particular line that might be of help to them in starting rightly. Our men usually cover a section represented by one or several states and learn much about the business side of ice cream making, and they are often able to tell prospective manufacturers of the advantages of different methods. When such prospective ice cream manufacturers are ready to buy their equipment, we extend to them assistance in the way of deferred payments or accounts carried over a considerable period of time, which gives them the opportunity to get on their feet and to enjoy at least their first warm weather ice cream season without tying up the entire amount of their working capital."

A second ice cream supply manufacturing company:

"We are not in the ice cream business, but are furnishing a considerable part of the necessary equipment for ice cream plants, either large or small, and are in very close contact with these companies all over the country. Naturally, we are concerned in the success of the ice cream manufacturer, because that success is reflected in his ability to purchase new and up-to-date equipment to care for an increasing or successful business. We have endeavored to assist these ice cream manufacturers in an advertising way by furnishing them without charge advertising mats or plates. These provide a blank space at the bottom wherein the name of the manufacturer or dealer can be inserted, and the idea is that these will be run in local papers and in other ways, which may be of benefit to the local manufacturer.

"There is another feature that we, through our organization, are constantly endeavoring to impress on the ice cream manufacturer, namely, the thought that they should produce a product of high quality. It has been our observation that the consuming public is willing to pay the price for a good article, and in this, ice cream is no exception. The difference in cost is comparatively small. Benefits accruing to the manufacturer who puts out an article of high standard means an increasing demand for his goods and the consequence, expansion of business."

Summarizing the results of the bureau's study, it appears that

1—Rural business is diminishing.

2—It is so diminishing, according to ice cream manufacturers because

a—of the increased cost of shipping.

b—of the difficulty in securing icing service in winter.

3—Ice cream companies are endeavoring to maintain and develop rural business by careful missionary work by

a—using direct by mail advertising on prospective consumers of ice cream.

b—keeping the local dealers effectively supplied with display material, running week-end specials, etc.

4—One company has found it of distinct advantage to maintain strategically located storage warehouses.

5—Numerous ice cream manufacturers have not a full understanding of the nature of overhead expenses as it affects the nature of rural business.

(For a discussion of this phase of the problem see our Business Leaflet No. 9, "The Cost of Overhead.")

The secretary of one influential local ice cream manufacturers' association writes:

"The subject of developing rural business has not been discussed at our meetings and I feel sure that our people will be glad to get the results of your study on this."

It is in this spirit that the Policyholders' Service Bureau offers the foregoing upon a problem of vital importance to the ice cream manufacturer and to the study of which little systematic attention has hitherto been given.

A Little Story How Letter D Works Hard For Those Three Other Well-Known Characters, C, B and A

NOT until we have survived all of childhood's diseases and reached the age of algebra and high-school do they usually introduce us to those mysterious and perplexing characters X, Y and Z.

But there is a more familiar group of characters, and much more friendly, that we are all introduced to far earlier in life, those famous old acquaintances A, B, C and even D. In the third grade A used to have five apples; he very, very generously gave two to B and one to C, and how many then had D?

And even before that there used to be a nursery rhyme or two where A and B and C and D met in a jingling way.

Each of us in the busy world in which we live has a particular job to do. The millionaire leader of many businesses perhaps sits at an uncluttered desk and seems to work but little. But actually he has his daily job and stop and wonder with a real confusion just what the actual relations of our daily jobs are to the bigger aggregation of days' jobs that constitute the life of a community or industry.

And one of the simplest ways of seeing clearly this relationship, without the natural confusion that the magnitude of many individual efforts does create, is to hark back to our familiar, simple, unspoiled old acquaintances, A, B, C and D.

A, B, C and D in the Ice Cream Industry.

Men in every branch of the ice cream industry, men who write for business men, business men in other industries frequently ask: "Just what is the work of The Association of Ice Cream Supply Men and why is it so useful to the ice cream industry."

NOTABLE ACHIEVEMENTS OF THE ASSOCIATION OF ICE CREAM SUPPLY MEN.

The adoption of the Fair Practice Code.

Support of the National Association's industrial laboratory project.

Eight expositions for the ice cream industry.

Development of greater industrial consciousness among supply men and throughout the whole industry.

Extensive publicity in behalf of ice cream and the ice cream industry.

Consistent efforts toward a sounder industrial economy for ice cream.

Then A, B, C and D advance to give the answer—an answer which lies, of course, in an understanding of the relationship inherent between the various stages of transaction that comprise the ice cream industry.

There is a principle underlying any successful industry. In this case the principle is this:

A is the public. Without the public there would be no occasion to produce ice cream.

B is the dealer. Without the dealer it would be difficult, if not impossible, to distribute ice cream to

DARKO

The new and better Cocoa Powder, made by the Dutch Process—improved in the Fortune Plant, and adapted particularly to the making of Ice Cream. DARKO produces a dark, rich, velvety ice cream—full of chocolate flavor that brings 'em back for more.

Drop us a card, and let us send you a working sample or a trial order in 25-lb., 50-lb., or 100-lb. drums, or in 200-lb. barrels.

do you want more business?

YOU can get it by proper advertising. Let us offer you the benefit of almost fifteen years of continuous experience advertising and selling Ice Cream. We've worked with many of the biggest manufacturers in the country and are still working with them, providing a day by day individual service and supplying everything necessary to properly advertise Ice Cream.

If your business does not conflict with someone we are now serving we should like to discuss advertising and selling with you. Write now while you are thinking about it.

Barker, Duff & Morris

Union Trust Building,
Pittsburgh, Pa.

has to do it, no less than has the driver of the wagon that leaves a shipping platform.

Often many of us, absorbed in the daily jobs we do, the public. If there were no dealer the manufacturer would have to make one.

C is the manufacturer. Without the demand from A and the means of distribution through B, C would not exist.

D is the supply man—the man who makes and delivers to C equipment, machinery, ingredients, supplies, accessories, and performs for him specialized services. Of course, if there were no C, D would not be in business.

Our familiar childhood friends, A, B, C and D have a faculty in this case of realigning their relationships also. If there were no A, it is quite apparent there would be no B and C and D. What some students of the business alphabet at one time did not realize in full, is that without a D there could not be a C or B or a means of reaching A.

THE work and the success of The Association of Ice Cream Supply Men is based on an understanding of the fact that D cannot exist and prosper without C and so on through to A; that C cannot exist and prosper without D and so on through to A. If this is true, it must be true as well that D can help C prosper and that C can help D prosper—that everytime that D helps C to prosper, D helps D to prosper too.

The ice cream industry is a whole. The supply men have realized that. They have not regarded themselves as incidental sellers to casual buyers. They recognized the fact some years ago that as they were dependent on the ice cream industry, so was the ice cream industry dependent upon them, and that the degree of dependence synchronized precisely with the degree of possible prosperity for each.

The supply men, through The Association of Ice Cream Supply Men, set out to help make the ice cream industry more prosperous.

D Begins to Work.

All men, all business and almost every institution that has survived any time in history has had a core of selfishness. The Association of Ice Cream Supply Men is no different. It began to work for D—and D is itself. It brought its members closer together. It taught the equipment man that the supply man has a right to live.

EXPOSITIONS HELD BY THE ASSOCIATION OF ICE CREAM SUPPLY MEN.

Cleveland	**1923**

It taught the million dollar company that the fifty thousand dollar company can and should survive beside it. It gave the salesman a new appreciation of his employer. It gave all member companies an exactitude of information on their common market. It saved them money, through eliminating waste sales effort. It did many things, legitimate, constructive and essential, for its members.

But in almost every part of this work for itself it simultaneously discovered that it was working just as actively for C. What did it do for C?

It brought supply man and manufacturer to understand each other. Both of them exist, you see, because there is an A and B. Some of them had never thought of that.

By reducing waste and inefficiency in selling effort, it eliminated great expenses that otherwise would have continued to be figured in the selling cost of articles that C must buy.

It dressed its window so that C might come and look at all the things displayed there. It did this in a series of great expositions that have made it possible for ice cream manufacturers to keep a close and wonderfully valuable check on all developments in process, mechanism, method and performance.

D cleaned its own house so that C might find it had

An Efficient Dairy and Ice Cream Plant is a good thing. It increases your pride in your business.

To know in advance, its exact cost is another good thing. It prevents over-investment.

To have it sanitary is necessary. That keeps the product up to Quality Standard.

To have it so perfectly laid out in every detail that operating costs are lowest is a most important factor. It enables the sales department to meet competition and satisfy customers.

All of these points are assured when the planning and construction supervision are done by Architects and Engineers specializing in Dairy and Ice Cream Plants.

no grievances to entertain. D adopted a fair practices code and a procedure for its enforcement.

D did many other things for C.

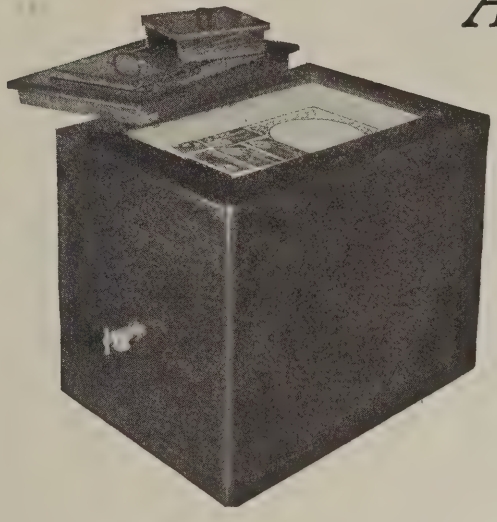
What did D do for B? Nothing, by direct contact; much, indirectly. D, at its end, laid the foundations for a sounder general economy throughout the ice cream industry—that economy which, according to an advertisement published recently by the association, is defined as "the disposition of the parts or functions of an organic whole."

D helped C save money. With that money saved C has helped and is helping B to make more money for himself. D preached and practiced modernization of plant and merchandising. C lagged not a bit behind in an enthusiasm that brought profit, for this modernization of both plant and merchandising. B today is more modern in his distribution methods, and expects and profits by instruction in bettering his approach to A.

D's Help Reaches Clear to A.

What has D done for A? Much.

A WANTS and buys more ice cream today. B wants and is learning better how to provide more ice cream tastefully, conveniently and every day. C is equipped to make more ice cream than B purveys to A. D has done no little to assist in this development and provision of a greater gallonage.



Has D done it all? By no means. The paragraphs above in no case state, and in no case should be so interpreted. D has received in return from the other elements of the industry. D has merely helped to do this work. But D has helped with an intelligent vision in its mind of what help was required and of the effective ways in which it could be given. D has known that its expositions would not merely help the ice cream manufacturer but would re-echo to the public. D has known, in its insistence on fair practices, that it not merely was protecting the ice cream manufacturer but was advancing all the way through B to A that sounder economy which would mean more ice cream and better ice cream called for by the public, more effective methods of purveying by the dealer, more invested capital at call for legitimate plant and production expansion by the manufacturer.

D has realized that an industry can be strengthened and advanced by working from the supply end as well as from what is more truly the heart and center of an industry, the manufacturing end. D has worked to make that heart and center sturdier and more prosperous.

WHAT has The Association of Ice Cream Supply Men done in definite terms? It was reorganized in 1919 from a small, semi-social business organization to a national trade association with a definite program. A feature of this program was the holding of expositions for the ice cream industry. Keeping pace with the development of that particular stage has been a development of educational work, of fair practices regulation, of market charting, of publicity in behalf of ice cream as an industry and a commodity, of co-operating with organizations of ice cream manufacturers in many of their activities, and in numerous other directions.

To relate the story of accomplishments in each of these directions would require extensive space and treatment. The story of its expositions can be taken as typifying the story of its other activities—in that it is a story of progressive, steady increase, of accomplishment and service.

Their Performance is Your Assurance of Economy

Dry Zero Universal Ice Cream Cabinets

48 hours
on one icing

HOT weather alone is not the only convincing evidence of Dry Zero superiority. In the cooler days of autumn and spring and during the winter season when you work with limited help and infrequent deliveries, then is when you will appreciate another angle of Dry Zero Accomplishment.

TRULY SURPRISING is what users say of the way Dry Zero cabinets maintain uniformly well refrigerated ice cream for a long period of time. The saving in ice and salt and the ability to go unattended for so long a period makes Dry Zero Cabinets an all year round profitable investment.

Time is plentiful now to make any test with Dry Zero Cabinets that you feel will determine their value to you. Send for a trial cabinet today. No cost to you unless satisfied.

The Eskimo Pie Season

Views and Reviews of the Chocolate-Coated Bar Industry

THE Eskimo pie season, now opened with a vengeance, as related on following pages, promises to bring forth developments of considerable interest to ice cream manufacturers who once persuaded themselves that this proposition was not sound. In the language of the streets, the industry once was divided between manufacturers who were frankly willing to see the matter through, and others who thought that Eskimo pie simply was a novelty that soon would "fizzle out."

The Ice Cream Review has seriously studied the matter. Feeling that it owes to its readers a thorough discussion of such a timely matter, much effort has been made to bring to light facts and figures which would enable readers to understand what to expect of the Eskimo pie in the future.

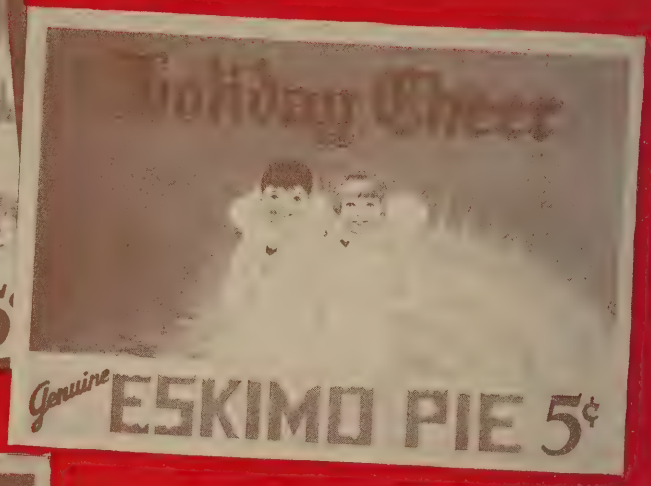
What follows is not an expression of opinion, except in regard to the opinions of men quoted. Great care has been taken not to inject into the discussion any personal bias or any unwarranted enthusiasm.

One of the oldest and most commonly accepted axioms of trade is the worth of a piece of merchandise, is best indicated by how well it pleases the public after a full trial. The Eskimo pie will get the fullest kind of a trial this year. This is assured. Many men will make it pay. Others, probably, will be dissatisfied. For that matter there probably never has been a merchandisable commodity that fully satisfied all who would handle it.

IT HAS been found that a five-cent pie can be sold. It has been impressed that nothing but a quality pie can be sold. There is ample proof that the buyer expects quality ice cream in his Eskimo pie, the same as he does out of a glass, a dish, or a cone. Quality is paramount. There is no doubt that some men in the past have not been satisfied with the pie business because they were led into buying chocolate not of the best quality. There is little likelihood that this mistake will be made this year.

The nickel pie, made from quality products, seems to have a future. Ice cream men who do not think they can profitably handle pies will be reminded, on the pages next to come, that men are building up winter gallonage through the Eskimo pie. Other men are giving more thought to the matter of pushing the chocolate-coated bar business more vigorously throughout the year.

There seems to be little reason why one section of the country is more favored than in any other section. In certain states the business is being more actively carried on than in others. It may be argued on one hand that these are states known for the quality of the ice cream produced, but in other states where manufacturers are conscientiously striving to produce the best ice cream possible, it may be pointed out, on the other hand, the Eskimo pie business is not being developed so fully.



READERS are requested thoughtfully to consider the information given here and to write us their views on the matter. We hope to see developed a correspondence discussion that will throw the fullest possible light upon the matter of Eskimo pie. In this desire we have the interests of the industry at heart.

Early in September manufacturers of chocolate, wrappers and pie machines find themselves hard pressed immediately to fill orders. Approximately 1,000 ice cream manufacturers have set out to make money out of Eskimo pies this year. Others will follow suit.

Just as in any other line of activity certain men are finding it possible to make the Eskimo pie sell better than others. The balloon day idea is fully described in this section. It is declared that some manufacturers, through the balloon day plan, have been enabled to increase their business 100 per cent and to hold up that volume for a period of 90 days. Consistent and intelligent advertising throughout the year means developing and holding more business.

THE Eskimo pie has made chocolate a dairy product. Just as the ice cream cone has stood the test and become a dairy food instead of a baker's cracker confection, just so does the chocolate-coated ice cream bar stand on trial before the high sales court of the ice cream industry. It may be that the point is well taken by the gentleman most intimately in touch with the Eskimo pie business of the country in saying, "The Eskimo pie has come through—just as the ice cream industry itself has weathered various storms and come through. It is here to stay."

Over 900 Ice Cream Manufacturers

are now actively engaged in making Eskimo Pie.

Eskimo Pie to Be Important Convention Topic this Year

Many Ice Cream Manufacturers Will Look Forward to Hearing About Chocolate-Coated Ice Cream Bar Business at Conventions.

AS THE convention season has not officially been pried open yet, with programs for this year, still in tentative form, it is impossible to say just how largely Eskimo pie will come up for discussion. But there is no doubt that the subject will occupy important places on convention programs throughout the country.

An important matter in connection with Eskimo pie is cost accounting. Members of this industry in the past have given too little attention to cost accounting, even in connection wth their general operations. It is extremely advisable, if the experiences of Eskimo pie manufacturers can be counted upon, for every manufacturer to study costs and profits in connection with the chocolate bar business and keep in operation a system that will enable them to know at all times just what it is costing to do this kind of business and just how much money it is drawing.

MANY manufacturers will recall bitter experiences at the time when the ten-cent bar went on the decline. At that time the hue and cry was raised that Eskimo pie was dead. The word was passed around in many states. Thinking they would get a jump on other manufacturers by suddenly shaving down the price to five cents, without properly studying the cost of putting together a certain amount of ice cream and chocolate at this price, many manufacturers a couple of years ago developed a large volume, excited themselves into believing they were making much money and suddenly were awakened to the fact that they were losing considerable money.

Some ice cream manufacturers still know very little about this business, which requires study in the same proportion that is required by the ordinary operation of an ice cream factory. There are sales systems to be worked out.

One man's system will be of interest to another. One man's experiences in a certain direction will be helpful to another. One man's mistake will enable others to avoid those mistakes.

As the industry continues to push Eskimo pie, different angles of the matter will be presented. There are angles to be discussed this year that were not thought of last year.

There is no doubt that the convention will bring out many new and interesting things in connection with this product.

Announcement was recently made that Cutlip's Ice Cream Co., North Bend, Ore., will erect a new plant at an estimated cost of $25,000. This structure is to be modern and the equipment is to be complete in every detail.

L. A. Cutlip is manager of the company and J. E. Tourtellotte is architect for the new structure.

We have all met men who were too little to be big. You know the fellow I mean, the one who mooches lunches, smokes, gum, etc., and walks ten blocks in the middle of a busy day to save car fare.

Eskimo Pie Season Off With a Running Start

Approximately 1000 Manufacturers Start Campaign that Promises to Boost Eskimo Pie Per Capita Consumption in Virtually Every State

IT'S off with a bang—the Eskimo pie "season." Approximately 1,000 ice cream manufacturers at this time are perfecting their plans to handle a record output of the chocolate-coated ice cream bars. Credited with doing more than anything else except consistent effort and persistent advertising to develop winter consumption, the Eskimo pie this winter promises to reach new high levels of popularity.

The growth of the business is indicated by the fact that the Chicago company which supplies 75 per cent of the wrappers used on the Eskimo pie bar this year are doing business with approximately 600 accounts greater than this time last year, with an average of three or four new accounts a day showing up in the mail.

The wrappers sold in 1923 amounted to 1,183,000, whereas, up to August 30, 1924, there had been sold 10,832,000 wrappers. A striking feature in this connection is the fact that while most manufacturers regard the Eskimo pie as a winter proposition, suited only for cold weather, many manufacturers last year were proving that proper initiative could make these bars sell all the year around. This is shown by the fact that in May, 1924, aproximately two million more bars were sold than in the same month last year. There was a slight decrease in June, but in July the manufacturers sold nearly double the amount of bars sold in July, 1923. And in August, which formerly was regarded as no month for the chocolate ice cream bar, sales jumped to approximately nine million more bars than in the same month last year.

The figures of the Chicago company handling the bulk of the business in wrappers follow:

1923	No. wrappers sold	1924	No. wrappers sold
May	5,562,000	May	5,308,000
June	3,310,000	June	3,394,000
July	1,730,000	July	2,947,000
August	1,183,000	August	10,832,000

Up to September 20, 1924, this company had sold 12,500,000 wrappers, while in the same period in 1923 only 8,999,000 wrappers had been sold.

The general manager of this company points out that Eskimo pie has been "put over," after many manufacturers were sure the idea was ready to die, by manufacturers who are willing to wield intelligent effort.

BALLOON day is a proposition that has done much to increase the Eskimo pie output in many different cities. This was described in the preceding issue of The Ice Cream Review. This plan, as explained in the preceding issue, means that the ice cream manufacturer is supplied with a number of balloons at a cost of approximately one cent each.

The dealers give free a balloon to each customer of an Eskimo pie bar. The spread in popularity of this idea is indicated by the fact that this year, with six companies manufacturing balloons solely for Eskimo pie, six million balloons were sold in the month of August. It was estimated during the middle of last month that in the months of September and October there would be sold five million balloons to ice cream manufacturers who are energetically at work building up business in the frozen chocolate pies.

ONE firm alone recently ordered 165,000 balloons, and another entered an order for 100,000. One day's mail brought in an order for 1,145,000 wrappers from the Chicago company supplying the bulk of these wrappers, and another day's mail, in September, brought to the same company orders for 219,000 for balloons, these orders being placed by 16 manufacturers.

An idea of how well adapted is the Eskimo pie to cities of different types is indicated by figures showing

A Bar Cabinet that makes a silent salesman of itself. It keeps the pies right. Its self advertising features helps to sell them. You will find lots of places to put them to advantage.

Northwestern Bar Cabinet

that manufacturers of Springfield, Mass., last year built up a per capita consumption of 12.8 per cent in Eskimo pie, while a very large city, Pittsburgh, went even higher, accomplishing a per capita consumption of 13.6 per cent of the population. In the latter city five manufacturers handled the pies.

The Chippewa Model Dairy Co., Chippewa Falls, Wis., a town of 9,000 population, last year sold 390,000 pies.

Other cities this year are starting out for new high records. The fact that Eskimo pie was many manufacturers' friend in need in the cool weather during the most part of the summer has given these manufacturers an insight into the possibilities of this product. There is no doubt that the product will be pushed harder during the remainder of 1924 than ever before has been the case, not even excepting the early days of Eskimo pie's frenzied popularity.

"Who is in best position to handle the Eskimo pie?" a representative of The Ice Cream Review asked at the headquarters of the Chicago company that controls this field.

"The manufacturer who has the foresight to vision possibilities and the enterprise to act," was the prompt reply. "The popularity of Eskimo pie is not confined to any particular part of the country. Men are doing a big business in this product in New England, and so are others in the Middle Atlantic states, the Middle West, the South, and on the Pacific Coast."

MISSISSIPPI, a Southern state, leads in per capita consumption in proportion to the population of the cities where Eskimo pie is sold. An Eastern city leads in per capita consumption among cities. Middle Western manufacturers have hung up sales records in the product.

Eskimo pie, in the opinion of many observers in close touch with the situation, is in for an active season. Many believe that the early start this year will carry far into next spring, while manufacturers who have given much study to the matter are of the opinion that there is every reason to expect to see heavy sales of the product in the summer of 1925.

Building Eskimo Pie Business on Balloon Day

Cleveland Manufacturers, Early in the Fall, Sold 29,580 Dozen Pies in One Day

CLEVELAND ice cream manufacturers began their drive on Eskimo pie on August 30. Balloon day opened the campaign with the sale of more than 355,000 pies. This outstanding record in merchandising was due to one simple fact, explained by a leading Cleveland ice cream manufacturer as follows: "The success of balloon day was due to our having conducted it in a thorough and organized manner."

An article in the September issue of The Ice Cream Review told the purpose of balloon day. Since this was published manufacturers throughout the country have tried out the plan. They will be reported on in subsequent issues of this publication.

Balloon day was launched ten months ago as a merchandising idea, particularly adapted to the Eskimo business. A small Iowa city was the starting point. An ice cream manufacturer with twenty dealers bought 1,000 balloons and gave away one with each Eskimo pie sold. After this successful experiment other manufacturers tried out the scheme.

MANUFACTURERS of a large Eastern city joined hands in a balloon day and sold 900,000 pies on that day. As the idea spread four balloon factories were contracted with for their entire output. All the balloons that could be furnished by smaller plants were bought up. Arrangements were made with six leading manufacturers of balloons to build up stocks for the fall.

This made it possible for the Cleveland manufacturers to receive 345,000 baloons, requirng six different imprints, in seven days from the date of the order.

"We checked up a number of dealers actually handling Eskimo pie," one Cleveland ice cream official said. "We figured each Eskimo pie dealer would sell 100 pies on that day, and, accordingly, we ordered 110 balloons for each dealer, which gave us a few extra for advertising purposes.

"We placed our order for advertising and for balloons the same day. The balloon announcement streamers, window streamers and placards were immediately delivered and placed.

"With the aid of our drivers and salesmen we put up two balloon streamers, two window streamers and one placard on Monday previous to the Saturday on which balloons were to be given away. The dealer readily agreed to put them up, as we were doing something out of the ordinary to stimulate his sales.

The Choicest Wood for Richmond Tubs

Only the choicest white cedar trees from this gigantic swamp of a hundred thousand acres are used in fashioning the Richmond White Cedar Tub. Only a wood with tremendous moisture resisting qualities could survive under conditions like these. It's this extraordinary quality of wood that makes Richmond White Cedar Tubs so economical.

Name.....

Address.....

"This advertising was up five days before balloon day. Every youngster in town knew Saturday was the day.

"MONDAY we started making pies for a reserve and Tuesday and Wednesday we started taking orders, advising the dealer that he should order ten times his normal Saturday requirement, at the same time emphasizing the fact that we were only making pies to fill our actual orders and to equal in number the quantity of balloons on hand; that no second deliveries would be made.

"By Thursday noon we had in all orders and, where practicable, made deliveries Friday, so the dealers would have pies the first thing Saturday morning. We put thirteen balloons in each box of a dozen pies to give the dealer a few extra for advertising.

"We did not disrupt our organization, but took care of every dealer, and, as we had forewarned them, were in a position to turn down calls for extra pies. We sold 45,000 pies that day, where we had formerly sold but 4,900 on the previous Saturday. We could have sold an additional ten thousand had we cared to make second deliveries.

"Hundreds of youngsters purchased their first Eskimo pie that day and acquired a taste for the product. Some dealers had ten times their normal pie business. Our name, appearing on the balloons, was carried into hundreds of homes. Our cost was $1.20 per dealer, and profit on the pies that day paid for it. We did not spend one cent for announcements or advertising, and our sales jumped one hundred per cent in the next 30 days."

ICE cream manufacturers who understand the importance of co-operating with dealers see, in this Cleveland experiment, an excellent means of making the Eskimo pie and balloon day useful in developing closer contact with the dealers.

For a long time it has been pointed out in The Ice Cream Review that more ice cream will be sold from the dealer's fountain when more ice cream manufacturers make up their minds that they are responsible for a very large share of the merchandising problem.

Will Eskimo pie be the means of bringing dealers and manufacturers closer together in sales promotion work?

AMERICA'S TYPICAL FOOD.

What is America's typical dish? The editor's are asking, and the answers range from potatoes and gravy through "hot dogs" to roastin' ears. But we think they are wrong. So many Americans went abroad a few years back that, if you listened to their talk, you could get a pretty good idea of what things at home that were lacking in France they most esteemed. So in food there was one dish they talked of always. Many a soldier expressed the intention of buying a dollar's worth the moment he landed on his native soil. Sometimes they saw it advertised in the window of a French restaurant, ordered it eagerly and found it far from the real article. A motherly woman at Newport News told us that tears came to the eyes of boys in the hospital newly returned from overseas when they were told they could have as much as they wanted.

What is it? At every railroad lunch counter you can get a ham sandwich. Travelers who go where they must and eat in restaurants of all characters, and no characters, often say "ham and—" is the safest dish. But what do you find everywhere—in restaurants, in drug stores, in department stores, yes, even in 10-cent stores? Ice cream, of course. And you can buy it for 10 cents, better than most American travelers ever tasted it overseas.—Editorial in The Milwaukee Journal.

LOUISIANA PLANT IN OPERATION.

The Crystal Ice and Bottling Co., Ltd., South Mansfield, La., recently began operatons in its new ice cream plant. The plant is small but, according to reports, it is modernly equipped and has a capacity of 100 gallons of ice cream daily. D. J. Cook, secretary, informs us that his company is using "the famous Kim mix, prepared by the Kentwood Ice Mfg. and Bottling Co. of Kentwood, La., and the quality of our product is excellent."

The plant is equipped with a three-ton refrigerating machine, enclosed type; a forty-quart horizontal freezer, and has a hardening room of 500 gallons capacity.

Officials of the company are J. L. Braun, president; Morris Aaron, vice-president; H. A. Cook, general manager; D. J. Cook, secretary, and V. E. Cook, treasurer.

NEWLY ORGANIZED COMPANY AT MOLINE, ILL.

The Bluebird Dairies, 2300 Fifth St., was recently incorporated with a capital of $21,000. This firm will soon begin the manufacture of ice cream and will deal in all dairy products.

The incorporators are H. R. Krueger, O. S. Brown, and others.

You'll make better ice cream if you get "The Ice Cream Review."

Master Metal Wrappers

The *official* wraps for Eskimo Pie

Why?

QUALITY

Master Metal has a rich, silver-like lustre, is strong enough to stand the hardest use, yet flexible, pliable, and easily handled. Beautiful color-printing.

SERVICE

No more delays and waiting for wrappers. Prompt shipments from our factories at Louisville and San Francisco of stock or imprint wrappers in sheets or continuous rolls.

SATISFACTION

The pleasure of knowing your bars are properly packaged to appeal to the most discriminating buyer.

Order your wrappers now from the Eskimo Pie Corporation, Chicago, or direct from the—

United States Foil Company

LOUISVILLE, KY.

Branch: SAN FRANCISCO

What Is the Saturation Point for Eskimo Pies?

One Statistician Declares the Maximum Volume Lies Somewhere Beyond 17 Million Gallons of Ice Cream a Year

STUDYING the possibilities of the Eskimo pie in this country becomes a fascinating undertaking when one takes counsel with the statistics. A representative of The Ice Cream Review, familiar with the widespread activity centered around Eskimo pie, asked an Eskimo pie supply official this question:

"What do you consider the maximum volume that can be reached on Eskimo pie? In other words, what do you consider a reasonable saturation point?"

"We do not know," was the frank reply. "But we have a statistical department through which we do know certain facts and possibilities of great interest.

"For example, we know there are 55,000,000 people in the United States living in cities, towns and suburbs within daily reach of ice cream dealers. We know that these people in the last twelve months took it upon themselves to eat an average of one Eskimo pie every three months and thereby consumed more than 170,000,000 Eskimo pie bars, or 2,125,000 gallons.

"WE KNOW that in seven states manufacturers have developed an appetite calling for one Eskimo pie every five weeks. If the people in the remaining states can develop a similar desire, the ice cream industry will sell 550,000,000 Eskimo pies, and an additional 7,000,000 gallons of ice cream will be sold.

"We know that in 45 cities scattered throughout 17 states the public's craving reached a point where people averaged one pie every seventeen days. They are only the healthier for it—they still are at it.

"Now, think what it would mean in turnover (mostly winter business) if the manufacturers in the remaining cities would get their public to eat just one Eskimo pie every seventeen days — exactly: 1,199,000,000 Eskimo pies annually; 14,990,000 additional gallons, and $5,996,000 greater income for the ice cream manufacturers."

On the basis of this figuring, there doesn't seem to be any close aproach to the saturation point in the ice cream industry at this time.

Asked if there were not some particular reasons why ice cream manufacturers of the remaining cities would find it more difficult to develop the Eskimo pie appetite, the man in question promptly replied, "The manufacturers in the remaining cities have before them the same situation that is facing the manufacturers in the seven states—people who eat."

PROFESSOR C. H. DAHLE ACCEPTS POSITION AT PENN STATE.

The dairy department of the Pennsylvania State College recently announced the appointment of Professor C. H. Dahle of the University of Minnesota as associate professor of dairy manufacturing. Professor Dahle is a graduate of the University of Minnesota and also received his masters degree from that institution in 1921. He has for several years been assistant professor of dairy manufacturing at Minnesota and has made an enviable record in his profession. He has completed a number of outstanding research projects and is the author of numerous professional papers relating to the manufacture, chemistry and nutritive value of dairy products.

Mr. Dahle will devote the major portion of his time to teaching and research work in dairy manufacturing, particularly ice cream. A wide field of opportunity for this line of work is presented in Pennsylvania which is the greatest ice cream state in the Union with an output of 34,100,000 gallons in 1923. The state outstrips its nearest competitor, New York, by about 14,000,000 gallons annually.

Professor Dahle's wide experience and technical training in dairy manufactured products will enable him to render much service both in instructional and research work to the dairy manufacturing industry in Pennsylvania.

ALUMINUM FOIL

The Standard Wrapper

for

ESKIMO PIE

During the last twelve months, more aluminum foil was used for Eskimo Pies than all other wrappers combined.

Aluminum foil is especially suited for wrapping food products because it is absolutely hygienic and can form no poisonous compounds with any food. Aluminum foil wrappers are made for all wrapping machines used on Eskimo Pies.

Bright silvery—white foil—made of pure aluminum—keeps its lustre and brilliance better than any other metal foil.

Aluminum Co. of America

Oliver Building *PITTSBURGH, PA.*

The Right Way to Manufacture Eskimo Pies

Cream Direct From Hardening Room Makes Best Pies

UNLESS you have less than ten accounts, and a very limited chance for development, it is recommended by most manufacturers that you purchase a machine. In making pies, let the following guide you:

1. See that cream is hard and free from moisture. Cream direct from the hardening room makes best pies. Moisture quickly thickens and ruins your coating. Note: Moisture in coating can be removed by slowly agitating it in a double boiler at a temperature of 100 to 108 degrees.

2. See that all pies are uniform. Better throw away a pie smaller than standard, than to make a dissatisfied customer.

3. See that pies are neatly and completely wrapped. Particular people will judge you by its appearance. It costs no more to have your pies properly wrapped — merely occasional inspection and attention.

4. See that pies fresh from the machines or wrapping table are thoroughly hardened before being checked out to your trade. Soft pies cause dissatisfaction and disgust and hurt sales quicker than any other cause. This mistake has been made many times. Far better to advise your dealer you have no pies for delivery than to send him soft ones.

5. In general, see that your pies are uniform, properly wrapped and delivered in good condition.

This keeps your dealer satisfied—your purchaser buying. It is claimed that no product of the ice cream manufacturer is as easy and simple to sell and build into volume as Eskimo pies. Instead of requiring weeks to build up and establish a satisfactory volume, maximum production can be secured the day it is placed on the market, is also claimed for the chocolate covered bar.

The newness of Eskimo pie, in comparison with the length of time many of the old established and popular foods have been on the market, is largely responsible for the lack of proper selling information and the wide range in volume secured in the same states and localities.

The HOUSE *of* *Personal Gelatine Service*

Hughes Gelatine Co.

1815 Franklin Street

DETROIT MICHIGAN

AUSTRALIAN IS HERE TO STUDY METHODS EMPLOYED IN U. S.

Dr. R. M. Kinross, prominent cattle raiser and president of the Australian Guernsey Breeders' Society, also part owner in an ice cream plant in Sydney, Australia, is visiting the United States to obtain complete knowledge of the dairy and ice cream making methods employed in this country.

According to Dr. Kinross, Wisconsin is recognized by Australia as the greatest dairy center in the world and it is only natural that Dr. Kinross should come to the "heart of dairyland" to glean a keener knowledge of producing quality dairy products.

Besides inspecting the model ice cream plants located in Milwaukee, Dr. Kinross also visited many of the splendid dairy farms throughout Wisconsin.

Consumption Grows In Dixie

Higher Quality and Better General Conditions Give Impetus to Ice Cream Industry in Southeast, Questionnaire Shows

*By F. R. EDWARDS**

IF WE can rightly judge, from the answers received to a recent questionnaire sent out by the Animal Industry Department of the Georgia Experiment Station of Experiment, Ga., the use of ice cream is decidedly on the increase in the Southeast. Things seem to be "moving along" and the ice cream folks have their pockets full of money as a result of the past season.

F. R. EDWARDS.

They are looking forward to an even better season for 1925, this survey indicates.

Two sets of questions were sent out. One set went to ice cream makers, while the other went to dealers in equipment and supplies.

The territory covered by these questionnaires includes all or parts of Georgia, Florida, South Carolina, Tennessee, Alabama, and Mississippi.

Special emphasis was laid on Georgia. The following is a resume prepared from the answers received:

GENERALLY speaking, business has been from 5 to 30 per cent greater than for 1923. No answer showed a decrease of business, and only one answer said that the present season had showed little or no change from the 1923 season.

Florida seems to have had the largest increase in ice cream production and demand over the preceding year. This comes in spite of the fact that Florida had a good year in 1923.

W. J. Barritt of the Tampa Dairy Co., and president of the Southern Association of Ice Cream Manufacturers, stated that his company's business had shown about 25 per cent increase over the 1923 season.

Georgia seems to rank about second in increased business. The answers from this state seem to show an increase of from 10 to 15 per cent.

For the entire Southeastern territory it would seem from the answers received that consumption had shown an increase of nearly 10 per cent in 1924 over 1923. The dealers in equipment and supplies showed an even greater increase in sales than did the ice cream manufacturers.

This seems to denote preparation for further expansion for the coming year.

ICE cream manufacturers seem to be expecting an increase of from 5 to 20 per cent next year over the present year. In Georgia this will probably be about 10 or 12 per cent, judging from the answers. In Florida somewhat less expansion seems to be expected for the coming year over the present season. In other sections of the Southeast covered here about the same increase is expected as in Georgia, or perhaps slightly more.

The supplymen are evidently planning for a substantially increased business for the coming year.

The question was asked whether a poor cotton year, with the decreased buying power it gives the South, tends to cut down ice cream consumption by causing more farmers to produce cream and thereby better supply the market.

This question brought rather divergent answers. Most of the answers seemed to agree that low buying power from a poor cotton year tended to cut down ice cream consumption.

On the other hand several keen business men said that such a decrease from unprofitable cotton was only temporary in its nature and, with cotton remaining unprofitable for any length of time, the consumption of ice cream would eventually be heavier than ever. Both views may be right.

Cotton conditions have been decidedly favorable during the last two years.

The ANCO Rotary Can Washer Is Proving a Great Success

IT HAS incorporated the most thorough cleansing features of expensive types of machines but is moderately priced, occupies comparatively little floor space and is adaptable for small, medium and large requirements.

The exceptional serviceability of these machines may be largely attributed to the method in which washing sprays, sterilizing sprays, steam and water sprays are applied. They are raised and lowered in the cans, while the cans are revolving, so that high pressure streams of water, etc., are directed directly against each square inch of the cans' surface. This insures PERFECT CLEANING.

The Allbright-Nell Co.,
Chicago, Illinois.

Gentlemen:

Since installing your machine, we have used it constantly, cleaning several hundred cans daily. These cans have been well cleaned and dry when taken from machine. We have washed some very dirty cans, and have had good results.

With best wishes for success, we beg to remain,

Yours very truly,
UNITED DAIRY COMPANY.
(Signed) Louis G. Glick.

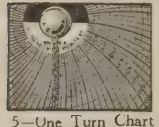
The FACTS *in the* CASE



1—Pen Pressure and Position Adjustments

2—Fountain Pen Point

3—Fixed Pivot

4—One Size Chart

5—One Turn Chart Holder

6—Improved Case

Inside the case you will find the reason for the extraordinary ruggedness and accuracy of TAG Recorders. By reason of a patented cam arrangement, the TAG is the ONLY Recorder with uniform chart graduations for ALL ranges. A special seasoning process prevents "setting" of the spiral spring. The development of a single-piece welded bulb and of a capillary tube of exceptionally fine bore are other TAG achievements. The following distinctive structural features also contribute to TAG superiority.

1—Pen pressure adjustment and pen position adjustment, the latter providing an exact and convenient means for correcting accidental bending of pen arm.

2—Fountain pen point writes a clean sharp record line and requires less frequent filling. The non-corrodible pen arm is inverted so that ink cannot run down into operating mechanism.

3—Accuracy of time indications is assured by mounting pen arm on a FIXED pivot so that pen point will always follow radial lines of chart (with clock stopped). Positive pen-arm stops, specially designed clock, convenient clock starter-lever are other features.

4—By standardizing on one best size of chart, manufacturing costs have been reduced making possible unusual refinement of construction at the usual price.

5—Improved chart holder, secured to case by light chain, is attached and removed with a single turn. Charts are printed in green ink on specially seasoned high quality ledger paper.

6—Improved case construction incorporating moisture-proof feature, if desired.

TAG DIAL-INDICATING Thermometers embody the same improved construction and operate according to the same reliable principles as TAG Recorders. The exceptionally easy reading dial is a feature.

CONSUMPTION GROWS IN DIXIE.

(Continued from page 116)

THE answers, as a whole, seemed to indicate that in recent years it is becoming decidedly easier throughout the South to obtain milk and cream from local producers than it was a few years ago. This is undoubtedly the fruit of the ravages of the boll weevil and of the campaign that the state experiment stations and agricultural colleges in the South have made to get the farmers to diversify.

The ice cream manufacturers were asked whether they had found that specialties (such as Eskimo pies, etc.,) increased their trade.

The replies were pretty evenly divided between the affirmatives and the negatives, but the affirmatives seemed to be slightly in the majority.

Manufacturers were almost unanimous in saying that ice cream consumption could be profitably stimulated in the South by a united advertising campaign, rightly staged. [Such a campaign is planned by the Southern Association of Ice Cream Manufacturers.—Ed.] Evidently the ice cream makers have great faith in the ability of the Southeast to expand its consumption.

In the writer's opinion the figures comparing the present year with the previous year may be a little too high for the ice cream business in the Southeast, as a whole, since the figures are largely from concerns that are well known and prosperous.

However, there seems to be little doubt but that the ice cream trade in Dixie has been unusually good during the present season, as compared to 1923, and the outlook is decidedly favorable for 1925.

AMONG the suggestions made as to how the trade in the Southeast could be helped were: 1. Greater co-operation among ice cream manufacturers. 2. A strong central organization to boost the trade by setting better standards, advertising and educating the consumer. 3. Keeping low grade products off the market and preventing them from hurting the trade. 4. Stimulation of local production of milk and cream and adoption of more efficient methods in milk production, so as to cut down the cost of raw materials. This included, especially, the education of the Southern farmers and dairymen away from the use of so much expensive imported grain feed and the substitution of home grown pastures, silage and other feeds.

The writer considers the suggestions made by James J. Harvey of Bessire & Co., Atlanta, as especially timely. Mr. Harvey says, "What we need for the ice cream industry of the South is greater co-operation toward a strong trade organization that would maintain high standards for ice cream. Encouragement must be placed upon ice cream of the highest quality. This would work toward greater consumption."

Pittsburg, Pa..

Gentlemen:-

About a year ago we installed one of your Viscolizers in our Milk Plant. We bought it for the purpose of viscolizing our table or coffee cream, but we also use it in a very satisfactory way for viscolizing our cream for sour cream and for viscolizing our skim milk for buttermilk, also for making milk and cream from by-products at times when milk is scarce. We think the Viscolizer is the most profitable piece of machinery we have in our plant and we know that it gives us an opportunity to work up our by-products in a more profitable way. It is making real money for us and we could not part with it under any consideration.

We recommend the Viscolizer very highly to every one in the milk business as we can put out a much better product than is possible to any other way.

Yours very truly,
(COPY) HA SPEER MILK CO.

No Decision in Matter of Weights and Standards

Officials Believe Situation is Favorable to Industry's Hopes

*By VERNON F. HOVEY**

THE subject of ice cream standards was apparently the most important brought before the Chattanooga meeting, the discussion being led by Dr. W. W. Skinner, chairman of the joint committee on definitions and standards.

At the request of Dr. Skinner, the writer was given fifteen minutes.

Mr. Munn, president of the National Dairy Council, very kindly consented to go to Chattanooga with the writer, for the purpose of discussing nutrition in connection with ice cream standards.

VERNON F. HOVEY.

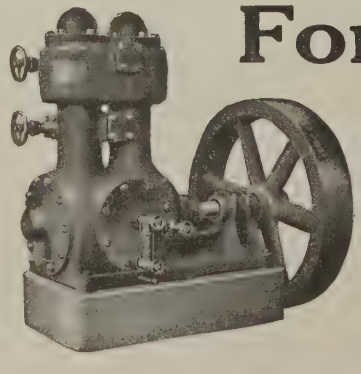
At the conference of this same body, in Duluth, a year ago, I understand they voted unanimously for a 12 per cent standard, whereas, at Chattanooga, they could come to no agreement, and there seemed to be comparatively little support for a 12 per cent standard.

You will, of course, understand that the joint committee on definitions and standards is sure to be considerably influenced by the action of the association of American dairy food and drug officials, the members of which are mostly state officials. This subject came up for discussion at 2 p. m., on Thursday afternoon, and as soon as the writer had completed his statement the association went into executive session, discussing ice cream standards all the rest of the afternoon, and again in the evening, finally deciding on Friday morning, just before adjourning, that no action be taken but that the whole matter be referred back to the joint committee on definitions and standards.

* President, National Association of Ice Cream Manufacturers.

WHILE there is considerable agitation through the country, over the question of ice cream overrun and shrinkage, I am glad to be able to say to you that the officials seem disposed to be quite fair. They feel that every abuse within the industry should be corrected, and that there should be no objection to a proper standard, showing consideration for variations in net weight resulting from normal operating conditions. They admit they have not, at the present time, sufficient information to come to an intelligent conclusion, and they intend sending one or more representatives into various large commercial ice cream plants for the purpose of getting facts, first hand.

One great difficulty which they recognize is the fact that no standard is logical because there is not necessarily any relation between weight and value.



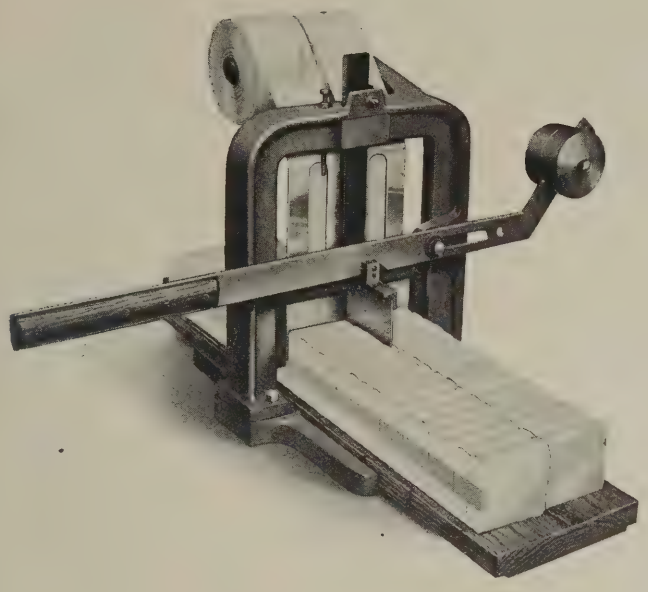
I am personally much opposed to high overrun, as I consider it is very uneconomic that we should pile up executive, delivery and selling expense on air; that it is fundamentally good economics to make our product as heavy as possible. At the present time we do not know whether or not shrinkage in in direct proportion to overrun, nor do we know what effect total solids may have on shrinkage. I intend to put this subject on our New Orleans program, and have real facts to present.

* * *

Report of the Chattanooga Meeting.

Mr. Hovey, president of the National Association of Ice Cream Manufacturers, discussed proposed legislation regulating the industry which he represents. He spoke in favor of maintaining the present minimum of 8 per cent butterfat in ice cream, instead of raising it to 12 per cent, as suggested. Mr. Hovey stated that the sale of ice was more or less local, and that it consequently seemed that the question of ice cream standards should be determined by the different states, and that a federal standard was of importance, mostly because of the influence of such a standard upon state standards, there being a desire for uniformity. Because of this, the ice cream manufacturers are much concerned about getting a proper federal standard.

MR. HOVEY stated that it was the purpose of the food and drug act to prevent adulteration or misbranding, and that ice cream could not be said to be either adulterated, or misbranded, simply because it



For Lasting Satisfaction

York
Refrigerating Equipment

One reason why there are so many installations of York Refrigerating Equipment is that its satisfactory working condition does not pass with the seasons. York Equipment does not mean satisfaction until the first signs of wear show up, but a year in year out dependable service that stands the strain of rush seasons without injury to its long life.

Let us show you just why York Equipment lasts longer.

failed to contain 12 per cent butterfat when 75 per cent of all of the ice cream sold in the country has been sold in states having butterfat standards of 8 per cent. In other words, that the federal government could not declare that 8 per cent ice cream was not ice cream when it had been officially recognized as ice cream by a substantial number of the biggest ice cream producing and consuming states. He stated that it could not be the thought that a higher fat standard in ice cream would give the people more for their money, as selling prices would be entirely determined by costs.

It was, therefore, simply a question whether people should be required to eat richer ice cream, for which they would pay more money. Mr. Hovey quoted the opinions of numerous food and nutrition experts, who stated that they would not endorse a minimum fat standard for ice cream in excess of 8 per cent, as a properly balanced product requires a proper ratio of milk fat and milk solids not fat, the ideal ratio probably being that found in normal whole milk. He admitted that the average consumer prefers rich food and that competition in the ice cream field was so keen that ice cream manufacturers were going to extremes in raising the fat content of their ice cream, seeking thereby to gain public preference, in spite of the fact that rich ice cream cannot be consumed 365 days in the year, with as much benefit as a product containing 8 per cent fat. He stated that food officials could leave it to competition to give the public any product for which there might be a demand, but that the desire for rich foods was no good excuse for raising the fat standard of ice cream, when considering only minimum standards. Mr. Hovey advocated that ice cream manufacturers be allowed to continue the use of certified colors, stating that the public will consume more largely a product that is pleasing to the eye, and that colors are not used in ice cream for the purpose of deceiving the public, the richness of which will be guaranteed in any standard that may be adopted.

HE ALSO suggested that manufacturers be allowed to use corn sugar, stating that the use of this product might help to stabilize the sugar market; that the product was an entirely American product, just as wholesome and more digestible than sucrose. He stated that the industry, as represented by the national association, desired to work with the food officials, in correcting every abuse found within the industry. Regarding a minimum weight standard he stated that it was impossible to determine in advance the weight of the finished product, and before any definite ruling should be considered, he asked that the government committee on standards send representatives into various ice cream plants, and to get facts as to actual operating conditions, particularly regarding the extreme variation in weights of finished ice cream, in different plants, when operating under normal conditions.

All of Mr. Hovey's recommendations were referred to the executive committee.

NATIONAL PRESIDENT REPLIES TO NEWSPAPERS.

A Washington news item recently stated that ice cream manufacturers, now and then, take advantage of the fact that their product is sold by volume, rather than by weight, and that the department of agriculture proposes a tentative weight standard of 4¾ pounds per gallon.

In connection with this, Vernon F. Hovey, president of the National Association of Ice Cream Manufacturers, has made the following statement:

"Such a statement is unfair to the ice cream industry, as the committee on definitions and standards has no definite conclusions regarding a weight standard for ice cream, but in line with their regulatory work, are making an investigation of this subject, with the assistance of the leading men in the ice cream industry.

"The public will appreciate that cream becomes whipped cream only when air is whipped into it, and in like manner cream, milk and sugar become ice cream only when whipped and frozen.

"The manufacturers of ice cream have made great progress, and have wonderfully sanitary and well equipped plants, yet, it has not been possible to get equipment which would enable them to determine, in advance, the exact weight of their finished product.

"The ice cream industry welcomes every reasonable and proper measure of regulation that will give the buying public increased confidence, and is working with the department of agriculture to determine whether or not a minimum weight standard is logical and commercially practicable. It is not the thought that ice cream should be sold by weight, but rather to fix a minimum weight per gallon."

ACQUIRES NEW DISTRIBUTION PLANT.

The New Haven Dairy Co., New Haven, Conn., manufacturers and distributors of ice cream, recently acquired the two-story plant on Knight, St., Norwalk, Conn. This plant was erected two years ago by William Krusch and is adequately suited for the purpose to which it is intended. The New Haven company will begin operations here immediately to accommodate its increasing business in that city.

The New Haven Dairy Co., of which Charles Morris is president, operates nine plants in Connecticut.

THE priceless ingredient of any product is the honor and integrity of its maker. If you can depend on the reliability of the House from which you buy, you can be assured of satisfaction.

Do Your Trucks Cost or Save?

ONE thing above all others that recommends GMC's for ice cream deliveries is their ability to stay on the job and meet delivery schedules in the busy season.

There is extra sturdiness in every GMC part. GMC design is simple and accessible. It calls for the use of that material which is best for the purpose in the fabrication of every GMC part. GMC started to find out which was best way back when the truck industry started.

Another thing—every GMC wearing part can be speedily replaced any number of times.

Another thing—GMC's of two tons and over have the now-famous GMC Two-Range Transmission with an extra power range for heavy loads and heavy pulling.

And still another—GMC price is lower than that of other high grade trucks. GMC volume and participation in the vast purchasing resources of General Motors saves you money.

There are two kinds of trucks. GMC's are the saving kind. Ask for a catalog.

DAIRY INDUSTRY NEEDS TRAINED MEN.

The dairy manufacturing industry's great need for men who understand the theory and practice of manufacturing dairy products of all kinds is pointed out in the 1924-25 winter dairy course catalog issued by the University of Wisconsin College of Agriculture.

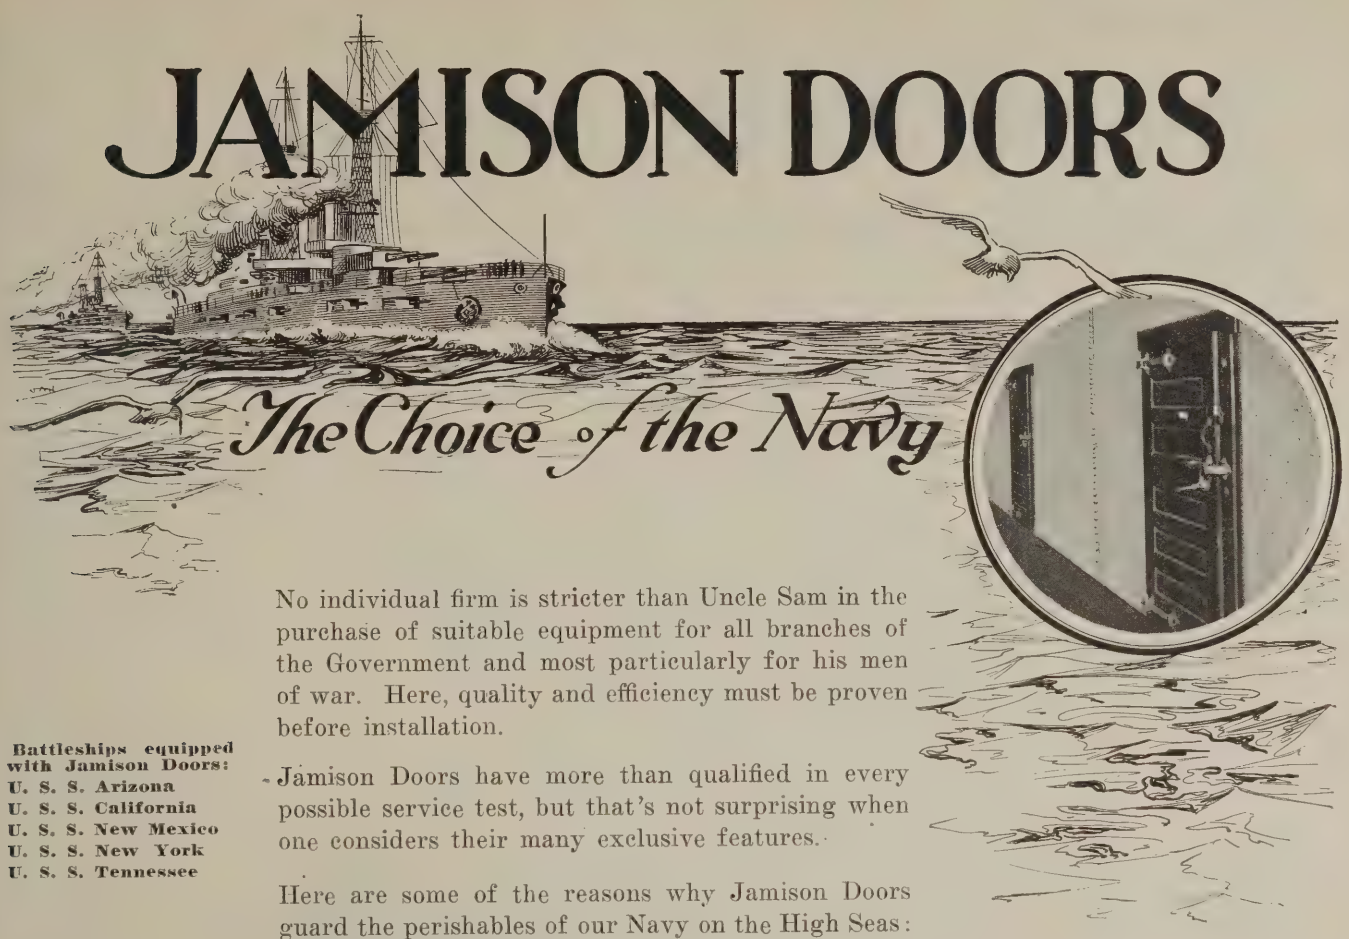
Prof. W. A. Sumner, associate professor of agricultural journalism, has called to this publication's attention the following striking paragraphs in the catalog which he believes will be of interest to our readers:

"At no time in the history of dairying has there been a greater demand for men who understand the theory and practice of manufacturing dairy products of all kinds than now. The managers and operators of creameries, cheese factories, ice cream plants, and city milk establishments realize more than ever before the greater value of trained men over untrained men.

"The quality of the product made and the profitable use of all by-products obtained in butter and cheese making depends to a large extent on the knowledge the workers have of the methods of manufacturing and of testing these products. The moisture content of both butter and cheese is something that must be thoroughly understood as to its influence on both the yield and the quality of butter and cheese; and the importance of small leaks and losses from waste, and the saving of food and fuel in a dairy manufacturing plant are points that our students are taught in their everyday work of this course of instruction.

"At the present time we are receiving an unusual number of requests for men to fill important positions in a great variety of dairy manufacturing plants.

"The following is a list of the inquiries received during one year for men who have been trained at the Wisconsin dairy school:



Buttermakers—183.
Helpers in creamery—24.
Buttermakers and ice cream men—14.
Cheesemakers—176.
Helpers in cheese factories—4.
Combined butter and cheesemakers—16.
Managers of factories—16.
Ice cream makers—12.
Cow-testing association men—4.
City milk plants—27.
City milk inspectors—6.
Condensed milk factories—35.
Factories wanted to buy and for sale—23.
Dairymen—8.
Traveling men—3.
Oleomargarine factories—7.
Instructors in other colleges—25.
Total—583.

"At the beginning of the winter dairy course students are allowed to select either buttermaking or cheesemaking as their special subject. Students desiring to take instruction in both cheese and butter can divide the twelve weeks between these two subjects. Most of the students, however, elect only one line of work.

"The instruction in making ice cream may be taken by students during one or two weeks of the periods they are assigned to the creamery or the cheese room.

"The instruction given during the course consists of both lectures and laboratory practice. The students meet at 8 o'clock every morning, except Sunday, for a lecture on some phase of dairying by one of the professors or instructors. At 9 o'clock the class divides into four sections, passing into the milk testing laboratory, the cheese room, the creamery or the machine shop,

JAMISON DOORS

The Choice of the Navy

No individual firm is stricter than Uncle Sam in the purchase of suitable equipment for all branches of the Government and most particularly for his men of war. Here, quality and efficiency must be proven before installation.

Battleships equipped with Jamison Doors:
U. S. S. Arizona
U. S. S. California
U. S. S. New Mexico
U. S. S. New York
U. S. S. Tennessee

Jamison Doors have more than qualified in every possible service test, but that's not surprising when one considers their many exclusive features.

Here are some of the reasons why Jamison Doors guard the perishables of our Navy on the High Seas: The Jamison 100% efficient fastener, the multiple seal between frame and door where others have but one, the adjustable spring hinges extending over half the width of the door; making it possible to regulate the pressure and renewing the seat against the multiple seals of contact, and the material weight of Jamison Hardware is about three times greater than that on any other cold storage door.

Our Catalog is in the Government's file—is it in your's?

Kindly Address Desk 6

Jamison Doors are guaranteed to outlast others, even under harder service conditions.

Jamison Doors
for better refrigeration

JAMISON COLD STORAGE DOOR CO. **Hagerstown, Md., U. S. A.**

STANDARD
HANSEN'S
OF THE WORLD

Investigate!

A *purely vegetable* annatto color, *unequalled in shade, strength and purity* and superior to any vegetable or aniline color on the market. Try a gallon of

HANSEN'S
June Cream
Ice Cream Color

and you will be convinced that it will not only give you **more coloring power per dollar invested,** but whether you desire a pale cream color or a rich yellow egg shade, the result will be just what you want in your ice cream.

HANSEN'S
Ice Cream Rennet

A pure rennet enzyme, unadulterated, in handy liquid form, especially prepared and packed for the ice cream trade. The specific action of Hansen's Ice Cream Rennet is to increase the viscosity of the mix, thereby increasing the smoothness and apparent richness, enhancing the flavor and making the desired overrun more uniform and certain.

Try a gallon now, and be convinced that **Hansen's Ice Cream Rennet** will do better work, if used as an improver, **at less than one-tenth the usual cost.**

Ask your dealer or write us for prices, giving us your dealer's name and we will send you an interesting little booklet by W. W. Fisk, the well known expert in ice cream manufacturing, "**Some Ice Cream Problems Solved,**" without charge.

CHR. HANSEN'S LABORATORY, Inc.
Western Branch: **Milwaukee, Wis.**

where definite duties are assigned to each student. This practical work is continued throughout the morning, and, if necessary, students come back in the afternoon to complete their assignments.

"At 1:30 in the afternoon, Saturdays and Sundays excepted, the second general lecture is given to the entire class. After this lecture the students take up laboratory work or meet for discussion in sections for the remainder of the afternoon.

"Students should be at least 16 years old and have a common school education. No entrance examination is reqquired.

"Every one who attends the winter dairy course must have had at least six months of practical experience in a creamery, a cheese factory, or some dairy manufacturing enterprise before entering. The records show that those pupils who have had experience before coming here are the best pleased with what they learn. Students with no experience in creamery or cheese factory work may enter the summer dairy course."

The catalog is strikingly illustrated with views of students at work in the dairy courses. It gives full information concerning the courses, the expenses, requirements, etc.

⚜

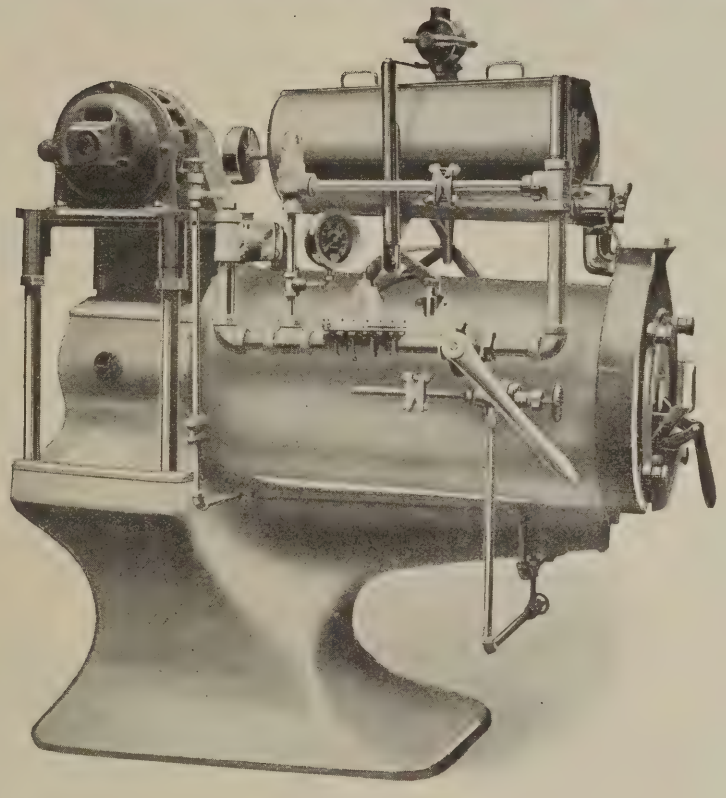
TAKES HER FATHER'S OWN MEDICINE.

This little miss is taking some of her father's own medicine. She is little Miss Elaine Marie Asselin of the Asselin Creamery, Norway, Mich. She likes her ice cream in all forms, but you will note how fondly she holds the cone to her breast. Ice cream is responsible for her full and rosy cheeks, her parents say. She is a good advertisement for the industry.

ELAINE MARIE ASSELIN.

Speaking of advertisements, few of us stop to think of how much appeal an ad with a child's picture can carry. Most of us like to advertise our products with pictures of pretty girls, generally in bathing suits, on calendars, ink blotters, billboards, etc., but it is doubtful if anything so catches the fond eye of the public as the picture of a little girl smiling from an ad.

Men love their women, but it must be remembered that men and women and everybody love the kiddies. You can fall in love with little Miss Elaine Marie right now just by looking at her picture.



⚜

We have so everlastingly drilled the word **service** into the public in our milk business that perhaps that accounts for the following note received by one of our salesmen one day last summer. It read:

"Mr. Jones:—I am going on my vacation, but can't get anyone who will take care of my cat, so please pour a pint of milk in a pan left on the piazza every morning so that it can feed regularly." When she returned she found the cat fat and healthy.—A testimonial of good Service.

MINNESOTA SHORT COURSE.

The annual ice cream short course, offered by the dairy division of the University of Minnesota, will be given at University Farm, St. Paul, Nov. 17 to 26. W. B. Combs, who will be in charge, has chosen the dates most likely to meet with the approval of those interested in such work, and expects many of the ice cream supplymen, as well as the ice cream makers, to attend.

A View of the Ice Cream Department.

The course this year will consist of 32 lecture and 8 laboratory periods. It is intended to cover the practical phases of the subject in the lectures and to demonstrate to the students the preparation and handling of the ice cream mix and the operation of the homogenizer and freezer in the laboratory periods. The forenoons will be given to lectures and the afternoons to laboratory work. Work will be assigned each day to be prepared during the evening and returned at the meeting of the class the next morning.

The laboratory work will include the testing of milk, cream, butter, condensed milk, and ice cream for butterfat; the calculation and preparation of the ice cream mix; pasteurization, homogenization and aging the mix. During the freezing periods the students will be instructed concerning the use of butter, powdered milk and improvers in ice cream, and will have ample opportunity to study the effect these may have on the quality of ice cream. Every student will be given an opportunity to learn the operation of the freezer.

The University of Minnesota has just completed a new dairy building in which all classes with the ice cream short course students will be held. Two testing laboratories will be open to the short course students every day of the course as well as an ice cream laboratory designed for ice cream instruction. The equipment available at the university is of the most modern type. This equipment consists of a five-ton refrigerating machine, a hardening room, one mixing tank, one homogenizer, one glass lined holding tank, one coil brine cooler, two brine freezers, and one overrun tester. In addition, minor equipment essential for instruction is well provided.

A short course catalog listing the dairy manufacturing courses for 1924 and 1925 is now available and may be obtained by addressing W. B. Combs, Dairy Division, University Farm, St. Paul, Minn.

The longer you listen to some salesmen talk, the more thoroughly you become convinced that all the bull is not put out from Durham, N. Car.

WORLD'S LARGEST MANUFACTURERS OF ICE CREAM CABINETS

TAKE ICE CREAM TO THE PEOPLE

By a Special Correspondent

EVERY period of five to ten years has brought to the ice cream industry new methods of serving ice cream. Today the total volume of ice cream is made up partly of cones, partly of sundaes, partly of sodas, partly of brick ice cream, partly of ice cream carried home and the balance in specialties. Each one of these adds a certain volume to the gross ice cream sales.

An analysis of the above methods of selling ice cream reveals the fact that a large share of the ice cream is sold upon the basis of the consumer coming to get it at the fountain. The fountain is absolutely essential for the sale of sodas, sundaes, cones and bulk ice cream.

There is no question that there is a possibility of selling more ice cream if it would be possible to take the ice cream to the people instead of having the people come to the soda fountain as at present. More ice cream can be sold if dispensed just as people want it, just when they want it. The following illustration will help to prove this point:

The writer was making a trip from Portland, Ore., to Los Angeles, Calif., in the summer of 1922. The train stopped in a small California town. At the station was an old man, driving an old gray horse, hitched to a rickety old wagon. In the wagon was a five-gallon packer filled with ice cream in individual boxes with a spoon. The driver announced his wares by calling "Ice cream, ten cents a box." Inside of five minutes people from all parts of the train had rushed to his wagon and his complete supply of ice cream was bought and consumed in a very short time. If this man had not met this train and had ice cream in a form that he could serve quickly surely this ice cream would never have been sold.

Taking ice cream to the people overcomes one element of resistance to the purchase of ice cram. There are hundreds of places where service in the small package ready to eat will make it possible to sell a great deal more ice cream. In office buildings, industrial plants, upon the bathing beaches, in the theatre, at baseball games, at railroad stations, in the home on the porch, upon the dining room table, at the banquet and at the picnic, these are just a few of the places where ice cream packaged in individual packages can be supplied.

There is no question that people are in the mood to eat ice cream at these places. If ice cream can be brought to them there will be very little resistance to its purchase, especially if it can be bought for five cents.

Experience has demonstrated without doubt that to be a good seller the individual package of ice cream must be sold at five cents. The ten-cent cone was a failure, but the five-cent cone is a great success. The ten-cent Eskimo pie was a failure, the five-cent Eskimo pie made by automatic machinery is a real success.

Statistics show that ten kiddies have a nickel to spend to one that has a dime. Folks think twice about spending a dime and do not think of spending a nickel at all.

At first thought many manufacturers will say that it is impossible to put out a five-cent package at a profit. A few years ago this would have been impossible. Today automatic machinery for packaging small quantities of ice cream and for making individual packages has been so highly developed that putting out the five-cent package is a real success.

On the market is a sturdy little cup, attractively decorated with a standard body design.

It is filled at the factory with automatic machinery, the lower half with slightly over one ounce of true fruit orange and lemon sherbet. The cup is then completely filled with vanilla ice cream. There is no assortment to bother with and no juices to run out. This is sold for five cents.

The cups are automatically fed to the machine, filled

What You Want--
When You Want It

With a complete stock of SUPPLIES and an abundance of MACHINERY carried in stock at five advantageous points from the Great Lakes to the Gulf of Mexico, we are in position to serve you in a way that no others can.

If your needs be a Freezer, Crusher, Packing Tubs, Packing Cans, Ice Cream Cabinets, Carry-Out Cans, Can Washer, Ice Cream Moulds, Ice Cream Pails or Dishes, Parchment Paper—in fact, anything from a Wood Plug to a Steam Boiler, we can furnish it at the right price.

Our business has been built up largely through the confidence of our customers. To secure and hold their confidence is the ambition of our organization; we take an active interest in their progress, because our progress is linked inseparably with theirs.

Miller Street **Somerville, Mass.**

first with the sherbet and then with the ice cream and then capped automatically.

From the turntable of the automatic machine the cups with the caps on are placed in bags holding three dozen cups and two of these bags can be slipped into a five-gallon can. If desired the bags may be placed in the stores of your dealer in the brick cabinet just as the Eskimo pies were handled.

The dealer is furnished with a small wooden spoon, if eaten at the store or near the store, or put a half dozen in a paper bag to be taken home and eaten at the table.

The natural fruit sherbet that goes in the bottom of the cup is made from pure oranges and lemons. It is made from a formula that produces a product second to none. The ice cream and sherbet are placed in the cup in perfect condition because of the provision made upon the automatic packaging machine for keeping them in this condition until they are filled. The small volume in the cup makes it possible for these to harden very quickly and a fine smooth quality of ice cream is produced.

In every community where the distribution will be sufficient to supply the demand these little dainties will be introduced to the public by striking newspaper and window paster advertising. The amount of advertising in each city will be in proportion to the territorial sales based upon the demand for the cup sundae.

One company selling a million of these cups a month state that they spent no money at all for additional trucks, cans or cabinets. They made no changes in their plant to accommodate this volume of business. The only expense required is the cost of the inexpensive automatic machine for manufacturing these. This is absolutely necessary, because the cost of packaging by make-shift methods will cost more for labor and waste of cream and an inferior product in two months than the cost of the machine. It is better not to handle them at all unless they are made upon entirely automatic machinery.

The advantages of these cups may be summed up as follows:

Help fill your cabinets this winter when you will want something to stimulate the demand.

Creates a new demand for ice cream just as the cone did. Millions of nickels that are now being spent for candy, peanuts and pop corn will go for ice cream instead.

They will not decrease your total volume of sales. They will increase your total volume. Packaged with your best quality of ice cream they will advertise your product. In other words, it enables you to distribute samples of your ice cream which you put out at a large profit.

You make more money for your dealers by bringing

I wish to take this opportunity of thanking my friends in the Ice Cream Industry for the courtesies and patronage shown me during the past years.

It is these friends who have made possible whatever measure of success which I have attained in the Vanilla business.

To these friends I wish to announce my resignation from The Widlar Co., of Cleveland, and to express a wish that the customers who have been served faithfully in the past, will see fit to favor The Widlar Co. with their continued patronage.

I am proud also to announce that I have become associated with our mutual friends, the John H. Mulholland Co., of Philadelphia.

From now on my entire efforts will be employed in popularizing the Mulholland line of Sanitary Ice Cream Dishes, Bentwood Spoons, Sidewalk Signs, and the many other items which comprise the Mulholland line of Advertising Necessities.

Sincerely,

HOWARD BLACK.

Up-to-date Jobbers recommend RING Cones

Up-to-date Dealers demand RING Cones

Plain design cones are out of style. They are fast being discarded for the newer design having the Breakage Protection Nesting Ring. THIS VALUABLE FEATURE IS PATENTED BY McLAREN

McLaren's "Real Cake" (Double Ring) Cones are a big improvement over other brands, not only in practical design, but in taste and flavor as well. They're packed in a strikingly attractive three-color carton.

BE UP-TO-DATE — MEMBER — HANDLE "McLAREN'S"

more people into their stores and keep the dealers better satisfied in pushing ice cream, especially in the season when the gallonage is low.

The package will put new life into your organization. This is true as shown by the results obtained by one manufacturer in the East who states he has been selling a million packages a month. In other words, getting their share of a million nickels a month that would ordinarily be diverted to other channels.

The package will help to capitalize upon all of the propaganda put out by the orange growers for people to eat more oranges. Each day orange drinks are growing more popular, especially where the natural fruit juices are served.

In Boston during a period of hard times one company sold a million packages a month. There is no question that you should be able to sell these at the same rate in your particular city.

ICE CREAM INDUSTRY WELL REPRESENTED AT RECORD DAIRY EXPOSITION.

(Continued from page 12)

FROM this industry's angle the exposition was featured by the disclosure that ice cream men of the country are considerably "worked up" over the ice cream conventions at New Orleans in November. National association officials were confident there would be a record attendance. Judging by the opinions of ice cream men who made the New Orleans gathering the general topic of conversation while passing through the exhibits, the sentiment of the industry seems largely in that direction.

Delegates left Milwaukee highly pleased with the 1924 convention. Facilities were all that could have been desired, though many expressed the wish that the machinery and farm exhibits could have been held nearer together. The exhibits relating to dairy farming were housed at the Wisconsin State Fair Grounds.

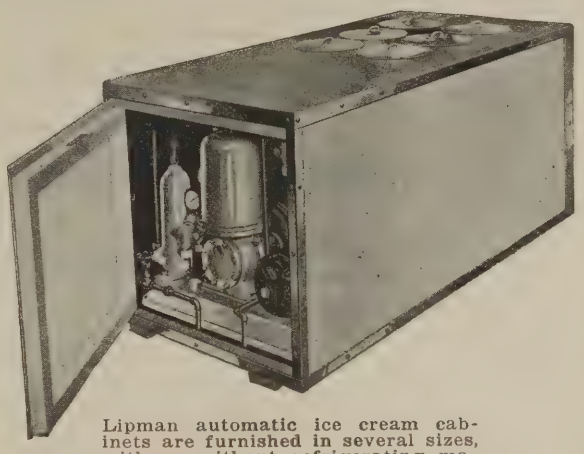
But all in all, Milwaukee was credited with having made a good job of the exposition. Officials came in for much praise. There is no doubt that in the long winter months to come manufacturers of many states will pause in discussions of different conventions and again recall to mind the many delightful experiences while traveling through Dairyland.

Many leaders in the industry believe the exposition did more to bring the ice cream industry into closer contact with dairying matters than any other development in recent years.

TO BOOST NEW ORLEANS ICE CREAM EVENT.

Representatives of The Blanke Manufacturing Co., St. Louis, will be in the thickest of activities in connection with the great Southern exposition and convention at New Orleans in November, judging by the excellent showing the company made at the National Dairy Exposition. Representing the company at Milwaukee were R. L. Blanke, general manager; A. K. Gillespie, salesmanager; Harry Blanke, Robert Sheer, Ben E. Cabell, Jr., Thomas Bernstein, O. E. Moore, S .K. Jensen, S. S. Brady, Clem J. Corbett, W. H. Hightower, H. R. Brady and C. R. Solomon.

Tell us what you want, or what you have that you don't want, and we'll fix up a little Ad for you and insert it in the next issue of "The Ice Cream Review." You just stay at home and wait for results. You'll soon have your hands full.



Add to Your Ice Cream *Profit* By Subtracting *Icing Service!*

You can eliminate practically all of your icing service overhead by providing your retailers with a Lipman automatic refrigeration cabinet. Not only do you do away with the expense of packing, salting and ice waste, but your dealers are able to keep their ice cream firm and hard, selling more and increasing your own volume. Here you get a double profit where before you had increased service costs.

Let us send you one of our engineers from our distributor's in your territory. He will give you a pretty accurate survey—at no cost to you—of your refrigerating costs and how to reduce them.

A Lipman cabinet will prove an investment for you—your saving will pay for it. Write

LIPMAN REFRIGERATION CO.

11:35 a. m.—"Our Attitude Toward the National Association of Ice Cream Manufacturers." By W. W. Campbell, Shreveport, La.

11:40 a. m.—Round Table Discussions. Session open to ice cream manufacturers only.
Report of Committees.
Selection of Convention City.
New Business.
Election of Officers.

1:00 p. m.—Adjournment.
Visit with supplymen.

General Information.

The headquarters of the Southern association will be the De Soto Hotel.

The convention will be held in the Athenaeum, St. Charles Ave. and Clio St., eleven blocks above Canal St. Street cars marked "St. Charles Ave." pass the De Soto Hotel and the Athenaeum. The exhibition given by the Dixie Flyers will be held in the Athenaeum.

Registration at the Athenaeum. The secretary will be at the Hotel De Soto after 4 p. m., Thursday, Nov. 13, and at the Athenaeum, 8 a. m., Friday, Nov. 14. Be sure to register early, as the convention will convene promptly at 10 a. m. No one will be allowed inside the hall without a badge of either the Southern association or of the Dixie Flyers.

Your officers request your co-operation by being prompt at all meetings. The program is interesting and instructive and it is going to be run on time.

You cannot afford to be late, and it can be carried through to a successful completion if you will be on hand promptly at all times.

The convention will adjourn on Saturday at 1 p. m., in order to give those in attendance an opportunity to visit with the supplymen. The Dixie Flyers have gone to considerable trouble and expense in arranging a splendid exhibit, and we are indebted to them for their efforts.

Entertainment.

On Saturday, Nov. 15, at 8 p. m., the Southern Association of Ice Cream Manufacturers will give their annual banquet.

This year a very novel entertainment will be provided. Something unusual in the way of a program will be offered.

You cannot afford to miss this hit of the season. Please secure your tickets early so the committee may know how many to provide for.

Entertainment Tendered by the Dixie Flyers.

Friday, November 14.

12:00 m. —Buffet luncheon served in the Athenaeum.

12:30 p. m.—Ladies' luncheon, by Ladies' Auxiliary, Hotel De Soto.

8:30 p. m. to 1:00 a. m.—Louisiana Jamabalaya??????? Vaudeville — Dancing — Refreshments, etc., to be held in the Athenaeum. Henry W. Stern, Master of Ceremonies.

Saturday, November 15.

1:30 p. m.—Buffet luncheon, served in the Athenaeum.

2:00 p. m.—Ladies, Orpheum Party (matinee).

Sunday, November 16.

10:00 a. m.—All day boat ride on steamer Capitol, to Ellington plantation, where visitors will witness cane cutting, cane grinding and sugar making. Refreshments will be served on board.

Continuous dancing. Music by the famous Gold Band of the steamer Capitol.

Boat leaves foot of Canal St., 10 a. m.; arrives Ellington plantation, 1 p. m. Leaves Ellington plantation, 3 p. m.; arrives New Orleans, 7 p. m.

NEW ORLEANS

During the winter season offers many attractions for the visitors. All the golf clubs are open, and playing is most enjoyable just at this time.

All the theatres are running full blast.

AN ADDED ATTRACTION, FOOTBALL, SATURDAY, 2:30 P. M.

To the lovers of this sport, a high-class exhibition will be the contest between Tulane University, **"The Greenbacks,"** and the University of Tennessee from Knoxville. Not less than 12,000 people will be in attendance. Street cars marked "Freret" pass Tulane Stadium. Tickets on sale at Porter Clothing Co. and D. H. Holmes Co.

Tentative Program

National Association of Ice Cream Manufacturers

ANNUAL CONVENTION

New Orleans, La. - - November 17, 18, 19, 20

MONDAY, NOVEMBER 17th.

9:30 A. M.

Meeting of Executive Committee and Board of Directors.

11:00 A. M.

Address of Welcome

Possibly by His Excellency, Henry L. Fuqua, Governor of Louisiana.

Response

Vice-President, W. W. Campbell, Shreveport, La.

Report of the Secretary

Report of the Treasurer

President's Address

2:00 P. M.

Executive Session

Admission by card only—for ice cream manufacturers.

"Some Uneconomic Manufacturing Policies"

by Dr. H. A. Ruehe, Head, Dairy Husbandry Dept., University of Ill., Urbana, Ill.

Also talk along the same line

by Mr. O. E. Williams, Dairy Manufacturing Specialist, Bureau of Dairying, U. S. Dept. of Agriculture, Washington, D. C.

The foregoing addresses to be followed by one or two ice cream manufacturers, concluding with a general discussion. Possibly the subject of "Suburban Trucking" will also be taken up at this session.

TUESDAY, NOVEMBER 18th.

All day Tuesday will be taken up on the subject of REFRIGERATED CABINETS. Addresses will be made by representatives of the various Refrigerated Cabinet manufacturers, as well as a large number of ice cream manufacturers who have been asked to prepare statements showing all of the factors connected with Refrigerated Cabinets. There will be a general and free discussion from the floor by all ice cream manufacturers who wish to participate therein.

WEDNESDAY, NOVEMBER 19th.

Wednesday morning, Mr. E. C. Sutton, Chairman of the Slogan Committee, will make a report for that Committee, after which the subject of the national advertising of ice cream will be taken up by a number of very capable speakers having experience in national co-operative campaigns, who are expected to amplify report of the Committee on National Advertising, of which Mr. W. A. Schwindeler of St. Louis is Chairman. After the conclusion of discussion on National Advertising of ice cream, which is expected to take up the entire morning session, Mr. S. T. Nivling, Chairman of the Cost Accounting Committee, will render a report for that committee and several able speakers will participate in the subject of Cost Finding and Uniform Cost Accounting.

THURSDAY, NOVEMBER 20th.

Thursday morning, there will be another Executive Session, at which admission will be by card and for Active Members only. At this session, Committe Reports not previously rendered will be presented. It is possible that some other matters of great interest to ice cream manufacturers may be discussed.

Early in the afternoon there will be a meeting of the Executive Committee and the newly elected 1925 Directors.

We cannot, as yet, give any particulars regarding the entertainment features in view of the fact that this is entirely in the hands of The Association of Ice Cream Supply Men and they have not as yet concluded their plans.

N. LOEWENSTEIN,
Secretary.

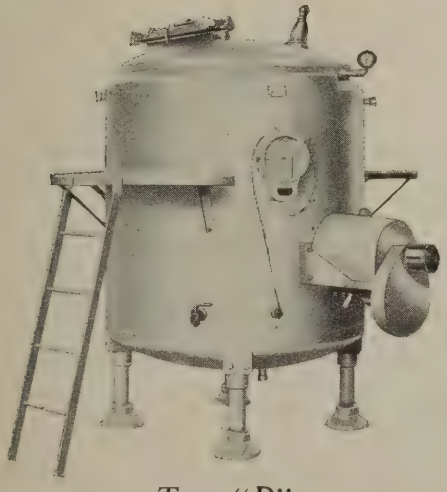
The Final Testing of our Powdered Milk

WE have told you in the preceding advertisements of this series, how our fresh milk supply is examined and tested as it is received from modern sanitary farms. You now know, also, how carefully and accurately each day's supply is tested, checked, and safeguarded.

In addition to the regular Control Laboratory, located right at the plant, Merrell-Soule maintains a separate Research Laboratory at Syracuse. To this institution are referred all problems of an unusual character and, in addition to aiding in this manner, the Research Laboratory is constantly evolving new ways and means to insure the uniform quality and purity of Merrell-Soule Powdered Milk.

When the powder is finally ready for packing it is again tested and this test must reveal the same high standard of quality and purity that we insist be found in fresh milk as it is received by us. Next month's advertisement will tell how our powdered milk is packed.



THE ASSOCIATION OF ICE CREAM SUPPLY MEN ★ MEMBER

ADVERTISEMENT No. 6

Upon request, we will be glad to send any ICE CREAM MANUFACTURER a complete set of the advertisements in this series, setting forth the production of our chief product, POWDERED MILK.

ICE CREAM MANUFACTURERS OF NATION PREPARE FOR MIGHTY GATHERING AT NEW ORLEANS.

(Continued from page 8)

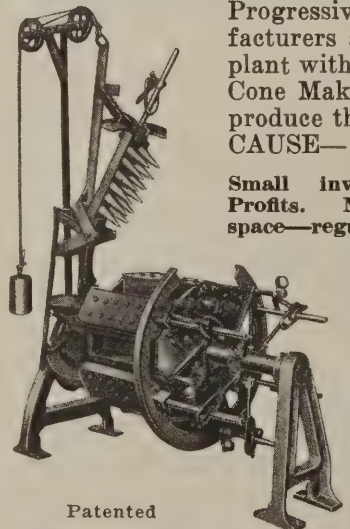
exposition recently held in Milwaukee, assurance was given by L. S. Wilson, president of the Michigan association, that his state will be well represented. Gentlemen from Minnesota give the same assurance.

NO ONE possibly could be so pessimistic as to doubt the attendance of the Southern manufacturers. It would be difficult to express in words the supreme elation felt by manufacturers of that section over the privilege of having that convention in their own section. It is for this reason that we find it is easy to justify the predictions made by Southern ice cream officials that the 1924 convention will mark a new beginning in the career of the national association, bring closer to the national body as it were the sympathies and understanding of the Southern people, a people peculiarly responsive when appealed to in a spirit of brotherly and neighborly cooperation. Probably in no other part of the country is the neighborly spirit so highly developed. Men who understand the situation in the Southern states—and unfortunately that section has not been fully understood in the past—know that the failure of the national association to develop full strength in the South is due to the fact that it has not previously found it possible to make the Southerners a visit and get next to the problems of the Southern manufacturers.

As a matter of particular importance in connection with the coming convention and the important lines of action that possibly will be confronted at that time is the situation with regard to the quality standard program undertaken by the Southern Association of Ice Cream Manufacturers.

THIS program, as repeatedly explained exclusively in The Ice Cream Review, calls for the setting up by the Southern association of a quality aristocracy that will give the public a new confidence in ice cream. The shaping up of this program has made much headway since it was put before the manufacturers of that association at the New Orleans convention. The plan centers around a symbol of quality adopted by the Southern association, the label bearing this seal being available only for those manufacturers who live up to the association's membership standard with regard to quality ice cream. It is in the nature of a quality guarantee that these members are privileged to use in their advertising.

The carrying out of this program, which is quite the most ambitious line of action yet undertaken in the industry, will mean giving ice cream manufacturers all over the country something over which to ponder.



The national association's national advertising program easily is the matter most outstanding at this time. It is almost sure to find something approaching a definite course at the New Orleans convention.

THE Southern manufacturers will not fail to appreciate the honor conferred upon their industry when the national association elected as its vice-president that worthy gentleman, W. W. Campbell of Louisiana, at the 1923 convention. It would have been difficult for the association to have thought of a wiser action than this. Not only did it select a man fully capable and desirous of working for this industry, but it placed in line for the presidency of that association a man who holds the love, respect and admiration of his fellow manufacturers in the Southland. The simple, genuine affection of the Southern industry toward "Bill" Campbell is one of most sublime instances of human trust anyone may hope to encounter in trade experiences. It is a trust that has been exhibited on many occasions that Mr. Campbell has been honored by election to offices by associations in the South, particularly when the Southern association placed him in the chair at the Macon convention in 1921 by an acclamation that spoke for the entire industry as saying, "A man of whom we are justly proud."

It is not the providence of the editor of a trade journal to express his personal opinion of any one man's personal achievements, but it is from a sense of deep interest in the welfare of this industry that we mention at this time that the men who are most hopeful for the ice cream industry's advancement are the men who pen their trust and confidence in such men as "Bill" Campbell, a gentleman with whom this young writer has little more than passing personal acquaintance.

(Continued on page 142)

NEW FIELD Opens for Ice Cream Manufacturers

Progressive ice cream manufacturers should equip their plant with the "Philadelphia Cone Making Machine" and produce their own cones BECAUSE—

Small investments net big Profits. No extra labor or space—regular salesmen solicit orders — helpers bake cones. Fresh, Crisp, Delicious Cones increase ice cream consumption.

Patented

Consists of revolving tumbler containing six sets of moulds of 12 cones each baking 72 cones each revolution.

This machine saves time, space and positively produces a better cone at less cost than any other machine on the market — Write for details today.

AS THE Southern ice cream manufacturers have turned their eyes more earnestly toward the work of the National Association of Ice Cream Manufacturers during the past year, they have been reminded of how singularly energetic and constructive have been the labors of the president of the association, Vernon F. Hovey, one gentleman who never in his extraordinarily busy and nerve-straining activities has been too occupied to answer the letters, the inquiries, suggestions and recommendations of those whom he so ably and so usefully has served.

It is at the New Orleans convention, if this young writer is correct in his gauging of the trade's pulse, that the ice cream manufacturers of the South are going to join those of the entire industry in expressing deep appreciation of the service of their chieftain during this exceedingly active year, and give to Vernon Hovey the assurance that they are mindful of the sacrifices he has made for them and our common industry. He has literally been at the elbow of every ice cream manufacturer of the country interested in the upbuilding of this industry. He is marked for one of the badges of honor going to those who serve well.

THERE will be entertainment features galore at New Orleans. The Dixie Flyers have prepared an elaborate program for the Southern manufacturers. The Association of Ice Cream Supply Men have mapped out very delightful entertainment features for the national delegates. The trip to Panama by steamer is being handled by Secretary N. Loewenstein of the national institution, and many reservations already have been made.

THE convention will bring to the national association many strong men of the Southern states only too glad to join in and do their best for the industry's advancement. It will bring before the national association such strong, enterprising and earnest men as J. D. Kinnett, M. J. Costa, Fred Scanlin, W. J. Barritt, A. E. Dixon, Charles Landreth, J. B. Porter, J. W. Clopton, S. N. Sutton, A. M. Thornton, E. R. Harris, E. B. Geisel, Ben C. Brown, W. E. Drake, Will Terry, Frank Stuart, A. E. Watson, George L. H. White, Hans Brody, and other men who can labor well and to good effect.

If there is a more earnest trade secretary than J. W. Clopton he is not on record.

FARE RATES FAVOR EARLY ATTENDANCE.

J. W. Clopton, secretary of the Southern Association of Ice Cream Manufacturers, has received advice from the Southeastern Passenger Association that the selling dates of reduced fare tickets for the New Orleans convention have been moved up from November 13 to November 11. This will enable members and others wishing to attend the convention to secure the reduced fare tickets in time to arrive in New Orleans by Thursday, November 13.

Reduced fare tickets will be on sale at all points covered by both the Southeastern and Southwestern Passenger Association and will be available from November 11 to 19 and will be honored in the sale of return tickets until November 26. Anyone wishing to take advantage of the special trip that has been arranged to the Panama Canal and other points after the convention, may extend the time of return by the deposit of the certificate and the payment of a fee of $1.00 at the city ticket office, Southern Pacific Lines, New Orleans.

W. W. CAMPBELL BELIEVES NATIONAL CONVENTION IN SOUTH WILL BE WINNER.

W. W. Campbell, Shreveport, La., vice-president of the National Association of Ice Cream Manufacturers, reached the dairy exposition in time to take part in Ice Cream Manufacturers' Day. He reported that preparations are rapidly being completed for a record ice cream event at New Orleans in November. In honoring the South by selecting a Southern city for its 1924 convention, the National Association of Ice Cream Manufacturers, the national association, at Cleveland last year, elected Mr. Campbell vice-president of the association, the first Southerner to hold office in the national body.

W. W. CAMPBELL

BAKER

System Refrigeration

Are you still using ice and salt in manufacturing ice cream? If so we can show you how a Baker System Refrigeration will do the work more effectively at a fraction of the cost. Besides, with a Baker you can make your packing ice cheaper than it can be bought.

Personal Survey of Your Plant

Baker System Refrigeration is built to order —"tailor-made" to your individual conditions. No order is accepted until one of our refrigerating engineers has made a personal survey of your needs. This guarantees to you an efficient plant which should pay for itself in a very short time.

One southern ice cream manufacturer said he could buy a Baker plant every 16 months out of the savings made over the ice and salt method.

Get Your Copy Bulletin 65 D It's chuck full of useful information you will value. It explains the Baker System Refrigeration in detail and gives you the reason why over 5,000 Baker plants are in successful operation.

ALL DIXIE IS LOOKING FORWARD TO 1924 NATIONAL CONVENTION AT NEW ORLEANS.

PROGRAM OF THE ICE CREAM SHORT COURSE TO BE GIVEN BY THE DAIRY DIVISION OF THE UNIVERSITY OF MINNESOTA. NOVEMBER 17-26, 1924.

Monday, November 17.

8:15-10:00 a. m.—Registration.

10:15 a. m.—Lecture, "The Babcock Test as Applied to Milk and Cream."

1:30-5:00 p. m.—Laboratory Practice in Testing Milk and Cream for Butterfat.

Tuesday, November 18.

8:15 a. m.—Lecture, "Ice Cream Defined and Ice Cream Standards."

9:15 a. m.—Lecture, "The Babcock Test Applied to Ice Cream and Condensed Milk."

10:15-12:10 p. m.—Laboratory Practice in Testing Ice Cream and Condensed Milk.

1:30-2:20 p. m.—Lecture, "Standardizing Milk and Cream."

2:30-5:00 p. m.—Laboratory Practice in Standardizing Milk and Cream.

Wednesday, November 19.

8:15-10:10 a. m.—Lectures, "Ingredients Used in the Manufacture of Ice Cream."

10:15-12:10 p. m.—Lectures, "Calculating the Ice Cream Mix."

1:30-5:00 p. m.—Laboratory Practice—Preparation of the Ice Cream Mix.

Thursday, November 20.

8:15 a. m.—Lecture, "Homogenizing the Ice Cream Mix."

9:15 a. m.—Lecture, "Calculating the Ice Cream Mix."

10:15-12:10 p. m.—Lecture, "Freezing the Ice Cream Mix."

1:30 p. m.—Laboratory Practice—Freezing Period and Preparation of the Mix.

Friday, November 21.

8:15-10:10 a. m.—Lecture, "Principles of Mechanical Refrigeration."

10:15 a. m.—Lecture, "Calculating the Ice Cream Mix."

11:15 a. m.—Lecture, "Defects in Ice Cream."

1:30. p. m.—Laboratory Practice in Freezing and Judging.

Saturday, November 22.

8:15 a. m.—Lecture and demonstration, Judging gelatine.

9:15 a. m.—Lecture, "Ice Cream Improvers."

10:15-12:10 p. m.—Laboratory Practice in Using Ice Cream Improvers.

1:30 p.m.—Laboratory practice in freezing mixes containing improvers and preparing the mix, using butter as a source of fat.

Monday, November 24.

8:15 a. m.—Lecture, "Bacteria, a Brief Survey."

9:15 a. m.—Lecture, "Viscosity and Its Relation to Ice Cream."

10:15 a. m.—Factors Influencing the Overrun of Ice Cream.

11:15 a. m.—Ice, Sherbets and Fancy Ice Creams.

1:30 p. m.—Laboratory practice in preparation and freezing the mix—A study of composition.

Tuesday, November 25.

8:15 a. m.—Lecture, "The Normal Fermentations of Milk."

9:15 a. m.—Plant records.

10:15 a. m.—Lecture, "The Food Value of Ice Cream."

11:15 a. m.—Lecture, "Ice Cream Sales."

1:30 p. m.—Laboratory Practice, Freezing the Mix and Judging Ice Creams.

Wednesday, November 26.

8:15 a. m.—Lecture, "Relation of Milk and Milk Products to the Spread of Disease."

9:15 a. m.—Lecture, "Hardening Ice Cream."

10:15 a. m.—Lecture, "Ice Cream Equipment."

11:15 a. m.—Round Table Discussion.

1:30 p. m.—This afternoon is to be given to visiting some of the prominent plants of the Twin Cities.

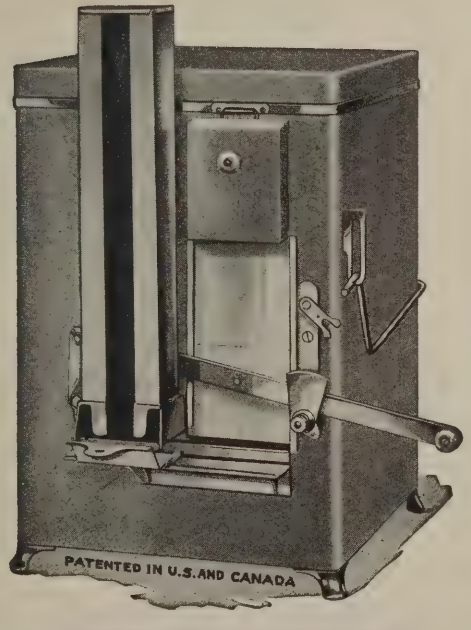
Gentlemen:

The thirty-six inch pan which we purchased from you, has been in operation about nine months.

The pan is working perfectly,and has never given us a bit of trouble. We are using it for making ice cream mix,and are enabled to make our mix cheaper and better by this method. We will probably be in the market for a larger pan next year.

Thanking you for the excellent service rendered on this installation,we remain,

Yours very truly,



Franklin Dairy Co.

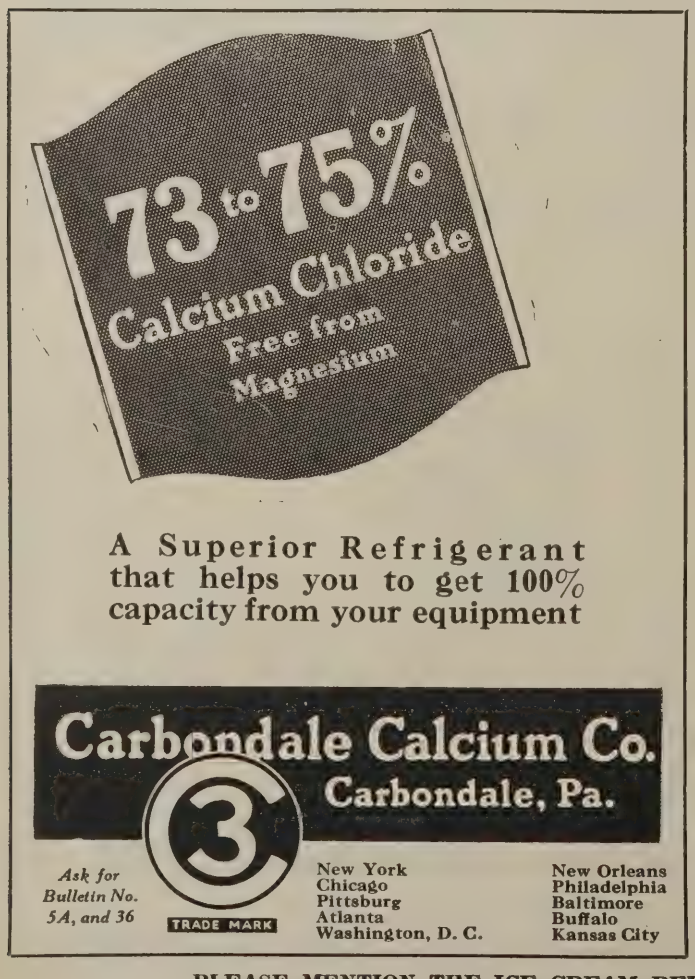
NATIONAL SUPPLY ASSOCIATION CANVASSING MEMBERSHIP CONCERNING PROPOSED SUPPORT OF NATIONAL ICE CREAM ADVERTISING CAMPAIGN.

The Association of Ice Cream Supply Men, as a result of recommendations made to it by members of the advertising committee of the National Association of Ice Cream Manufacturers and representative supply men whom this committee recently invited to a discussion of national advertising of ice cream, has voted through the executive committee of its board of directors to canvass its members in advance of the New Orleans convention as to its constituent companies' possible support of a 1925 national advertising campaign for ice cream, in conjunction with major support from the manufacturing end of the industry.



The method being followed by The Association of Ice Cream Supply Men in this canvassing is the offering of an opportunity to member supply houses to pledge one-half per cent of the latter's gross 1924 sales of such of their products as are purchased directly by the ice cream industry, and contingent upon the following conditions:

1. That a plan satisfactory to the trade organizations concerned and, insofar as possible, the individual companies financially interested, be developed.

2. That the ice cream manufacturers of the country definitely pledge contributions equivalent to one-half cent a gallon on 40 per cent of 1924's estimated total commercial gallonage.

3. That a total of pledges from the supply field, shall amount to one-half per cent of 40 per cent of the estimated 1924 gross sales of supplies, machinery and equipment to the ice cream industry, by the companies ordinarily regarded as making up that field.

The Association of Ice Cream Supply Men expects, as a result of this canvass to be in position to report to the ice cream industry as a whole, through the National Association of Ice Cream Manufacturers at the latter's forthcoming annual convention in New Orleans in November, the degree of support for a sound campaign of national advertising for ice cream that may be expected from the nationally organized supply fields, in the event that the conditions enumerated are fulfilled.

AMERICAN DAIRY FEDERATION BANQUET.

Over 900 leaders in American dairying gathered at the Hotel Pfister on Wednesday evening, October 1, to enjoy the first annual banquet of the American Dairy Federation. Former Governor Lowden of Illinois presided as toastmaster.

Former Governor Philipp of Wisconsin, president of the Milwaukee Association of Commerce, in a happy vein, welcomed the visitors representing every dairy section of the Union, and in doing so briefly revied the history of dairying in Wisconsin. Other speakers were Secretary of Commerce Hoover, Vice-President Whitney of the Metropolitan Life Insurance Co., and Dean Russell of the Wisconsin College of Agriculture.

A very pleasing feature of the program was a series of vocal selections by W. P. Kearney, president of the Axle Valve Co. of New York. Mr. Kearney was forced into the job, we are told, by his partner, Mr. Driscoll, but his listeners were not forced to enjoy his work. They were mighty pleased and he got a good "hand." Mr. Kearney is a real artist.

Secretary Loomis is wearing a smile that just refuses to come off.

THREAT OF VIOLENCE MADE AGAINST ICE CREAM MANUFACTURER.

A. A. Comey, one of the best known ice cream manufacturers in the country, recently was threatened with death by blackmailers, according to newspapers in his home town, Los Angeles, where Comey is vice-president and general manager of the Globe Ice Cream Co. and the People's Ice Cream Co. The blackmailers demanded $20,000 and declared if this amount was not forthcoming they would blow up the company's plant.

The letter follows:

A. A. Comey:

This is to notify you that we want $20,000 cash and want it bad. If we don't get it we are going to blow your million dollar factory all to Hell.

This is no joke and we mean business. We are organized and only last week blew up a factory in Lomita. You will hear from us sonn telling you where and how to leave the money.

Rember your factory is going the rout of the Lomita factory unless you come clean. Get that money and have it ready.

If you notify the police it may cost you your life. Be careful.

You will hear from us soon, within 48 hours.

Mr. Comey notified detectives and a special investigation was put under way.

We want to remind you that if you do not find advertised in this issue what you are seeking, it will cost you only 2 cents a word to let the world know through "The Ice Cream Review" what you want. Get busy before the other fellow gets ahead of you.

NOTES OF THE TRADE

News of Interest Concerning What Our Readers and Advertisers are Doing to Develop the Industry. We Invite Correspondence Relative to New Products and New Equipment.

TAYLOR JOINS BROOKS CABINET CO., INC.

J. N. TAYLOR.

J. N. Taylor, secretary-treasurer, Brooks Cabinet Co., Inc., Norfolk, Va., became acquainted with the dairy industry in Charlotte, N. C., about thirty-nine years ago, as he had the honor to be born a "Tar Heel," as he puts it.

In 1900 he entered the service of the Pennsylvania railroad in Norfolk, Va., and served that company in various capacities, from office boy to chief accountant, which position he occupied when he resigned in 1918 to accept a position as office manager with the Eagle Iron Works, Inc., Norfolk, Va. After spending three years in the machine shop and foundry business he was elected secretary-treasurer of the Brooks Cabinet Co., which position he now occupies.

THE TRACTOR-TRUCK.

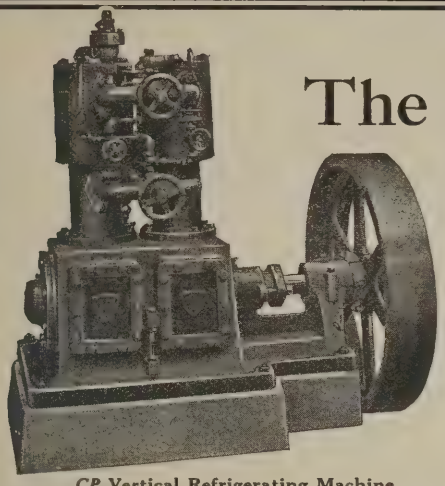
From General Motors Truck Company.

For heavy duty work in milk hauling, the GMC tractor-truck with its train of trailers has been found a practical

piece of equipment, according to officials of the company, who have canvassed the industry on the subject.

The company claims the tractor-truck, like the railroad engine, can pull more than it can carry, a point often overlooked by truck buyers, and the loading and unloading of trailers can be effected without detaining the tractor-truck.

BAKER SALESMEN MEET.



The most enthusiastic sales meeting that the Baker Ice Machine Company of Omaha ever had, according to officials, took place at Omaha, Neb., Sept. 15, 16 and 17.

Reading from left to right, rear column in the picture above, are: F. E. Hartman, sales manager, Omaha; E. N. Nicklas, factory foreman, Omaha; J. M. McKenzie, manager Los Angeles branch; R. C. Hudson, advertising manager, Omaha; C. H. Williams, manager Minneapolis branch; J. E. Rasmussen, manager Forth Worth factory; Chas. Knox, superintendent of erection, Omaha; C. F. Sturtevant, manager of the foreign department, Omaha; J. C. Vaught, manager engineering department, Omaha; P. R. Hospe, sales engineer, Omaha; C. A. Baker, manager purchasing department, Omaha; C. W. Koehler, manager fisheries and produce departments, Omaha; B. E. Morley, sales engineer, Kansas City branch; W. F. Moody, president Moody Engineering Co., Little Rock; C. W. Stipp, sales engineer, Kansas City office; L. Hebert, president Northwest Ice Machine Co., Seattle. Second row, left to right: W. G. Smith, president Southern Engineering Co., Memphis; J. M. Speed, manager Des Moines branch; J. H. Coesfeld, superintendent, Omaha; F. J. Vette, secretary, Baker Ice Machine Co., Omaha; A. P. Benway, sales engineer Kettering Co., Denver; W. C. Hardy, manager Philadelphia branch; J. L. Baker, president Baker Ice Machine Co., Omaha; W. A. Cross, president New England Ice Machine Co., Boston; H. G. Venemann, general sales manager, Omaha; C. CP Vertical Refrigerating Machine

The Silent *CP* Refrigerating Machine

The unusually silent operation of the ***CP*** Refrigerating Machine is a wonder to all users. Guy Spiers, owner of the Cameron Creamery and Produce Co., who has a ***CP*** Refrigerating Machine in his plant at Cameron, Wis., declares it runs "as quietly as a watch." An engineer who inspected a ***CP*** Refrigerating Machine in the Hotel Astor, Milwaukee, Wis., asserted that it operates so quietly it could be installed in the hotel lobby without disturbing a single guest.

The silent operation of the ***CP*** Refrigerating Machine is due to the accuracy with which all parts are fitted and to the perfection of its lubricating system. Both of these features assure a long life for the machine with a minimum of attention. A high grade, custom-built, quiet running automobile runs quietly and has an exceedingly long life, whereas the reverse is true of the noisy, cheaply constructed machines. So it is with refrigerating machines.

CP Refrigerating Machines are built in all sizes and in both horizontal and vertical types. Please write for catalogue.

THE CREAMERY PACKAGE MFG. COMPANY

61-67 W. Kinzie Street Sales Branches Everywhere **Chicago, Illinois**

Sanitary Ice Cream Truck

The Sanitary Ice Cream Truck facilitates handling cream from freezing to hardening room.

Will handle any size can in common usage. Avoids accidents in handling, as the operator does not touch the cans until he reaches the hardening room.

The truck can also be used in taking cans from the hardening room.

One man with truck will handle the cream from the freezers as fast as it will flow, no helper being necessary.

Substantially built to stand usage, nothing to get out of order. Can container revolves on a thrust roller bearing and is easily turned.

Made in two sizes. Style A, capacity six 5-gallon cans. Over-all dimensions, diameter 28½ inches; height, loaded with 5-gallon cans, 26 inches.

Style B, capacity four 5-gallon cans. Over-all dimensions, diameter 23 inches, height loaded 26 inches.

PRICE, STYLE A $50.00 **PRICE, STYLE B $45.00**

NELSON C. HOAG.

Thomas W. Dunn Co., 546 Greenwich St., New York City, recently appointed Nelson C. Hoag as Southern representative. Officials of the company advise that Mr. Hoag is a practical ice cream man and is well known and much esteemed by the ice cream trade as well as among the supplymen.

* * *

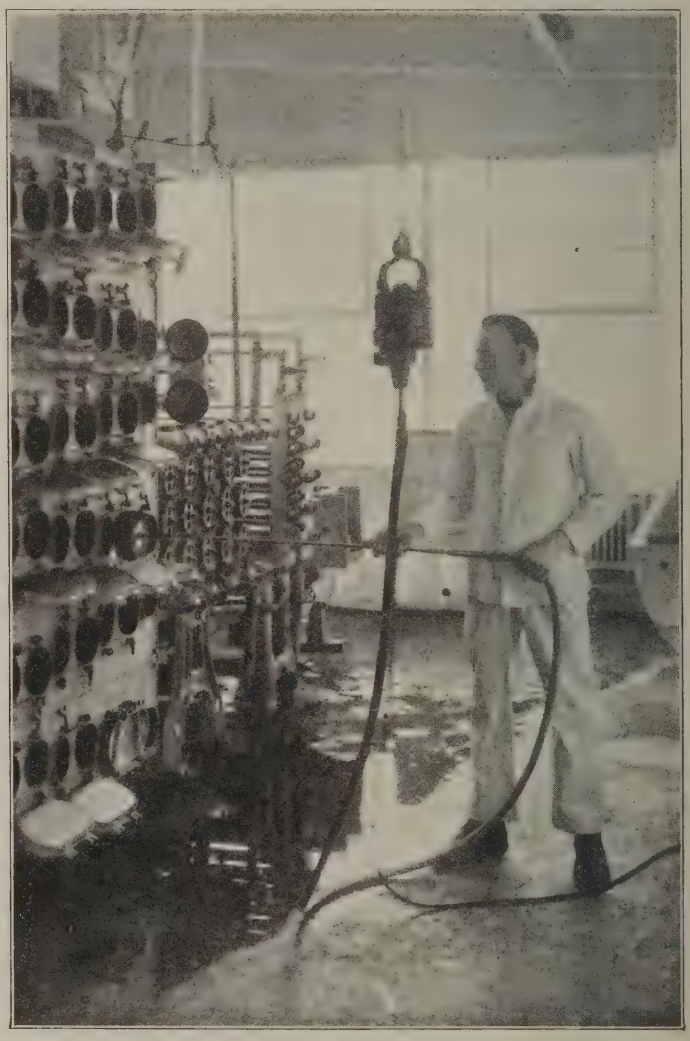
Gifford - Wood Co., Hudson, N. Y., through its sales promotion manager, W. F. Granger, has announced some new bulletins, including ice chopper, scoring machine, power field saw model "c" and Bulletin No. 110 on power ice saws.

* * *

NEW REGENERATOR COOLER AND HEATER BULLETIN.

The Creamery Package Mfg. Co., 61-67 W. Kinzie St., Chicago, announces the publication of a bulletin covering the Progress and Alaska regenerator coolers, heaters and preheaters.

The Progress unit described in this bulletin is an enclosed tube-within-a-tube outfit. The cold or raw milk is pumped through the tubes, entering at the top, while the hot pasteurized milk is pumped through spaces surrounding the tubes and inside the outer tubes, thus giving up its heat to the cold incoming milk, which in turn is warmed up to near the proper pasteurizing temperature.



The Alaska unit is described as a continuous surface outfit, the incoming cold, unpasteurized milk enters the lower tube of the bottom regenerative section and passes upward inside of cooler, coming out at the top tube and going direct to the pasteurizing heater. The hot milk from the pasteurized holder enters the top trough and flows down over the outside surface of cooler. A similar action is obtained used with cream in creamery.

Either of these machines are extremely economical for use in milk bottling plants, creameries, milk condenseries or ice cream plants. A copy of the descriptive bulletin may be secured by mentioning this publication and addressing the manufacturers.

* * *

KING SANITARY PIPE CLEANER.

The King sanitary pipe cleaner was developed by S. F. King, a member of the Mitchell Dairy Co., Bridgeport, Conn. He has applied for patents on it in his name. This is a power driven brush for cleaning any internal tubing or sanitary piping used in a milk or ice cream plant. The accompanying illustration shows the King cleaner being used.

The machine consists of a ½ h. p. motor, to which is attached a gear box and 16 foot flexible shaft. The shaft is covered with woven canvas, so that no injury can occur to the soft metal of the sanitary piping or internal tubing. The brush revolves at 750 r. p. m., thereby securing a percentage of cleaning efficiency many times that of hand cleaning, it is claimed.

The machine is guaranteed to clean anything from barrel heaters to Simplex holders in less time and with much less effort, officials say.

BRANCH PLANT ESTABLISHED.

Bessire & Co., Indianapolis, Ind., announces that a branch house has been established at 120-122 East Chestnut St., Columbus, Ohio. Officials say this means that Bessire & Co. now "will be in position to carry on in Columbus the same full merchandising responsibilities that have characterized their Indianapolis, Louisville, Memphis and Atlanta houses."

This company has been serving ice cream manufacturers of the country for more than 25 years, distributing supplies and equipment.

* * *

TO REBUILD TEXAS BARREL PLANT.

A new site has been purchased and plans are going forward for the rebuilding of the plant of the Texas Barrel Co., Houston, Tex., which was destroyed by fire on August 26. G. J. Kapner, secretary of the company, has informed The Ice Cream Review that machinery has been ordered from the East and will be installed with all possible speed. He expects the company to return to the manufacture of ice cream tubs, kegs and barrels without much loss of time.

Trade Literature

BOOKLET ON LACALAC.

"Lacalac" is the title of a booklet recently issued by the Ward Dry Milk Co., Waseca, Minn. Lacalac is a cream product which, its makers claim, will not sour quickly, and which gives the manufacturer the largest percentage of milk solids in proportion both to its bulk and its cost. The greatest possible purity is assured by its powdered form, it is claimed. It is declared in the booklet that there need be no loss through souring, no sticky, half-empty cans standing around, gathering flies, when Lacalac is used.

* * *

The J. G. Cherry Co. has just published a new bulletin (No. 2070) in which are shown 15 plant lay-outs illustrating successful methods of grouping and installing equipment in milk plants, ice cream plants and creameries of varying sizes and capacities.

The drawings shown were developed to save floor space and cut down production operations under certain specific conditions.

A copy will be mailed, without obligation, to anyone making request, officials say. In asking for the bulletin, they request readers to mention the bulletin number—2070—and address all inquiries to the Cedar Rapids office.

⚜

WHERE WILL THE NEXT NATIONAL DAIRY EXPOSITION BE HELD?

A live question. If the opinions of the exhibitors in the auditorium are to point the way then Milwaukee will stage a return engagement.

Just to ascertain the sentiment of the exhibitors in the auditorium we distributed ballots for a "straw" vote on which this question appeared: "My choice of city for holding the next National Dairy Exposition is ————." The result of the vote was as follows:

Milwaukee, Wis.	109
Chicago, Ill.	34
Detroit, Mich.	19
Cleveland, O.	13
Louisville, Ky.	8
Kansas City, Mo.	5

The remainder of the votes were scattering, cities all over the country, from Springdale, Wis., to Paris, France, getting from one to four votes each.

We Specialize in Printing for the Dairy Products Industries

In our modern building we have housed an array of equipment of the first order to turn out in volume, with precision and dispatch, an endless variety of advertising material.

Specializing in printing to the dairy products industries, we are in a position to lend advertisers the benefit of a long experience and association with this trade, its requirements and peculiarities.

Our volume production should also make our prices worth your investigation. Submit your next printing job to us for suggestion and quotation.

WASHINGTON—MAINE

News From Far and Near

CALIFORNIA—FLORIDA

Bessemer, Ala.—The American Ice Cream Co. was recently organized and operations were begun in the company's plant on Fourth Avenue.

Gurdon, Ark.—The Southern Creameries of Texarkana, a branch of the Southern Utilities Co., concluded a deal with R. L. Thomas of the Gurdon Bottling & Ice Cream Co., whereby the ice cream part of the business becomes property of the Southern Utilities. Mr. Thomas, however, will continue to operate the ice cream factory until the end of the season. He will also continue his bottling business. The Southern Creameries have made plans to establish a modern ice cream factory here next winter.

Eustis, Fla.—A modern ice cream factory is being built here.

Chicago, Ill.—The Hydrox Corp. has purchased the Durkin Ice Cream Co. of Waukegan, Ill., and will begin the manufacture of ice cream soon. J. E. Sams will be manager.

Anderson, Ind.—Kruesch Ice Cream and Bottling Co., incorporated with capital of $75,000, by Luther F. Pence, T. C. Werbe, B. J. Noland and N. M. McCullough.

Seymour, Ind.—The Seymour Ice Cream Co. was recently organizd with capital of $50,000. William B. Gallemore, Ernest Denk and Loretta Gallemore are the incorporators.

Augusta, Kans.—Chas. Chambers has sold his interest in the Augusta Ice Cream Co. to J. R. Gray, who will take over the entire management of the business.

No. Adams, Mass.—The Berkshire Ice Cream Co. will soon begin the erection of a large and modern ice cream factory.

Detroit, Mich.—The Arctic Ice Cream Co. will erect a new plant at Ovid, Mich., where the mix for ice cream will be prepared, placed in refrigerated, glass lined tank trucks and conveyed to the company's new plant at Lansing.

Milaca, Minn.—The Wahl Dairy Co. will erect a new building for its ice cream plant at a cost of about $5,000.

Brookhaven, Miss.—J. B. Halty, W. A. Halty and others recently organized the Purity Ice Cream Co., with a capital of $15,000.

Tupelo, Miss.—The McLeran Ice Cream Co. will add new equipment, including ice plant.

St. Louis, Mo.—A charter, with capital of $30,000, was granted to the People's Ice and Ice Cream Co. Matthew H. Galt, Woodruff Bldg., Springfield, Mo., is attorney.

Buffalo, N. Y.—The Rich Ice Cream Co. has awarded the contract to the Metz Bros. Construction Co. for the erection of a two-story garage and repair shop on Pratt St., to cost $50,000.

New York, N. Y.—The National Dairy Products Corp., 23 Brood St., through an exchange of stock, has acquired the J. T. Castles Ice Cream Co. of Irvington, N. J., and the Castles Ice Cream Co. of Perth Amboy, N. J. The two companies are reported as manufacturing 3,270,000 gallons of ice cream annually.

Pittsburgh, Pa.—The plant of the Reinhold Ice Cream Co. was recently destroyed by fire entailing a loss estimated at $60,000.

Wilkes-Barre, Pa.—The J. K. Stelnoters Co. was recently organized by John K. Karambellas to manufacture ice cream. The capital is reported at $11,000.

Winnsboro, S. C.—J. C. McMaster is manager of a newly organized ice cream company, with capital of $20,000. A brick structure will be erected, it is reported.

Galveston, Tex.—A site on Avenue K and 23rd St., has been acquired by the Galveston Ice Cream Co., and steps are being taken to remodel and enlarge the plant.

San Benito, Tex.—A plant, 56 by 204 feet, two stories high, for the manufacture of ice cream, will be erected by the San Benito Creamery Co., at a cost of $25,000. Roy Mulhausen is architect.

Puyallup, Wash.—The Puyallup Ice Cream Co. recently moved into its new $10,000 brick building. Tony Roettger is proprietor of the plant. Much new equipment has been purchased, he reports.

Edgerton, Wis.—The ice cream and creamery plant owned by L. L. Hannan and Ernest F. Saltwedel was almost completely destroyed by fire. Loss is estimated at $25,000.

Racine, Wis.—The Thiesen Ice Cream Co., purchasers of the defunct Billy's Ice Cream Co., has filed articles of incorporation. Its capital stock is given at $50,000, and the incorporators are T. W. Thiesen, Jacob Stoffel, Jr., and Gustave Hilker.

Ladies' Auxiliary to S. A. I. C. M. and Other Organizations

LADIES HAVE THEIR WORK AT NEW ORLEANS.

The members of the Ladies' Auxiliary to the Southern Association of Ice Cream Manufacturers and the Dixie Flyers are going to contribute their share toward the success of the great New Orleans gathering. Our activities, as well known, are in the interest of the Southern association. But this year the Southern association will have a great honor conferred upon it; the national association will meet at the same place, and near the same time.

SALLY MAHONEY.

Ladies, we must do our duty. We must make a showing at New Orleans such as never before have we made. We must show the ice cream men of the nation how much we can do to make a trip to the South pleasant and enjoyable. No other association is so famous for its social features as our Southern body. No other association has allied with it and assisting in its advancement an organization of ladies. No other convention carries the charm of the feminine touch.

We are expecting at New Orleans the greatest attendance of the ladies of Dixieland in the history of Southern conventions. There can be no true Southern hospitality without the presence of ladies. You are the hostesses.

In a few days you will hear something about our program. But in the meantime, make your plans to be at New Orleans. We'll turn back the pages of time and show every visitor how nice it is to meet with the ladies and gentlemen of the Southland.

SALLY MAHONEY, President,
Ladies' Auxiliary to the S. A. I. C. M. and Dixie Flyers.

HEADQUARTERS ANNOUNCED.

The headquarters for the Michigan Dairy Boosters at the Lansing convention will be at the Kearns Hotel and all Boosters should send in their room reservations early, it has been announced by C. J. Yuncker, president of the Boosters.

NEED ANY HELP?

An advertisement placed in "The Review" Want Department will put you in touch with just the kind of help you are looking for. Give "The Review" a trial—it's the best way to get results.

CASTLES IN THE AIR.

After spending an enjoyable vacation in Colorado, Mr. and Mrs. W. L. Castle of St. Louis are getting in in readiness for the conventions of the National and the Southern Association of Ice Cream Manufacturers at New Orleans in November. Their vacation, according to the Castles, was in the nature of a second honeymoon. The accompanying illustration shows the pair on the top of Look Out Mountain, beside Buffalo Bill Cody's grave, an altitude of more than 7,000 feet.

MR. AND MRS. W. L. CASTLE.

Mr. Castle is connected with the Blanke Baer Extract and Preserving Co. of St. Louis. He and Mrs. Castle were married last spring a year ago, and spent their honeymoon at the Southern convention at Little Rock.

In a communication to The Ice Cream Review, Mr. Castle calls attention to the fact that Denver, with an altitude of 6,000 feet above sea level, and a consequently much cooler climate than the Southern states, has had a very good ice cream season.

⚜

BORN SALESMAN.

A small boy was complaining to a sympathetic neighbor of his father's suddenly acquired penuriousness. He wasn't giving his offspring money for ice cream and soda water as before and the latter was greatly stirred over the change in his parent's nature.

"Papa's saving his money, but I tell him he's foolish," he observed.

"Saving, eh?" commented the neighbor.

"Yes. Papa said he's saving to buy a baby, but I think I'll be able to talk him out of it."—New York Sun and Globe.

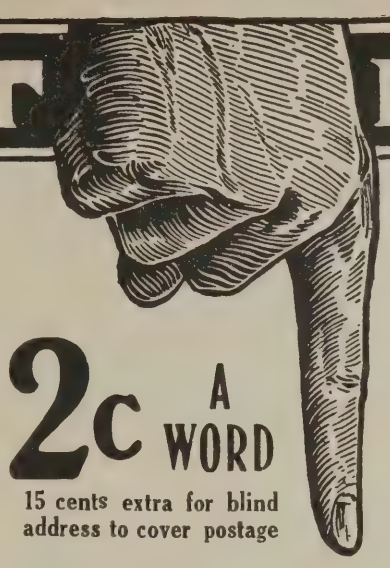
"A high salaried man on our staff"—

Mr. F. J. Paddock a reader of The Ice Cream Review who operates three ice cream plants has this to say:

"We appreciate the interest you take in our business.

"We consider the information obtained from your magazine one of the greatest helps in solving our problems.



"In fact every month in the "Review" we find something that improves our business; and we consider it worth as much to us as though we had a high salaried man on our staff for this information."

Ice Cream Men get all this for little effort and small cost.

The advertiser, too, obtains the services of the high salaried man—at little cost. The "Review" brings regularly to the ice cream industry news and information on meritorious products, supplies, machinery and equipment that ice cream manufacturers use.

FILTERING DEVICE ADDED.

The White Dairy Products Co., Raleigh, N. C., recently announced the installation of the first filtering device used in any ice cream plant in North Carolina. All ingredients used in the manufacture of White's ice cream will in the future be filtered through this high pressure filter, removing all possible impurities in the sugar and other ingredients, according to officials of the company. Mr. White claims that this is another evidence that all possible human precautions are taken by them to assure the elimination of any possible impurities in the raw materials and insure a quality product.

⚜

ARCTIC TO OFFER LANSING PLANT FOR SALE.

Announcement recently was made by the Detroit, Mich., office of the Arctic Ice Cream Co. that the two Lansing plants now manufacturing ice cream would be offered for sale. However, it is also made known that the company expects to erect a refrigeration and storage plant to be used as a distributing center for its product in Lansing and adjacent territory. The present plans call for the erection of a manufacturing plant in Ovid, Mich., nearer the raw milk supply, where the mix will be made, placed in refrigerated, glass-lined trucks and delivered to the Lansing distributing plant.

The main reason for the change in manufacturing plant is because Ovid offers the Arctic company a steady supply of raw milk, although other matters also played a part in reaching the decision. The company claims that lower taxes, lower cost of manufacturing, lower priced property and other economies have made this step advisable.

THE BOYS WERE WISE.

With the thermometer near zero one early morning last winter, a man who directs the operation of a score of newsboys considered it a good idea to give the boys some food to help them combat the cold. So he invited them all into a restaurant. "Now order what you want," he told them, "so you'll be able to keep warm when you go out on the street."

And every mother's son of them ordered ice cream!—The New Guide.

⚜

Bulling the Goat.

A Holstein cow with a high-bred mein,
Daintily browsed in a meadow green;
And bragged to a goat as he wandered by,
"A pedigreed 'queen of the herd' am I."

"**My** milk's above normal in butter fats,
And I yield twice as much as the poor 'scrub rats';
One pound to the quart is my average score
And when 'Contented' I may give more!"

Old Billy (who had travelled) concealed a grin
But finally said, "I should hate like sin,
In the slightest degree your pride to choke,
But your owner get's "the coin and you're the goat!"

THE STORK'S RIVAL.

"Mother," little Archie said, "it wasn't the stork that brought baby."

"Who was it then?" his mother asked, curious to hear what idea her small son had in his head.

"It was the milkman," Archie replied with absolute positiveness. "He has a sign painted right on his wagon: "Families Supplied Daily."

Double Your Brick Cutting Capacity

with the

CHERRY ICE CREAM BRICK CUTTER

SPEED—Under normal operating conditions this machine will cut 60 quart bricks or 120 pints per minute.

ACCURACY—Size of each cut is determined by an accurately machined steel ratchet feed arm which is notched for the following cuts per minute: 1, 2, 4, 5, 6, 7, 8, 9, 10.

SIMPLICITY—There are only two simple adjustments to make in changing from one cut to another.

ECONOMY—The Cherry Brick Cutter is so simple to adjust and works so rapidly and quietly that high-priced labor is not required to operate it.

AN EXCLUSIVE FEATURE — Due to the design of the special cams which operate the cutting knife there is ample space between each cut of ice cream as it goes onto the conveyor belt of the wrapping table for the girls who are packing to pick up each cut without touching the one next in line. You will appreciate this exclusive feature when you have seen the Cutter in operation.

ICE cream men in 41 states have informed The Association of Ice Cream Supply Men of their intended presence at the annual convention of the National Association of Ice Cream Manufacturers at New Orleans, November 17th—20th, inclusive.

Announcements of officers of the National Association forecast reports and discussions of such matters at the Convention as the iceless cabinet, national advertising, cost accounting, selection of a slogan, butter-fat standard.

The New Orleans Convention is the industry's clearing house of 1924 for facts and analysis, policies and decisions.

A Southern climate—outdoor recreation—the charm of a "different" city — add to the business attraction of attendance at the Convention. The Roosevelt is the convention hotel.

NOVEMBER 1924

A STAR of high destiny is rising for the ice cream industry. This is an impression gained by careful observation in late months. Those "in the know" feel sure something big is about to develop for this industry. It's in the air. Ice cream manufacturers in various parts of the country seem to sense it. This feeling is a recognizable under-current in virtually every topic of conversation where ice cream men in different groups have gathered in late months. They seem to think "something's going to drop."

It is this general frame of mind which will do as much as anything else to attract a large attendance at the annual convention of the National Association of Ice Cream Manufacturers at New Orleans the week of November 17.

Many want to see America's most interesting city. But when men in remote corners buy strips of tickets longer than their neckties and make hotel managers sit up late nights figuring out extra sleeping quarters in one of the great hotel cities of the world—when these things happen, one can rest assured that the armies of delegates now preparing to move on New Orleans are going for something besides the prospect of seeing magnolias bloom in a land of scenic splendor. They feel that something big is hanging fire for their industry. We believe President Hovey has something in mind when he makes this statement in this issue of The Ice Cream Review about "new opportunities in connection with the New Orleans convention."

It's in the air.

IT'S a great day for the Southern ice cream industry. Washington waited and got its World Series; Greece waited and got its republic; the South waited and got its national convention. The word "got" is used advisedly. For the Southern ice cream industry sent a band of "go-getters" to Cleveland last fall and they would not be denied.

The South is determined to make the most of this great victory. It comes from high authority that, to a man, the Southern ice cream industry is behind the ice cream events at New Orleans this month. It is no light honor that has fallen upon the men of Dixie. And with it goes a heavy responsibility. This seems to be generally realized in the states below the Ohio River. They are out to make good. The word has been passed that company is coming. In the South the word company has a deep significance. It means calling into play those thousand and one little courtesies and accommodations that have made that section known from pole to pole as the land where all strangers are at home. It is the proud boast of Dixie that the sun never sets upon a stranger within its gates.

Leaving aside the many important matters that undoubtedly will engage the thoughts of delegates at this convention, the 1924 national convention is sure to go down in trade annals as one of great moment, if for no other than the reason that it promises to celebrate a new spirit and a new understanding among the men who do business on the opposite sides of what we once foolishly called a dividing line in this country. That line has gradually melted away as the men of the Southern ice cream industry, year after year, have labored over their works and looked forward to the time when they could call into their own confines their neighbors of every state in the Union, and raise high the glasses cementing cordial relations.

Delegates from out of the South are sure to get many surprises at New Orleans. While they will see a city that, in many respects, is not unlike other port cities of this country, they also will see a city with enterprise that will match the cream of the great commercial centers of the country—a city with great hotels not eclipsed by any city its size in the land.

It is safe to say that never have delegates to a national ice cream convention received a welcome such as the one they will receive at New Orleans this month. The Southern association will hold its convention and get its own matters out of the way. It is promised that there

will be a record attendance. Virtually all of this large number of delegates will be waiting at New Orleans with outstretched hands for the coming of the gentlemen "from up the country." From all the hills and hamlets, from all the lowlands and valleys, they will be assembled in goodly company.

It is a great day for the Southern ice cream industry. The South is sure to make the most of it.

⚜

YOU will notice that this issue of The Ice Cream Review reaches you right at the start of a new month. You will also notice that it contains considerable information that is new to you. That is one thing, among many others, you can always depend upon about The Ice Cream Review—timely arrival. It comes out on time and tells the things in which you are interested at the time.

If you are reading this at the national convention, you will notice that this is the **November** issue of The Ice Cream Review, and that it dwells particularly upon things of interest to the industry this month. It is not the October issue; that month is dead so far as matters of present interest are concerned. It has been said that nothing is quite so dead as yesterday's newspaper.

We believe in giving the ice cream industry what it wants and at the time when it wants it. If you are reading this issue at your office, you will note that it deals largely with matters which are facing you at this particular time of the year.

If you are reading this on the train, on your way to the convention, you will notice that we had your trip in mind in preparing our reading matter for this month.

This kind of service is made possible because we are in position to give it, because the industry needs it, and because our readers and advertisers deserve it. That little line means something under the masthead—"NOVEMBER." It means service. It means we are on time.

⚜

AGAIN the ice cream industry comes face to face with its old, old question, "What about winter consumption?" It seems as though it were only a few days ago when we discussed this same topic in connection with the gathering snowclouds of 1923. The snowclouds are hovering around us again. In just a little while we shall be at close handgrips with Jack Frost, the ice cream industry's enemy of long standing.

Sometimes our enemies do us much good. Maybe it will prove that way in this case. It is undeniably true that young Jack Frost makes us fight for what we get—that is, if we get it. Some of us don't. He has done a good service when he has taught a man how to fight.

A very successful business man once said the best friend that ever influenced his life was a long-eared, hard-headed mule that was forever fighting against him. That mule developed in this man a tendency always to be set to put forth his best efforts in facing any undertaking that might arise.

There is now no longer any doubt that people can be sold ice cream in the winter time if the effort is made. Let us all fight harder this winter than ever before. This is not the time to lean back and wait for next year. It is true that business has slacked up enough to allow ice cream men to take in the conventions, but of all times in the year, this is the best time for every ice cream man to make up his mind that Jack Frost, stubborn son of Old Man Winter, is not to have things all his own way. There is nothing that will so tune you up for the campaign just ahead as a fight to the finish with this arch enemy. He is likely to prove one of our best friends yet.

⚜

IS THE ice cream industry going to launch a great national campaign? That question has been uppermost in the rank and file of the industry for many months. Manufacturers at large have had their eyes glued upon the activities of the advertising campaign of the national association. Even during the summer months one could not find as many as three or four manufacturers gathering in one spot when somebody did not bring up that subject. Manufacturers have written letters to The Ice Cream Review asking for information.

It seems that at last something is to be done. It is to be hoped that out of the activities of the advertising committee there will emerge a program that will place this industry in the same rank with the other great food groups that have adopted national advertising. We shall know something definite about this in the very near future, it now seems sure. Now that the national slogan has been definitely adopted as related on page 10, there is little doubt that if the matter is put before the members of the industry with request for its support, it will get widespread indorsement.

At the national convention this month there will be much said on the subject. Considerable time will be allotted the advertising committee to go into detail and explain what it has discovered concerning the feasibility of this plan. That is a mighty good reason why you should go to New Orleans this month. It's a big thing, gentlemen of the trade, and you owe it to yourselves and the future of your business to see what is going to come off and what you can do for the good of the cause.

⚜

OUT on the coast the gentlemen of the golden West are getting ready for a huge affair. They don't mind telling you so, which is a habit they have that is all their own. But when you reflect that all the big things they plan on the coast generally go over with a vim, you will understand that officials no doubt have good reasons for their high expectations in connection

with the Pacific Slope Dairy Show, which will take place at Oakland in December.

There have been several months of preparations, another habit they have on the coast. They believe in planning well and thoroughly before they act. Maybe that is one of the reasons why they usually are so successful. But probably the big reason is the enthusiasm so characteristic of the Pacific territory. It is doubtful if such a spirit of enthusiasm can be found anywhere else in the world. That is where they get their vigor.

The Pacific show will draw together this year all the ice cream men of the West, including not only the coast states but also many of the inland states of the Southwest and the Northwest. The Pacific Ice Cream Manufacturers' Association will meet in joint convention with the California and Southwestern States Ice Cream Manufacturers' Association. In addition, the Supply Men of the Pacific Ice Cream Industry, a duly organized body, will furnish the ice cream men a show for which they make great promises.

It is sure that something extremely interesting faces the ice cream men of that territory. They have done so many really great things in that part of the country that few of us will be surprised at the victory they probably will score at this time, however big it may be. They have made us all sit up and take notice before; they may be expected to do the same thing many times again.

⚜

THE manufacturers of Pennsylvania and New Jersey formally opened the convention city in the ice cream industry with a highly successful convention at Newark the middle of last month. It was the eighteenth annual convention of the association, which now is known as the Association of Ice Cream Manufacturers of Pennsylvania and New Jersey, but it was the first convention since including the New Jersey manufacturers in the membership.

The association showed its appreciation of E. E. Rieck by re-electing that gentleman president.

⚜

THE felicitations of the industry go out to the Illinois Association of Ice Cream Manufacturers. As this issue of The Ice Cream Review was going to press that splendid organization was celebrating its Silver Jubilee, at the twenty-fifth annual convention in Chicago. Prominent ice cream men from all parts of the country were sending in congratulations on the eve of the convention. Many had promised personally to attend and express appreciation for the services this association has performed. By the time you read these lines the Illinois Silver Jubilee will be history. But the spirit of that great organization will continue to flower as its activities go on and on toward greater usefulness. It gives us all a better feeling about the future of this industry when we think of the men who have made possible the good record of the Illinois association.

THE Southern convention will be featured by what probably will prove to be one of the greatest expositions ever held in connection with a Southern convention. This will be provided by the Dixie Flyers. The Athenaeum, one of New Orleans' largest buildings used for this purpose, will be the scene. Officials of the Dixie Flyers report that space is virtually all sold. It was originally planned to occupy only a small part of the hall, but the demand for booths made it necessary to throw open additional space. The Southern convention sessions will be held in this same hall. Southern ice cream manufacturers owe a debt of real gratitude to this splendid body. Not only will the Dixie Flyers furnish a dazzling exposition but they also will live up to their splendid reputation for high-class entertainment.

BULLETIN OF EVENTS

Southern Association of Ice Cream Manufacturers—Twelfth Annual Convention, New Orleans, November 14 and 15, 1924. Secretary, J. W. Clopton, Decatur Ice Cream & Creamery Co., Decatur, Ala.

National Association of Ice Cream Manufacturers — Twenty-fourth Annual Convention, New Orleans, La., November 17, 18, 19 and 20, 1924. Convention headquarters, Hotel Roosevelt. Secretary, N. Loewenstein, 155 N. Clark St., Chicago.

Louisiana Association of Ice Cream Manufacturers—Annual convention, November 21, 1924. New Orleans, La. Secretary, N. F. Manning, Monroe.

Texas Ice Cream Manufacturers' Association—Annual Convention, Dallas, December 3, 4, 5, 1924. Secretary, A. J. White, San Antonio.

Georgia Ice Cream Manufacturers' Association—Annual Convention, Augusta, Ga., December 2, 1924. Convention headquarters, Richmond Hotel. Secretary, Sam Marshall, Marshall Ice Cream Co., Albany, Ga.

Indiana Manufacturers of Dairy Products—Annual convention, Indianapolis, December 4. Secretary, R. L. Hammond, 306-07 Chamber of Commerce Bldg., Indianapolis.

Oklahoma Association of Ice Cream Manufacturers—Annual Convention, Tulsa, December 8-9-10. Secretary, W. M. Hawk, Tulsa.

The Association of Ice Cream Manufacturers of West Virginia—Annual Convention, Clarksburg, December 9 and 10. Convention headquarters, Hotel Waldo. Secretary, C. F. Jamison, Huntington, W. Va.

Dairy Products Association of Kentucky—Annual convention, Paducah, Tuesday, December 9, 1924. Convention headquarters, Palmer House. Secretary, Carlton Ball, 206 Republic Bldg., Louisville.

Association of Ice Cream Manufacturers of Iowa—Annual convention, Des Moines, December 9, 10 and 11. Convention headquarters, Fort Des Moines Hotel. Secretary, P. W. Crowley, 512 S. & L. Bldg., Des Moines.

Pacific Slope Dairy Show—Exposition under the auspices of the California Dairy Council with co-operation of dairy councils of the Western states and dairy divisions of the agricultural colleges and departments of the Pacific Coast states, Oakland, Cal., December 10 to 16, inclusive. Secretary-manager, Sam H. Greene, 216 Pine St., San Francisco.

Pacific Ice Cream Manufacturers' Association—Annual convention, Oakland, Cal., December 10, 11 and 12. Secretary, Bert H. Walker, Tacoma, Wash.

California & Southwestern States Ice Cream Manufacturers' Association—Annual convention, Oakland, December 10, 11 and 12. Secretary, Jay Kugler, 57 Post St., San Francisco.

Supply Men of the Pacific Coast Ice Cream Manufacturers' Association—Exhibition in connection with joint convention of Pacific Northwest, Pacific Coast and Southwestern States, City Auditorium, Oakland, Cal., December 10, 11 and 12.

Kansas Association of Ice Cream Manufacturers—Annual convention, Topeka, December 16, 17 and 18. Convention headquarters, Hotel Kansa, Topeka. Secretary, B. T. Perkins, Pittsburg.

Louisiana Association of Ice Cream Manufacturers—Annual convention, New Orleans, December 21. Convention headquarters, Hotel DeSoto. Secretary, N. F. Manning, Monroe.

Arkansas Ice Cream Manufacturers' Association—Annual Convention, Little Rock, some time in December, 1924. Convention headquarters, Hotel Marion. Secretary, Charles Hooberry, Pine Bluff.

North Carolina Ice Cream Manufacturers' Association—Seventh Annual Convention, Charlotte, January 13-14, 1925. Secretary A. E. Dixon, Fayetteville.

New England Association of Ice Cream Manufacturers—Annual convention, January 21-22, Hartford, Conn. Secretary, W. P. B. Lockwood, 51 Cornhill, Room 401, Boston, Mass.

Ohio Association of Ice Cream Manufacturers—Annual convention, Cleveland, during last week of January, 1925. Convention headquarters, not announced yet. Secretary, W. A. Wentworth, 509 Outlook Building, Columbus, O.

Michigan Dairy Boosters—Exhibition in connection with convention of the Michigan Allied Dairy Association, Lansing, February 2, 3, 4, 5 and 6, 1925. Exhibition headquarters, Kerns Hotel. Secretary, C. J. W. Smith, 502 Lenox Ave., Detroit.

Michigan Allied Dairy Association—Annual convention, Lansing, February 2, 3, 4, 5 and 6, 1925. Convention headquarters, Michigan Agricultural College. Secretary, R. F. Frary, Lapeer.

Tentative Program

National Association of Ice Cream Manufacturers

ANNUAL CONVENTION

New Orleans, La. - - November 17, 18, 19, 20

MONDAY, NOVEMBER 17th.

9:30 A. M.

Meeting of Executive Committee and Board of Directors.

11:00 A. M.

Address of Welcome

Possibly by His Excellency, Henry L. Fuqua, Governor of Louisiana.

Response

Vice-President, W. W. Campbell, Shreveport, La.

Report of the Secretary

Report of the Treasurer

President's Address

2:00 P. M.

Executive Session

Admission by card only—for ice cream manufacturers.

"Some Uneconomic Manufacturing Policies"

by Dr. H. A. Ruehe, Head, Dairy Husbandry Dept., University of Ill., Urbana, Ill.

Also talk along the same line,

by Mr. O. E. Williams, Dairy Manufacturing Specialist, Bureau of Dairying, U. S. Dept. of Agriculture, Washington, D. C.

The foregoing addresses to be followed by one or two ice cream manufacturers, concluding with a general discussion. Possibly the subject of "Suburban Trucking" will also be taken up at this session.

TUESDAY, NOVEMBER 18th.

All day Tuesday will be taken up on the subject of REFRIGERATED CABINETS. Addresses will be made by representatives of the various Refrigerated Cabinet manufacturers, as well as a large number of ice cream manufacturers who have been asked to prepare statements showing all of the factors connected with Refrigerated Cabinets. There will be a general and free discussion from the floor by all ice cream manufacturers who wish to participate therein.

WEDNESDAY, NOVEMBER 19th.

Wednesday morning, Mr. E. C. Sutton, Chairman of the Slogan Committee, will make a report for that Committee, after which the subject of the national advertising of ice cream will be taken up by a number of very capable speakers having experience in national co-operative campaigns, who are expected to amplify report of the Committee on National Advertising, of which Mr. W. A. Schwindeler of St. Louis is Chairman. After the conclusion of discussion on National Advertising of ice cream, which is expected to take up the entire morning session, Mr. S. T. Nivling, Chairman of the Cost Accounting Committee, will render a report for that committee and several able speakers will participate in the subject of Cost Finding and Uniform Cost Accounting.

THURSDAY, NOVEMBER 20th.

Thursday morning, there will be another Executive Session, at which admission will be by card and for Active Members only. At this session, Committe Reports not previously rendered will be presented. It is possible that some other matters of great interest to ice cream manufacturers may be discussed.

Early in the afternoon there will be a meeting of the Executive Committee and the newly elected 1925 Directors.

We cannot, as yet, give any particulars regarding the entertainment features in view of the fact that this is entirely in the hands of The Association of Ice Cream Supply Men and they have not as yet concluded their plans.

N. LOEWENSTEIN,
Secretary.

Program

Southern Association of Ice Cream Manufacturers

New Orleans, La. - - Nov. 14 and 15, 1924

Thursday, November 13.

4:00 p. m.—Registration at De Soto Hotel.

Friday, November 14.

8:00 a. m.—Registration at the Athenaeum, St. Charles Ave. and Clio St. Street cars marked "St. Charles Ave." pass the door.
10:00 a. m.—Assembly of the Convention at the Athenaeum.
10:05 a. m.—Invocation.
10:10 a. m.—Welcome Song.
10:15 a. m.—"We Welcome You to New Orleans." Andrew J. McShane, Mayor New Orleans.
10:25 a. m.—"We are Happy to be in New Orleans." By Will Terry, Little Rock, Ark.
10:30 a. m.—Presentation of the Convention Program for Adoption. By Benjamin C. Brown, Chairman, Convention Program Committee, New Orleans.
10:35 a. m.—Convention called to order by President W. J. Barritt, Tampa, Fla.
10:40 a. m.—Announcements, Reading of Communications, Telegrams, etc.
10:45 a. m.—President's Message — W. J. Barritt, Tampa, Fla.
11:00 a. m.—Secretary-Treasurer's Report, by J. W. Clopton, Decatur, Ala.
11:15 a. m.—"Specialties — Are They Profitable?" By—
S. N. Sutton, Vicksburg, Miss.
G. A. Meyer, Stuttgart, Ark.

Discussion.

12:00 a. m.—Adjournment. Buffet luncheon served in the building. Compliments of the Dixie Flyers.

Friday Afternoon.

2:00 p. m.—"Should a Dealer Carry Several Flavors?" By—
E. B. Giesel, New Orleans, 10 minutes.
John Kloecker, Lexington, Ky., 5 minutes.
2:15 p. m.—Discussion.
2:30 p. m.—"The Magic Chance." By Benjamin C. Brown, New Orleans.
2:50 p. m.—"Co-operation of Factory Employees." By Harry Cuscaden, Louisville, Ky.
3:00 p. m —Discussion.
3:10 p. m.—"What is the Proper Standard for Ice Cream?" By—
M. J. Costa, Athens, Ga.
S. S. Dent, Memphis, Tenn.
3:40 p. m.—"Pure Food Laws and Their Enforcement." By Dr. Oscar Dowling, President Louisiana State Board of Health.
4:00 p. m.—Discussion.
5:00 p. m.—Adjournment.

Saturday, November 15.

11:40 a. m.—Round Table Discussions. Session open to ice cream manufacturers only.
Report of Committees.
Selection of Convention City.
New Business.
Election of Officers.
1:00 p. m.—Adjournment.
Visit with supplymen.

GENERAL INFORMATION.

Headquarters of the Southern association, De Soto Hotel.

The convention will be held in the Athenaeum, St. Charles Ave. and Clio St., eleven blocks above Canal St. Street cars marked "St. Charles Ave." pass the De Soto Hotel and the Athenaeum. The exhibition given by the Dixie Flyers will be held in the Athenaeum.

Registration at the Athenaeum. The secretary will be at the Hotel De Soto after 4 p. m., Thursday, Nov. 13, and at the Athenaeum, 8 a. m., Friday, Nov. 14. Be sure to register early, as the convention will convene promptly at 10 a. m. No one will be allowed inside the hall without a badge of either the Southern association or of the Dixie Flyers.

Your officers request your co-operation by being prompt at all meetings. The program is interesting and instructive and it is going to be run on time.

You cannot afford to be late, and it can be carried through to a successful completion if you will be on hand promptly at all times.

The convention will adjourn on Saturday at 1 p. m., in order to give those in attendance an opportunity to visit with the supplymen. The Dixie Flyers have gone to considerable trouble and expense in arranging a splendid exhibit, and we are indebted to them for their efforts.

All railroads under the supervision of the Southeastern and Southwestern Passenger Associations have made reduced fares based on the certificate plan which entitles the passenger to one-half fare return from the convention. These tickets will be on sale November 10.

For Entertainment Features see page 158

National Ice Cream Slogan Selected

"Serve It—And You Please All"

Is Winning Slogan in Contest Covering Civilized Globe and Attracting 110,000 Entries

DETERMINED to unearth a slogan that would emphasize the universal appeal of ice cream, the slogan committee of the National Association of Ice Cream Manufacturers combed the North American continent and searched the civilized globe to find the one desired—"SERVE IT—AND YOU PLEASE ALL." The slogan, as shown in the accompanying illustration, was announced by the slogan committee on October 25, and is published in The Ice Cream Review for the first time.

It remained for a young lady in the Dominion of Canada to offer the winning slogan, which was selected from 110,000 submitted from virtually every corner of the earth. The winning slogan was submitted by Miss Edith Ashcroft, 204 King St., Kingston, Ont. She sent in a neat little folder that showed, on the first page, the slogan worked in with a very attractive emblem. The explanation was written out on the second page of the folder in twenty-five words, as follows:

"Foods or delicacies which 'please all' obviously embody purity, wholesomeness and deliciousness, and year-round use.

"My slogan is adaptable to all forms of advertising."

The value of this slogan was suggested to the committee by that last line, regarding all forms of advertising.

The Ice Cream Industry's Slogan.

"The fact that this slogan is contained in a very attractive emblem, which immediately associates it with the product being advertised gives it an emphasis which cannot be denied," declares E. J. Weinstock, one of the slogan judges, in a statement to The Ice Cream Review. "It is the constant repetition of this slogan and its universal use by ice cream manufacturers throughout the country that will popularize this phase and literally place it on the tongues of every man, women and child."

A FOLLOW-UP campaign has been prepared, so the complete membership of the national association may co-operate with the committee in announcing the winning slogan. This slogan now is being circulated in every state in the Union and among the provinces of Canada, including a newspaper advertisement which can also be used for other advertising purposes.

Members of the national association who wish to co-operate can obtain newspaper mats, stereotypes, electrotypes or reprints of this announcement ad by communicating at once with Walz-Weinstock, Inc., Washington Building, Buffalo, N. Y.

Six judges waded through the 110,000 slogans submitted. These judges were Miss M. P. Knight, domestic science department, Hutchinson High School, Buffalo, N. Y.; Dr. Albert P. Sy, professor of chemistry, University of Buffalo; Edwin J. Weinstock, vice-president, Walz-Weinstock, inc., Buffalo, N. Y.; Reynolds A. Peters, Joseph Kearn and Roy Snyder.

THE judges personally went over every individual slogan submitted, which accounts for the delay in deciding upon the winner. The original number of slogans was reduced to 564, then to 139, and finally to a choice of 20 slogans. The committee then apprised every director of the national association and every member of the executive committee. Each director and member of the executive committee was asked to name his choice. The winning slogan was determined by the vote of the directors plus the vote of the judges.

The phrase, "Serve It—and You Please All" will be the ice cream industry's official catchline, the same as the florists have for their trade cry the phrase, "Say it with Flowers," and the bakers advertise their slogan, "Bread Is Your Best Food—Eat More of It."

The slogans were tabulated and arranged numerically, according to file number. Behind the packages were boxes containing the cards on which were written the slogans, these slogans being arranged alphabetically as to state and slogan. Early in July it was realized that the work of wading through the large number of offerings would consume several weeks. According to the method of handling the work, it was impossible for the judges to know the name of the winner until after they had judged the slogan itself.

ICE cream manufacturers throughout the country have waited with great interest for a decision. There is no doubt that this will be a great stimulus to ice cream advertising. It remains for the advertising committee to make known its suggestions, and then for the association to take action, before it will be definitely known just what will be done in connection with nation-wide advertising of ice cream.

The fact that a decision has been reached in this matter will add to the interest centering around the advertising committtee's report at the national association. The entire industry is vitally concerned in the matter, and no doubt the session at which advertising will be featured will find a crowded convention chamber.

If the winner of the slogan had resided in the United States she would receive quite a bit of prize money, for many state associations had offered prizes, in addition to the national association's, providing the winner should be a resident of one of certain states.

Among the slogans included in the last twenty to be selected were:

"A Health Prescription in Two Words."

All in Readiness for Great Dixie Classic

New Orleans Awaits Arrival of Monster Gathering of Ice Cream Men from all States This Month

All Eyes on South

ALL TRAILS LEAD TO DIXIELAND—as preparations near completion for the twelfth annual convention of the Southern Association of Ice Cream Manufacturers and the twenty-fourth annual convention of the National Association of Ice Cream Manufacturers. The Southerners will convene in New Orleans, November 14 and 15, and are expecting to entertain a large number of visitors from other sections. With the close of the Southern convention on the Saturday afternoon of November 14, Dixie delegates and their visitors will be entertained by the Dixie Flyers over the week-end and will be in readiness to extend welcoming hands to all delegates to the national association, which this year is honoring the South and the national association's Southern vice-president by meeting in a Southern city for the first time since 1909.

The association held a meeting in Memphis in 1909.

In many ways this promises to be the national association's greatest convention. This despite the fact that it will meet this time for the first time in three years without the attraction of a great national exposition. This is more than offset, some onlookers agree, by a number of extraordinary matters to confront the convention this year, to say nothing of the great natural appeal of the convention city itself.

MANY manufacturers who for years have looked to the national association for the working out of problems facing the industry will be drawn to the convention by a number of matters that have been hanging fire for some time. The past year has been one of the most eventful in the association's history. It has seen launched several constructive lines of action that, carried out, would mean something of vast importance to the ice cream business. Among these are such matters as national advertising. The convention will be featured by discussions on what other industries have accomplished through national advertising, with experts giving their opinions on what the ice cream industry can accomplish in this way. This alone will hold strongest interest for many delegates.

Much has been said about weight per gallon. The national association has had little to say upon this matter thus far, but it probably is safe to surmise that its officials have given much thought in this direction. There is no doubt much will be said on the subject at New Orleans—very much indeed, very probably. It is a timely matter of paramount importance.

The trade for the past two years or so, particularly in the last twelve months, has been particularly on the alert for all the information possible on iceless refrigeration. This will be forthcoming at New Orleans, officials promise. At least one entire day, we are told, will be devoted to this subject. There is sure to be brought out some very valuable information concerning this phase of the ice cream business, which, overnight as it were, has brought the ice cream manufacturer entirely face to face with new conditions.

OF VERY great importance will be the report of the committee on cost accounting. Nothing that has developed in the annals of the industry surpasses the step taken by the national association looking toward the elimination of unbusinesslike practices in the industry. Delivery costs will be discussed at length.

In discussing convention features last month Secretary Loewenstein said:

"Uniform cost finding and accounting will occupy a half day. The subject of the national advertising of ice cream, which is another very important topic, will be thoroughly taken up and action may be taken which will effect every manufacturer of ice cream in the country.

"If you will visualize what these subjects mean to you and your business you can understand what an epoch making convention the coming meeting of the national association will be to the ice cream industry.

"The Association of Ice Cream Supply Men have assured us that they will put on an even more elaborate entertainment than ever before. This in view of the large anticipated attendance of the ladies.

"From Chicago, one and possibly two, solid Pullman trains will be operated to take care of manufacturers attending the convention from the West and Northwest. Arrangements will be made to pick up delegates en route from Chicago as well as take care of Eastern delegates whose cars can be attached to the special train at points along the way. Special reduced rates have been granted by the various passenger associations throughout the country.

"A number of choice available rooms are still to be obtained by ice cream manufacturers at the Bienville Hotel. Manufacturers from the Southern states are requested to make reservations at the DeSoto Hotel.

"In addition to the foregoing you have an opportunity of traveling with a number of your fellow ice cream manufacturers on a seventeen day (17) trip to Cuba and the Panama Canal Zone and return to New Orleans. This trip will be made on one of the finest of the United Fruit Company's boats, leaving New Orleans, Saturday, November 22."

Southern interests are centering every effort upon the success of the New Orleans gathering. It is generally known that the national association's purpose in de-

(Continued on page 132)

WELCOME TO DIXIE!

Now that the big dairy show is over, all eyes are turned to the Southern and national conventions which meet in New Orleans from the 14th to the 25th of November.

The Southern manufacturers are making preparations to give those who attend this meeting the glad hand and show them some real Southern hospitality. It is with a great deal of pleasure and gratification that we welcome every manufacturer of ice cream throughout the United States to this meeting, as it has long been the wish to have the National Association meet in our Southern territory, and especially New Orleans, our most interesting city and the second port of the United States.

From what I can learn, we are going to have a record breaking crowd, and we hope each and every one of them will enjoy themselves to the fullest extent, and when they return to their respective homes, they will have the thought that they are glad that they atended this great meeting.

W. W. CAMPBELL, Shreveport, La.,
Vice-president, National Association
of Ice Cream Manufacturers.

HAVE YOU TRIED The New CAN-PRO-CO ICE-LESS SHIPPERS

TRY THIS BAG ON OUR TRIAL OFFER (SEE BELOW) AS HUNDREDS OF OTHERS HAVE DONE, BECOMING ENTHUSIASTIC ENDORSERS OF THIS METHOD OF DELIVERY

PATENT PENDING

Made of Heavy Waterproof Canvas Inside and Outside —Double Canvas Bottom and otherwise Reinforced to give Maximum Service.

The Can-Pro-Co Ice-less Shipper weighs nine pounds. The height of this container is less than 24" and the diameter is 12", made for regular twenty-quart cans. You can ship Ice Cream to your customers at less than half the former express charges. Think of this tremendous saving. Think of the ease of the delivery. No salt or ice. No packing. Just drop the cans of cream into the container, buckle it up and you're ready. Load your truck. Any truck will do. Pile them up like cord wood, and you'll be surprised how many you can load. One man does the work of three. One truck carries the load of four as formerly.

ALL DIXIE IS LOOKING FORWARD TO 1924 NATIONAL CONVENTION AT NEW ORLEANS.

Many Important Features President Says

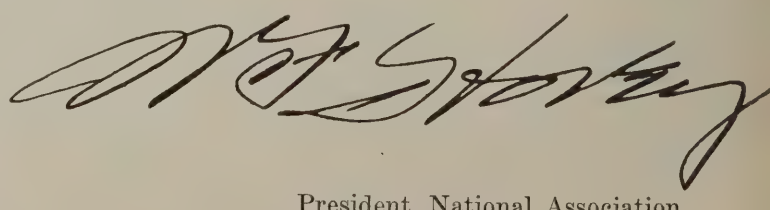
"Opportunities for Constructive Work offered at New Orleans Convention"—Vernon F. Hovey

THERE are good reasons for feeling that the New Orleans convention offers real opportunities to the ice cream manufacturer — opportunities for service to himself and service to the industry.

There has probably never been a time before in our history when we have been confronted with so many problems or been favored with so many chances to progress. If we can have at New Orleans a representative gathering such as we expect to have, it will be a surprise to the writer if we do not make this convention a real corner stone in the path of progress within our industry.

There seems to be a certain vision among leaders in the industry, that we can make the national association an agency for service, in doing constructive work that we have never before attempted. There is probably no one thing that would be as helpful as increased volume and some of us believe this increased volume can be gained at a minimum of cost, through co-operative national advertising. At the convention you will be shown the progress that has been made through national advertising, by other industries, and you will hear talks by some of the best advertising men in the country. Let us hope we will all have the vision to do the big thing if we can be convinced that it is the right thing.

WE HAVEN'T said much about weight per gallon, overrun or shrinkage, but this is a problem of paramount importance that confronts the industry. This problem is being agitated everywhere and it is our contention to the food officials of the country that the ice cream industry is made up of men who are disposed, without compulsion, to conduct their business in a way that is fair and economically sound. We certainly intend to correct every abuse that may be found to exist, and we ask that we be permitted to do this without interference. This particular problem is going to be handled in an aggressive manner. It is needless to say that we will have a mass of information to present to the trade regarding refrigerated cabinets. At least one entire day will be devoted to this subject, as we have a great number of speakers, who can speak with authority on this question. Every ice cream manufacturer needs all the atmosphere he can get on this subject, and the only way to get it is to go to New Orleans.



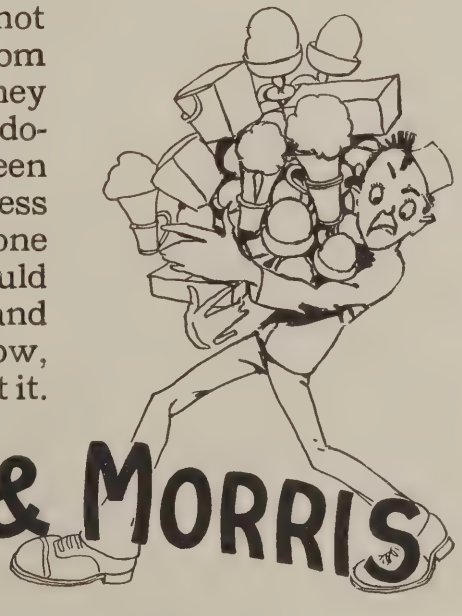
THE committee on uniform cost accounting will make a report, telling of the work that has been done, and the scope of our plans. It is sometimes difficult to arouse interest on this subject, nevertheless, it is a fact that we would find but little wrong with the ice cream industry if every manufacturer had all the figures regarding his own business, and we are sure to have better conditions within the industry if our competitors can be shown that unbusinesslike practices are uneconomic and unprofitable. A comparison of costs will give all of us the satisfaction of knowing wherein our business is efficient, or inefficient, as compared with others, truly a wonderful thing for all of us to know.

Some time will also be devoted to a discussion of delivery costs.

The New Orleans convention is going to be worth while, and we are hopeful that we will have a gathering of men there, who will make it a turning point in our industry.

The national association is an agency for service, and gives us the opportunity to do all the big things that may be accomplished only through co-operative effort.

Come to New Orleans and do your part in boosting the industry



President, National Association,
of Ice Cream Manufacturers.

More Business

Makes Music for both Manufacturer & Dealer

WE ADVERTISE ICE CREAM. Work with many of the biggest manufacturers. Study their particular conditions, keep in constant touch with them all through the year, plan their campaigns, supply window displays, posters, mailing literature, newspaper campaigns, etc., help them to sell Ice Cream and not infrequently save them from frittering away good money unwisely. We have been doing the job for almost fifteen years and if your business does not conflict with someone we are now serving we should like to discuss advertising and selling with you. Write now, while you are thinking about it.

Union Trust Building, Pittsburgh, Pa.

How Far Is It to the Convention City?

The Farther Away You Live, the Longer Ride You'll Have Through Some of the Most Fascinating Scenery in America

All Aboard for Dixie!

WHEN ice cream manufacturers of the nation pack up their troubles in their old kit bag and start traveling toward New Orleans this month, many of them will wonder how Christopher Columbus could have missed so big a country as America, even if he had wished to avoid it. Mileage will run higher for this convention than for any other in the history of the national association, with the exception of the Los Angeles convention a few years ago.

Regarding distance, the selection of New Orleans works extremely well for the convenience of Southern manufacturers. It is just at the point where the territory embraced by the Southern Association of Ice Cream Manufacturers ends and the territory embraced by the large Texas and Oklahoma associations begins. This will mean drawing together the largest number of Southern manufacturers possible.

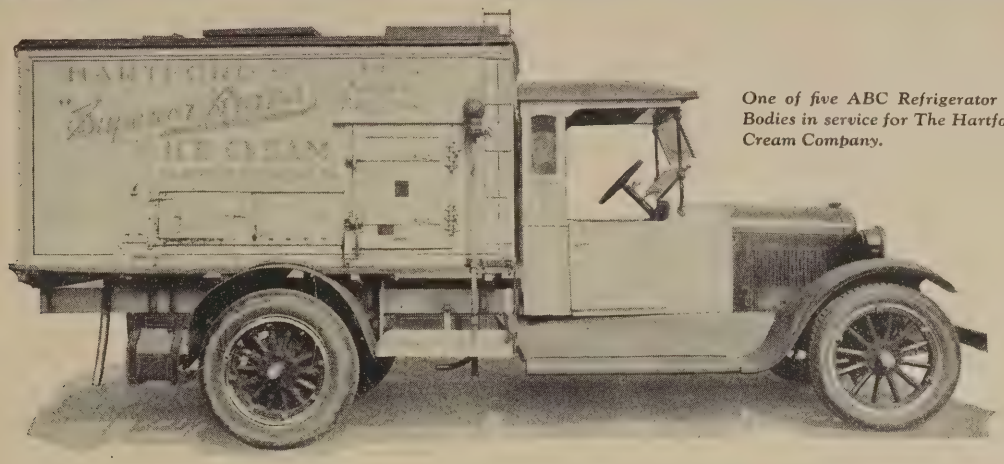
There will be compensations for the manufacturers who have to make long journeys to New Orleans. Every step of the journey will be taking them into a country that is fairly saturated with romantic history.

President Hovey will travel straight to the convention city from his home in Schenectady, N. Y. He will ride a matter of 1,400 miles or so. Joining him at Pittsburgh will be a delegation of Pennsylvania members, who will have a distance of 1,142 miles to cover before ordering their spinach and roast at the Roosevelt Hotel in New Orleans Sunday noon, November 16. Those traveling from New York and other Eastern points will use the Pennsylvania Railroad. At Effingham, Ill., they will connect with the special train to be run from Chicago. On this train will be delegates from Wisconsin, Michigan, northern and eastern Iowa, Nebraska, the Dakotas and other Western states.

Let's follow the routes of these various groups. The gentlemen in Iowa will travel a distance of 400 or 500 miles to Chicago to connect with the special train. From the Dakotas the delegates will travel about 600 miles, or a little more, before reaching Chicago. Wisconsin manufacturers will make their trip to Chicago in a few hours, most of them being in a part of the state no farther away than 100 miles to 250 miles, though those manufacturers in northern Wisconsin will ride about 400 or 500 miles before connecting with the special train.

Those manufacturers desiring to travel on the special train will do well to reach Chicago on the morning of November 16. The special leaves right after noon on that date, at 12:45 to be exact. The distance from Chicago to New Orleans is 912 miles. It will be covered in 23 hours.

The manufacturers of Missouri, Kansas and southern Iowa have been asked to leave St. Louis on the Illinois Central train No. 207, leaving at 4:04 p. m. Saturday, November 15, connecting with the special train from Chicago at Carbondale, Ill. E. D. Miller, assistant general passenger agent of the Illinois Central, 408 Pine St., St. Louis, is the man to get in touch with in connection with this trip. From St. Louis the delegates will travel a distance of 699 miles to New Orleans.



The Ohio delegation may use B. & O. train No. 57, leaving Cincinnati Saturday morning, November 15, at 8:20 o'clock, change to an Illinois Central train at Louisville, and connect with their special car at Fulton, Ky., at 7:50 o'clock Saturday evening. The special train will pick up this special car at Fulton. From Cincinnati the delegates will ride 829 miles.

It is not likely that any of the Kentucky manufacturers will wait for the special train, though provisions were made for them by Secretary Loewenstein of the national association. The Kentucky manufacturers, by that time, however, will be in New Orleans with a solid front for the Southern convention, as the manufacturers of the Blue Grass state are heartily behind the Southern association.

But if you are lamenting the long ride you will have to reach the convention city, just reflect upon the journeys of others. Manufacturers who travel from Seattle will pass something like 3,000 milestones before they get to shake hands with their brothers-in-arms from Boston, who will cover a trifle over 1,062 miles. Los Angeles manufacturers will cover a pathway strewn with 2,007 milestones.

And it is not all soup and gravy for the Southern manufacturers. You get an idea of the size of the South when you reflect that even manufacturers around Atlanta will have to cover in the neighborhood of 500 miles. Manufacturers of Richmond, Va., and vicinity are farther from New Orleans than they are from New York City, having more than a thousand miles to cover to reach the Crescent City.

(Continued on page 118)

One of five ABC Refrigerator Truck Bodies in service for The Hartford Ice Cream Company.

Two on trial in 1922—another in 1923 —a fourth and fifth this year

And now The Hartford Ice Cream Company writes: "Convinced ABC type of refrigeration is economical and bodies well constructed."

Two years ago, The Hartford Ice Cream Company, of Hartford, Conn., bought their first ABC Refrigerator Truck Bodies —two 1½-ton units. A 2-ton unit was added in 1923. And in 1924, orders were placed for two more ABC bodies— one of 1-ton, one of 2-ton capacity.

In a letter, F. A. Judd, general manager, says: "We are now operating a total of five ABC bodies in addition to two refrigerator bodies of different makes. The fact that we have ordered two additional bodies from you this year after a trial of our two previous orders is evidence that we are convinced the ABC type of refrigeration is economical and your bodies well constructed. The last three were painted in your shops, and the painting and lettering were as good as any we have ever seen in Hartford."

Seeking perfect refrigeration and the lowest possible delivery cost per gallon, more ice cream manufacturers are standardizing on ABC Refrigerator Truck Bodies every year.

ABC Refrigerator Truck Bodies use less ice and less salt than any other refrigerator truck bodies. All brine is retained in the tank and circulated thru coils of heavy iron pipe—again and again. This circulating principle, plus a one-piece brine tank—an exclusive ABC feature—prevents the waste of good, cold brine thru running or dripping. Consequently, less ice and less salt are required to keep ice cream, milk and other perishable products at the exact temperature desired.

ABC Refrigerator Truck Bodies are adaptable to any type or size of chassis from 1-ton to 7-ton capacity.

NATIONAL SUPPLY MEN CONTINUE NEW ORLEANS ACTIVITIES.

The Association of Ice Cream Supply Men, according to the bulletins to its membership in the last month and announcements by its officers, is concentrating with increased definiteness on plans for assisting the success of the 1924 annual convention of the National Association of Ice Cream Manufacturers in New Orleans November 17 to 20, inclusive.

The supply association is recommending in communications to ice cream manufacturers the country over, that all ice cream men who have their own selfish welfare and general good will of the industry at heart, attend the sessions at New Orleans.

The supply association is also whipping into definite shape its entertainment program for the four-day period of the convention, during which time the members of the National Association of Ice Cream Manufacturers, all other ice cream men in attendance, and the wives and families of the ice cream manufacturers will be guests at numerous events arranged by and through the courtesy of The Association of Ice Cream Supply Men.

The preparations are taking into account the expected attendance at the national convention of a great number of Southern ice cream manufacturers, who are expected first to attend the two-day sessions of the Southern Association of Ice Cream Manufacturers in New Orleans November 14 and 15, the week preceding the national convention. During the two-day sessions of the Southern association, the Dixie Flyers, the organization of Southern supply salesmen, will manage an exposition of supplies. The Dixie Flyers will also entertain members of the Southern Association of Ice Cream Manufacturers and other ice cream manufacturers present in New Orleans, November 14, 15 and 16.

Part of the program of The Association of Ice Cream Supply Men for the period of the national convention will be an elaborate initiation ceremony for and by members of the salesmen's club of the association.

KANSANS MEET NEXT MONTH.

On December 16-17-18, 1924, the Kansas Association of Ice Cream Manufacturers will meet at the Kansa Hotel, Topeka, Kan.

The general arrangement committee met at Topeka in August to make general arrangements for the coming convention. Most of the speakers for the event have been secured. Some of the most prominent speakers are: Nels Darling of Chicago, nationally known, who will deliver a business address to us the afternoon of the 18th and will, also, deliver the after-dinner address; Professor A. C. Baer of Oklahoma, of the editorial staff of The Ice Cream Review; State Dairy Commissioner E. C. Luellen, and Professor N. E. Olsen.

The Jackrabbits will play their important part in the convention and will give their usual high class entertainment. Special arrangements are being made for the entertainment of the ladies.

It was decided by the Kansas Association of Supply Men that no exhibit would be displayed as was at the Broadview Hotel, at Wichita, the preceeding year.

If you can't travel, you can get Pullman luxury at home. Just crawl up on a closet shelf and stick a cinder in your eye.—Coatesville Record.

America's Most Interesting City

New Orleans Has a Subtle Charm That Captivates

NEW ORLEANS, America's most interesting city, has an inimitable character made up of the blended customs and architecture of three nations, rich historical associations replete with romance, the mild equable climate and flower-fragrant air of the semi-tropics, and a favored maritime position near the mouth of the majestic Mississippi. It is one of the essentials of the American traveler's education—one of the five or six cities on the continent that every person should see.

New Orleans has a subtle charm that captivates every visitor. In the old town, the **Vieux Carre,** laid out by French engineers soon after Captain Jean de Bienville founded his capital there in 1718, history, romance, quaint architecture, half-hidden courtyards, narrow streets, and delectable restaurants irresistibly hold the attention. It is a bit of France and Spain from a vanished age, upon which the impress of America has been but lightly laid. The duel, the vendetta, Congo slaves and Voodoo rites, the picturesque dress, the graceful gallantry, the courtly speech and princely hospitality of the centuries that time has devoured still project their traditions into the living present.

The **Vieux Carre** preserves memories of the bold Bienville, the Marquis de Lafayette, Louis Phillipe the "Citizen King" of France, General Andrew Jackson, Aaron Burr, President Zachary Taylor, the pirates, Jean and Pierre Lafitte, Grand Duke Alexis of Russia, and Henry Clay; of Dr. Antommarchi, Napoleon's physician, of Marshall Ney and General Humbert, two of his commanders; of William Walker, the filibuster; of Lola Montez, Jenny Lind, Adelina Patti, Sarah Bernhardt, Booth, Barrett, Coquelin and many other famous persons.

At Canal street begins the new American city, the modern metropolis of public building, enticing department stores and shops, great commercial establishments, palatial hotels, theaters and cafes, handsome residence avenues, parks, libraries, art galleries and colleges.

The City of Romance

THE Place d'Armes in the Vieux Carre—or as it is more popularly described today—"Jackson Square in the French Quarter"—surrounded as it is by St. Louis Cathedral, which is flanked by the Cabildo on one side and the Presbytere, on the other; the river, and the Pontalba Buildings; and with the Napoleon House and the French market off its downtown river corner—is the HEART OF OLD NEW ORLEANS.

This old square and its surrounding buildings and streets stand today just as they were laid out 206 years ago by the Chevalier Blond de la Tour, who was Bienville's chief engineer when he founded the city 206 years ago.

In it and around it all of the thrilling episodes of the history that is New Orleans' were enacted. In it the entire territory of Louisiana was transferred to Spain—a political gift which aroused the ire of the descendants of its French founders. It was later bought back by France and then sold to the United States.

The architecture that surrounds the old square is a delightful intermingling of French and Spanish art—the Spanish element becoming dominant because it was while New Orleans was under Spanish domination that a conflagration razed most of the original buildings of Bienville's colony, and the Spaniards rebuilt them.

The Cathedral—the gift of Don Almonaster y Roxas to the city—stands on the site of the Mississippi Valley's first church edifice.

The Cabildo was the seat of the Spanish government of New Orleans, where Bloody O'Reilly ruled. He was the first Spanish governor who murdered six loyal Orleanians because they dared oppose the transfer of Louisiana to Spain. It occupies the site of Bienville's capitol building.

The Presbytere, erected shortly after the Cabildo, was the seat of the ecclesiastical government of Louisiana.

The Pontalba buildings—built by Don Almonaster for his daughter, the Baroness de Pontalba—were long the centers of the gayest of New Orleans social life, now tenements. Note the unusual wrought iron art work of the banisters.

The French market has been the trading place ever since the foundation of the city.

NEW ORLEANS is an outdoor city all the year 'round. Golf may be played with comfort upon the numerous courses at all seasons; polo, tennis, racquet, baseball, in fact, all field sports may be enjoyed any day of the year. Upon the lakes, bayous, and canals near the city sailing and motor boating are uninterrupted.

Hunters and fishermen will find in the regions adjacent to New Orleans the land of their dreams; both fresh and salt water game fishes are incredibly numerous, and season finds some species biting greedily.

New Orleans is the city of social brilliancy, whose traditions are founded upon the courtly grace and formality of France and Spain. Perhaps the most striking illustration, and one in which every one may participate, is the Mardi Gras, celebrated each year by a series of balls, pageants, and parades reaching their culmination upon Shrove Tuesday, the day preceding the beginning of Lent.

No survey of New Orleans is complete that does not mention its commercial importance as the port of the vast Mississippi Valley, the gateway to the Panama Canal, and to all Central and South America. Prominent among the port facilities are the immense Stuyvesant docks of the Illinois Central System.

For reaching New Orleans from the North, East and West the service of the Illinois Central is easily foremost. Three fast-time, on-time, all-steel trains are operated daily, among them the noted "Panama Limited," the finest train in the world.

From this brief survey it will be observed that for many years the city developed under Latin influence rather than Anglo-Saxon; and, during its colonial existence, it adopted manners, customs, even a patois, which subsequent conditions have not obliterated. New Orleans inherits a rich flavor of elegance, culture, dashing courage, and an impeccable code of honor chiefly from the Creoles—Louisiana-born descendants of French and Spanish parents.

So This is New Orl

Romance in Trade and on Field of Honor Features Colorful History of Ancient City Where Ice Cream Manufacturers will Gather This Month

CANAL Street is the principal business thoroughfare of New Orleans and the dividing line between the old and new portions of the city. One of the widest streets in the United States. it is lined by great stores and smart shops and is among the chief retail marts in the land. Many of its buildings are handsome modern structures, although most of them were erected before the Civil War.

In the eighteenth century the common ground between the ramparts of the city and the Bienville Plantation was intersected by a canal from the Mississippi, which formed part of the moat protecting the defenses. The mouth of the canal was blocked, in 1795, by the building of Fort St. Louis; and in 1838 part of the waterway was filled in and became Canal Street.

In Liberty Place, at the head of Canal Street, stands an obelisk of stone, a monument to the citizens killed in a revolt against the "Carpet-Bag" government in 1874. One block away is the New Orleans Customhouse, a handsome, substantial edifice occupying the site of old Fort St. Louis. It was begun in 1848 under P. G. T. Beauregard, then major of engineers, U. S. A., but later a noted Confederate general, and was completed in 1881. The building occupies a city block and has a central marble hall famed for architectural beauty.

THE French Quarter" is the most familiar name for the Vieux Carre, the rectangular city laid out in 1720 by the engineers of Bienville. Its boundaries are Canal Street on the south, Esplanade Avenue on the north, Rampart Street on the west, and North Peters Street and a portion of the river on the east—streets marking the old defenses of the colony. New Orleans was confined within these narrow limits until early in the nineteenth century, when it began to expand over the extensive plantation upon the area now occupied by the business district.

As the visitor roams through the French Quarter he observes an architecture with which he is unfamiliar unless he has seen the towns of France and Spain. In

Suburb Near New Orleans.

Entrance to City Park.
French Market.

Cash Registers Now Clang Where Sabers Once Clashed in Days of Cavaliers and Chevaliers

e a n s

the small, quaint shops may be found many a novelty—antiques, curios, rare old books, unobtainable elsewhere. Nothing is more fascinating than a special journey to watch the customs and manners of the residents of this transplanted niche from lands across the sea. This is the domain of the **picayune** (nickel), the **quarti** (half a nickel), and the **lagniappe,** or gift that the storekeeper makes to each purchaser—old Creole words still common in the quarter.

To see the **Vieux Carre** it is better to walk, as the points of interest are so numerous and close together that a trip by automobile or carriage will cause the visitor to miss much that he would see were he on foot and unhurried.

Jackson Square. Laid out in 1720 by Captain Bienville and known then as the **Place d'Armes,** Jackson Square has been closely identified with the history and the romance of New Orleans for two hundred years. The visitor may reach it by a five-minute walk from Canal Street, down Royal to Orleans Street, which ends at the rear of the cathedral, thence through St. Anthony's Alley. In front of the original **Place d'Armes** was the parish church, on the site of the present cathedral, with the **Presbytere** and prison alongside. In the early days it was a bare, open space enclosed by cypress palings; the tarred bodies of pirates left suspended as a warning dangled from rude gallows in the center.

The Square of today presents well-tended lawns, clipped shrubbery, and beds of bright flowers, with the bronze warrior surveying the scene from his curvetting charger. Probably no spot of equal size in America has furnished the scene for history more varied and picturesque. Among the dramatic events may be cited the landing of the **Cassette** girls in 1727; the gathering of the troops in 1728 to repel the expected attack of Natchez Indians; the reception of the Acadians driven from Nova Scotia by the English, in 1755; the arrival in 1769 of the galleons that brought Captain-General O'Reilly and marked the transfer of the colony to Spain; the delivery of Louisiana to the United States in 1803, when Thomas Jefferson "stretched his authority until it cracked"; and the return of General Jackson from the Battle of New Orleans, in 1815, when he gave thanks for victory in the cathedral.

ST. LOUIS CATHEDRAL is one of the best known churches in the United States. The site was selected by Bienville in 1718, but it was not until 1724 that the first brick church was built. That church was destroyed in the fire of 1788; in 1795 the present structure was built by Don Almonoster y Roxas, and it was repaired and added to from time to time; today it is in a good state of preservation. Don Almonaster is buried in a crypt under the altar and other distinguished Frenchmen and Spaniards repose in the cathedral. To the rear is a small garden in which many duels took place in colonial times.

The Cabildo is next to the cathedral, separated from it by Orleans Alley. Erected by Don Almonaster in 1795, it was the Spanish courthouse in colonial days. Many stirring dramas were enacted in the Cabildo. The transfer of Louisiana from Spain to France and from France to the United States took place there, and the spot where the officials stood is marked by a brass plate. Lafayette, as the city's guest in 1825, had his quarters in the Cabildo, and many other distinguished visitors have passed through the wrought-iron door and climbed the marble stairway. There is perhaps no building more historic in the Mississippi Valley.

ON the other side of the cathedral is a building similar in appearance to the Cabildo, built shortly after the latter and known as the **Presbytere** or house of the Capuchin priests. In later years it housed the civil courts of New Orleans.

Both the Cabildo and the **Presbytere** are now museums of the Louisiona Historical Society. The Cabildo contains, among many priceless relics, the Lami painting of the Battle of New Orleans; the Napoleon death mask in bronze by Bonaparte's physician, who himself pressed the matrix to the dead emperor's face; and the rare elephant folio volumes of Audubon's "Birds of America."

On two sides of Jackson Square are long rows of three-story brick buildings, erected in 1849 by Baroness Pontalba, daughter of Don Almonaster. Jenny Lind once lived in the central building on St. Peter Street, and Thackeray, the English novelist, dwelt in one of them for a time. Today, however, the Pontalba buildings are tenements inhabited by foreigners and a few artists.

The fine equestrian statue of General Andrew Jackson was erected in 1846, when the square was given the noted soldier's name.

The French Market is just off the northeast corner of Jackson Square and extends down to Barracks Street. The first market, erected on this site by the Spaniards in 1791, was destroyed by a hurricane in 1812. The old structure was replaced by the present market in 1813; in 1822 the vegetable market was added; the bazaar market in 1872. This picturesque trading place is at its liveliest between five and ten o'clock in the morning. To the rear of the French Market, and including the area from St. Ann to Barracks Street, is "Little Italy."

(Continued on page 120)

Southern Convention Preparations Complete

Lively Sessions Will Feature Abbreviated Convention of Southern Association of Ice Cream Manufacturers This Month

Record Attendance Forecast

THE men of the Southland are ready! That's the word that comes from officials of the Southern Association of Ice Cream Manufacturers on the eve of the South's greatest ice cream event—and probably the American ice cream industry's greatest event. Extensive preparations have been made for the mighty ice cream host to move upon the Crescent City this month. New Orleans hotels report extremely heavy registrations.

While the ice cream men of the South have every nerve and fibre strained for the success of the national convention, they are not overlooking anything in connection with their own sessions. The Southern convention will be much shorter this year than in the past. But it will be an important convention in every sense of the word. The Southern association, many of whose members are active in the national, has on its hands a number of matters of particular interest to the Southern industry.

The opportunity to attend both the national and Southern conventions almost at the same time is the great magnet for the large attendance expected by officials. But there are various other reasons why Southern officials feel it is important for their members to turn out in large force. Efforts will be concentrated, of course, toward making the national convention a great success.

The two days in which the Southern association will be in session are sure to be crowded with matters of real importance. It will be necessary for the convention to get down to work early and drive, drive on through till the end. It is for that reason that officials have asked members to be on hand by Thursday, November 13, so everything will be in readiness for work at the opening of the convention the next morning.

PRESIDENT W. J. Barritt of Tampa, Fla., who has been very energetic in preparing for his own convention and at the same time making ready for his welcome visitors, will take charge of the meeting and endeavor to keep it "speeded up" from the outset.

The convention sessions will be held in the Athenaeum, at St. Charles Ave. and Clio St., the scene of the exposition by the Dixie Flyers. The headquarters of the Southern association will be the De Soto Hotel. Street cars marked "St. Charles Ave." pass the door of that hotel go right on to the Athenaeum.

The convention will be formally opened at 10 o'clock Friday morning, November 14. After invocation and the welcome song, President Barritt will introduce a speaker who will formally welcome the delegates to New Orleans. In the response Will Terry of Little Rock, will tell the convention, "We are Happy to be in New Orleans." This will be followed by the presentation of the convention program, by Ben C. Brown of New Orleans, for adoption.

The convention will get down to brass tacks at 10:35 o'clock, according to the schedule. The usual convention preliminaries, reading of telegrams, delivery of president's annual message, secretary's report, etc., will be followed by convention addresses by such well-known Southern ice cream manufacturers as S. N. Sutton of Vicksburg, G. A. Meyer of Stuttgart, and others. The remainder of the program will be found elsewhere in this issue.

OF PARTICULAR interest is the outlook for a large attendance from Texas and Oklahoma. For years it has been the hope of leading ice cream men of the South to bring into the fold of the Southern association the manufacturers of these two states.

The Texans and Oklahomans have felt that they were a little removed from the Southern's centers of activities, but the main thing that has defeated these plans is these two states have very good state associations of their own. On the other hand, Southern officials point out that by working with the Southern association they could bring about generally better conditions for the ice cream industry in general in the South than ever could be effected through state convention work alone.

Observers will have their eyes turned upon Texas and Oklahoma with great interest this year. Many manufacturers in these two states are members of the National Association of Ice Cream Manufacturers.

THIS
Tall Tub

has been the first choice of discriminating ice cream manufacturers ever since in was introduced. They will buy no other, for this tub is backed by a three year guarantee. Let us tell you more about it.

Below is the new-style Ice Cream Cabinet we are now manufacturing. It is a vast improvement over the old-style box cabinets. It is equipped with cut steel rollers and galvanized handles and can be moved from place to place without aid of a delivery wagon, simply by catching hold of one handle and the rollers do the rest.

HOUSTON, TEXAS

Fall and Winter—A Good Time to Make Installations

Frigidaire Cabinets are built 30 inches high and 30 inches wide for convenient installation behind the fountain. There is a Frigidaire Cabinet for every need—4 and 6 hole sizes in single row, also 4, 6 and 8 hole sizes in double row. Air-cooled or water-cooled compressors are optional. No extras to buy. Every Frigidaire Cabinet comes complete ready for installation.

WHY wait until warm spring and summer days create a rush demand for ice cream? Now is the opportune time to make Frigidaire Cabinet installations.

Unhurried forethought can be devoted to placing such important store equipment to the best advantage. The question of floor space and convenience can be considered carefully and for all time.

At this season Delco-Light men are immediately available to make installations. Or if you prefer to do the work yourself, now is the time when your own men are at greater liberty.

Anticipate demand and be in shape to meet your 1925 trade—not forgetting that Frigidaire Cabinets will increase winter sales and help solve the problem of surplus.

Notify us or the local Delco-Light distributor and a Frigidaire engineer will give immediate and painstaking thought to your special requirements.

DELCO-LIGHT COMPANY, Dayton, Ohio

Subsidiary of General Motors Corporation

ELECTRIC ICE CREAM CABINETS

NATIONAL CONVENTION—NEW ORLEANS—NOVEMBER 17-20, 1924.

Remarkable Exposition Prepared for Convention

President Harry A. Benners Announces That Dixie Flyers Have Everything In Readiness for Great Trade Display

EVERYTHING is in readiness for the exposition of the Dixie Flyers in connection with the annual convention of the Southern Association of Ice Cream Manufacturers. With the different committees putting on the finishing touches to their work, President Benners, late in October, was gathering up the loose ends and preparing to open the doors to the ice cream manufacturers of the South upon one of the greatest trade exhibits ever staged in Dixie. The exposition undoubtedly will be the most complete ever handled by the Dixie Flyers, officers say.

The Athenaeum, the large public building made famous by so many important events at New Orleans, will house the exhibits.

The sessions of the Southern Association of Ice Cream Manufacturers will be held in the same building. Although the exhibits will not be held over for the national convention, which will open the beginning of the week following the close of the Southern convention on Saturday, Nov. 15, Southern officials are expecting many national delegates to visit New Orleans in advance of their convention. This will enable them to attend the Southern sessions and at the same time see the exhibits. This will be the only opportunity for many ice cream manufacturers to see an ice cream exposition this year, as there will be no national exposition. Many who did not attend the National Dairy Exposition will be unable to attend either the Pacific Slope or the Michigan show.

THE Dixie Flyers will by no means be content with this elaborate exposition. Following olden custom the Flyers have prepared for the Southern delegates an entertainment program of the highest order, in fact, outdoing their previous efforts of this kind.

It is due to the Dixie Flyers that Southern conventions for many years have stood out in a class to themselves in regard to social features. The entertainment program will give visitors the best kind of opportunities to see "America's most interesting city" under the best kind of conditions. This program, which includes many features of past Southern conventions and many new ones, is announced elsewhere in this issue.

Henry Stern of Chicago will be master of ceremonies at the "Louisiana Jambalaya," according to announcement by President Benners.

ONE of the important features of the New Orleans meeting will be a special meeting of the Dixie Flyers the first day of the convention, at 10:30 o'clock Friday morning, November 14, at the Athenaeum. At this meeting the Flyers will receive for adoption the report of a committee on by-laws, rules and regulations. This report is expected largely to influence the future activities of the organization.

The committee on by-laws, rules and regulations has been announced by President Benners as follows:

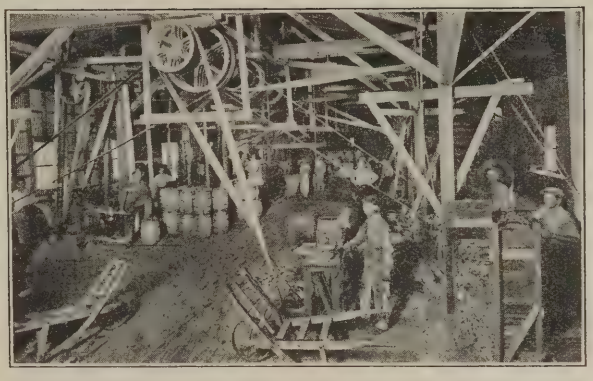
Ben H. Brown, Memphis, chairman; Neil Mortensen, Louisville; Byron Morris, Jackson, Miss. The president has asked members of the organization to be on hand promptly for the meeting.

Preparations for the exposition and the entertainment of Southern delegates have been going on for the past three or four months. Assisting President Benners have been two of New Orleans' most prominent ice cream manufacturers, Benjamin C. Brown and E. B. Geisel. These gentlemen, who have been active in Southern association affairs and more or less active in national convention affairs for several years, have done much to assure visitors a pleasant and profitable stay in New Orleans. The efforts of these gentlemen bring to mind the fact New Orleans has been peculiarly the city at which Southern conventions show to the best possible advantage. This is explained when it is recalled that it was at New Orleans that the association was formed more than a decade ago, and since that time the association's greatest conventions have been held in that city.

Benjamin C. Brown is one of the Southern ice cream industry's most aggressive champions.

Even at the National Dairy Exposition in Milwaukee early this fall the members of the Dixie Flyers present to convey the welcome of the South could not refrain from getting together and talking over details of the coming pageant. At a meeting at Hotel Plankinton one evening of the exposition it was made apparent that the Southern industry is taking the 1924 ice cream gathering more seriously than any previous convention.

AT that time some of the features that may be incorporated in the by-laws, rules and regulations to be offered for adoption at New Orleans were outlined. Among the provisions was one calling for permanent officers, these officers to be president, vice-president, secretary, treasurer and a manager of exhibits. This would be a decided departure from the past custom of electing new officers every year.



It also would mean making two offices of the secretary-treasurer. Under the provisions of the new by-laws, rules and regulations the work of these officers would be directed by the president.

Veteran ice cream men of the South who recall the important part the Dixie Flyers have played for many years in the success of Southern conventions have looked with interest at the extensive preparations made for them this year.

ONE of the outstanding features of the entertainment of visitors, announced late last month by President Benners, is an arrangement whereby the Godchaux Sugars, Inc., will be hosts to members of the national and Southern associations and the Dixie Flyers on visits through that company's plantation and refinery at Reserve, La. This invitation was conveyed to President Benners through E. B. Geisel of the Anheuser-Busch Co., New Orleans. Special guides will be provided. This will enable delegates to see one of the largest sugar plantations and refineries in the country.

President Benners has further announced a change in the departure of the Steamer Capitol for the boat ride on Sunday, November 16. Instead of leaving at 10 o'clock the steamer will leave at 8 o'clock Sunday morning. The vessel will stop at Reserve for a visit at the plantation and refinery. The president issues a special invitation to national guests of the Southern association to accompany the delegates on this boat ride. He hopes that delegates from states out of the South will reach New Orleans at least as early as Saturday evening, November 15, to be on hand for the boat ride the next day.

Houston Cooperage & Tub Company

Manufacturers of Ice Cream Packing Tubs and Cabinets

These Tubs and Cabinets are built to give dependable service. They are constructed of selected California Fir. They are constructed with double bottom which is patented and is sold under three years guarantee. These tubs have been on the market for years and not one has been returned for bottom.

Visit our booth at the convention of Southern Association of Ice Cream Manufacturers at New Orleans, Louisiana, November 14-16.

National Association Formed to Protect Industry From Trouble

Eventful Career Followed by Association Since Organization in 1906

J. H. FRANK, was First President

THE twenty-fourth annual convention of the National Association of Ice Cream Manufacturers will mark the third occasion of the national association's visit in a Southern state. Organized in 1906 at Chicago, with J. H. Frank, then of Alexandria, Ind., but now of Lebanon, Ind., as first president, the national association three years later met at Memphis, Tenn., for a sort of informal convention. The national convention that year was held at Cincinnati. There was another lapse of three years and the association paid another informal visit to the South, visiting Dallas. The annual convention that year, however, was held in Chicago.

So it is that the 1924 convention at New Orleans will be the first simon-pure, regulation annual convention in the South's history.

The history of the National Association of Ice Cream Manufacturers, as in every instance of trade achievement, is a history of trouble. Nothing so arouses men of trade into organized action as threat of injury to their business. It was the threat of a very malicious law proposed by Dr. Wiley, at that time chief chemist of the pure food department of the United States Department of Agriculture, that the ice cream manufacturers of the nation felt the urge to come together and save their industry from such misguided men.

IT WAS natural that the manufacturers should turn to the great Three-I Association of Ice Cream Manufacturers, composed of manufacturers representing the states of Indiana, Illinois and Iowa. J. H. Frank was president. The association formally went out of existence and was succeeded by the National Association of Ice Cream Manufacturers. The momentous event took place at the old Briggs Hotel in Chicago in 1906.

Dr. Wiley's law would have compelled the use of 14 per cent butterfat and permit the use of only 25 per cent of the amount of gelatine formerly used, thereby preventing ice cream manufacturers to do interstate business.

Thirty-five states were represented at this convention. The convention adopted resolutions providing for a delegation of lawyers and ice cream manufacturers to Washington to combat Dr. Wiley's legislation. Each manufacturer who contributed as much as $10 to the fund for this undertaking was made a member of the association. Some manufacturers gave as high as $500.

The election of Mr. Frank to the presidency of the association was followed by the naming of John T. Cunningham of Chicago as vice-president, Bruce Roszell of Peoria as secretary and H. S. Allen of Pontiac, Mich., as treasurer.

Mr. Frank, the first president of the association, has attended nearly every national convention since the first one, though at this time he is not actively engaged in the manufacturing end of the business. Since 1907 he has been employed by Herf & Frerichs Chemical Co. of St. Louis. He began his ice career with a saw and a wheel barrow in the early 70's. In 1890 he built an ice plant at Alexandria, Ind., and later engaged in the manufacture of ice cream.

THE second convention was held in Chicago in 1907, when John T. Cunningham of that city was elected president. Mr. Cunningham served two terms. The convention in 1908 was held in Pittsburgh. In 1909 the association went to Cincinnati for its annual convention and elected Hon. Ross A. Woodhull, the first president of the Illinois Association of Ice Cream Manufacturers, to be its leader. Mr. Woodhull still lives in Chicago, though he has given up the ice cream business for a political caree. The Memphis visit in 1909 preceded the annual convention. At the Atlantic City convention in 1910, E. C. Sutton of Buffalo was elected president. He served three terms. In 1912 the national convention again was held in Chicago, as also the two succeeding conventions. John Knobbe of Chicago was made president in 1913. The 1914 convention marked the election of William F. Luick of Milwaukee as president.

The long journey to the coast came in 1915. Mr. Luick was re-elected president at this convention, which was held at Los Angeles. Asa Bird Gardiner took over the reins of leadership at the convention at Atlantic City in 1916, holding this office after the Boston convention in 1917 and the Columbus convention in 1918. Chicago was the scene of the conventions of 1919-20, S. T. Nivling of Rochester being elected president in 1919, and F. N. Martin of Spokane, Wash., in 1920. Charles G. Morris of New Haven, Conn., was made president at the 1921 convention at Minneapolis and was re-elected at the Cleveland convention the following year.

AT CLEVELAND last year Vernon F. Hovey of Schenectady, N. Y., was named president, and for the first time in the association's history a Southerner was honored with an office when William W. Campbell of Shreveport, La., was named vice-president.

The stage is now set for the 1924 convention at New Orleans, which is expected to mark a new beginning in the association's activities, particularly in regard to strengthening its membership in the Southern states.

N. Loewenstein was made secretary of the National Association of Ice Cream Manufacturers six years ago. He was the first secretary of the Illinois Association of Ice Cream Manufacturers, which later became engulfed by the Three-I association, which in turn became the national association.

W. J. Weller of Brooklyn has been treasurer of the national association for ten years.

Southern delegates are requested by Secretary J. W. Clopton to arrive in New Orleans the evening of November 13. This will enable the association to get away to an early start the following morning without any delay caused by straggling delegates at the registration desk. Because of the short time in which to handle the business of the convention, all sessions must start on time, move at a lively clip and be attended by delegates who want to get business out of the way.

Don't forget to be in New Orleans early and be on time for every convention session.

PLEASE MENTION THE ICE CREAM REVIEW WHEN WRITING TO ADVERTISERS.

Gobs Get Ice Cream At Panama

The Blue Jackets Prove that Ice Cream is For He-Men by Eating Great Quantities of it at Culebra

Ituan Locks, Panama Canal.

NOWADAYS when so many food-product advertisers are classifying their stuff as being for "he-men," what about ice cream?

If there is any doubt as to whether ice cream will classify, an account from a newspaper in San Juan, Porto Rico, about how the ice cream factory in that city handled the business for the U. S. fleet will be of interest:

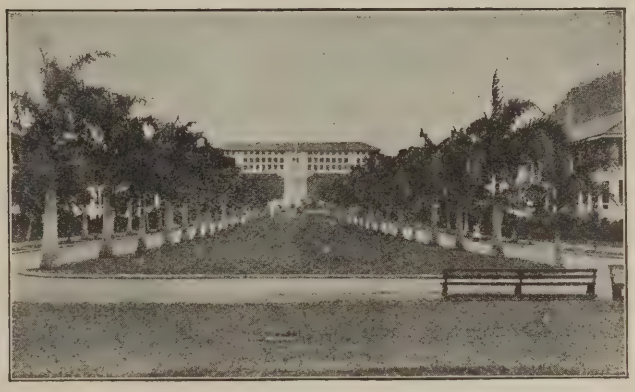
The fleet, at Culebra, has an appetite for ice cream—any flavor—but chiefly vanilla and chocolate. The demand comes from any and all—from Admiral Coontz, commander of the United States fleet, down to the newest enlisted man who is just getting his sea legs.

The Blue Jackets are getting ice cream daily at the rate of from 400 to 600 gallons. There are 28 bricks to a gallon, so figure it out yourself just how much each man is eating or how many have to eat how much. Something like 11,200 bricks in 400 gallons, aren't there?

MAYBE the navy could float without an admiral or even if Secretary Denby should resign, but the Blue Jacket must have his ice cream. The navy realizes this and plans ahead so the sailors can have what he wants when he wants it. Of course, ice cream is only one of the trimmings. But it has required a good deal of planning and hard work to make enough ice cream and get it to Culebra and on the ships in surrounding waters. But a system has been worked out so that ice cream made in San Juan can be delivered to Culebra and distributed to the canteen of every ship virtually every day.

W. B. Houston of Guantanamo, Cuba, who is known in the navy as the "ice cream man," moved his ice cream plant from Cuba to San Juan a few months ago. He has established a factory in Puerta de Tierra and to make delivery has hired a motor truck, a launch and a schooner. But he delivers the ice cream.

All the freezing and other processes requiring power are handled by electricity. And then when you figure there are 45,000 men in the fleet it is easy to understand that they can eat a few hundred gallons of ice cream without letting out their belts.



THE navy requires its ice cream to be of high quality, as all other foods. To meet the requirement of a fixed butterfat standard Mr. Houston has machinery which puts butter back into the milk before it is prepared for ice cream. The machinery does it so well that the butter can't be extracted from the cream again.

For many years Mr. Houston has been a navy contractor at Guantanamo. When he found that the maneuvers were to be held at Culebra last winter he made a visit there several months ago to find out how he could get closer to his ship customers. He found that San Juan was the best place to operate on account of ice, power and labor being available here.

Stage is Set For Great Pacific Show

Ice Cream Manufacturers of Pacific Northwest and Southwest to Gather at Oakland in December in Joint Session

PROF. M. MORTENSEN, head of the dairy department of the Iowa College of Agriculture at Ames, Ia., and one of the world's highest authorities on ice cream manufacturing, will be one of the principal speakers on the program for the joint convention of the western ice cream associations to be held at Oakland, Calif., December 10, 11 and 12. Prof. Mortensen will discuss "Factors Responsible for Desired Texture in Ice Cream," and it is planned to give his address and the discussion which is expected to follow it most of one afternoon's session of the convention.

With the big joint convention and the supply men's exposition which is to be held simultaneously with it only a little more than a month away, plans have been completed for the greatest gathering of the ice cream industry ever seen west of the Rocky Mountains. Both the Pacific Ice Cream Manufacturers' Association, which includes all the wholesale and many of the large retail manufacturers of Washington, Oregon, Idaho, Montana and British Columbia, and the California & Southwestern States Ice Cream Manufacturers' Association, which comprises the wholesale and larger retail manufacturers of California, Nevada and Arizona, will celebrate their tenth anniversaries on this occasion.

THE two associations will meet in a joint session for the first time in their history. For many years a large number of the members of both associations have attended the conventions of the other, and most of the supply men catering to the ice cream industry have taken in both conventions and contributed to their entertainments, but never before have all the ice cream manufacturers and all the supply men of the West been assembled at one time and place.

Most of the members of the Pacific associations have planned to gather from all parts of the Pacific Northwest at Seattle on December 6, and make the trip to San Francisco by boat as a big family party. The party will leave Seattle on the S. S. Ruth Alexander of the Admiral line, sailing at midnight, December 6 and arriving in San Francisco at noon Tuesday, December 9. A sort of get-together rally will be held on board and the party will have an opportunity to rehearse the songs and stunts it is planning for the convention. A rate of $66 for the round trip, including berth and meals and good for the return trip at any time within four months, has been announced. This includes the finest service on the biggest boat in American coastwise trade.

Convention headquarters will be at the Hotel Oakland, where many of the convention activities will take place and where arrangements have been made for the accommodation of some 500 ice cream manufacturers and supply men and their wives The hotel is only a matter of some five blocks from the Oakland Civic Auditorium, where the convention sessions and show will be held.

THE convention program, which is practically completed, calls for three joint sessions of the ice cream manufacturers, to which all the members of both associations, the representatives of supply firms or anyone else interested will be welcomed, and two separate closed sessions, for association members only, when each organization will transact its annual business, elect officers and select its next meeting place.

For the open sessions the program of business and technical papers includes 14 subjects of primary importance to every ice cream manufacturer, handled by leaders in the ice cream world, all of them among the highest authorities in their lines available. The convention will have a complete report on everything that may happen at the national convention to be held this month in New Orleans, and the question of "Refrigeration for the Dealer," by far the biggest problem confronting the industry today, will be given special attention by nationally-known authorities.

Among the papers on the program, which has been completed but which the committees in charge are not yet ready to announce in its entirety, will be "Are We Selling Ice Cream or Service?" by J. M. Bonner of the Miller Ice Cream Company of Oakland, Calif., speaking from his firm's recent experiences; "The Public's Interest—Getting and Keeping it," by A. A. Comey of the Globe Ice Cream Company of Los Angeles, who somehow gets more newspaper publicity for his plant and product than any other manufacturer in the West; "Legislation, Present and Future," by Dr. J. J. Frey, head of the dairy industry division of the California state department of agriculture, who recently attended the national conference of the Bureau of Standards of the U. S. department of agriculture; "Ice Cream from the Retailer's Standpoint," by R. C. Thompson, manager of the San Francisco Pig'n Whistle stores. Other subjects—speakers to be announced later—include "Relation of Buyer and Seller;" "Efficient Delivery Service;" "Constructive Merchandising;" "Cost of Distribution;" "Competition in Business;" and "What Does it Cost?"

(Continued on page 38)

Pacific Supplymen Active in Promoting Industry

THE ice cream industry of the coast is receiving some very able support from an organization known as the Supply Men of the Pacific Ice Cream Industry. H. P. Jacobsen is president and Robert Tripp is secretary. The organization has adopted a seal and slogan shown in the accompanying illustration. It is looking after the ice cream angle of the Pacific Dairy Show to be held in December, advance reports indicating that it will be one of the banner ice cream events of the year. For the first time in the history of the industry, there will be gathered together at this show all the ice cream manufacturers of the Far West, from British Columbia to Arizona and from Denver to the coast. Invitations have been sent to every member of the National Association of Ice Cream Manufacturers and to members of the faculty of all the Western states' universities.

The show will be held in the Oakland Municipal Auditorium during the entire week of December 10.

DUNN'S *FINEST* Ice Cream Gelatine

Purity—
Value—
Economy—
Uniformity—

Four essentials always found in DUNN'S Gelatine — used by the largest and most successful firms in the Ice Cream Industry.

THOMAS W. DUNN CO.

546 GREENWICH STREET NEW YORK, N. Y.

Canadian Branch: 653 St. Paul St. W., Montreal

BESIDES his lecture and conference at the convention, Prof. Mortensen will be the presiding judge in the ice cream scoring contest which is to be held as one of the features of the convention and as a part of the Pacific Slope Dairy Show, which will be held in the Oakland Civic Auditorium at the same time. And the convention and show will be the first in the country to use the new standard for scoring ice cream which was devised by the American Dairy Science Association at the recent National Dairy Exposition at Milwaukee. It is expected that most of the ice cream manufacturers attending the convention will enter samples of their product in the contest.

Prof. M. Mortensen.

Opening simultaneously with the convention, but continuing beyond it into the next week, will be a big exposition of machinery, equipment and supplies for the ice cream plant, staged under the auspices of the Supply Men of Pacific Ice Cream Industry in connection with and as a part of the fourth annual Pacific Slope Dairy Show. The show will be held in the Oakland Civic Auditorium, where 25,000 square feet of floor space, all in one room, will be crowded with the most up-to-date products of most of the large manufacturers of the country catering to the ice cream industry.

THE Pacific Slope Dairy Show has become an institution on the coast, and for the past three years has attracted the attention of the allied dairy industries throughout the West to its successful expositions. While the show is planned to cover the entire dairy industry in all its branches and the milk, butter and cheese interests will also be represented in equipment and service displays, the ice cream branch of the industry will dominate the show this year on account of the joint ice cream convention and the participation of the ice cream supply men. This will be the biggest ice cream show ever held in the West, officials are sure.

A partial list of the exhibitors includes: General Laboratories; Premier Machinery Co.; J. B. Ford Co.; R. A. Simpson Manufacturing Co.; W. L. Cochrane, Inc.; M. Getz & Co., Inc.; Vulcan Iron Works; Harold A. Sinclair; The Lee-Greefkens Co. Inc.; Sealright Co.; Jensen Creamery Machinery Co.; Golden State Milk Products Co.; The "400" Products Co.; Wood Bros.; The Nizer Corporation; York California Construction Co.; Menasha Printing & Carton Co.; The Pfaudler Co.; The Joe Lowe Co. Inc.; Magnus California Fruit Products Co.; F. C. Mathews Co.; Superior Metal Products Co.; George W. Prising Co.; De Laval Pacific Company; International Harvester Co.; California Tin Plating Works; Cyclops Iron Works; Creamery Package Manufacturing Co.; J. G. Cherry Co.; Jordan-Hill Co.; The Bristol Company; The Impruv Mix Co.; Pacific Dairy Machinery Co.; Canavan Motors Corporation; Illinois Pacific Glass Co.; Standard Oil Co. of California; Pacific Coast Glass Co.; O. J. Weber Co.; The Russ Manufacturing Co.; Taylor Instrument Co.

IN ACCORDANCE with a custom long established in the ice cream industry on the Pacific coast, the supply men will entertain the ice cream manufacturers during the convention, under the leadership of the Association of Supply Men of the Pacific Ice Cream Industry. An elaborate program is being prepared, which will include a cabaret dinner dance for one evening and the usual convention banquet for another, theater parties, teas and automobile trips for the ladies who may not care to attend the convention sessions, a golf tournament for the men addicted to that form of sport and other features such as Oakland and San Francisco, unique among the communities of the country, can provide.

GENERAL MEETING OF DAIRYMEN IS PLANNED.

Speakers of national reputation will discuss problems of the dairy industry at the get-together dinner which will be held one evening during the Pacific Slope Dairy Show in Oakland, December 10-16. Heading the list of speakers are A. J. Glover, editor of Hoard's Dairyman; Dr. David P. Barrows, formerly president of the University of California; and Prof. C. L. Roadhouse, professor of dairy industry, University of California College of Agriculture, and Sam H. Greene, secretary-manager of California Dairy Council. Governor Friend W. Richardson has been invited to speak at this dinner, but it is not yet known whether he will be able to accept.

Requests for reservations indicate, according to Robert E. Jones, manager of the show, that the attendance at this important dinner will exceed 500.

LOUISIANA CONVENTION TO FOLLOW NATIONAL SESSIONS AT NEW ORLEANS.

The Louisiana Association of Ice Cream Manufacturers will meet in annual convention at Hotel DeSoto, New Orleans, on November 21. There will be sessions only on this day, which comes right at the close of the national convention in New Orleans.

The Louisiana convention will have no set program, as the members are being encouraged to take part in the Southern and national conventions. The Louisiana association will just hold a round-table meeting to discuss matters of particular interest to manufacturers doing business in that state. There will be no banquet. These announcements were made last month by Secretary N. F. Manning of Monroe, La. Other officers of the association are A. A. Lay, president; C. A. Tooke, vice-president; E. B. Geisel, national association director, and Newton F. Manning, secretary-treasurer.

NEW ENGLAND MEN TO ATTEND DIXIE ICE CREAM SESSIONS.

The New England Association of Ice Cream Manufacturers will attend the double-barreled convention at New Orleans in November in a body. This was the information brought to the dairy exposition by Secretary W. P. B. Lockwood of the New England association.

The New Englanders will arrive in New Orleans in time to take in the sessions of the Southern Association of Ice Cream Manufacturers, and naturally will remain over to participate in the sessions of the national association.

'Jever hear of a fellow working on a small salary crushing a woman's heart and being sued for breach of promise?

Announcing—

The "Hallowell"

ALL STEEL SIGN FRAME

Equipped With Our "Hallowell" Steel Sign Legs

Just take a look at the above cut. If this isn't the neatest looking sign on the market, we would like to see the one that is any better. The "HALLOWELL" was designed exclusively to give the ice cream manufacturer a quality sign at minimum cost. Your first cost is your last cost. Think of it—an indestructible all steel frame and feet for $2.60, less discounts on quantities. Surely you will be interested to know more about it.

Details of Construction:

Frame of steel with metal strips, acting as a moulding—"HALLOWELL" Steel Feet—the best known sign leg on the market. Painted with a black lustre long lasting paint—Knocked down for shipment—total weight of frame and legs 12 lbs. complete. Box of rust resisting screws furnished with each sign.

Write for discounts and further particulars.

GENTLEMEN OF THE TRADE, MEET COL. BENNERS.

It's Colonel Benners, gentlemen—not Harry. The president of the Dixie Flyers is a regular, life-size colonel. He won his spurs in the Spanish-American War, leaving Cuba with the rank of lieutenant-colonel. This rank he still holds in the Second Louisiana Regiment, National Guard.

Col. Harry A. Benners.

This was something that cropped out at the National Dairy Exposition, when Harry A. Benners, officer in the service of the nation, came to Milwaukee as president of the Dixie Flyers, officer in the service of the Southern ice cream industry. Colonel Harry himself was too modest to let folks engaged in the ice cream industry know of his military attainments. But these things have a way of coming out.

With this made plain, with all of us understanding that Harry Benners holds the title of lieutenant-colonel, everybody will remember how to address him in the future—he will still be called Harry.

IOWANS MEET IN DECEMBER.

The 1924 annual convention of the Association of Ice Cream Manufacturers of Iowa will be held at Des Moines December 9, 10 and 11, according to recent announcement by Secretary P. W. Crowley, 512 S. & L. Bldg., Des Moines.

Fort Des Moines Hotel will be convention headquarters.

A committee is working up an interesting program for the convention, we are informed. Officers of the association are C. F. Hutchinson, president, Des Moines; R. R. Hadley, vice-president, Ackley; A. B. Sayles, treasurer, Fort Dodge; and P. W. Crowley, secretary, 512 S. & L. Bldg., Des Moines. The executive board consists of C. B. Madison, Edgewood; B. K. Peter, Fort Madison; A. B. Sidwell, Iowa City; Harry Rex, Creston, and H. F. Lange, Sac City.

SOUTHERN CONVENTION PREPARATIONS COMPLETE.

(Continued from page 28)

THE first thing on the morning of November 14 is registration at the Athenaeum. Members are requested to be on hand early for this duty. No one will be permitted inside the Athenaeum without either a Dixie Flyers' or a Southern association badge. Secretary J. W. Clopton will be at the De Soto Hotel Thursday and at the Athenaeum Friday.

The convention will adjourn at 1 o'clock Saturday afternoon to permit delegates to visit with the Dixie Flyers.

The annual banquet will be held Saturday evening at 8 o'clock. A novel entertainment feature is promised in connection with the banquet. Members have been requested to make reservations early.

The Improved Smith & Mann one-piece Cabinet Valve

Fully Patented.
All infringements will be prosecuted.

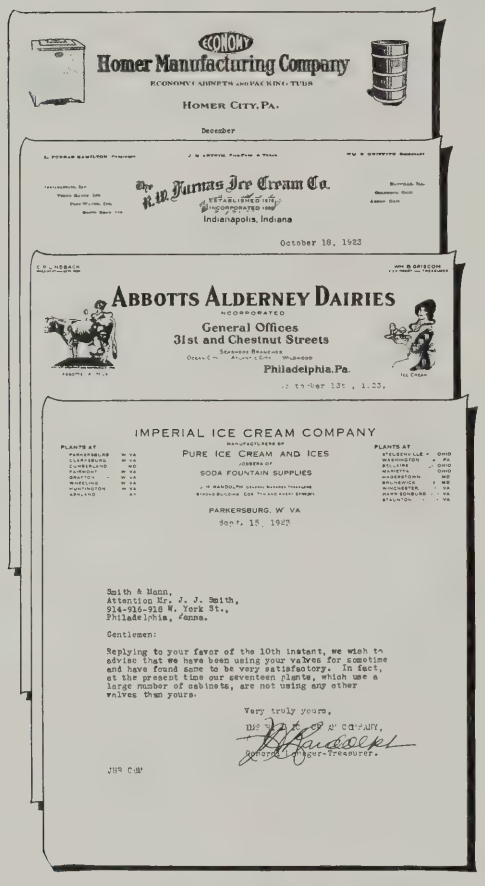
Avoids the Necessity of Replacing Plugs in Cabinet Drains

UPKEEP is just as much a determining factor in buying a cabinet drain as in purchasing an automobile. It is a deciding factor that determines the true relative cost of one article over another.

Smith & Mann Cabinet Drains with their new patented "Security" plug eliminate that item of cost for replacing plugs.

Furthermore, being made in one piece, there are no nipples to replace, no loss of old brine for which you spend so many dollars to keep your product in good condition.

Dealers, too, appreciate this one-piece feature. The freedom from leaks keeps the floors dry and clean.



There is economy and satisfaction in using Smith & Mann one-piece Cabinet Drains.

Smith & Mann,
Attention Mr. J. J. Smith,
914-916-918 W. York St.,
Philadelphia, Penna.

Gentlemen:

Replying to your favor of the 10th instant, we wish to advise that we have been using your valves for sometime and have found same to be very satisfactory. In fact, at the present time our seventeen plants, which use a large number of cabinets, are not using any other valves than yours.

Very truly yours,

Secretary-Manager-Treasurer.

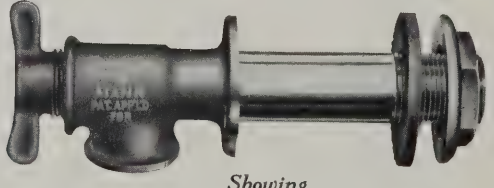
JHS CJM

SATISFACTION comes to those who use Smith & Mann Cabinet Drains.

Made of non-corrosive metal they outlast the life of the cabinet. Ample openings quickly drain the cabinet and save the dealer's time.

Cast in one-piece they can not leak. Fastened from the inside with lock washer and leather gasket they are ***tight*** and defy theft while on the cabinet.

The steady increase of representative concerns using Smith & Mann one-piece cabinet drains is your assurance that they are an "improvement" and that you, too, can profit by their use.



Let us send you our latest price list.

ILLINOIS MANUFACTURER TAKES SHOT AT UNWISE BUSINESS POLICIES.

Editor The Ice Cream Review:

I don't agree with the way the ice cream manufacturers in large cities conduct the business. I claim that the ice cream man has no business to furnish cabinets and iceup ice cream after he delivers it any more than the wholesale butcher has to furnish ice boxes and ice after he has delivered the meat to the meat market.

It reminds me of when I was in the wholesale beer business. I was doing a good business and after a while along came a man from Chicago who went to my customers, entered the places, looked around, and said, "You seem to be doing a good business and you ought to have a better set of fixtures. Now I represent a Chicago brewery and if you will sell our beer we will furnish you a nice set of fixtures." Upon hearing this I wrote to my company and told them what they were doing. Got a letter back saying they could furnish fixtures and not let them get any business away from me.

This shows how foolish the ice cream men are. The ice cream business is established and if the ice cream man stops icing he will have fewer customers, but those he does have will be better ones. There are too many who are ready to sell ice cream if the manufacturer takes care of it.

I agree with you as to the Jubilee and that is about all it amounts to. They have in some cases reduced express rates and have had some influence as to the laws governing the manufacture, but when the ice cream men hold a convention, it should be for the benefit of the manufacturers. I hope that someone will attend the convention who will wake up the ice cream manufacturers—it is surely time.

Respectfully yours,

H. W. CAMPBELL,
Moline Ice Cream Co., Moline, Ill.

P. S. I forgot to say that I have been in the ice cream business for eleven years.

EXCURSION RATES TO PACIFIC SLOPE SHOW.

Special excursion rates to the Pacific Slope Dairy Show at Oakland, December 10-16 will be put into effect throughout the territory covered by the show, the exact amount of the reduction to be announced after a furthem conference of the railway passenger traffic managers. This is the announcement reaching Sam H. Greene, secretary-treasurer of the show, from J. H. Parsons, passenger traffic manager for the Southern Pacific Company.

Many persons will want to extend their visit to the show into a longer stay in Oakland or other points in California, and for this class of visitors passenger fare arrangements already have been made. From all points in California, also from Klamath Falls, Ore., Verdi, Nev., Reno, Nev., and Yuma, Ariz., excursion tickets good for three months will be sold daily with a special and still lower rate for sixteen-day tickets to be sold on Fridays, Saturdays, and Sundays. The sixteen-day ticket fare from Los Angeles to Oakland will be $25.00, with the same proportionate reduction from all the other points.

Why Attend Conventions?

Many Manufacturers Do Not Properly Co-operate in Developing Faith in Each Other, Which is Necessary to the Industry's Advancement

*By W. A. WENTWORTH**

WHEN a customer sits down in any city, it matters not where—at any restaurant or any drug store—and takes a dish of ice cream, if that dish does not satisfy him (suppose it's in Kalamazoo), when he gets in Detroit he says, "Well, I don't know whether I want to eat any ice cream in Detroit or not." The stories you hear at the convention, give somebody an idea about how to make the class of ice cream we want to serve the consumer. It will mean that you in Detroit and you in Grand Rapids will have a better sale for ice cream because maybe that fellow went home and put into practice the ideas that went into the paper just read. If for no other reason you should interest yourself in the convention. And so in our state we are undertaking during the coming year a rather extensive effort to get the fellows to come to meetings.

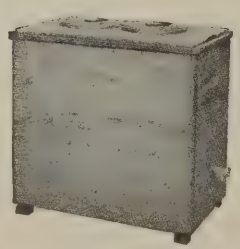
I have heard as I traveled about in Ohio, that the fellows get together in these meetings, talk things over and then go home and do as they please. It doesn't make much difference what kind of understanding men develop at meetings, somebody goes home and starts out in poor faith, and then some fellow says, "What's the use of going to a meeting. They don't do what they said they'd do anyway."

* Secretary Ohio Association. An address before 1924 Michigan Convention.

BUT I went to Alliance, O., two days after the close of our convention, in an effort to try to straighten out a situation which was and still is a bad one for the ice cream industry in that Ohio neighborhood. And the trouble probably was with one fellow who had been attending the Ohio conventions year after year. I think he told me when I got there that this year was the first convention he had missed for about eight years. "What's the use of my going down there. My neighbors tell me what they are going to do and they come home and don't do it. They just get home and raise the devil with me. What was the use of my going down?"

That was a specific instance where a man actually stayed away from convention meeting because he felt that subjects were discussed by his neighbors, and when they got home the fellows wouldn't do what they said when in convention.

Our organization revised its constitution and by-laws. During the coming year under that constitution our association will have districts throughout the state. There are eight in the ice cream association in the state. Those districts are going to elect a chairman and vice-chairman, and the chairman of those districts are going to be on the board of directors of the state association.



WHAT'S going to happen? In the very first instance I am going to return to mention of that situation at Alliance and say that that man promised to come to that district meeting. Why? First, because he felt that when he went to the state association maybe he didn't have a thing to say, just sat and listened. And when he came to the district meeting he could have some influence with neighbors in the election of chairman and vice-chairman. He would be in contact with the business of that district. When you get that fellow to take active part in building the industry, he's going to be a fellow that will work along with you fellows in construction of that industry. You are the men that have been building the industry and have been held back by the fellow who wouldn't co-operate.

That's one thing we feel it will accomplish. It will arouse interest in the fellow who lives there, who has gone into conventions year after year and gone home and said, "Oh, what's the use? I didn't have anything to say. Maybe I voted for someone because I thought everybody else wanted that fellow. I didn't have anything to say and I'm going to go home and do as I want to." And that's the thing that is disturbing to any in-

dustry and it's the thing that has been a disturbance to the ice cream industry of Ohio.

Now we are going to proceed in those districts with meetings about every month. I think we can show to you, at least in this section of the state, that about the most successful situation that exists in any other ice cream industry has developed in territory along the Ohio river. At Wheeling there is a centrally located area that includes quite a district, almost to Pittsburgh and almost to Parkersburg and west into Ohio. Those fellows have got together every single month during the past fifteen. They haven't missed a month.

They have brought into meeting small manufacturers as well as the large manufacturers. They have sat down across the table and talked things over in such a way that the little fellow felt that "I'm going to go back to the next meeting because I had something to say about it." He went to the convention at Parkersburg and I noticed some of the smaller men who had been attending district meetings around Wheeling came over to Columbus for the first time. They got some things. They had something to say at home and there aroused in them some of this spirit of enthusiasm for the industry in which they were engaged to a feeling that they were a part of it. That's the thing that has to be driven home to the fellows that stay home, that they are a part of a big industry and their success is hooked up with everyone else's.

I haven't told you this with any thought on my part of having it repeated except to get rolling around in your minds as to how to get that fellow who hasn't come to this convention, who hasn't attended maybe some of your district meetings, and who causes you some trouble here and there or some where else, how you can get him somewhat interested and come to a realization that he is just about as important to the country in this ice cream industry as you fellows, should get out and do things, say things in meeting. Reap some of the benefits of the industry.

THERE are two or three jobs which the industry has ahead of it. One is the increasing the per capita consumption of ice cream. I have referred, I think, to the fact that the average person in the United States eats one dish of ice cream about 70 days in the year and the balance of the time he doesn't eat any ice cream. There is an opportunity to develop the use of ice cream. We hear a lot of stories, and we read a lot, and our imagination gets away with us.

We do let our enthusiasm and our understanding of our own industry kind of carry ourselves away and we feel that the ice cream industry is getting better and is growing. It is, but I am going to—just take a minute and refer to a few comparative figures in that you may know perhaps just what the ice cream industry is doing in proportion to the other dairy industries. I compare it with opportunities. It is a dairy food.

In 1910 average per capita consumption of ice cream in the United States was one gallon. That has increased to the highest point in 1920 when it was 2.46 gallons or an increase of approximately 150 per cent in a ten-year period. During that same time the milk industry showed an increase of 33⅓ per cent, from 33 to 43 gallons. Butter showed a decrease during that time. But from 1920 it was a year that in ice cream consumption we have seen a drop in per capita use of ice cream. We have made somewhat more ice cream last year, but population has come along and we have not had annual per capita use of ice cream during the past three years that we had in 1920. In mlk, business has ever been increasing use during those years. Butter business same thing holds true and we have had perhaps the same thing but more to talk about in ice cream industry than the milk men or butter men have had to tell in regard to their own product. So in spite of the fact that we have had an opportunity to talk about a product in a better way. we have not yet as ice cream manufacturers, secured the results which the milk industry has secured and the butter industry.

There's another way of stating that, and that is, has the ice cream industry kept pace with the increase which has taken place in production of all dairy products? In 1917, 3.7 per cent (these are figures from the United States Department of Agriculture) of all milk products in the United States was used for production of ice cream. The highest point that was reached was in 1920, when four per cent was used and in 1922, which is the last year on which figures are available, only 3 per cent of the total milk production in this country was used in the manufacture of ice cream. So, viewing the ice cream industry as a part of the dairy business, and I think you all recognize it as such, there has not been the development or increase in its use that there has been in the increased use of the other dairy products. So there is something for us to get the ice cream men interested in.

WHO holds it back? It isn't you fellows. It isn't the man who comes to a convention. I didn't make any record of figures, but out of curiosity from such records as we have available in our office in Columbus, I took the men who went to meetings, men who are building the industry, and I find that their percentage increased in 1923, over 1922, as they have come to our office at the present time, show increases. Those were the men who gave us the ground work on which we made an estimate in the increase of the production of ice cream in Ohio of 10.0 per cent in 1923 over 1922.

But in that group of reports were fellows that I had

BAKER

System Refrigeration

Are you still using ice and salt in manufacturing ice cream? If so we can show you how a Baker System Refrigeration will do the work more effectively at a fraction of the cost. Besides, with a Baker you can make your packing ice cheaper than it can be bought.

Personal Survey of Your Plant

Baker System Refrigeration is built to order —"tailor-made" to your individual conditions. No order is accepted until one of our refrigerating engineers has made a personal survey of your needs. This guarantees to you an efficient plant which should pay for itself in a very short time.

One southern ice cream manufacturer said he could buy a Baker plant every 16 months out of the savings made over the ice and salt method.

Get Your Copy Bulletin 65 D It's chuck full of useful information you will value. It explains the Baker System Refrigeration in detail and gives you the reason why over 5,000 Baker plants are in successful operation.

Baker Ice Machine Co.

Ice & Salt—The Ice Cream Retailers' Winter Luxury

IN COLD WEATHER ice cream consumption goes down—but the temperature in stores stays up. As a result, the ice cream manufacturers' trucks are busy hauling ice and salt—three to ten times as much per gallon of ice cream as in summer. And the average ice cream manufacturer writes the story of this on his books in red ink.

But what about the retailer? His ice and salt is free or he gets a rebate to cover its cost. Yet he loses money on it.

The wide variations of temperature in his ice and salt cabinets keep packing his ice cream down—stealing his profits thru shrinkage—displeasing his customers by making the ice cream "grainy."

There is only one constructive answer to this winter ice cream problem and that is to eliminate the use of ice and salt. In the city of Detroit, where over 70% of the retailers are now equipped with Nizer Iceless Ice Cream Cabinets, it is safe to say that only one-third of the usual number of trucks will be needed this winter and that over one-half of the shrinkage losses which the retailers used to suffer will be saved.

And similar conditions will prevail in over seven hundred other Nizer cities in proportion to the percentage of retailers using iceless cabinets.

The two main advantages of the Nizer which make these revolutionary improvements possible are—

(1) The lowest known cabinet refrigerating expense.

(2) An absolutely constant low temperature which practically eliminates shrinkage.

* * *

The aid of our entire staff of experienced ice cream men and refrigerating engineers is freely at the disposal of the ice cream industry. Come to Detroit. Let us give you the benefit of our more than three years experience in iceless ice cream distribution.

BARBER

Everything for the Dairy Industry

You Get a Smoother, Richer Feeling Cream with

The Viscolizer

The butter fat in the cream is finely divided by the action of the Viscolizer and united firmly with the filler, the sugar and the gelatine. These ingredients remain united in the freezer, resulting in smooth, rich-feeling cream.

A fine quality cream may be developed from sweet butter and skim-milk, or skim-milk powder. The Viscolizer unites the solid ingredients so that the butter fat will not separate while standing in the can or bottle.

The Viscolizer is furnished for either motor or belt drive – in five sizes, to meet the needs of any plant, large or small, capacities 100 gallons to 800 gallons per hour.

The Viscolizer is widely used also to improve table cream, for making ripened cream, for breaking up the fat in evaporated milk so it will not separate, for emulsifying oils, vegetable mixtures, salad dressings, fruit liquids, etc., and for various uses in the drug and food industries.

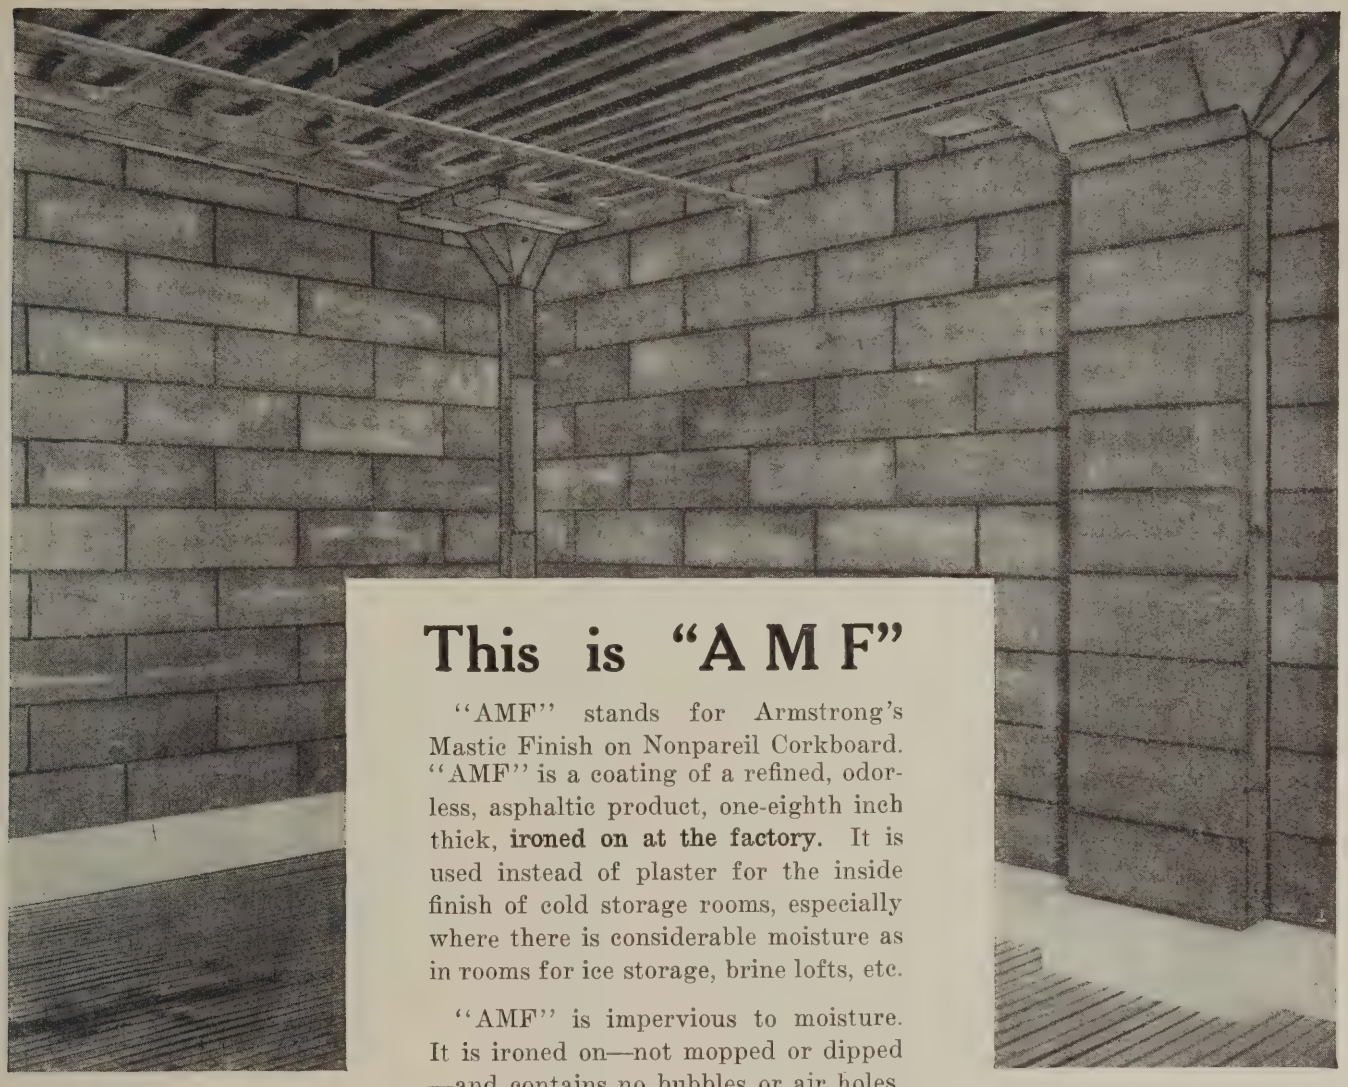
never seen at a meeting. I don't know whether we will ever get them to a meeting. We will try. But one of those fellows shows decrease in volume. Three or four others show about the same sort of a volume. The men who go to a convention had sufficiently increased the amount in their business so that, in spite of these fellows they showed an increase in ice cream production of 10 per cent. That only makes me believe that it is the fellow who gets out to the conventions, the man who attends the trade organization meeting, which is the subject of these few remarks; that is, the fellow that's building the industry.

I am going to read you just one statement. This was sent out by the National Association of Ice Cream Manufacturers in a little pamphlet form. It's the Can's and Can'ts of trade association work. No. 88 says, "We can't pick our competitors and, legally and morally, we can't exterminate them, but we can, by patience and education improve their business methods and profits and make more kindly our relations one with another." That, if anything, would be the theme of what I have to bring before you men today.

I recently heard a story that I'm going to repeat because it more or less applies to this thing that, "We can, by patience and education improve their business methods and profits, etc."



Mary was rather a recalcitrant child. Her mother had all kinds of difficulties in keeping her along the right path. She had used every possible means of correcting some of Mary's uncertainties and finally had, as a last resort, locked her in a clothes closet. She said to her, "I am sure that when you come out you will be ready to say you'll never do it again."

At the end of three-quarters of an hour, Mary's mother went to the door. "Mary, time is up now. Have you thought this all over and are you ready to apologize for what you did." "No, Mama, I'm not." "Well, Mary, what in the world have you been doing all the time you have been sitting in the closet."

"I've 'pit over your dress, an' I'v 'pit all over your s'oes, an' dust as soon as I det more 'pit weady I'm goin' to 'pit all over your bwan' new hat."

THERE are too many men in the ice cream industry and too many men in every industry for that matter who maybe are not locked in that closet but having got back in the corner are waiting for more spit. The way to make them a constructive factor in industry, which you men are and which men are that go to the other meetings, is to get their interest, to keep faith with them as much as we can, get them to see the situation, the industry as we see it, and then, as it happens so often the little fellow sometimes gets to be the big fellow. He comes along and is a co-partner with you in your business of this great big ice cream industry that can be made bigger, that has a goal to shoot to, and that gives a job for this association, for our association down in Ohio to get if possible in our state 650 fellows interested in attending every meeting.

When we come to our convention next year, and I hope it will be with you fellows, if we can get 650 there we may not reach perfection, but we will have had some improvement over this year, and if you fellows can do the same thing, I know that your industry here in this state will be better for having done that thing. Let's get the fellow turned from golf, and turned from California or Florida, or turned from the grind and the grime of the wheels of the ice cream plant, so that he will sit down with you around the table at every meeting that your association has, whether state wide or in district, so that fellow will go along and help you build industry.

This is "A M F"

"AMF" stands for Armstrong's Mastic Finish on Nonpareil Corkboard. "AMF" is a coating of a refined, odorless, asphaltic product, one-eighth inch thick, **ironed on at the factory.** It is used instead of plaster for the inside finish of cold storage rooms, especially where there is considerable moisture as in rooms for ice storage, brine lofts, etc.

"AMF" is impervious to moisture. It is ironed on—not mopped or dipped—and contains no bubbles or air holes. It will not crack or peel. Being non-absorbent and without odor, it is a perfectly safe and sanitary finish for the storage of meats, butter, eggs and other easily tainted articles. No other finish is needed, though, "AMF" can, if desired, be painted or enameled.

Samples of "AMF" Nonpareil Corkboard will be sent on request. Be sure to ask the Armstrong representative about this finish; he will give you full information. Or write this office.

Also manufacturers of Nonpareil Cork Covering for brine, ammonia and other cold lines, coolers, tanks, etc.

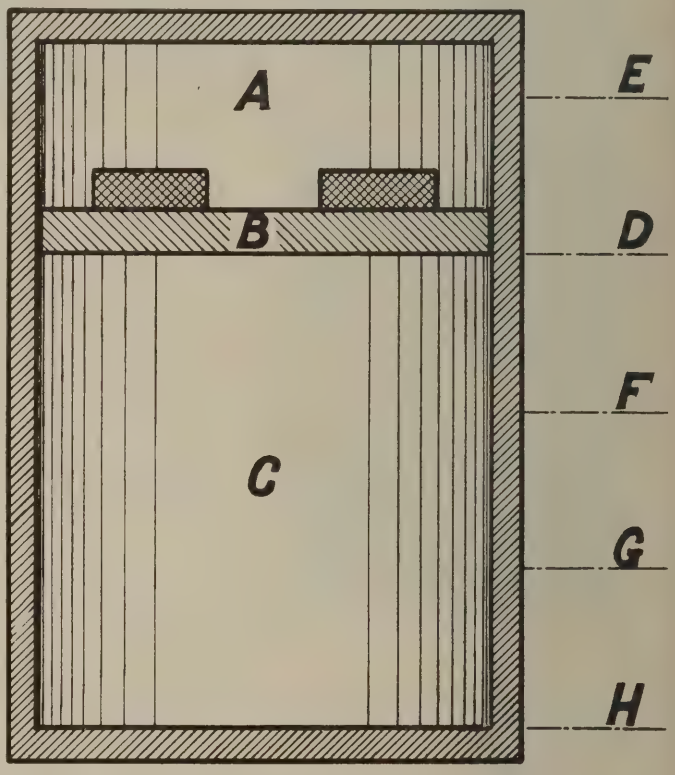
Dairy Refrigeration

Continuation of Timely Discussion by a Recognized Anthority

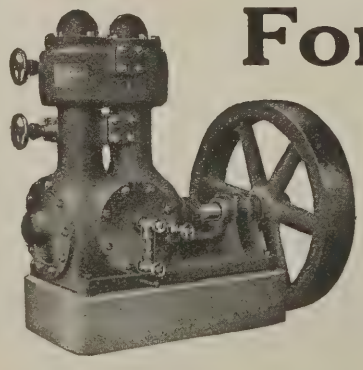
By F. B. FULMER

ABSOLUTE pressure is pounds per square inch above a vacuum, and as the ordinary ammonia and steam gauges are adjusted so that the "0" or zero mark represents the atmospheric pressure, it is necessary to add approximately 15 lbs. (or to be exact, 14.696 lbs. at sea level) to the pressure recorded by the gauge in order to convert it into absolute pressure. In ordinary engineering problems the atmospheric pressure is taken as 14.7 lbs. When the altitude of a place is much above sea level the boiling point of the water will be effected. Up to an altitude of one-half of a mile the boiling point decreases one degree Fahr. for each 550 feet above sea level. When an altitude of more than one-half of a mile is found, there is a slight change and at one mile the boiling temperature will correspond to one degree Fahr. for 560 feet. At an altitude of 15,000 feet the boiling point will be approximately 184 degrees Fahr.



F. B. FULMER.

As we descend below the level of the sea the boiling point increases in about the same ratio as it decreases with altitude, but such cases are not very common in engineering practice.



The volume of gases and vapors is altered by a change of pressure. The rule has been laid down that the volume of a gas will vary inversely as the pressure, the temperature remaining the same. It has been calculated that a cubic foot of air at an absolute pressure of 10 lbs. per square inch, when subjected to an absolute pressure of 100 lbs. per square inch, will have its volume reduced to (1 cu. ft.x10 lbs.+100=)0.1 cu. ft. When work is performed, energy is expended and in this case heat is evolved, so the cubic foot of air before described will have its temperature raised to approximately 810 degrees Fahr., hence it is apparent that it is necessary to consider both pressure and temperature when gases and vapors are compressed.

ABSOLUTE temperature is the theoretical point where there is no heat and as the scientist would express it, "no motion." From experiments that have been carefully performed, we are justified in concluding that all pure, dry gases expand in the same ratio for equal additions of heat, so it matters but little what gas is taken for the purpose of explaining the principle on which the basis for absolute temperature has been determined.

Figure 1.

If a rectangular cylinder closed at both ends and having a cross sectional area of 144 square inches (or

C. NELSON MFG. CO.

2306 Division St. **St. Louis, U. S. A.**

one foot square) and a height of about 18 inches be taken for the purpose of illustration, we will asume that it contains a close fitting piston which is capable of moving without friction. The cylinder should be placed on one end and the piston weighted on the top side so that it will exert a pressure of 14.696 lbs. per square inch on the lower side, while a perfect vacuum is maintained in the space "A" above the piston and weights.

This arrangement will place the piston (B) at the point "D" which is approximately 1.1 feet from the bottom of the cylinder as it stands in the vertical position.

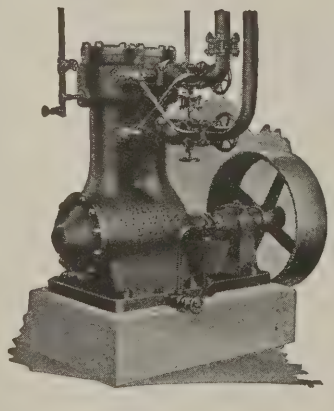
If heat is now applied to the air confined under the piston so as to raise the temperature from 32 degrees Fahr. to 212 (from the freezing to the boiling points) or through a range of 180 degrees Fahr., a certain amount of expansion will take place and force the piston upward to a point represented by "E," so that when it comes to rest again, it will have been raised 0.367 of one foot and the original volume of air confined under the piston will have increased to 1.367 cubic feet. If the air at the temperature of 212 degrees Fahr. is allowed to cool down to 32 degrees the piston will descend to the original position at "D."

IF WE go back to the first position occupied by the piston with the air at a temperature of 32 degrees Fahr. and extract instead of add 180 degrees of heat, the air will contract and the piston will descend practically the same distance that it rose when the air was heated, or 0.367 of a foot, the piston resting at the position indicated by "F" and the temperature will be (180—32=) 148 below zero in space "C".

The extraction of another 180 degrees of heat will cause the piston to descend another 0.367 foot and rest at position "G" which will produce a temperature of 328 degrees below zero. To cause the piston to descend to the bottom of the cylinder, or to "H" and thus contract the air to, theoretically speaking, nothing,) would necessitate the air being cooled down to (180+0.367=) 490.46 degrees below the starting point (32 degrees Fahr.) and this would give a resulting temperature of (490.46—32=) 458.46 degrees below the zero on the Fahrenheit thermometer scale.

In practice the point for absolute zero is sometimes given as 460 degrees below zero. The point of absolute zero is supposed to be the lowest possible temperature that can exist under any set of conditions. So long as there is temperature there is supposed to be some form of molecular energy. At absolute zero it is assumed that there is no movement of the molecules and a gas would exert no pressure.

The absolute temperature of any substance is the absolute zero added to the thermometer reading, so long as the given temperature is above the zero of the thermometer scale. To illustrate: the absolute temperature of air at 32 degrees Fahr. is (458.46+32.=490.46; and if the thermometer gave a reading of 32 degrees Fahr. below zero the absolute temperature would be (458.46—32=) 426.46.



CLOSELY associated with the terms that have been considered are two others that are referred to when dealing with gases and vapors from refrigerating media and these are "critical temperature" and "critical pressure."

Experiments have demonstrated that for all gases there is a temperature above which it cannot be liquefied, no matter how great the pressure may be that is applied to the gas. This point is called the critical temperature and below this temperature the gas or vapor may be liquefied is sufficient pressure is used. The point of critical temperature is of vital importance in refrigeration work that is effected by mechanical means, as will appear later.

The pressure which causes liquefaction of a gas just below the critical temperature is known as the critical pressure.

Vilter

Enclosed Type Ammonia Compressor

An ideal ice machine for the moderate size plant. Modern in design, made of high grade materials and thoroughly inspected and tested. Let us send a copy of our Bulletin No. 29R to you. It tells of the force feed lubrication to the piston pins, the easily operated Vilter plate valves, the oil sealed stuffing box and gives other information of value.

Let us submit quotations on your requirements —no obligation to you.

The Vilter Manufacturing Company
ESTABLISHED 1867
830 Clinton Street Milwaukee, Wis.

WHAT'S WRONG WITH THIS PICTURE?

The Cleveland Plain Dealer recently published a cartoon of Curtis F. Sisco, sales manager of the Cleveland Ice Cream Co., as shown in the accompanying illustration. What's wrong with the cartoon? No matter how proud Cleveland may be of its splendid industries, Mr. Sisco has a perfect right to kick against this newspaper artist showing him drinking a cup of coffee. A plate of ice cream would have been more to the point. Remind them, Mr. Sisco, that coffee is not a dairy dish. and that ice cream is a dish of which no one should be ashamed.

FEW WILL WANT TO MISS THIS

Right now we are making an unusual introductory offer to Ice Cream Manufacturers, which makes it possible to purchase Toco Tub Enamel* under a new plan.

No Ice Cream Manufacturer ought to buy enamel for his tubs and cans until he has at least received our proposition and considered it carefully.

Your name and address written on this page will bring this special offer, a color card and letters from Toco Tub Enamel users.

THE TROPICAL PAINT & OIL CO.
1218-1260 West 70th St. - Cleveland, Ohio

*For fourteen years we have supplied a limited number of Ice Cream Manufacturers with Toco Tub Enamel. Increased production makes it possible to serve more of you this season.

Pacific Slope Dairy Show to Draw National Attendance

Great Dairy Pageant to be Staged on Coast in December

NOW that the National Dairy Exposition at Milwaukee is over, the industry is turning its face toward the other big event of the dairyman's year—The Pacific Slope Dairy Show at Oakland, Calif., December 10-16, and it is becoming more and more evident that interest in the Pacific Slope show is by no means confined to the West.

The source of hotel reservations furnishes one indication of this widening interest. According to the manager of one of Oakland's leading hotels, the Eastern supplymen and manufacturers began to look to their room reservations as early as last June. Reservations kept coming in, and with the show 90 days away, this particular hotel has booked 75 reservations from beyond the Pacific Slope.

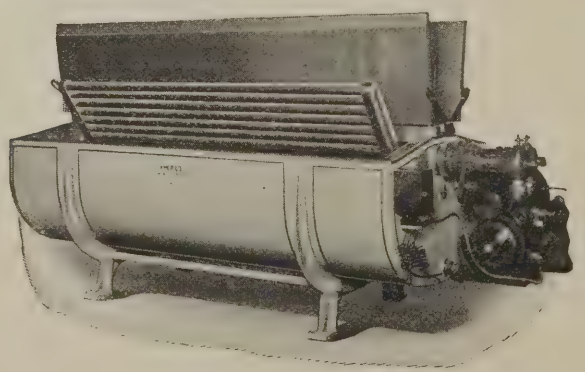
A dozen conventions have been scheduled for the show dates, with others yet to be arranged. The largest of these, perhaps, is the joint meeting of the West's two big associations of ice cream manufacturers. This program is being worked out by a committee headed by Jay H. Kugler, secretary, representing the California and Southwestern association, and W. S. V. Robb, president, and Bert H .Walker, secretary, of the Pacific association. The conference committee met in Seattle. The ice cream men intend to charter a special steamer to bring them from Seattle to San Francisco.

THE Pacific Slope show will be the first in the nation to use the new standard for scoring ice cream adopted by the American Dairy Science Association at its Milwaukee meeting. G. D. Turnbow, assistant professor of dairy husbandry, University of California, who is a member of the association, attended the sessions and brings back with him the new standards. He will see that they are strictly applied at the Pacific Slope show, where he is superintendent of the dairy products division.

A feature that is new in the West and is attracting much attention this year is the high school students' dairy judging contest. These young agriculturists have had many opportunities to judge livestock, but never dairy products. The University of California College of Agriculture and the office of the California State Superintendent of Schools are lending the weight of their influence to this feature. The college of agriculture is offering some special work to high school agricultural teachers in judging dairy products and the state superintendent's office is urging their attendance.

Men of the various branches of the dairy industry are going to be offered this year a splendid opportunity to draw close and get acquainted with those in supplementary lines. One of the occasions is a big get-together dinner of the whole industry, when various viewpoints will be experssed by speakers of national reputation. Speakers who have already accepted the invitation include A. J. Glover, editor Hoard's Dairyman; Dr. David P. Barrows, formerly president of the University of California; Dr. C. L. Roadhouse, professor of dairy industry, University of California College of Agriculture. Sam H. Greene, secretary-manager of California Dairy Council, will be toastmaster. Governor Friend W. Richardson of California is expected to be among the speakers, although his definite acceptance has not yet been received.

AN INDICATION of the international character which the Pacific Slope Dairy Show is beginning to acquire came with the visit to San Francisco of Charles B. Colby from Auckland, New Zealand. Drawn by word of the show, Colby came early and purchased from a supply house at San Francisco a complete ice cream making plant. Also, he asked Dr. Roadhouse, president of the show association, to secure for him the services of two men to go to Australia and take charge of the plant's operation.



There has been a great and early demand for com-

Cincinnati, Ohio.

Gentlemen:-

I thought it might be interesting to you to know the results we have obtained from the "AMERICO" combination machine you installed in our plant as per order.

After thoroughly trying it out in the Pasteurization of milk, Ripening of cream for butter making, producing commercial buttermilk and useing it as a Holder for fresh milk over night, I am thoroughly convinced it is entitled to the name you gave it, "The Four in One".

In all respects it has proven itself superior to any other Pasteurizer or Buttermilk machine we have ever used.

As soon as it is practical for us to do so, we will replace all our present Pasteurizers with the "AMERICO".

Yours very truly,

THE MATTHEWS SELECTED DAIRIES CO.

Dartnell Cut Sales Costs $35,000 a Year

With Hooven Automatic Typewriters

It is now just a year since The Dartnell Corporation of Chicago dismantled a force of thirty salesmen which it employed in the sale of its service to sales executives, and put Hoovens on the job.

During the past year, with three Hooven Automatic Typewriters, Dartnell sales have increased forty per cent. Not only were more subscribers to the service secured during the twelve month period, but they were secured at a cost of $2.05 a subscriber as compared with a cost of $18.00 a subscriber under the old selling plan.

What Hoovens Are—and What They Can Do

You don't have to revolutionize your business to put Hoovens to work. You don't have to even hire an operator, because the Hooven is so simple that any bright telephone operator who is an accurate typist can learn how to write real personal typewritten letters—the same identical letters that your personal stenographer writes for you.

With Hoovens you can write thousands of genuine letters, with carbon copies that you can use to follow up; with the name of the man you are writing to and other special information written right into the letter at the same time the letter is written. A Hooven never tires. It never stays home. It never comes down late. It never slackens. It keeps on writing all day long, at the rate of from 100 to 300 individually typed letters a day.

Hoovens not only save you the salaries of from three to ten typists but they make it possible for you to systematically work carefully selected lists of prospects in a way that **COMMANDS** attention. A careful check of the returns between individually typed letters and process letters by a publishing house on magazine subscriptions shows that where the process letters pulled slightly less than two per cent returns, the Hooven pulled better than twelve per cent.

There are many ways that Hoovens might be used in your business to help salesmen; to cut sales costs; to develop inquiries; to work the small town account; to secure special information; to intensively work select lists of preferred buyers. It will cost you nothing, and place you under no obligation whatsoever, to let us draw up a Hooven plan for your business just as we drew it up for Dartnell.

Hoovens are Making Thousands of Dollars for Hundreds of Concerns—Perhaps They Can Do As Much for You

More and more Manufacturers are insisting on MAPLEINE

They demand Mapleine because they know it has no satisfactory substitute. With Mapleine, they get flavor that is not approached by its imitators—flavor the public repeats on.

Mapleine is a vegetable flavoring---contains no ethers or volatile materials to evaporate and change the flavor. The flavor Mapleine develops holds true through freezing and storing.

Mapleine is more profitable than strawberry, chocolate or a good vanilla because of its concentrated strength. Two ounces flavor and color 10 gallons of finished ice cream at a cost of only 1½ cents a gallon.

Give Mapleine a trial—
It will convince you.

Supply houses sell Mapleine
or order direct from us.

PENNSYLVANIA DAIRY MANUFACTURING SHORT COURSE.

Plans are being made by the Dairy Husbandry Department of the Pennsylvania State College for its 33rd annual creamery short course. This year three separate short courses, each lasting two weeks, have been scheduled to replace the eight-weeks' general course given in former years. This change was made to take care of the demand for more specialized work. Under the new plan, men who formerly could not be away from their plant for eight weeks can come in and stay for the two-weeks' course in a paricular line of work. Those who have no plant experience and want a general course in all manufacturing subjects will have an opportunity to stay throughout the three courses.

The Pennsylvania State College creamery, equipped with up-to-date machinery for handling butter, cheese, ice cream, market milk and condensed milk offers excellent facilities for teaching dairy manufacturing work. During the past year 157,969 pounds of butter, 13,277 pounds of cheese, 10,000 gallons of ice cream and 150,000 quarts of market milk were handled in this plant. Located as it is in the midst of hundreds of dairy plants, the college is in a position to place men who do satisfactory work in good positions at the close of the course.

The courses offered this year will be as follows:

1. Testing dairy products and the manufacture of butter and cheese, January 8 to 24.
2. Ice Cream making, January 26 to February 6.
3. Market milk and milk condensing, February 9 to 20.

The work will be handled by the regular dairy department staff, assisted by specialists in the various lines of work. The expenses in connection with the course will be a registration fee of $10 for each course, board and room $10 to $12 per week, books and white suits $10 to $15.

A scholarship awarded by the supply salesmen who attended their short course given in August is available for some ice cream maker who wishes to attend the ice cream short course. Application for this scholarship which will pay all the expenses of a man for the ice cream course, should be made at once to C. Robert Fickes, 534 E. Market St., York, Pa. The lucky man will be chosen at the New Orleans convention November 17 to 20.

Toledo, Ohio

Secy., C. J. W. SMITH
561 Continental Ave.
Detroit

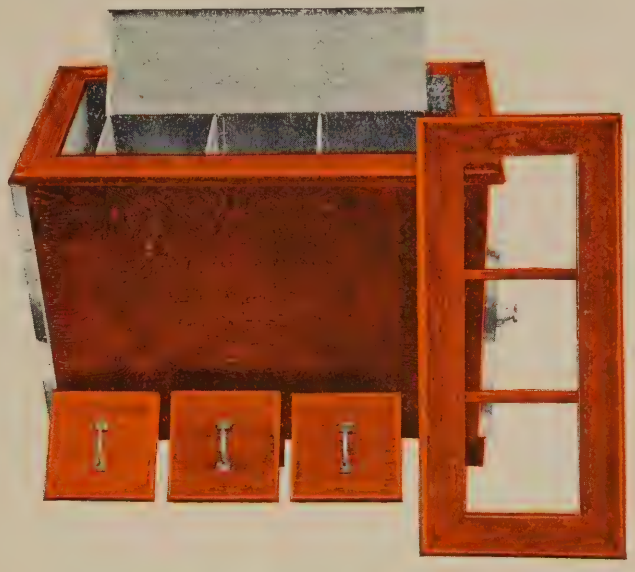
MICHIGAN BOOSTERS WANT TO FOLLOW UP DAIRY EXPOSITION SUCCESS.

The big dairy exposition at Milwaukee is now over and a big success. Next comes the National Ice Cream Manufacturers' Association convention at New Orleans. After that we must all get together and work in harmony to make the Michigan Allied Dairy Association convention another howling success. Remember we have done so before and can again.

C. J. Yuncker.

Just one thing now. From today on when calling on the trade, why not impress on everybody's mind that we are going to give them a great show of exhibits and in turn they should show courtesy to our firms and ourselves, by making their appearance through the hall of exhibits and get better acquainted with all. The fact is they owe such courtesy to those who pay membership and make exhibits at our show. It stands to reason that it costs money to run this show and exhibitors should have pleasure of meeting ice cream manufacturers, dairymen and creamerymen, butter and cheesemakers, etc., at their booths.

So let's all get to work and accomplish it. All other meetings during our convention should be so arranged to not interfere with the manufacturers and dealers in going through hall of exhibits.



C. J. YUNCKER, President,
Michigan Dairy Boosters.

MICHIGAN ICE CREAM MEN ATTEND EXPOSITION 30 STRONG.

L. W. Wilson, president of the Michigan Association of Ice Cream Manufacturers, reached the exposition at the head of a party of 30 Michigan ice cream manufacturers. This delegation was very proud of its showing. Mr. Wilson was getting set for the New Orleans convention, he notified the editor of Dairyink. He spent most of one day looking over the splendid exhibits of ice cream equipment at the exposition.

This Cabinet stops needless ice and salt waste

Cuts unnecessary charge from ice cream manufacturers' overhead—turns fixed expenses into added profits

This diagram explains why A-B Ice Cream Cabinets will give 48-hour service from a single icing should emergency require. Notice how cream compartments and ice and salt chamber are fully protected against warm outside air. No wonder A-B Ice Cream Cabinets save ice — save salt — save money!

Here is an ice cream cabinet that will save more ice, more salt and more money for you than any other pack cabinet you can buy.

You see why as you examine the A-B Cabinet inside and out. Square, perfectly dry cream compartments are surrounded on all four sides by the ice and salt chamber, which tapers downward from a broad, easily filled throat at the top to a narrow bottom.

Cold air is kept in and warm air out by a novel insulating material, which graduates from a thick section at the bottom of the ice chamber to a thinner section at the top, as shown by the accompanying diagram.

Even the lid is fully insulated, yet it is feathery light. In fact, the whole A-B Cabinet is exceptionally light—10% to 15% lighter than ordinary pack cabinets—hence will place no strain on your floors.

Full details and prices gladly furnished on request. Write for them now. Get the facts about this cabinet that stops needless ice and salt waste.

Anheuser-Busch, St. Louis

Two Problems of Manufacture

"K"

Have you solved them satisfactorily? Probably not, unless you are following the suggestions brought out in this article.

THERE are two major problems in connection with the manufacture of commercial ice cream that have perplexed manufacturers for years. Many plants have spent hundreds of dollars attempting to solve these problems, and stand today as much in the dark as when they began.

And yet these problems *must* be solved in order to turn out a line of products that the public will want and continue to want. So far as the quality of the mix is concerned, every manufacturer knows that he can make that just about what he wants to. And while a quality mix is an important factor in winning public approval, yet it is not a problem. But flavor—*that is a different matter.*

Do you know whether or not, after your batch is whipped, hardened and delivered, it is going to have the flavor you were striving for—and have that *same* flavor every time? Do you realize that the flavors of your creams, ices and sherbets are the chief reason for their popularity with your dealers and the public? Do they know that the strawberry (for example) that they get today is going to taste *just the same* as the strawberry they bought last week?

That is problem Number 1!

The second problem is—color. And that is a baffling one. I dare say that more time and money and patience have been wasted in trying to get true, uniform colors in the finished product than on any other single process of ice cream manufacture. And if you have tried to solve this by putting in your own artificial colors — what have you accomplished? My guess is—nothing; that you are absolutely unable to produce just the color you want in the finished product—even and true—every time.

* * * * * * * * * *

A short time ago a demonstration was being made in a large factory in the South. The demonstrator had made up several batches — ice creams, ices, sherbets — orange, strawberry, cherry, grape, lemon, raspberry, lime, pineapple. As the tray full of samples was brought into the offices for sampling, it was a beautiful sight to see—presenting in beautiful pastel shades every tint to tempt the eye and the appetite. The sampling began — smacks of approval — words of praise.

"Fine," said the general manager. "But will flavor and color always be what we have before us now?" * * * * * * * * *

And the immediate, confident answer of the demonstrator was, "Yes!"

For the flavors were Kist Flavors, the color a part of the flavor itself — and the proportion of flavor to mix is always assured by the Formula Sheets that are a part of the free Kist Service.

Kist Flavors *meet the public approval.* Make no mistakes about that. Sales records of 1,500 leading manufacturers who are "Kist" users prove it. Thus problem No. 1 — Flavor — is solved.

Kist flavors *freeze* to just the color desired. Thus the color problem (Problem No. 2) is entirely removed.

Kist flavors are made of the finest ingredients procurable, carefully handled and accurately processed. They need no artificial preservatives so they contain none. Note this—*there is no benzoate of soda in any "Kist" flavor.* And there never will be. Never will we court the inevitable disapproval of the public and food authorities for the products of our customers, by using benzoate of soda.

Upon this page is reproduced a sample formula for a Kist Special. Note the accurate proportioning, and the cautions for accuracy that accompany these formulas.

The gist of the whole thing is this:

Use the free Kist Advertising Service and the public will eat your products.

Use the Kist Flavors and use them by formula — the public will *continue* to eat your products to the exclusion of those of any rivals.

Remember the Kist proposition:

One customer to a territory.

Free formula service.

Free advertising service, for Week End Specials —the most complete and comprehensive service ever known in the Ice Cream Industry.

Free monthly magazine, the "Kist Business Builder" containing in addition to formulas and samples of advertising many valuable and helpful discussions.

And remember the flavors: Orange, lemon, lime, raspberry, cherry, pineapple, strawberry, grape—the latter two now brought to a specially perfected point—and, now this year, a wonderful *peach.*

Write for a sample copy of the Kist Business Builder and a complete explanation of our proposition. No obligation to you, but we suggest that you act quickly. Just address Citrus Products Company, Ice Cream Division, 54 E. Kinzie St., Chicago.

THANKSGIVING BRICK SPECIAL

"ORANGE KIST" Nougat Ice Cream
"LEMON KIST" Sherbet
CHOCOLATE Ice Cream

Formulas for the above brick:

"ORANGE KIST" Nougat Ice Cream.

5 Gals. of your regular Ice Cream Mix, without Vanilla.
2 Ozs. "ORANGE KIST" Ice Cream Compound.
½ lb. Chopped Brazil Nuts.
½ lb. Chopped Almonds.
½ lb. Chopped Pecans.
½ lb. Chopped Filberts.
1 Pt. drained Maraschino Cherries.
½ Pt. Green Pineapple.

"LEMON KIST" Sherbet.

20 lbs. Granulated Sugar.
5½ Gals. Water.
1 Gal. of your regular Ice Cream Mix, without Vanilla.
5 Ozs. Gelatin.
6 Ozs. "LEMON KIST" Ice Cream Compound.
12 Ozs. Standard Citric Acid Solution.

Chocolate Ice Cream.

5 Gals. of your regular Chocolate Ice Cream Mix.
1 Oz. "ORANGE KIST" Ice Cream Mix.

SPECIAL AND IMPORTANT

These formulas are outlined for the convenience of your superintendent and Ice Cream maker. Extra care should be taken in making any special—because it gets special attention from the public. *Follow the formulas exactly.* Make your "Kist" Week-End Specials especially delicious and palatable and they will become the preferred dessert and refreshment.

One of the most important steps in manufacturing "Kist" brand flavored ice cream is to see that the Citric Acid Solution and Tartaric Acid Solution are properly added after the primary freezing has taken place. That is, the ice cream mix is run into a freezer and partly frozen, and the acid solution is then added and freezing allowed to continue. This effectually prevents any reaction between the acid and the milk fats.

(Where "oz." is used as an abbreviation, it is, of course, understood that fluid oz. is meant)

DIRECTIONS FOR MAKING STANDARD CITRIC ACID SOLUTION

Place four pounds of Citric Acid Crystals or Powder in gallon enameled or glass measure. Fill measure with warm water—stir until dissolved and filter through flannel cloth. Makes one gallon.

NOTE—We will supply Standard Citric Acid Solution in one gallon glass jugs at $2.50 per gallon.

Standardize The Color of Your Ice Cream

BY USING THE NEW

Nafis Standard Ice Cream Color Rods

OKLAHOMANS PREPARE FOR CONVENTION.

W. M. Hawk, secretary of the Oklahoma Association of Ice Cream Manufacturers, announces that an interesting program is being drawn up for the 1924 convention of the association, which will be held at Tulsa, December 8, 9 and 10, as previously announced in The Ice Cream Review.

W. M. Hawk.

Their tentative program calls for speeches by Prof. A. C. Baer of The Ice Cream Review, Prof. A. D. Burke of Oklahoma A. & M. College, Hon. Herman F. Newblock, Mayor of Tulsa, Paul C. Mojonnier of Mojonnier Bros., and Early Cass, chief milk inspector of the city of Tulsa.

Secretary Hawk is confident that the 1924 convention will be the largest Oklahoma association has ever held. He is basing his assertion upon the fact that all the Oklahoma manufacturers seem to be very much interested in preliminary preparations.

MASSACHUSETTS SHORT COURSE.

The Massachusetts Agricultural College's winter short course in dairying—to be held January 6 to March 15, 1925,—has been announced by Prof. H. F. Judkins, head of the dairying department, as follows:

Course I—Testing milk and its products, Tuesday, Jan. 6, 8 a. m., to Saturday, Jan. 17, 12 m.

Course II—Ice cream making, Tuesday, Jan. 20, 8 a. m., to Saturday, Jan. 31, 12 m. (Prerequisite, Course I or its equivalent).

Course III—Milk plant operation, Tuesday, Feb. 3, 8 a. m., to Saturday, Feb. 14, 12 m.

Course IV—Repetition of Course II, Tuesday, Feb. 17, 8 a. m., to Saturday, Feb. 28, 12 m. (This course is for those without previous experience in testing milk and its products).

Course V—Milk inspection, Tuesday, March 3, 8 a. m., to Saturday, March 14, 12 m.

ICE CREAM ON TRAIN.

According to the bureau of railway economics, the dining cars of the United States calls for 900,000 quarts of ice cream which would be sufficient to supply all the children in the country between the ages of five and nine years with a big cone.

CHARLES G. CARLSON DEAD.

In many circles of the industry profound regret is felt over announcement of the death on September 28 of Charles G. Carlson, president of the C. G. Carlson Ice Cream Co., Denver, Col., and an important factor in the newly organized Colorado Association of Ice Cream Manufacturers.

for each freezer, before it enters the freezer.

100% Accurate By Weight.

Every pint of mix in your pipe line represents real dollars and cents. When your freezer man pulls mix for a 40 quart batch and throws in a pint for good luck, he practically hands out 102c for a dollar.

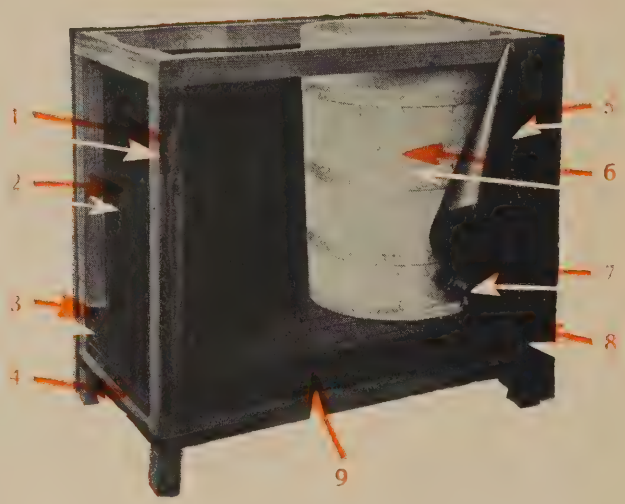
The extra pint represents 2½% of the batch pulled, while the 40 quart freezer was designed to give the maximum yield for a "DEFINITE" quantity of mix.

Weibatch Pulls Every Batch By Weight

You can't check out with your raw ingredients by buying them by weight and drawing them out by liquid measure.

Each and every batch pulled by Weibatch is exactly the same by weight. Each batch is automatically recorded and gives an *exact* record of the amount of mix ACTUALLY drawn down.

Furthermore — Weibatch insures uniformity. Measuring out flavors in small amounts leaves little chance for variation, but adding a definite quantity of flavor to an ever varying sized batch of mix can not result in uniformity of flavor. Neither does a varying sized batch of mix produce uniform quality of ice cream.



Learn to KNOW that the customers get a definite quality and you get a definite profit. Install a WEIBATCH on a 30-day Guarantee Trial and convince YOURSELF

MINNESOTA DAIRY SHORT COURSE.

Instruction in every phase of ice cream making, from the consideration of ice cream standards and testing milk and cream for butterfat and acidity to the calculation of the mix, the principles of mechanical refrigeration, and viscosity and its relation to ice cream, will be given at the ice cream makers' short course by the dairy division at University Farm, St. Paul, November 17 to 26. The course is primarily for those who have had some practice and experience in making ice cream, but will be so conducted that those who have had no experience may enter. Many creameries are already making ice cream, and others, watching the growth of the industry, are planning to do so in the future. The University Farm course will, therefore, be taught from the standpoint of both the small town plant and the city enterprise.

PROF. W. B. COMBS.

Prof. W. B. Combs, who will be in charge of the course, has been assisted by experienced dairy workers and expert technicians in preparing the most comprehensive and thorough going program of lectures and laboratory work ever presented in the Northwest. Nothing pertaining to the industry will be neglected. Ices, sherbets, and fancy creams will be presented when the principal rules have been mastered. Lectures dealing with the bacteriology of milk and milk products, keeping plant records, the food value of ice cream, and ice cream defects will be given by men well qualified to speak on these subjects. Round table discussions, where instructors and students can scrutinize and discuss every problem, will follow many of the laboratory periods.

Professor Combs, who will head the instructional work of the course, came to the Minnesota College of Agriculture from the Pennsylvania State College last July to take charge of the dairy products manufacturing section of the Minnesota dairy division. He is a graduate of the Missouri College of Agriculture and was a member of the faculties at Missouri and at Rutgers College, the agricultural college of New Jersey, before going to Pennsylvania. During his five years in Pennsylvania, he had large and varied experience in dairy products manufacturing work, particularly of butter and ice cream. The general opinion of his qualifications was reflected in a letter written to Dr. C. H. Eckles, chief of the dairy division, University of Minnesota, by A. A. Borland, professor of dairy husbandry and head of the dairy department at Penn State. Professor Borland wrote: "I wish we could hang on to Combs, but since we cannot, I am glad he is going with you at Minnesota. He has made good here tremendously and will leave with the highest regards of the dairy manufacturing men in the state and of his associates in the dairy department."

R. M. Washburn, former professor of dairy husbandry with the University of Minnesota, but now di-

Lake & Seldon Sts. Chicago, Ill.

rector of laboratories for the International Dry Milk Company of Minneapolis, will second the efforts of Professor Combs in making this course the greatest of its kind in the country. Professor Washburn has been in dairy work for more than 30 years. A teacher of animal and dairy husbandry in the Baron de Hirsch Agricultural School in 1902-4, he was later with the University of Missouri and state dairy and food commissioner of Missouri in 1905-8. He was with the University of Vermont in 1908-11, coming the latter year to the University of Minnesota with which he remained until the fall of 1919 when he resigned to accept the directorship with the commercial company. Professor Washburn is not only a celebrated teacher, but he has been a voluminous writer of dairy articles and pamphlets and is the author of "Productive Dairying," a 432-page volume issued by the J. P. Lippincott company as one of its series of farm manuals. Mr. Washburn's book is used in high schools, schools and colleges of agriculture, general courses, and rural consolidated schools, and has long been recognized as a standard work.

Prof. Harold Macy, bacteriologist of the University of Minnesota, will handle the broad subject of bacteriology and give demonstrations in the normal fermentations of milk. H. C. Moore and L. M. Thurston of the faculty will assist in the laboratory periods and Professor Moore will give demonstrations in the judging of gelatines. J. F. Raether, refrigerating engineer of the Westerlin & Campbell company, St. Paul, will teach the principles of mechanical refrigeration. Two other experts, E. O. Hanson and J. L. Larsen, both of the Vander Bie Ice Cream Company, will lecture on sales and keeping records.

"The course will consist of 32 lectures and 8 laboratory periods," says Professor Combs. "All the classes will be held in the new dairy building at university farm. Two testing laboratories will be available for students every day, as well as an ice cream laboratory designed for ice cream instruction. Modern type equipment provides the instructional staff with all the necessary essentials in teaching a modern ice cream course. Though the institution does not maintain a working creamery it is not hindered in any way in securing an adequate supply of raw products with which to work. Located between the twin cities it is possible to secure any amount of milk, cream, or butter for class use. This advantage is one which the dairy division recognizes as one of its most valuable assets. Any amount of products prepared by students can be quickly disposed of on the markets of either of the twin cities."

EXIT MR. C.

Mr. C., a distinguished lawyer of Chicago, was on his way to Denver to transact some important business. In the opposite section of the Pullman, a sweet-faced, tired-appearing woman traveling with four small children. Being fond of children and feeling sorry for the mother, he soon made friends with the little ones.

Early the next morning, he heard their eager questions and the patient "Yes, dear," of the mother as she tried to dress them, and looking out, he saw a small white foot protruding beyond the opposite curtain. Reaching across the aisle, he took hold of the large toe and began to recite: "This little pig went to the market, this little pig stayed home." The foot was suddenly withdrawn and a cold, quiet voice said: "That is quite sufficient, thank you."

Mr. C. hastily withdrew to the smoker where he remained until the train arrived in Denver.

Gelatine—
the unnoticed ingredient

Unseen, untasted, unnoticed—gelatine is the supporting element of your product—the determining point of quality.

Clarity, viscosity, purity and most important, absolute uniformity, are your chief considerations in picking this ingredient for your production.

Atlantic Super-Clarified Gelatine has every desired attribute. Its super-clarity is unequalled, its viscosity higher than average, its purity unchallenged and its uniformity guaranteed by its successful record in the factories of the best manufacturers of candy and ice cream.

Use Atlantic Super-Clarified Gelatine. One trial will convince you of its unexcelled goodness and fitness for your work. Its economy in production will make decided savings possible while raising the quality of your product. For the "Unnoticed ingredient" use Atlantic Super-Clarified Gelatine.

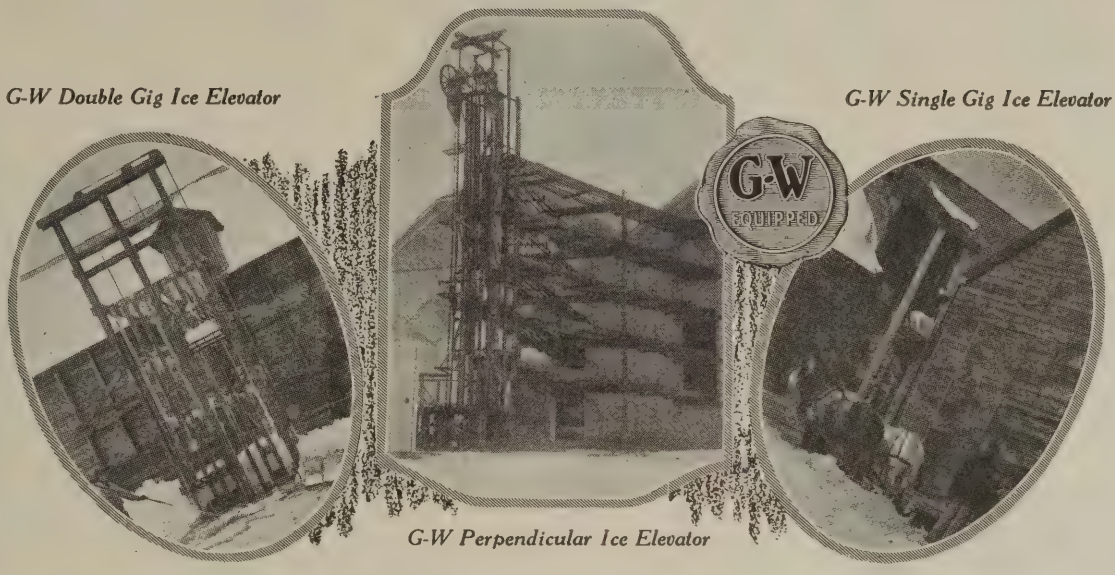
ELECTRIC TRUCKS ARE BEING USED INCREASINGLY THE COUNTRY OVER.

"The difference between the electric truck situation today and that of a few years or even a year ago is the fact that not only are they being used increasingly but, that business men the country over are realizing that perhaps the best way to reduce the cost of doing business is the judicious use of both gasoline and electric trucks." This is the report of The Society for Electrical Development based upon a field survey now being made by Raymond G. Zindle, supervisor of electric truck promotion, to ascertain local conditions in various sections of the United States and Canada.

It is found that bakers, laundry owners, ice cream makers, department stores, express companies, milk dealers, coal and ice companies, public utilities and others, recognizing that the cost of delivery is anywhere from 18 to 30 per cent—and in some instances as high as 45 per cent—of their gross income, are looking for some means of reducing that cost. Experience of others in their own line of business is teaching them that the use of electric trucks for city deliveries—on routes of 15 to 30 and 40 miles per day with anywhere from 50 to 200 or more delivery stops per day—and the use of gas trucks on longer hauls is the best means of placing their transportation on an economical basis.

Many instances have been found in New Zealand, in Chicago, Cleveland, Columbus and other cities where companies now using only a few electrics on city routes are preparing to replace all of their horse-drawn equipment with electric trucks. Several concerns are employing gasoline trucks as feeder service to electric delivery trucks. In the bakery industry, for instance, a single gas truck is often used to supply as many as ten or fifteen electrics with hot bread and rolls around noon times. The electrics thus served are employed to make the deliveries to the housewife.



One large baking company with branches in almost all of the larger cities in the United States makes provision for the charging and garaging of electric trucks at the loading platforms in every new branch which they open. Thus stable and garage space is entirely eliminated, materially reducing an otherwise necessary investment.

In one city after another, cases have been found where companies have purchased only one or two electric trucks to see if, as one user said, "they'll do for me what they have done for others" and have then install electrics on every route where they are applicable.

The lighting companies are lending their assistance. Every central station which has been called upon is glad to send a man to call on prospective users of electric trucks with the salesmen and explain to them that the power company endorses the use of electric trucks if the conditions meet the capabilities of the electric.

In brief the central station companies, we are told, stand ready to do these things:

1. To use electric trucks themselves where they are applicable.
2. To establish the right power rate for charging trucks.
3. To expedite the installation of service when a man buys electric trucks.
4. To promote the idea of electric trucks just as they promote the use of electric fans, electric irons, electric ranges or anything else electrical.
5. To co-operate with the electric truck battery and accessory companies as outlined above.

G-W Double Gig Ice Elevator

G-W Single Gig Ice Elevator

G-W Perpendicular Ice Elevator

Prepare for the Harvest *NOW!*

Reliable equipment is essential to economy

You are cordially invited

TO ATTEND OUR EXHIBIT

IN NEW ORLEANS

Plan to attend the exhibits of the National Association of Practical Refrigerating Engineers to be held at the Isaac Delgado Central Trade School, New Orleans, in November. The Gifford-Wood exhibit will remain intact until the evening of November 15th. Included in our display will be several models of ice handling machinery, an Ice Scoring Machine, a display of Ice Tools, etc.

Preparedness in ice harvesting is particularly essential—a breakdown during a stretch of ideal harvesting weather is a costly proposition.

The sturdy construction of G-W Perpendicular and Gig Ice Elevators insures their operation **when needed.** Correct design insures rapid handling of the ice crop with economy. Vital parts are provided with extra strength for endurance—materials used measure up to the requirements of the service expected.

Installations in every section of the country are active evidence of the long lived economy to be derived from the use of G-W Ice Harvesting Equipment.

G-W Engineers may be called into conference at any time, without cost or obligation to you. Send for Catalog No. 90, describing in detail our complete line of Ice Handling Machinery and Tools, and ask also for complete information concerning the engineering service we are prepared to render.

Building A Business Where Nothing Exists

Harry Helmar, "Wonder Boy," Had To Teach Consumers That There is Health in Milk, and Instruct Farmers That There is Money in it, Before Building Up One of the Biggest Dairy Products Businesses in the South

By A Contributor

FROM a small single square room, containing 1,200 square feet and handling milk deliveries only, the Gate City Dairy & Ice Cream Company, 52 Trinity Avenue, Atlanta, Ga., has grown into one of the greatest institutions of its kind in the South, manufacturing and distributing thousands upon thousands of dollars worth of milk, cream, ice cream and butter. And this was accomplished within a short period of ten years.

The Gate City, once a concern of a few hundred dollars in value, now is a vast business permeating into four states, and capitalized in the sum of $600,000. It is one of the remarkable industrial developments of a section that has just begun to awaken to its possibilities. It is no small distinction to be the supervising genious of a business that excels in any line, but it is a genuine distinction to be at the head of an enterprise that leads a vast district in the great dairy products industry. This distinction belongs to Harry Helmar, easily one of the outstanding business men of the Southland.

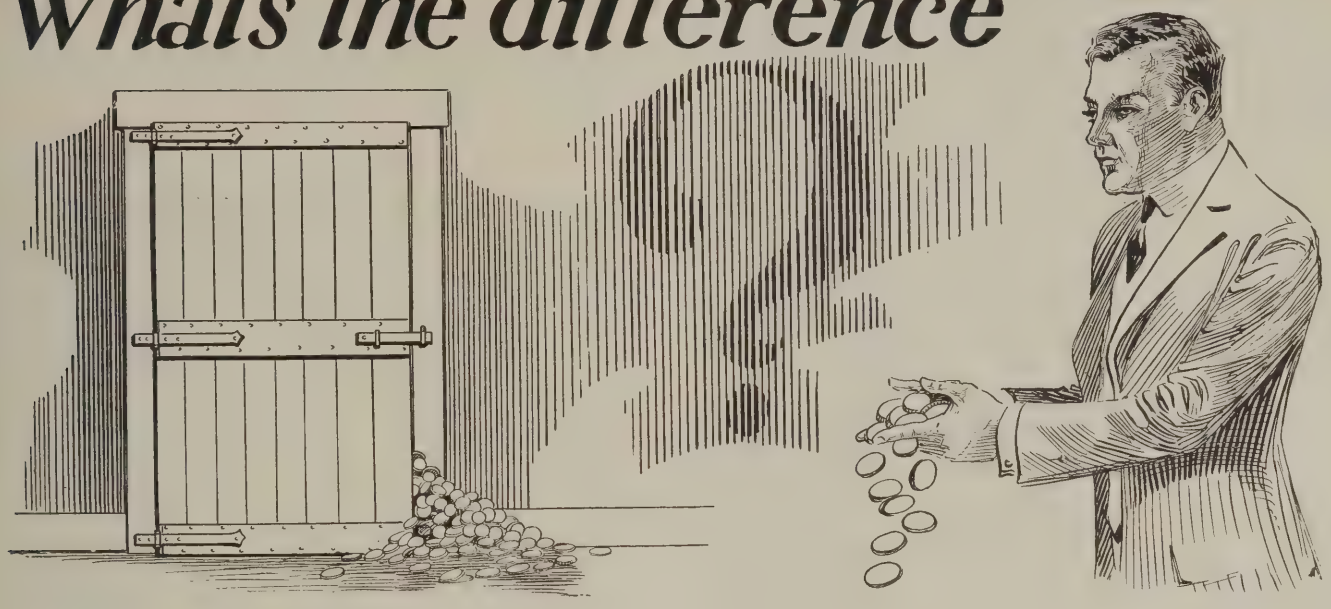
HARRY HELMAR.

When Harry, youthful, ambitious, thorough and confident of the posibilities of the dairy industry, ventured into the milk business in 1914, he was but 20 years old, but he was a reasoner; he applied logic; he knew the "why" of everything he did; he was accurately familiar with the local situation and entirely convinced that a successful business could be built upon service, quality and organization.

His beginning was modest but it was properly foundationed. His equipment consisted of a few milk cans, an ice box and a horse and wagon. A very modest beginning indeed. This business represented a considerable comparative volume (it even then was the largest in the city) but like many other lines, there were not so many precautions exercised and not altogether as much attention given to scientific purity and cleanliness. Although, then as now, the Gate City policy was a strict adherance to the best known methods of sanitation as practiced a decade ago.

WITH this 20 year old boy to manage the situation, with an original determination to succeed and become an important spoke in the world's wheel of commerce and construct along lines that would endure, this same Harry Helmar, now 30 years of age, heads the principal business of his industry in the Southeast. Apparently, it is the only open market, that is, the only place that a farmer can ship, twelve months of the year, whatever dairy products he may have to ship and get the highest market price and without the fear of being forced, at times, to find another market.

Studying the situation, visualizing possibilities, acquiring actual knowledge of what a progressive city population would require and fortifying himself with the right kind of employees and equipping his plant with the most modern machinery, he finds himself today heading a company valued at considerably more than a half million dollars, using the output of more than 300 farms, receiving milk and cream and distributing ice cream in the states of Georgia, North Carolina, South Carolina, Tennessee and Alabama. It requires a fleet of thirty trucks to take care of the Gate City's business.



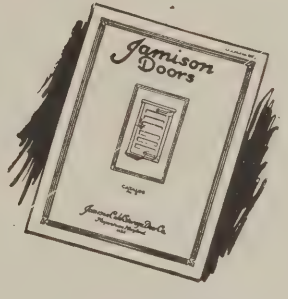
"Less than ten years ago," said Mr. Helmar in briefly reviewing the development of the Gate City, "I handled the output of about five or six dairy farms. Service and routing were not much of a job then. One or two horses and wagons delivered the Gate City's output in a few hours each day. Today we are handling the output of more than 300 farms. A fleet of thirty of the best trucks that man can build or money can buy are required to handle the business volume and service and routing is a 'regular job' now.

"The growth of your business and the other fellow's business is responsible for the growth of the South which is beyond the conception of a man's mind unless he can see what I have seen. It is a pleasure to observe how most of our customers realize and appreciate what service means. Traffic conditions, parking, non-parking, congestion, no-turns, upstairs business and many other things delay deliveries. I appreciate the co-operation most of our customers give us. It all helps toward a more efficient and economical service in the delivery of the most vitally important of human foods.

REVERTING to the growth of this individual business, it is remarkable what great strides the dairy industry has made throughout the land within the last several years and particularly is this true in our own section. The South is destined to assume its proper place in dairying. I read with much interest and with one hundred per cent accord, the recent article by Craddock Goins, associate editor of The Olsen Publishing Co., which recently appeared in the Manufacturers' Record relative to the South's possibilities in this line. In my opinion, if the industrial elements—bankers. farmers, dairy products manufacturers, merchants and other classes of business—will become imbued with the logic of Mr. Goins' arguments and statements of fact, this development will not only continue more rapidly but will be placed upon a permanent basis, assuring us the constant prosperity which characterized Wisconsin and other of the great dairy states."

That is the preachments, the advice, to call it by a more properly dignified term, of a young man 30 years old, who has seen an insignificant business grow, step by step, into conceded leadership. Still a young man, too tender in years to be recognized by many of the

What's the difference

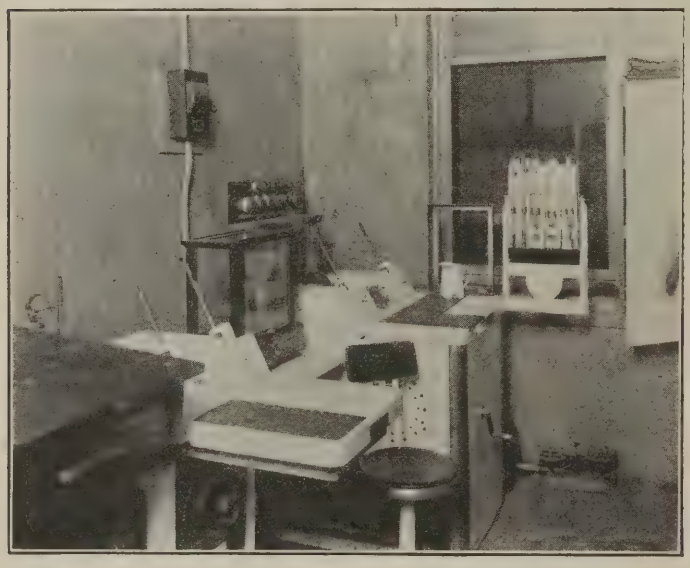


Between Dollars that Slip Through Your Fingers—and Dollars that Slip Through Your Doors?

When you get dollars in your hands, you don't let them slip through your fingers—not if you know it. But what about the dollars that are slipping through your cooler doors—every day?

To be **loss-proof,** your doors must be **leak-proof.** Changes in temperature, due to heat transmission, cost you money. They mean dollars that go into upkeep instead of the bank.

Jamison Doors are **leak-proof** and **loss-proof.** The Jamison Adjustable Spring Hinges make it possible to regulate the pressure against the multiple seals of contact. The Jamison Automatic Self-Tightening Fastener tightens instantly when the door is closed—tightens so that there's no rebound from compression when the door is slammed. Jamison Hardware is for HARD WEAR!



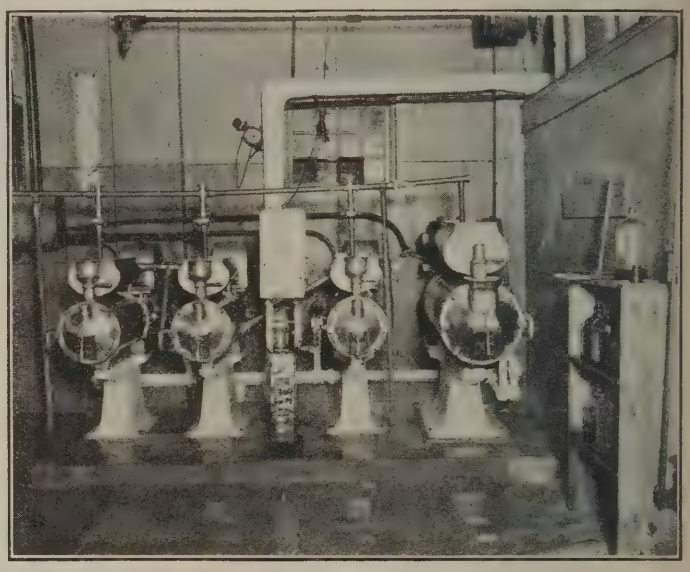
Our new catalog fully describes Jamison Doors with their remarkable, patented features. You should have it. Send us your name today.

Jamison Doors
for better refrigeration

Jamison Cold Storage Door Co., Inc. **Hagerstown, Md.**

sturdy men, who, at more mature years, now reflect with reluctance or dream over the mistakes of the past. He doesn't dream; he acts and acts positively. Hesitation is not a part of his compound. But to the rise of the Gate City—

WHEN Mr. Helmar was ready to make his business a corporation, he proposed to incorporate for $350,000 but the mere fact that a man had money to invest was no inducement to have him associated with the company. He worked on men of influence and prominence, never hesitating to assert that if the company did not gain prestige by selling stock, such prospect was not acceptable.



Laboratory.

In doing this, the stockholders, directorate, and the employees are chosen on merit only. The stockholders, selected from men of influence, naturally place influence in favor of the Gate City products, which show evidence of "something behind the gun," for there is hardly a highway in the country where Gate City advertising is not on duty and there is hardly a drug store in shipping distance of Atlanta where Gate City ice cream, in selected flavors, cannot be purchased by a discriminating public.

Grabbing the "bull by the horns" to make a real business where virtually nothing exists, requires genuine "sand courage." The business was not there. The possibilities could only be guessed. It required a man with an analytical mind and a galvanized courage—a man with a clear conception of the needs of the community to take the plunge. The man who knew that milk is vitally essential to the human diet, that all milk products were coming into prominence and that with an industrious and intelligent application of effort—a tremendous success awaited. It was a boy's dream and perseverance, constant attention to duty, a policy of full value received got the results.

The Gate City's organization moves with system and thoroughness right down the line from President Helmar to the office boy. Each is capable and each enthusiastic. P. A. Methvin, the vice-president, was for twelve years in charge of the food inspection of the state of Georgia. He also, for a time, was vice-president of the Odom Ice Cream Company at Macon, and both by experience and natural tendency peculiarly qualified as an official of the big Gate City.

Freezer Room.

ALVIN SANSING, known to every ice cream manufacturer and supply man in the South, is secretary of the Gate City. Mr. Sansing, for many years, was with the De Laval Separator Company and is familiar with every detail of the mechanical, the office and the distribution divisions of the ice cream, milk and butter business. He is recognized, not only as progressive and capable, but profound in his study of the best methods of developing and maintaining the sources of the raw material, assembling and marketing. He is the man who is most directly responsible to President Helmar—they are more than office associates; they are personal friends and no important steps are taken without a complete understanding.

Just recently—the first of the year—a new office was created at the Gate City, that of sales manager, and H. C. Halsey, who has been with the company for years as a salesman, was appointed. Mr. Halsey is of the literal live-wire sort, brimful of what is famed in the Southeast as the "Atlantic Spirit." He is on the job early and sticks until the situation warrants closing. And likewise are the others.

Style 7

The Grand Rapids
ICE CREAM CABINET OF QUALITY

IN the three words above you will find the outstanding reasons why Style 7 Grand Rapids Ice Cream Cabinets should be put at work for you next season.

Style 7 is the most efficient of cabinets because it is beyond any question of doubt the most highly developed cabinet ever devised. Its design includes the scientific taper style of insulation originated and perfected by us. In construction it is unrivalled — extra heavily insulated, absolutely protected against absorption of moisture, sturdily built of finest materials, sound as a dollar throughout.

Style 7 Cabinet is extremely economical for four reasons: First, because its efficiency makes possible substantial reductions in the cost of ice and in attention required. Second, it affords maximum protection for your product. Third, our position as the world's largest makers enables us to produce and sell this superior article at an extremely attractive price. Fourth, the Style 7 Cabinet is so long lived that when the price is divided by years of service the result represents mimimum investment cost.

The Style 7 Cabinet has stood the greatest of all tests—**TIME.** It has demonstrated to the satisfaction of thousands of users that it offers the utmost in freedom from annoying and costly trouble.

Investigate fully! Then you will learn why Grand Rapids Cabinets are essential if you are to enjoy greatest profits. Send for our complete catalog which illustrates our full line of models of all types, including the Style 7, the famous Zero Brick Cabinet and our extremely practical combination brick and bulk cabinets.

WORLD'S LARGEST MANUFACTURERS OF ICE CREAM CABINETS

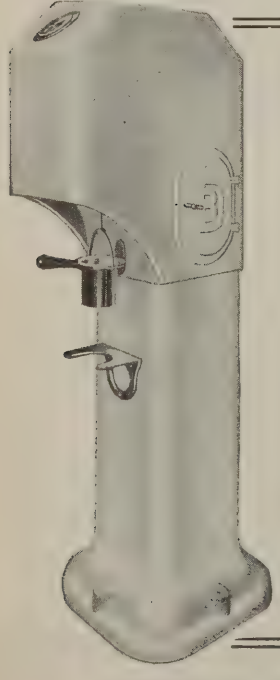
Replies to Inquiries

Dear Sir:—We had 370 pounds of 18 per cent cream, 6 pounds of skim milk powder, 30 ounces of gelatine and 30 ounces of vanilla from which we only made 70 gallons of ice cream. We have been used to the disc freezer and we made 100 gallons from the same mix. In the first place we tried to freeze the cream with just the filler and vanilla as we always had done on the disc freezer, but found it would not whip. The cream mix had been pasteurized and held at a low temperature for 24 hours. We then added the skim milk powder to 45 pounds more of cream, ran it through the emulsifier and held all the mix for 24 hours longer with but little better results. It just refused to whip up to a full freezer. We have the Emery-Thompson upright 10-gallon freezer. We want from 90 to 100 per cent overrun. That is, we want ten gallons of ice cream from 90 pounds of mix. Can you tell us where our trouble was? Could you give us a mix made of say 20 per cent cream, 4 per cent milk, skimmilk powder that would contain about 12 to 14 per cent butterfat that we could get the overrun we want?

Reply: You perhaps understand that the continuous disc machine was so constructed that it was very easy to get an overrun. You will find that it is more difficult to secure the overrun with any vertical type freezer. I believe, however, that if you will study your freezer carefully, regulating the temperature and pressure of bran and consequently the rate of freezing along with the proper speed of the tester also carefully making tests on the ice cream when drawing it from the machine you will soon be able to increase your overrun.

I have indicated below in table 1 a suggestive 14 per cent formula using a little skim milk powder to increase the milk serum solids.

Table 1.



Ingredients	Fat	Serum Sol.	Total Sol.
14.0 lbs. sugar	.....	.....	13.30
.5 lbs. gelatine	.....	.....	.47
2.0 lbs. skim powder.....	.....	1.9	1.9
66.0 lbs. 20% cream.....	13.2	4.7	17.90
17.5 lbs. 4% milk.....	.70	1.5	2.20
100.0 lbs. mix	13.9	8.1	35.77

You will not have to use a large amount of milk powder when making a 14 per cent ice cream.

If you want to cut the butterfat to 12 per cent you should use more butterfat, two pounds to more than the same relation of the total milk solids to the total solids of the mix.

* * *

Dear Sir:—Being a reader of The Ice Cream Review, I have noticed several of your formulas to the ice cream manufacturers. We would be pleased if you would give us a formula showing us how to use whole milk with sweet butter and skim milk powder, that is, the amount of each to be used. We would like to have two formulas, one for an 8 per cent and one for a 10 per cent, figured on a 900-pound mix, with about 35 per cent total solids.

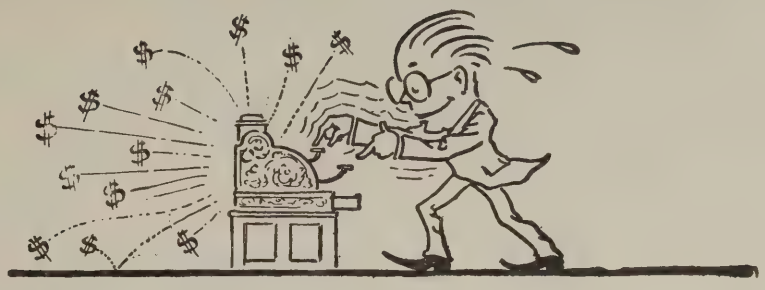
Sommers Ice Cream Over-run Tester

Simple in Construction—Quick Acting and Accurate

SMOOTH, SIMPLE CUP IS USED.

No loose weights or adjustment on Cup necessary.

Adjustments for variation in specific gravity of the mix are easily made on the Tester itself.



The Cup hanger is easily accessible.

The reading is always made at one place, right under your eye as you stand in front of the Tester and tilt your head slightly forward.

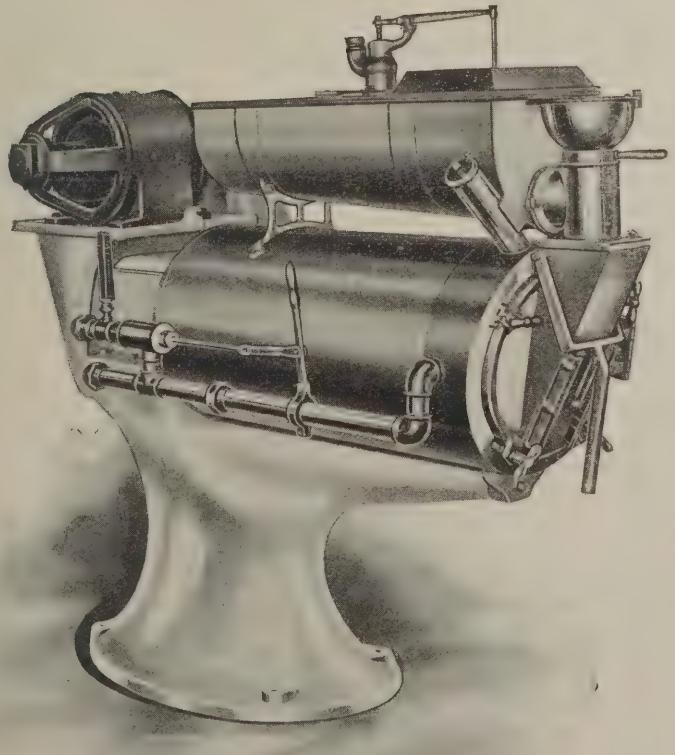
Damrow Brothers Company, Fond du Lac, Wis.

"Ringing out" Cash? or "Ringing in" Profits?



There are at least two channels—that come to mind at this writing—in which a manufacturer who contemplates the purchase of needed freezing equipment can put his money:

1. The dollar may go into freezer equipment that keeps the ice cream manufacturer running into his cash register for **other** dollars needed for repairs, for losses caused by delays and improper freezing. That's the **outgoing** channel!

2. The dollar may go into freezer equipment that costs enough at the beginning so as to insure against constant dollar dribbles and drains in future. That's the **incoming** channel!

You are offered a superlatively good machine in the

EMERY THOMPSON HORIZONTAL

It is making good under all operating conditions. It delivers a good product at low cost and turns out the cream months on end with a minimum of attention. Look into it.

Emery Thompson Machine & Supply Co.

271-275 RIDER AVENUE
New York

The Emery Thompson line

of Brine Freezers includes 40, 60, 80 and 120 quart horizontals — Direct Expansion Freezers — and the "old standby" 40 quart vertical.

We have no trouble in getting butterfat percentage but do not know just how much milk powder to use.

We are now using skim milk powder and sweet butter altogether and for a 2,700-pound mix we use 325 pounds of butter, 300 pounds milk powder, 400 pounds sugar, 15 pounds gelatine, 3 pounds Washburn improver, 1 gallon extract and balance water. Our mix is pasteurized and viscolized on a 2,000-pound pressure and held 24 hours before freezing.

Are there any changes we could make in our present mix that would better it in any way?

Reply: You will find the analysis of the formula given below in table one.

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
325.00 lbs. 84% butter	273.00	.....	273.00
300.00 lbs. skim powder	.....	285.00	285.00
400.00 lbs. sugar	.....	.....	380.00
15.00 lbs. gelatine	.....	.....	14.25
3.00 lbs. improver	.....	.....	2.85
8.40 lbs. extract	.....	.....	1.25
1648.60 lbs. water	.....	.....	.....
2700.00 lbs. mix	273.00	285.00	956.35
Per cent	10.01	10.50	35.40
Per cent sugar	14.80		
Per cent gelatine	.55		

You should have no difficulty getting a very satisfactory ice cream from this formula. I suggest that for the 8 per cent and 10 per cent formulas which you would like to have, you refer to the Ice Cream Mix booklet where you will find an 8 per cent formula on page 27 and a 10 per cent formula on page 32, both being formulas No. 8 on these pages.

Should you not have a copy of this Ice Cream Mix book you can secure this at the regular price of $1.00 from The Olsen Publishing Co., Milwaukee, Wis.

* * *

Dear Sir:—I shall be glad if you will let me know what you think of the following mix or any suggestion for improving same, if necessary. The butterfat content must be 16 per cent.

I am using a Sharples Emulsifier, the first one to be operated in this country (third season now.)

20.0 lbs. 84 per cent butter.
10.0 lbs. Skim milk powder.
11.5 lbs. sugar.
.5 lbs. gelatine.
58.0 lbs. water.

100.0 lbs. mix.

Also, will you give me the figures for a 14 per cent mix using 50 per cent butterfat cream, 4 per cent milk, sugar and gelatine only?

Reply: I have made an analysis of your cream mix as indicated and you will find the calculations given below in table one:

Table 1.

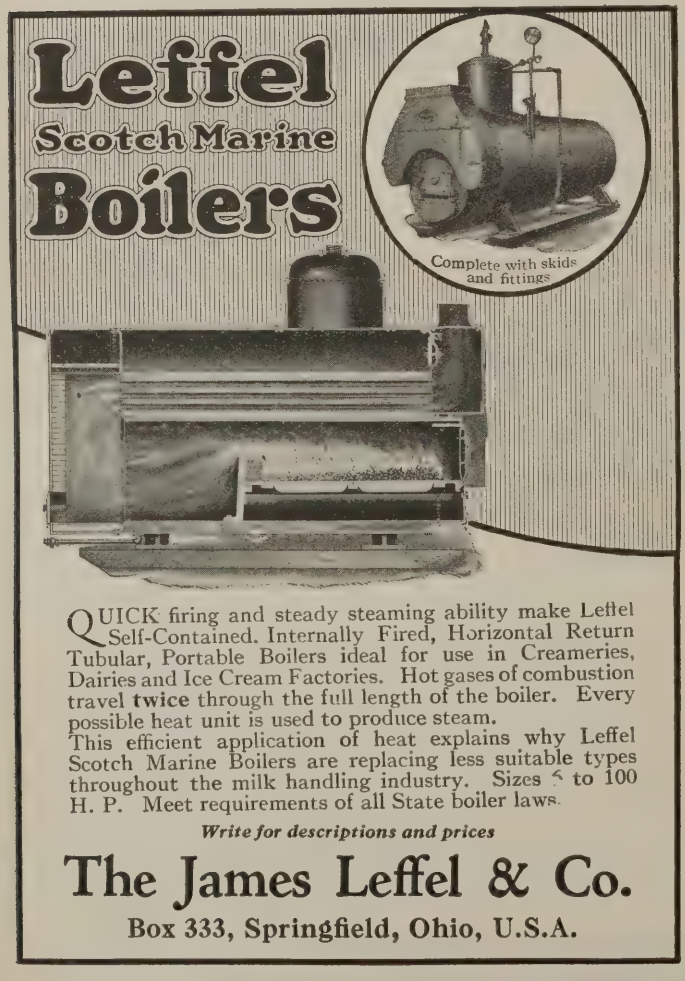
Ingredients	Fat	Serum Sol.	Total Sol.
20.00 lbs. 84% butter	16.80	.....	16.80
10.00 lbs. skim powder	.....	9.50	9.50
11.50 lbs. sugar	.....	.....	10.92
.50 lbs. gelatine	.....	.....	.47
58.00 lbs. water	.....	.....	.....
100.00 lbs. mix	16.80	9.50	37.69
Per cent sugar	11.50		

You will notice that you have now 17 per cent butterfat in this mix and also a high total solids, which is, of course, due to the extra amount of skim milk powder making 9.5 per cent milk serum solids. You will notice, however, that you have only 11.5 per cent sugar in this mix.

I am just wondering whether that does make your cream sweet enough for the average trade. Most of the factories in this country are using at least 13 per cent sugar.

I would suggest that you try revising this formula by using 3 pounds less of skim milk powder and use 3 pounds more sugar and see if that will not improve the quality of your product. I am also suggesting below in table two a mix testing 14 per cent butterfat made from cream and milk without using any extra solids. This should give you very satisfactory ice cream.

Table 2.



Ingredients	Fat	Serum Sol.	Total Sol.
13.00 lbs. sugar	.....	.....	12.40
.50 lbs. gelatine	.....	.....	.47
23.00 lbs. 50% cream	11.50	1.02	12.52
63.50 lbs. 4% milk	2.54	5.43	7.97
100.00 lbs. mix	14.04	6.45	33.36

In the preparation of this mix as suggested in table two I would process it similar to your number one mix by running it through the emulsifier. I am glad to know that you are getting good results with the use of the emulsifier making your ice cream mix out of butter and skim milk powder. If you are able to secure a fine quality of sweet butter and have a fresh, sweet-flavored soluble skim milk powder you should have no difficulty in maintaining a good quality of ice cream.

* * *

Dear Sir:—We would like to make a 12 per cent butterfat smooth ice cream with 100 per cent overrun.

(Continued on page 80)

QUICK firing and steady steaming ability make Leffel Self-Contained, Internally Fired, Horizontal Return Tubular, Portable Boilers ideal for use in Creameries, Dairies and Ice Cream Factories. Hot gases of combustion travel **twice** through the full length of the boiler. Every possible heat unit is used to produce steam.
This efficient application of heat explains why Leffel Scotch Marine Boilers are replacing less suitable types throughout the milk handling industry. Sizes 5 to 100 H. P. Meet requirements of all State boiler laws.

The QUALITY FRUITS

for Discriminating Ice Cream Manufacturers

Crown Fruit & Extract Co., Inc.

418-420 West Broadway

NEW YORK

MEET US IN NEW ORLEANS
November 14th to 16th
Booths No. 57-80

We have a viscolizer. At what temperature would you viscolize?

Herewith is our mix. If O. K. you may report so. If not, tell us how to improve it. How much (gals.) should we get from the finished mix?

Mix.

720 lbs. 3.6% whole milk.
21 lbs. skim milk powder.
15 gals. Libby's evaporated milk.
166 lbs. sugar.
4.5 lbs. high grade gelatine.
132 lbs. sweet butter.
12 oz. Gumpert's improver.

Reply: You will find the calculations of your mix given below in table one:

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
720.00 lbs. 3.6% milk	25.92	61.77	87.69
21.00 lbs. skim powder	.....	19.95	19.95
132.00 lbs. evap. milk	.....	23.76	34.32
166.00 lbs. sugar	.....	.....	157.70
4.50 lbs. gelatine	.....	.....	4.27
132.00 lbs. butter 84%	110.88	.....	110.88
1175.50 lbs. mix	147.36	105.48	414.81
Per cent	12.50	9.10	35.30

You will notice that the per cent butterfat is 12.5, serum solids 9 and total solids 35. In order to get 100 per cent overrun from your 1175 pounds of mix you should get about 260 gallons of ice cream.

You stated that you had a viscolizer. The usual temperature at which a mix is viscolized is 120 degrees. That would mean that after pasteurizing you would reduce the temperature a little before viscolizing. I believe you could make very little improvement in your present mix, especially if you can keep the composition as indicated in table one.

ICE, in the long run, costs more than diamonds

Ucanisters take the ice out of ice cream. Simply take your five-gallon cans of ice cream out of your hardening room and put them into Iceless **Delivering** Ucanisters and save all the salt and ice on the wagon. Iceless **Shipping** Ucanisters save $1.00 worth of salt, ice, express weight, and rate, every time you make a shipment in a Ucanister instead of a tub.

Our Icerettes, installed in your cabinets or your dealers' fountains, or both, save all the salt and ice used in the retailing of ice cream.

Now, then, with mechanically refrigerated factories, Iceless Delivering and Shipping Ucanisters and Icerette Iceless retailing, your ice cream business is completely iceless and the selling of the ice instead of giving it away, the saving of salt, labor, wear and tear, reduction in equipment and the money, positively turn your present gross profits into net profits and you know what that means in dollars and cents per annum.

ICE DEVICES SERVICE, Inc.
SERVICE STATION—550 W. Lake St.
Chicago, Ill.

Licensed Manufacturers Under
WOLF ICE SERVICE DEVICES, DESIGNS, COPYRIGHTS & PATENTS

FRED W. WOLF, Consulting Engineer and Purchasing Agent.

Dear Sir:—We are having trouble with our ice cream mix, one that you figured for us some time ago. We are giving you our complete mix and our means of handling same, so you will be able to advise us.

84 lbs. sugar.
3 lbs. gelatine.
63 lbs. Butter (84 %).
96 lbs. Armours evaporated unsweetened milk.
45 lbs. powder.
309 lbs. water.

600 lbs. Mix.

Which makes from 130 to 140 gallons of finished ice cream. We pasteurize the mix to 145 degrees, hold 30 minutes, then cool over a tubular cooler, and age 48 hours before freezing. We have a C. & B. brine freezer, 40-quart 175 R. P. M. and brine at 10 degrees above.

We draw the cream at about the consistency of sorghum molasses. Cream tastes real good but not quite as smooth as it should be. We have the old style injector type of emulser. Cream, when thoroughly hardened, is completely full of holes, similar to holes in bread after baking. Can you give us the reason and the remedy for this?

Please figure us a formula using the following:

Sugar, gelatine, butter (84%), water, Armour's evaporated unsweetened, and powdered milk containing the following: butterfat, 1.78; moisture, 2.01; protein, 30.93; lactose, 55.36; lactic acid, 00.172; ash, 7.58.

Formula for 10 per cent finished.

Reply: According to your suggestion I have analyzed your present mix, the calculations being given below in table one:

Table 1.

Ingredients	Fat	Serum Sol.	Total Soll
84.00 lbs. sugar	.....	.....	79.80
3.00 lbs. gelatine	.....	.....	2.85
63.00 lbs. butter 84%	52.92	.....	52.92
96.00 lbs. evap. milk	7.68	17.28	24.96
45.00 lbs. skim powder	.....	42.75	42.75
309.00 lbs. water	.....	.....	.....
600.00 lbs. mix	60.60	60.03	203.30
Per cent	10.01	10.00	33.90
Per cent sugar	14.00		

I am also suggesting in table two a 600-pound mix made up according to your suggestions:

Table 2.

Ingredients	Fat	Serum Sol.	Total Sol.
84.00 lbs. sugar	.....	.....	79.80
3.00 lbs. gelatine	.....	.....	2.85
62.00 lbs. butter 84%	52.08	.....	52.08
90.00 lbs. evap. milk	7.20	16.20	23.40
46.00 lbs. skim powder	.82	43.80	44.62
315.00 lbs. water	.....	.....	.....
600.00 lbs. mix	60.10	40.00	202.75
Per cent	10.00	10.00	33.80

The difficulty in your ice cream that you described as being full of holes similar to holes in bread after baking is due to drawing the ice cream too soft from the freezer. If you will do a little experimenting and draw the cream a little stiffer you will overcome this difficulty immediately. You will also find that if you draw the cream just a little stiffer you will secure a smoother product.

I believe that some of your troubles are due to the steam emulser as this type of emulser introduces considerable water into your mix thus reducing the fat and solids and this type of emulser is also liable to heat your mix too high which would give it a cooked flavor.

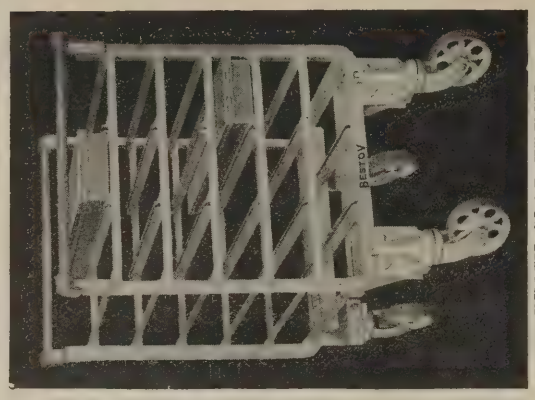
The BEST Vanilla Sells the MOST Ice Cream

There's a BEST in everything

There are many flowers, and then there is the orchid. By the same token, there are many vanillas, and then there is

MICHAEL'S Mexican Vanilla Powder

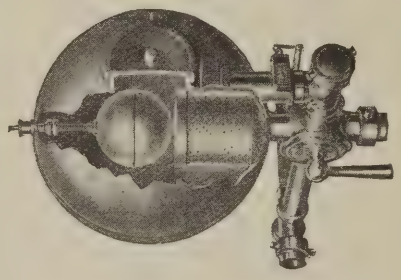
"America's Flavorite"



You may *seem* to save by using a cheaper flavoring. But in the end, it will pay you to use Michael's Mexican in every mix. Because its mellow-mild, lip-smacking flavor makes people eat *more* of that kind of ice-cream. 25% more, as a matter of record! Make the test! Find out!

DAVID MICHAEL & CO., Inc.
Front and Master Sts. Philadelphia, Pa.

Make This Test at Our Expense



Place a trial order. Use all you need to give it a full, fair trial. If MICHAEL'S Mexican Vanilla Powder does not produce the finest vanilla ice-cream you ever tasted, return the remainder at our expense, and we will cancel the charge. DO this, by all means.

BRICK SLAB TRUCK
All sorts of trucks for ice cream plants are described in **Bulletin No. 2308—worth sending for!**

BESTOV ICE CREAM FILTER
Filters out the dirt from the mix, caused by sugar, gelatine and the milk itself. Send for **Bulletin No. 2408** and read all about this machine.

Dear Sir:—I have been reading your Replies to Inquiries in The Ice Cream Review, and I am sending the following 100-pound mix, and would be very glad to have you improve it in any way:

46 lbs. 4% milk (pasteurized to 140 degrees F)
24 lbs. 40% cream (pasteurized to 140 degrees F.)
16 lbs. unsweetened evaporated Carnation milk.
14 lbs. sugar.
.5 lbs. gelatine.

Please analyze this mix and explain the method of figuring the serum and total solids.

Reply: I am very glad to assist you in analyzing your ice cream mix, the calculations being given below in table one:

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
46.00 lbs. 4% milk	1.84	3.83	5.67
24.00 lbs. 40% cream	9.60	1.26	10.88
16.00 lbs. evap. milk	1.28	2.88	4.16
14.00 lbs. sugar	.....	.....	13.30
.50 lbs. gelatine	.....	.....	.47
100.00 lbs. mix	12.72	7.99	34.48

I would say that your mix was fairly well balanced, containing a little over 20 per cent total milk solids. If you are planning to make about 20 per cent butterfat ice cream it will not be necessary to use any skim milk powder for extra serum solids. Should you, however, want to reduce the fat to 10 per cent, it would not be advisable to use a larger quantity of evaporated milk, but rather to make up the solids with skim milk powder.

* * *

Reply to C. G.: While it is rather unusual for me to suggest the manufacture of either an ice cream or a cream with cocoanut fat replacing the butterfat, I am very glad to suggest below in table one how the frozen product could be made by emulsifying cocoanut oil with the other ice cream ingredients:

Table 1.

Ingredients	Fat	Serum Sol.	Total Sol.
14.00 lbs. sugar	.....	.....	13.30
.50 lb. gelatine	.....	.....	.47
10.00 lbs. cocoanut oil	10.00	.....	10.00
4.00 lbs. skim milk powder	.....	3.80	3.80
71.50 lbs. skimmilk	.....	6.36	6.36
100.00 lbs. mix	10.00	10.16	33.93

You undoubtedly know that according to the pure food laws of the United States a product made in this way could not be called ice cream or cream. Many of the states in the Union have passed laws forbidding the sale of products containing other fats than butterfat to be sold as dairy products or substitutes for them. We are still manufacturing in this country in some states a so-called 'filled milk'' which is nothing more than a concentrated skim milk with cocoanut oil replacing the butterfat.

I am also suggesting below in table two how a 25 per cent cocoanut fat emulsion can be made by emulsifying into skim milk. I am stating this for a 25 per cent cocoanut fat emulsion. If you should want a 20 per cent fat emulsion you would use 20 pounds of oil and 80 pounds of skim milk. Similarly you could vary the per cent of fat to any per cent desired:

Table 2.

Table 2.—For a 25 per cent Cocoanut Fat Emulsion.

25 lbs. cocoanut oil
75 lbs. skim milk

100 lbs. 25 per cent cocoanut emulsion.

turn the page and read the story of a million nickel sales a month.

Write for your copy at once.

The Nickel Comes Back

The folder which we offer to send you at once, upon request, goes into the details of the tremendous possibilities of "The Big Idea". There isn't room enough here to give you more than an outline—enough, however, to let you judge the merits of the proposition for yourself.

3,000,000 Nickel Sales in 90 Days

OURS is a nickel proposition. You know what that means in the ice cream business. The dime has proved a good money maker in the past, but it was the little nickel that carried the wallop of big volume. Ice cream men have the kind of confidence in the nickel that grows from the cheerful jingle of busy cash registers.

The first ice cream manufacturer who took up our proposal made 3,000,000 sales in 90 days. And he is continuing to sell at a fine clip without any special effort at all.

A New Market For Your Ice Cream

A steady sale of such volume might be enough to cheer the doubters, but there are other benefits resulting from this nickel proposition.

1. It not only creates new business for you, but steadies your production and sales all the year 'round.

2. It stimulates demand for *your* brand during the *winter.*

3. It opens new markets for you—takes your ice cream on outings, picnics, to parties where otherwise *no* ice cream at all would be served.

4. It gives you a decided advantage over other manufacturers—if you are the first to take it up in your territory.

5. It is a money maker for your dealers also, particularly when their normal gallonage is low.

Facts---not Theory

We are not theorizing—the facts and figures which are given in detail in "The Big Idea" are based on the actual experience of a number of manufacturers who jumped at the opportunity as soon as it was put to them.

We have now brought our manufacturing facilities to a point where we can offer the same opportunity to you.

Write for "The Big Idea" today—and let our representative discuss it with you personally.

DIXIE CONTAINER DEPT.

Original Makers of the Paper Cup

CALIFORNIA DAIRY OUTPUT GAINING.

Butterfat production in California during the fiscal year 1923-24 will show an increase of 5,000,000 pounds over the preceding year, giving strongest indication of the firm foundation upon which the dairy industry stands. This is according to preliminary figures compiled for his annual report by Dr. J. J. Frey, chief of the state bureau of dairy control, and released through California Dairy Council.

J. J. Frey.

The increase is despite unusual conditions which confronted the industry—an exceedingly dry season and a visitation of the foot-and-mouth disease, now stamped out. The growth, however, has not kept pace with the 1922 increase, which was 15,000,000 pounds of butterfat.

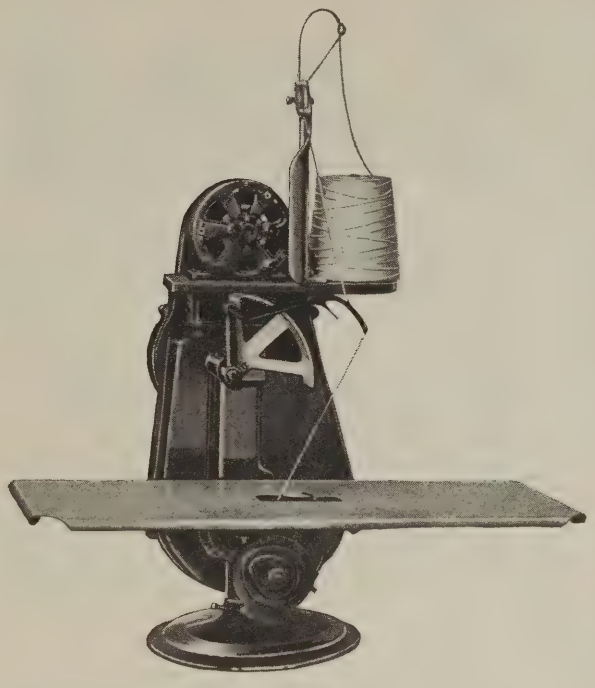
The butterfat total for the fiscal year just closed will be around 125,056,672, according to Dr. Frey. Butter will show an increase of about 1,500,000 pounds over the previous year, when production was 76,976,244 pounds. There has been an increase of 15,000,000 pounds in the output of evaporated whole milk, and ice cream manufacture has grown more than 1,000,000 gallons. Ten million more gallons of market milk and cream were distributed than in the preceding year, but the output of cheese shows a slight falling off from the previous year's mark of 7,888,210 pounds.

The relative positions of several dairy producing counties will be shifted when the final report is made, according to Dr. Frey:

"In general the irrigated counties will show an increase, except Glenn and Kings, while the natural pasture counties will show a decrease, with exception of Humboldt. The East Mountain counties in general will show a gain."

The greatest percentage of increase has been in Colusa county, with Orange next. Other counties with a heavy percentage of increase are, in the order given: Nevada, Riverside, El Dorado, Ventura, Kern, Shasta, Fresno, Madera, Butte, and Humboldt.

Dr. Frey's final report is nearing completion. Further rechecking, he said, may modify some minor details, but no material changes are expected.



The Benham Ice Cream Company of Fresno., Cal., has not changed its name to the L. W. Wilson Company, Mr. Wilson, general manager of the firm, declares in denial. He explains that a new corporation known as the L. W. Wilson Company was recently formed in Fresno to handle a lot of real estate belonging to himself and Mr. Benham. This company will have nothing to do with ice cream.

"KIDDING."

Thirsty days hath September, April, June and November. All the rest are thirsty, too, unless you make your own home brew.

Nearly 100% Popular in Chicago

Practically all the brick ice cream in Chicago passes over the platforms of "Saxmayer" Bundle Tyers.

These clever little machines have been almost universally adopted by Chicago ice cream manufacturers, who save thousands of dollars annually through their use.

Every knot is neat and uniform.

There is no waste string.

Operator needs no experience.

Does the work of several hand tyers.

Practically nothing to get out of order.

Automatically adjusts to various size packages.

Free Trial If You Wish

We would like you to try a machine for ten days, in your own plant, on your own work.

You may return it without question, if you are not convinced that you need it, and that it will pay for itself in a short time.

BLISSFIELD, MICH.

Sealright

Liquid-Tight

Paper Containers

Here's why Sealrights are absolutely 100% leak-proof: Double bottom, reinforced crimped-in flange and patented "inner seal" are exclusive Sealright features.

Make More Money for Yourself and Your Dealers

There is a sure way to do it. Manufacturers from every section of the country—and their retailers — have increased profits by using Sealright Containers.

Here's the reason: Sealrights offer you the easiest, cheapest and most profitable way of handling ice cream from the time it is manufactured until it is eaten by the ultimate consumer.

Either fill Sealrights direct from your freezer, or with an improved Sealright Ice Cream Filling Machine; then place in hardening room until ready for delivery.

Only **two** simple operations as compared with eight or ten the old way. It's a big help to the retailer, too. And it has been proved beyond a doubt that his (the retailer's) customers prefer their ice cream in neat, attractive Sealright Containers and appreciate the convenience of Sealright Service.

You can be sure that every Sealright Container is 100% leak proof and absolutely perfect. The name Sealright is stamped on top and bottom of every genuine Sealright Container and printed on sides of Cartons in which they are packed. Large output, plus large resources and a vast distributing organization covering the whole country, assures you prompt, efficient deliveries and service.

If you are interested in increasing turn-over and profits, fill in and mail the coupon below. Prompt action will pay you.

You SEE the Inside of Every Sheet

When you buy ordinary corkboard you see the **outside** of the sheet only—because you use it just as it comes from the ovens. There is no way of knowing whether or not the **inside** of the sheet is properly baked. And, not knowing this, you have no assurance that your insulation will **last!** For Corkboard with a "green" or insufficiently baked center quickly disintegrates. And your so-called "insulation" becomes a total loss.

Now note the difference in

NOVOID Corkboard

Every 2-inch sheet is a 4-inch slab sawed down through the center. You can SEE the inside of the sheet you use because **one side represents the very center of the original 4-inch sheet.** You can also see the center in the other direction, as every 12-inch sheet of Novoid Corkboard is half of a 24-inch sheet. Two inner surfaces laid open for your inspection.

A close examination of a sheet shows that the baking process has been uniform—the color is a chocolate brown on both sides, and the granules are just as tightly cemented together on one side as on the other with the natural gum in the cork that is liberated by proper baking.

No other corkboard is cut from larger sheets, like Novoid, hence no other corkboard gives you the positive, visual evidence of durability.

A sample of Novoid Corkboard, together with descriptive booklet, sent on request. Drop us a postcard today.

CORK IMPORT CORP.

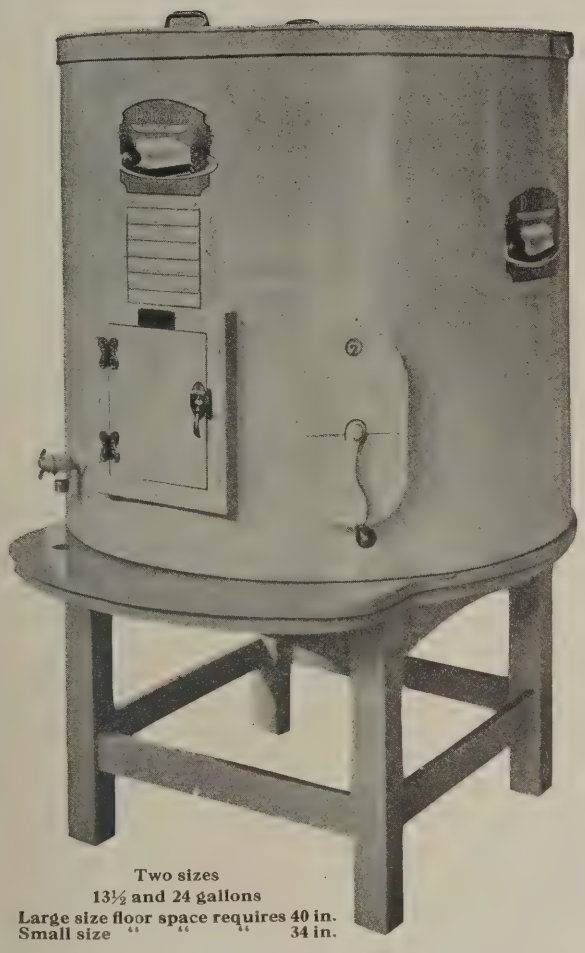
MILK TRANSPORTED FROM PITTSBURGH ARRIVES IN MILWAUKEE SWEET.

A transportation feat which is the most unusual of its kind ever attempted, was staged in connection with the National Dairy Exposition in Milwaukee. A glass lined truck tank full, of 1,300 gallons, of pasteurized milk was started out of Pittsburgh Saturday, September 27, at 10:05 p. m., and pursued its way along slippery roads under adverse weather conditions.

The milk was cooled to 36 degrees F. before being run into the tank; the tank was operated by the Harmony Creamery Co. of Pittsburgh and the milk went through in their name.

The trip consumed approximately 56 hours and the tank arrived at Milwaukee Tuesday, 4:30 a. m. It was then taken to the health department where Drs. Thompson and Pilgrim officially broke the seals. Samples of the milk were taken, and Dr. Pilgrim reported on his findings.

The milk showed an acidity test of 12.7—which is remarkably low—17 and 18 being passable on ordinary market milk. The butterfat test showed 4.2 and the temperature increase was only 5 degrees F., the official reading being 41 on arrival.



The tank truck was then taken to the State Fair grounds where the milk was dispensed free. Crowds took advantage of this and 28,000 glasses of milk was given away.

The significance of this test lies in the fact that milk may now be transported enormous distances in glass lined truck tanks to meet the ever-growing demand of the milk consuming public.

⚜

Laugh, and the world laughs with you,
Snore, and you sleep alone;
For the truest bride will leave your side,
For a quiet bed of her own. —Gym.

Now Your Dealers Can "Display" Your Ice Cream

Two sizes
13½ and 24 gallons
Large size floor space requires 40 in.
Small size " " " 34 in.

Successful merchandizers realize the value of "displaying" their products—bringing them right out where the public can not help but see them.

The Gearhart Selective Sales Cabinet

brings your ice cream out from back of the counter and presents an inviting appeal to the store customers.

Its power of suggestion really sells ice cream and the selective feature spells actual service in delivering the particular variety and size of package selected.

Quarts, pints, and half pints in six varieties all delivered with equal ease and speed by a turn of the handle.

Let us show you some real sales results from these silent salesmen

GEARHART SALES CABINET CO., INC.
CLEARFIELD, PENNA.

The Gearhart Ice Cream Package Filler

fills 40 packages at one time, either Quarts, Pints or half-pints. Absolutely full measure. No waste. Each carton is spotted and then clamped fast; the top is then brought over and the openings being beveled slip securely over the cartons. The exact amount of ice cream is then poured in and leveled. The top is thrown back and the cartons topped and closed. Compact, only occupies 20 x 40 inches.

Send for illustrated folder showing operating details.

How To Analyze Delivery Problems

Of Interest to Ice Cream Manufacturers is This Account of a Transportation Engineer*

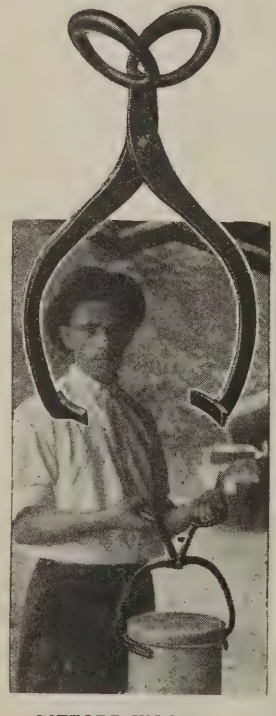
THE electric truck, as a quality product that must be sold on a basis of ultimate price, is an acid test of truck salesmanship. Its big field is the 50 per cent or so of commercial hauling still done by horse equipment—the equipment which apparently costs the least. Its biggest success has been in the bakery, laundry, department store, express, ice cream and dairy industries—all of which, excepting department stores, pay a very large proportion of their earnings for delivery and all of which do business on a very narrow margin of profit. Yet large fleets of trucks are sold to these industries, at a first cost which entails an initial outlay several times as great as the "cheapest" equipment.

The methods followed in doing this are worthy of careful study by the dealer who handles the more expensive grades of gasoline truck for, in another field—that of long hauls—he faces the same problem, viz.: **How to overcome cheap first cost competition with lowest ultimate costs.** If, in his case the problem is intensified by ridiculous trade-in allowances and crazy credits by his competitors, **it only increases his need for a method of selling which will raise him to the status of a technical adviser.**

THE Crescent** Baking Company, for whom the route analysis described below was made, had 30 electric trucks and 58 gas trucks—44 of which were of the medium priced make and 14 of the more expensive sort. The data furnished by their auditing and superintendent's departments covering two years' operations of practically all their present equipment had disclosed considerably lower operating and upkeep costs for their electrics and they desired to apply them to as many routes as possible.

This problem did not lend itself to a spectacular exhibition of transportation engineering for the following reasons:

1. The baking companies present equipment was an excellent one—far better than that of the average company for which such surveys are made.
2. The routes were, generally speaking, well and scientifically laid out—preventing the possibility of making big savings by route rearrangement.
3. As the bakery was located in a medium-sized city, the routes comprised a comparatively large number of rural routes and a smaller proportion than usual of short urban ones.
4. The bakery did a wholesale business exclusively, which reduced the number of stops per routes, thereby narrowing the problem and depriving it of many interesting aspects.
5. The company by keeping a careful and accurate check on their costs, excepting for a few errors which I will point out later, had made much of the customary work of a transportation engineer superfluous.



However, the very fact that I was up against real competition by real trucks, not cheap or second-hand equipment, makes it an interesting and valuable study, from a transportation engineering view-point. While the dealer who handles high-class equipment may find it harder to point out big economies to the man in charge of a large well-managed and carefully selected fleet—he is easier to sell to because he is usually more intelligent, far-sighted and open-minded than the little fellow.

Obviously, the problem demanded very conservative handling and I would recommend the course followed to any dealer or salesman who is selling equipment that is high in initial price, whether gas truck or electric, but lowest in ultimate cost. This course was to recommend my company's trucks only for routes on which the economies would be large, leaving the client's ledger to sell additional equipment as his present trucks wore out in the cases where the savings, while substantial, would be smaller. Difficult though this course may appear to the dealer with a payroll and rent bill to face, he will be more than repaid in the long run if he adopts it.

My eventual recommendations only called for substituting electrics for gas trucks on only 12 routes—where the annual saving ran to a considerable figure.

An experienced route analyst can usually approxi-

More Edison Batteries Than All Others Combined

ACCORDING to the admission of a competitive company, Edison Batteries constitute 55% of all batteries in use in the power fields—that is, propelling electric street trucks, industrial trucks and tractors, and mine locomotives. The remaining 45% is divided among all the other battery manufacturers.

This is particularly significant when we remember that all this has been done in fifteen years. It is a wholesale endorsement of the Edison Battery principle and Edison Battery endurance and economy in operation.

There could be no stronger recommendation than that so many users, large and small find it profitable to replace other batteries with Edison and continue to use Edison.

Leading Electric Truck Manufacturers gladly furnish Edison Batteries.

Built like a watch,
—Rugged as a battleship.

mate within a few dollars a prospect's monthly feed, gasoline or repair bills without the aid of any more data than the number and general appearance of his horses, vehicles, the location and size of his stable or garage and other information that can easily be secured without troubling the prospect.

THE first impression one receives on beginning a route survey for a bakery or milk company is the difference in personal comfort entailed by getting out of bed at midnight. After he has done this for several months on a stretch he appreciates home comforts.

It is a good plan when commencing a route survey to spend several days in the garage absorbing the details of the client's policy and studying the peculiarities of the men. The route analyst, if he is to be successful, must never forget that he is dealing mainly with flesh and blood. He must make the route salesmen forget he is a "white collar" man and win their friendship and confidence. The garage superintendent will be able to enlighten you as to their idiosyncracies.

One common peculiarity of bread salesmen is their dislike of being spoken of as drivers or chauffeurs. The last is considered almost an insult.

Here it may be of value to digress from this specific problem and recapitulate the fundamental principles of transportation engineering as applied to route surveying.

The following facts must be obtained before it is possible to recommend the proper transportation unit to cover a route most economically:

1. Maximum miles to route.
2. Average miles to route.
3. Maximum weight of load.
4. Average weight of load.
5. Number of cubic feet to load.
6. Average number of stops.
7. Ratio of standing and running time.
8. Grades—number and per cent.
9. Road conditions.
10. Working hours on route.

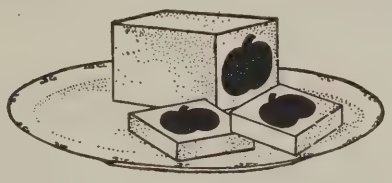
If a truck equipped with a speedometer or hub odometer is not available, mileage is best determined by laying out the route on a sheet map and measuring it with a scale. In no case should the driver's estimate be relied upon as it is almost invariably high.

Assuming that a demonstration truck is available, readings for one "heavy" and one "light" day will usually suffice in the case of a bakery or dairy. For a laundry these days, including both collection and delivery should be taken; for department store or express companies even a larger number of days are desirable.

You can determine the **weight of load** most accurately by first weighing the truck empty and then weighing it loaded on a wagon scale. When no wagon scale is available, weight should be calculated from the daily loading sheet.

Daily loading sheets for a considerable period of time will give the maximum load.

The **volume of load** in the baker business is best calculated by determining the number of cubic inches in a standard loaf of known weight.



It is my practice to keep a time record of each individual run and stop on a special sheet designed for that purpose which is standard for several electric truck companies. In this way a record can be made of each stop and, by analysis one can determine for the customer where the time leaks are.

A more common but not so satisfactory method is to use a stop watch of the type that does not run back to zero but merely stops when shut off. The standing time

Carry Out Pail Cedar Tub

Better Packing

YOU cannot meet competition with poorly packed cream —

And you can't do good packing with poor tubs and cans.

Our Ice Cream Packing Tubs and Carry Out Pails are extra-heavy, seasoned, everlasting, Virginia White Cedar, painted inside and out. Heavy galvanized hoops and stamped steel handles. Illustration shows the regular Western Style Tubs.

Our Ice Cream Packing Cans embody all sanitary and retinning features claimed for seamless cans. Leakproof. There are no seams, and they are easy to clean and keep clean. Electric-welded inserted bottom — roll top edge.

Rolled Top Edge. Wire Ribbed Bottom.

It will pay you to examine your stock of tubs and let us have your order *now* before you run short. Always in stock for prompt shipment out of Syracuse.

Department B

"The HOUSE with the GOODS and the SERVICE"

GOWING DIETRICH COMPANY INCORPORATED Syracuse N.Y., U.S.A.

"Everything for the Handling of Milk and its Products"

is determined by deducting the not-running time from time spent on route.

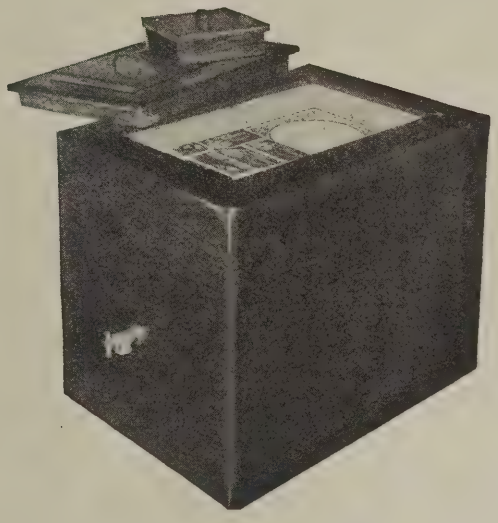
To return to the Crescent Bread Company's routes. During the time I had spent in our client's garage I had noted carefully the name of the route salesman on each route, and collected such details regarding their individual tastes and peculiarities as would be useful to me.

The route salesmen of this particular company were of an excellent type—experienced, hardworking and well trained. They make two daily trips—the first starting from midnight to 1 o'clock and ending at 7 or 8, the second beginning at 10 a. m. and terminating about noon. They were paid a salary and commission basis and earned very good wages.

ALL of the baking company's electric truck routes and some gas truck routes were covered by a demonstrator truck equipped with hub odometer and speedometer and the data previously described was gathered in each individual instance. Here is the average data for present and prospective electirc truck routes in parrallel columns:

	Present Electric Truck Routes Average	Prospective Electric Truck Routes Average
Truck stops.....	64	90
Customer stops...	77	..
Running time....1 hr. 58 min.		2 hrs. 41 min.
Standing time.....4 hr. 43 min.		2 hrs. 44 min.
Average load.....	1580	1666
Maximum load....	1959	1966
Roads	Poor to good	Half poor—half fair to good
Daily mileage.....	15.8	22.5
Amphere hour consumption	105	179
Amphere hours per mile	6.7	8.1
Aver. distance between stops in miles	.257	.227
Speed miles per hour	8.04	8.45

It will be noted that the average running time of the demonstrator truck averaged 2 hrs. and 41 min. as against 4 hrs. and 44 min. for standing time. This ratio of running to standing time is unusually high and testifies to the loyalty, intelligence and energy of the route salesmen.



The speed of the demonstrator truck loaded varied from 10 to 13 miles an hour. Operated under the same conditions of road and weather on the same route, it was found that the running time of the demonstrator averaged 8.5 miles per hour as against 9.3 miles per hour for a gas truck with a controlled speed of 25 miles per hour. This gave a higher speed for the gas truck of .8 miles per hour or to put it in another way, the electric took 10 minutes longer to run a 22.5 miles route.

Of course, this difference was negligible and the lower operating and upkeep costs and slower depreciation of the electric truck made it more than worth while to disregard it. In view of the lightening of his work, which the electrics involved, due to the fact that no gear shifts are necessary, the route salesman would not grudge the few minutes additional time per trip on the route.

Referring to the route data given above—it represents sub-average conditions so far as speed and roads are concerned. It rained continuously during the speed tests of gas trucks and electrics and the roads were wet and muddy during the entire month in which the tests were made.

My rating of "poor," "fair" and "good" were made on the following basis:

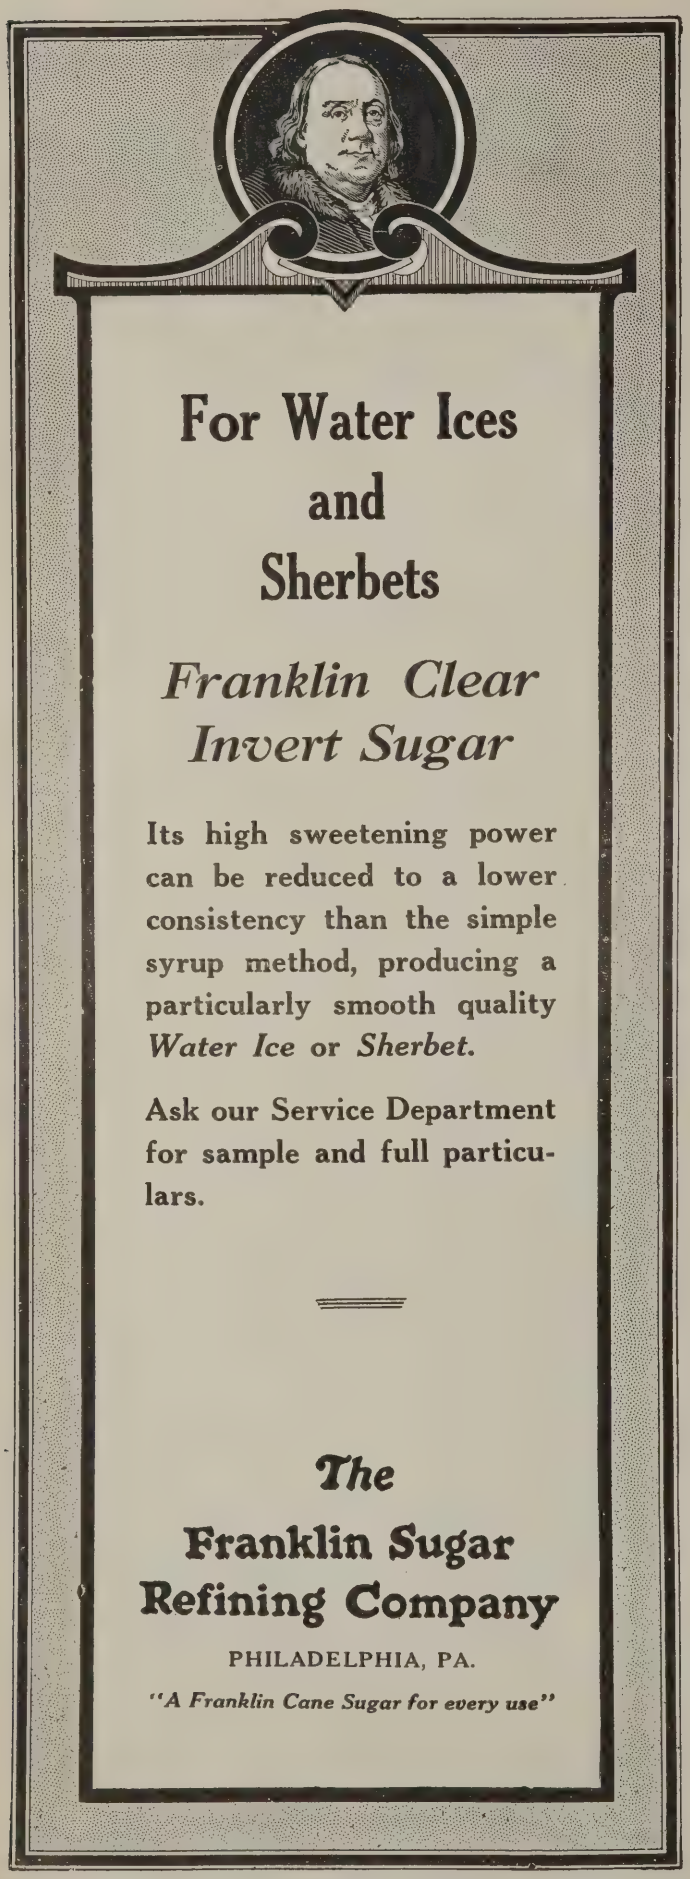
Dry Zero Insulation

"Stays Put"

Examination of Dry Zero Cabinets that have been jostled around and bumped in and out of storage, deliver the same efficiency as cabinets fresh from our factories.

They prove that not only is Dry Zero the ideal insulating material, but also that its method of application to ice cream cabinets gives a lasting service at 100% efficiency.

For a better insulated cabinet that will make your ice and salt go farther and save the time of your "service man" try a Dry Zero Cabinet subject to YOUR approval.



48 hours on one icing

You can have a Dry-Zero Universal Cabinet shipped to you subject to your approval after full test at your plant.

Send for one and try it out

Dry Zero Insulation Co.

50 East 42nd Street NEW YORK CITY

Clay roads with deep ruts....."poor"
Macadam covered with mud....."fair"
Concrete roads ....."good"

In addition to the routes which were run by the demonstrator truck, general data on loads, trips, etc., of routes not covered was obtained in the office of the baking company.

CROSS-COUNTRY ADVERTISING FOR ICE CREAM.

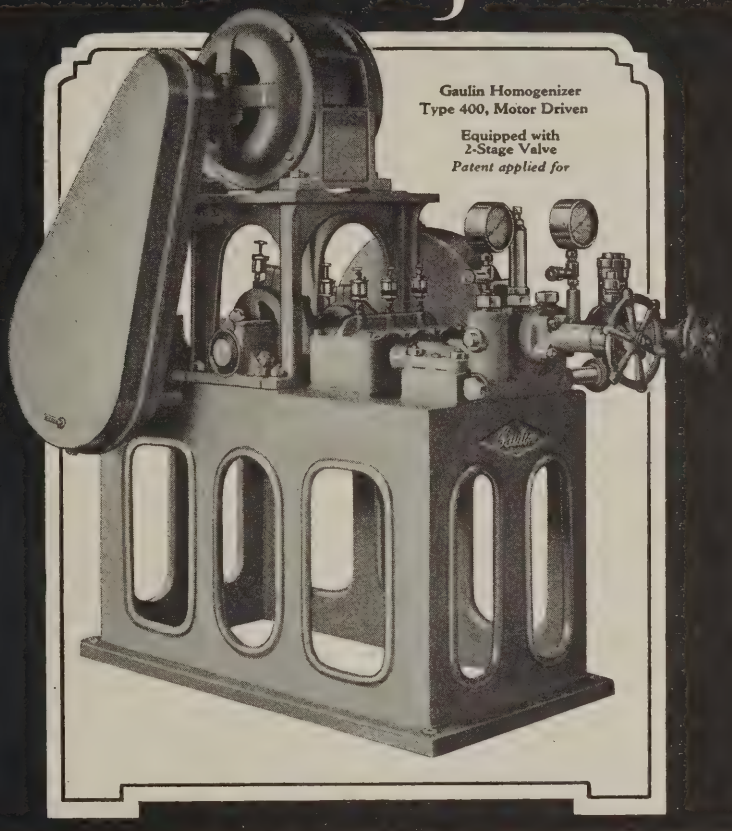
A striking method of advertising ice cream over the highways from the Atlantic Seaboard to the western shores of Lake Michigan when Howard Black of the John Mulholland Co. traveled to the National Dairy Exposition in the automobile shown in the accompanying illustration.

Several days prior to the exposition, Mr. Black was in a quandary as to how to work up a novel advertising

The Cross-Country Ice Cream Ad.

feature in connection with his trip. He finally decided upon the novel scheme as shown in the cut. Everywhere he stopped he drew attention to ice cream. At the exposition his car was parked a great part of the time in front of the Auditorium. Passersby often stopped and read the ice cream ad with interest. Mr. Black probably will stick to this scheme in future travels over the country by auto.

D. D. KEELER PASSES AWAY IN TEXAS.



The passing away of D. D. Keeler has removed from the Texas ice cream industry one of the pioneer ice cream manufacturers of that state. He entered business at Gainesville, Tex., in 1884, under the name of the Keeler Ice Cream Co. He was 66 years old at the time of his death. He is survived by a daughter. The business now is being operated by his son-in-law, M. M. Anderson.

SHE KNEW.

"Who discovered America?"
"Ohio," replied the little girl.
"No; Columbus discovered America."
"Yes'm, Columbus was his first name."

Gaulin TRADE MARK

Gaulin Dependability

Gaulin Homogenizer
Type 400, Motor Driven
Equipped with
2-Stage Valve
Patent applied for

THE Gaulin Homogenizer is a *Dependable Homogenizer* and has no equal in quality or performance! Years of constant use by the leading ice-cream manufacturers the country over have proven its superiority over every other machine of its kind manufactured—they find the "Gaulin" *practically indispensable*. In length of service the "Gaulin" leads the field—*it is built to last.*

All Gaulin Homogenizers are now equipped with the Gaulin 2-Stage Valve, a recent development which insures a more thorough homogenization of the product than with the Original Gaulin Spring Valve. The dual valve feature not only increases the homogenizing efficiency over 100%, but is the only device manufactured that *positively controls viscosity.*

The results obtained by users of the 2-Stage Valve equipment have been very gratifying, and its many advantages over the single valve have resulted in its adoption as *standard equipment* in many prominent manufacturing plants where previously the single valve had been in use.

When the 2-Stage Valve was adopted we had on hand a supply of Gaulin single valves, and to those who may wish to take advantage of special prices we are offering *Genuine Gaulins* equipped with the Original Gaulin Spring Valve at substantial reductions. Prices for the various sizes will be submitted upon request.

Watch for the *Gaulin* Trademark

THE PURE MILK DAIRY COMPANY HANDLES MILK FROM COW TO CONSUMER.

California is noted for many excellent dairy plants and one of the most notable in the entire state is that of the Pure Milk Dairy of Los Angeles. In their effort to insure a high grade product for their customers, they maintain two dairy ranches comprising some six hundred tuberculin tested cows which have a twelve-months' herd average of 468 pounds of butterfat per cow. These ranches produce Guaranteed and Grade "A" raw milk. In addition to the product from their own herds, they purchase a large quantity of milk and cream outside, but they exercise close supervision over all of their producers, and their Grade "A" raw milk and Guaranteed milk customers are supplied from their own herds only.

Besides the two brands mentioned, they distribute Certified and Grade "A" pasteurized milk and cream. They also distribute eggs, domestic cheese and "Chow May" sandwich spread.

The manufacturing end of their business is large, including a million and a quarter pounds of butter, 800,000 gallons of ice cream and great quantities of Eskimo pies, ice, cheese and condensed skim milk. They build their own wagons and ice cream cabinets and maintain blacksmith, machine, electrical and paint shops.

Each day they bottle from 25,000 to 30,000 bottles of milk, cream and buttermilk and distribute them by means of 25 horse-drawn wagons and 29 automobile trucks.

They go to considerable lengths to co-operate with the milk producer and help him to show a profit. One example of this is evinced by their custom of advancing money for the buying of feed when feed prices are favorable, their purchases of hay, grain and mill feeds amounting to 150 or 200 carloads a year. They also call the producers together for consultation when changes in retail or wholesale prices are advisable or when changes in policy are contemplated. By taking the producer into their confidence, and treating him justly, they have eliminated the ill feeling that frequently exists between the two groups. As a result of their co-operation with the producers, the average bacteria count for all shippers over a twelve months' period is under 20,000 cc.

The Pure Milk Dairy Co. was organized in 1913 by Henry F. Schnell and has shown a steady growth sinee that time. The present plant would cost $75,000 to replace and 153 employees are required to operate it.

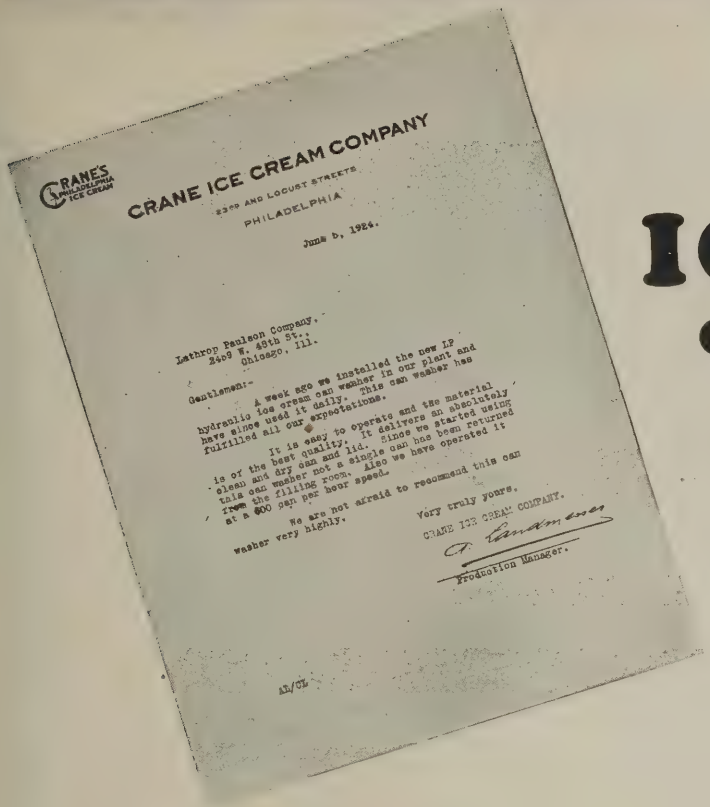
Mr. Schnell, the president, has been engaged in the production and distribution of milk and cream for over 35 years and Waynes A. Hood, vice-president and general manager, has been engaged in some branch of the business for 32 years. Both of these officers are fanatics on the subject of clean milk production, quality equipment, high grade dairy products and a square deal policy to producers, employees, consumers and stockholders.

Their equipment includes 13 Wizard pasteurizing vats, a Davis milk pasteurizing system, Ft. Atkinson and Progress ice cream freezers, a Disbrow churn, Davis fillers and cappers, cheese vats and considerable other equipment.

In order to insure the quality of their product, the cooling room, bottling room and butter-cutting and wrapping rooms are all glass enclosed. The butter-wrapping and cutting rooms are in view of the passing public and this attracts a great deal of favorable attention.

The Lux Ice Cream Company, Mt. Vernon, Wash., has completed an addition to its hardening room. This will enable the firm to take care of its increasing business.

* * *



Work has been started on a new plant building for the Cutlip Ice Cream Company, North Bend, Ore. The firm expects to be operating in it before the end of the present season. Mr. Cutlip purchased a large lot at the corner of Sheridan and Washington streets for the new factory, which will be a Class A structure, especially designed for ice cream manufacturing and which will house one of the most modern plants in Oregon.

ICE CREAM AND ELECTRICITY MIX.

We are now reasonably assured that the ice cream business will never become a public utility, at least in Minneapolis. For one reason or another, which the Twin City fellows have been unable to explain, the ordinary vehicle used for carrying human freight in Minneapolis, and the modern conveyance for our "National Dish" do not get along very well.

It seems Milady Ice Cream in her new limousine crossed the path of a street car a moment or two too soon—or was it too late? The accident happened at 23d and Central Avenues, Minneapolis, when a Bloomington street car collided with an ice cream truck owned by the Northwestern Ice Cream Company of that city. No one seriously hurt—Milady Ice Cream held her cool composure in the refrigerator body, while Sam Gemmel, her chauffer, jumped to safety, and the motorman was slightly bruised and cut by glass. Damage to the refrigerator body, the product of the Joseph Miller Co., Minneapolis, and the truck was slight, the principal loss being a couple hours' time and ice and salt.

CRANE ICE CREAM COMPANY
23rd AND LOCUST STREETS
PHILADELPHIA

June 5, 1924.

Lathrop Paulson Company,
2459 W. 48th St.
Chicago, Ill.

Gentlemen:-

A week ago we installed the new LP hydraulic ice cream can washer in our plant and have since used it daily. This can washer has fulfilled all our expectations.

It is easy to operate and the material is of the best quality; it delivers an absolutely clean and dry can and lid. Since we started using this can washer not a single can has been returned from the filling room. Also we have operated it at a 600 can per hour speed.

We are not afraid to recommend this can washer very highly.

Very truly yours,
CRANE ICE CREAM COMPANY,
A. Lamson
Production Manager.

AL/CL

L.-P.

ICE CREAM

Can Washer and Drier

Fast, Efficient and Fool Proof.

Washes All Sizes of Cans and Covers from 20 qts. Down to 4 qts. Small Cans May Be Washed Together with Larger Ones Increasing Capacity to 1200 per Hour.

Cans Are Fed in and Delivered at the Same End of Machine.

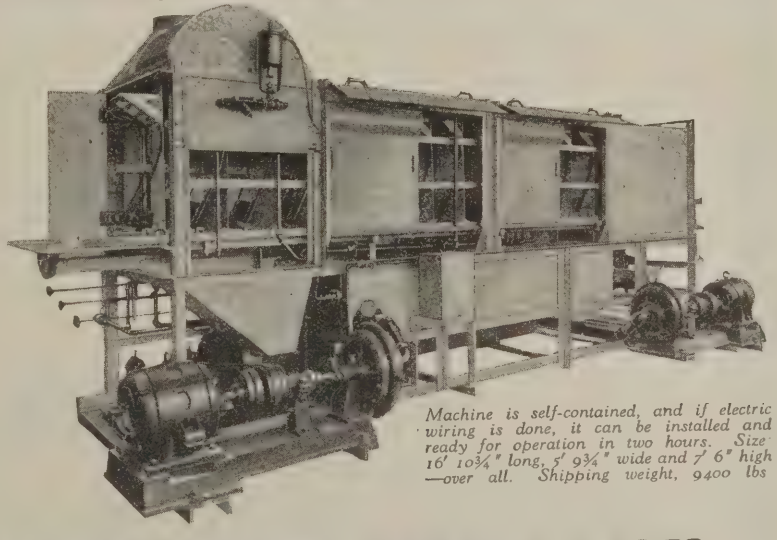
This machine embodies many of the L. P. features of efficiency, simplicity and durability which characterize L.-P. equipment.

600 Cans and Covers or Brick Pans Per Hour

Absolutely Clean, Sterile and Dry

THIS machine has two speeds—600 and 300 per hour. At the 600 speed it will efficiently wash, sterilize and dry all ordinary city and shipping cans, and at the 300 speed it cleans, sterilizes and dries the dirtiest of cans. Handled at 600 per hour, cans, brick pans and covers come from the machine **absolutely clean, sterile and dry.** Cans are washed on outside as well, freeing the cans, lids, pans and covers from brine. This machine eliminates the necessity of washing cans and covers separately. Cans which have been stored and coated with oil do not have to be brush washed. They come out ready for service, or may be piled in storage racks without danger of rust. The machine will also handle brick tanks up to 12-qt. size.

Each Can Receives 17 Distinct and Intensive Treatments



All cans are placed in machine upright. They are first thoroughly rinsed with preliminary tempered water, which thoroughly flushes out the cans, freeing them from refuse. This rinse water is caught in a separate tank and carried away. They are next washed inside and out with six separate intense soda solution treatments under 40 lbs. pressure; they are then entirely freed from soda and thoroughly drained before receiving six clear hot water washes, which are followed by scalding hot unused water rinse. Next comes the steam, inside and out, thoroughly sterilizing the cans, lids, pans and covers. They then pass over two hot air jets (the same as are used on all L.-P. Can Washers) and are delivered absolutely dry and ready for immediate service.

Only two men are required to operate the machine at maximum speed, and one man can handle the work efficiently at the 300 speed.

There are two powerful pumps operated by 10 h.p. and 7½ h.p. motors in separate units. No other power required.

The machine is sturdily constructed and heavily galvanized. Temperatures are thermostatically controlled. Soda solution is automatically controlled by L.-P. patent Soda Regulator.

This machine has passed its experimental stage. It has stood the most rigid tests in actual operation, and is sold on a results-guaranteed basis. Write for full information and names of users.

Machine is self-contained, and if electric wiring is done, it can be installed and ready for operation in two hours. Size 16' 10¾" long, 5' 9¾" wide and 7' 6" high —over all. Shipping weight, 9400 lbs

PURE CHOCOLATE AND COCOA

BROOKLYN and BALLSTON SPA, N. Y.

ESKIMO PIE sales are now surpassing all previous records. They are still increasing. Distribution has become universal.

Eskimo Pie is now being manufactured in every large city in the United States.

You should manufacture Eskimo Pie. It is a money maker. Our best endorsement is your associated manufacturers.

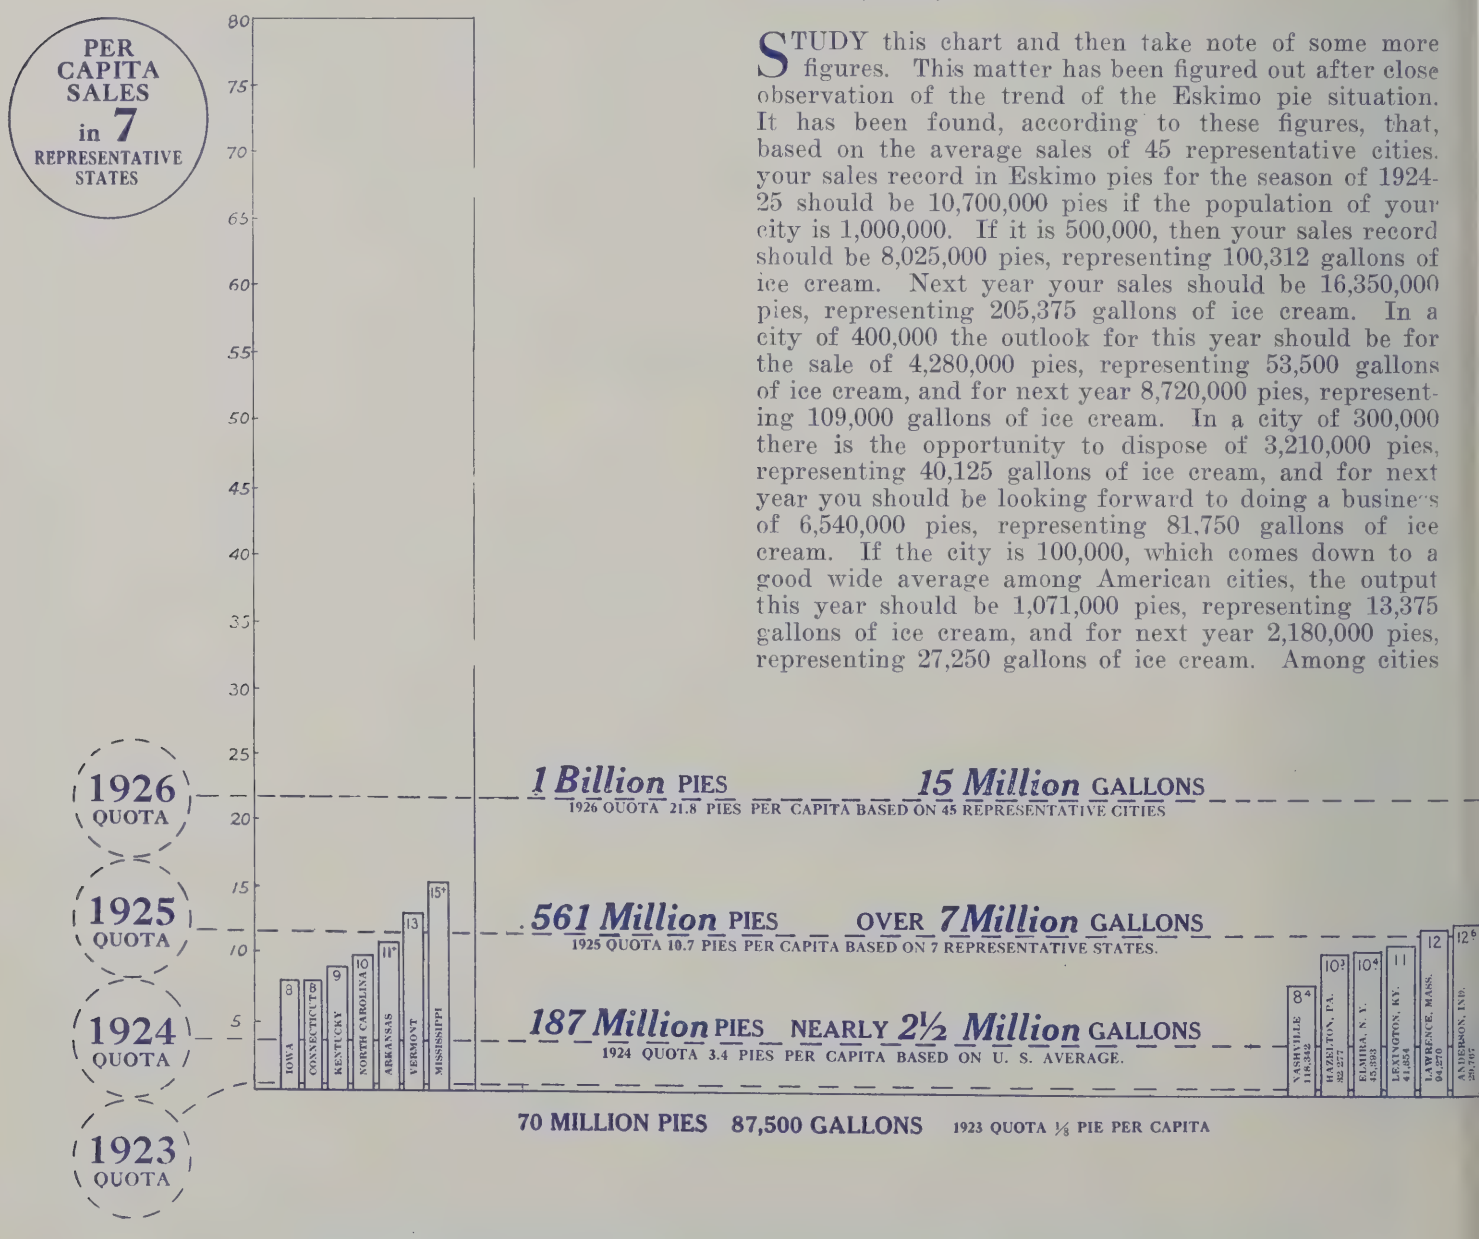
The latest information on the manufacturing and merchandising of Eskimo Pie is contained in our new issue of "COLD SELLING FACTS." Send for your copy today.

ESKIMO PIE CORPORATION

General Offices Louisville, Ky.

MEMBER

Eskimo Pie Outlook For Future



Production in 1923 was 70 Million Pies, Representing 87,500 Gallons.

Consumption for 1924 Should be 187 Million Pies, Representing 2,500,000 Gallons of Ice Cream

THE accompanying chart is one of the most interesting imaginable. It is an illustration of Eskimo pie possibilities, designed to show what manufacturers with the proper initiative can do handling the chocolate bar. It was prepared by a man who has made an earnest study of the situation regarding this phase of the industry, and it is passed on to our readers for what thoughts it may suggest to them.

This table lists the per capita Eskimo pie consumption of the country based upon records of 45 representative cities of the United States. By looking over this table you can get a graphic idea of what can be done in your city. It will be noted that the cities named here have their population figures listed underneath, and opposite each city is given its per capita Eskimo pie consumption. You will note the range of the cities: Nashville, Lexington, Paducah, Brookhaven, Miss., Jackson, Miss., Bristol, Va., Florence, S. C., Johnson City, Tenn., and Yazoo City, Miss., in the South; Fort Worth, Sweet Water, Corsicanna, Brownwood, Tex., Jonesboro and Prescott, Ark., in the Southeast; Lawrence, Springfield and North Adams, Mass., Burlington, Vt., New Haven, Conn., and Waterville, Me., in New England; Hazelton, Indiana, Pittsburgh and Shamokin, Pa., Elmira, N. Y., and Perth Amboy, N. J. in the middle Atlantic states; and Anderson, Evansville, and Logansport, Ind., Waterloo, Fort Dodge, Grinnell and Ackley, Ia., Waukesha, Janesville, Green Bay and Chippewa Falls, Wis., Fremont, Neb., and Thief River Falls and Albert Lea, Minn., and Champaign and Joliet, Ill., and Atchison, Kan., in the middle West.

STUDY this chart and then take note of some more figures. This matter has been figured out after close observation of the trend of the Eskimo pie situation. It has been found, according to these figures, that, based on the average sales of 45 representative cities, your sales record in Eskimo pies for the season of 1924-25 should be 10,700,000 pies if the population of your city is 1,000,000. If it is 500,000, then your sales record should be 8,025,000 pies, representing 100,312 gallons of ice cream. Next year your sales should be 16,350,000 pies, representing 205,375 gallons of ice cream. In a city of 400,000 the outlook for this year should be for the sale of 4,280,000 pies, representing 53,500 gallons of ice cream, and for next year 8,720,000 pies, representing 109,000 gallons of ice cream. In a city of 300,000 there is the opportunity to dispose of 3,210,000 pies, representing 40,125 gallons of ice cream, and for next year you should be looking forward to doing a business of 6,540,000 pies, representing 81,750 gallons of ice cream. If the city is 100,000, which comes down to a good wide average among American cities, the output this year should be 1,071,000 pies, representing 13,375 gallons of ice cream, and for next year 2,180,000 pies, representing 27,250 gallons of ice cream. Among cities

of 50,000 the output this year should be 535,000 pies, representing 6,687 gallons of ice cream, and for next year the record should be 1,090,000 pies, representing 13,625 gallons of ice cream. In a city of 25,000 the Eskimo pie record this year should be around 267,500 pies, representing 3,343 gallons of ice cream, and for next year 545,000 pies, representing 6,812 gallons of ice cream. In a city of 15,000, there should be sold this year 160,000 pies, representing 2,006 gallons of ice cream, and next year 327,000 pies, representing 4,088 gallons of ice cream. The city of 10,000 should do a business this year of 107,000 pies, representing 1,337 gallons of ice cream, and next year 218,000 pies, representing 2,727 gallons of ice cream. In the small cities of around 5,000 there should not be any great difficulty in disposing of 53,500 pies, representing 668 gallons of ice cream, and next year should find a business of 109,000 pies, representing 1,367 gallons of ice cream.

THINK over these figures and decide for yourself what you can do. You might also take a careful survey of the chart and notice where per capita consumption has been increased in widely scattered cities by manufacturers who have studied out the matter very thoroughly. For instance, you will notice that Ackley, Ia., a small town in the middle West, has built up the tremendous per capita consumption of 250 pies. This is a town of less than 2,000 inhabitants. On the other hand it is noted that Perth Amboy, N. J., far away in the East, has developed a per capita consumption of 71 pies, while Prescott, Ark., down South, has a per capita consumption of 75 pies.

The chart shows that the 1923 per capita consumption for the representative 45 cities is one-eighth of a pie. It shows that the 1924 record will be around 3.4 pies, and that the 1925 record will be 10.7 pies. In 1926 it is expected to have consumption developed to 21.8 pies.

So it is that increase in Eskimo pie consumption is not merely a matter of increased population. The man in the small villages can boost his consumption just as well as manufacturers in the large industrial centers, and vice versa.

The chart is interesting in that it shows the tremendous possibilities for increasing ice cream consumption through the chocolate bars.

Consider the records of seven representative states: Iowa, 8 pies per capita; Connecticut, 8; North Carolina, 10; Arkansas, 11; Vermont, 13, and Mississippi, 15.

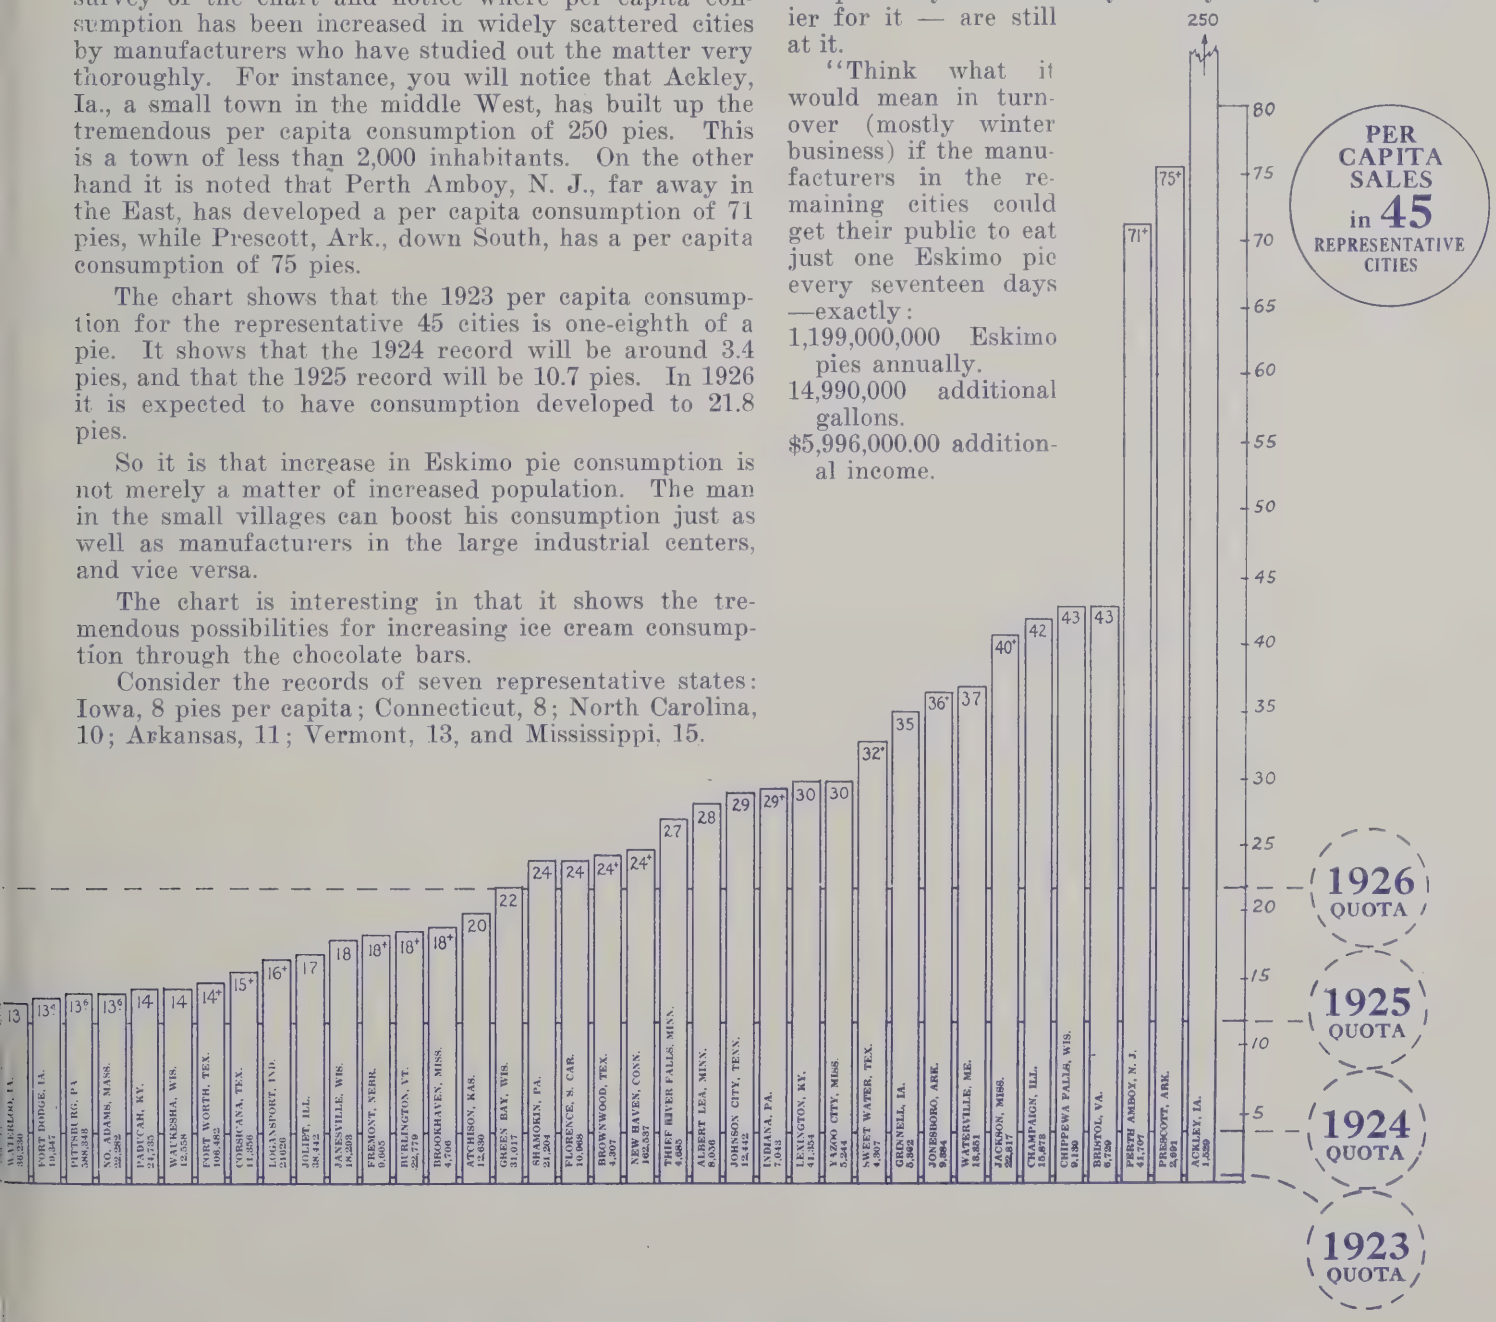
LOOK over this chart well and then ask yourself what are you going to do with the sale of Eskimo pies this year.

HERE are some more statistics on the situation worthy of full consideration, it having been revealed by investigation:

"That there are 55,000,000 people in the United States living in cities, towns and suburbs within daily reach of the ice cream dealers.

"That these people in the past twelve months took it upon themselves to eat an average of one Eskimo pie every three months and thereby consumed over 170,000,000 pieces or 2,125,000 gallons.

"That in seven states they developed an appetite for one Eskimo pie every five weeks. If the people in the remaining states can develop a similar desire, the ice cream industry will sell 550,000,000 Eskimo pies and an additional 7,000,000 gallons of ice cream will be sold.



"That in 45 cities scattered through 17 states the public's craving reached a point where they averaged one pie every seventeen days. They are only the healthier for it — are still at it.

"Think what it would mean in turnover (mostly winter business) if the manufacturers in the remaining cities could get their public to eat just one Eskimo pie every seventeen days —exactly:

1,199,000,000 Eskimo pies annually.

14,990,000 additional gallons.

$5,996,000.00 additional income.

Figuring Profits in Eskimo Pies

A Simple Method of Figuring Out What You Are Making from Chocolate Bars

WITH several hundred Eskimo pie machines already in service, the machine sales in July and August, for September delivery, were the greatest of any corresponding period, according to a canvass of the manufacturers of these machines. The manufacturers of the machine believe that this keen interest and indorsement by the ice cream manufacturer should readily dispel any opinion.

The extent of profit can readily be determined by the following:

Profit on ice cream should be figured in terms of gallons. Figure your Eskimo pies on a gallonage basis also—manufacture them by the gallon and sell them by the dozen. As an example, if 1,000 gallons of ice cream was used for making Eskimo pies during a given month, and to convert this amount of cream into pies required:

Coating—2,250 lbs. @ 25c a lb.	$ 562.50
Cartons—6,700 @ $7.50 per M.	50.25
Labor—150 hrs. @ 50c per hr.	75.00
Wrappers (Royalty inc.) 80,000 @ $3.25 per M.	260.00
	$ 947.75
Add 10% for freight, drayage and incidentals.	94.75
Total cost of converting 1,000 gallons of cream into pies	$1,042.52

BY CUTTING 20 pies to the quart, 1,000 gallons should produce approximately 6,600 dozen. By selling these to the dealer at 45c a dozen would bring $2,970.00, or a net amount of $1,927.50 for 1,000 gallons of cream—$1.93 a gallon. Selling at 40c a dozen, $1.60 is the return on each gallon of cream.

The Eskimo Pie Corporation offers to help get any ice cream manufacturer sarted right in the manufacture of Eskimo pies. This company has at its disposal records concerning the operations of hundreds of manufacturers and having combined these observations with years of constant study and investigation as to the most successful and practical methods of starting the manufacture of pies, they offer to assist ice cream manufacturers with this knowledge. The company admits that in the wide distribution of Eskimo pies, untold mistakes have crept in; many of them time and time again.

For this reason the Eskimo pie company wishes to steer the ice cream manufacturer in the right direction from the start. They emphasize the fact that the manufacturers of poor ice cream are not listed among the successful distributors of Eskimo pies. They claim there is no more permanency with a poor grade of ice cream in Eskimo pie than there is in bulk or brick ice cream.

TOGETHER with manufacture a high quality ice cream, it is also essential to buy the best grade of coating that can be secured. Officials of the Eskimo Pie Corporation admonish again the use of adulterated and so-called cheap coatings. They remind the ice cream manufacturer that a 100 per cent profit is unprofitable if the public will not buy their product.

Buy your coating already mixed. Do not try to add your own cocoa butter. Leading coating manufacturers have Eskimo coating mixed ready for dipping.

The carton holding one dozen seems to predominate. For the shipping trade, dispense with cartons and pack the pies carefully and tightly in an ordinary bulk or brick can.

We can supply you with information as to where cartons may be reasonably purchased.

Master Metal Wrappers

The *official* wraps for Eskimo Pie

Why?

QUALITY

Master Metal has a rich, silver-like lustre, is strong enough to stand the hardest use, yet flexible, pliable, and easily handled. Beautiful color-printing.

SERVICE

No more delays and waiting for wrappers. Prompt shipments from our factories at Louisville and San Francisco of stock or imprint wrappers in sheets or continuous rolls.

SATISFACTION

The pleasure of knowing your bars are properly packaged to appeal to the most discriminating buyer.

Order your wrappers now from the Eskimo Pie Corporation, Chicago, or direct from the—

United States Foil Company

LOUISVILLE, KY.

Branch: SAN FRANCISCO

MASTER METAL WRAPS *for* ESKIMO PIE

EVERY MANUFACTURER IN DIXIE SHOULD BE A MEMBER OF THE SOUTHERN ASSOCIATION.

The Right Way To Start

When You Start Handling Eskimo Pie—Start Right

IT IS only logical that in the wide distribution of Eskimo pie, untold mistakes have been made; many of them time and time again. The least you can do is to steer clear of them.

The manufacturers of poor ice cream, or just "ice cream," are not listed among the successful. There is no more permanency with a poor grade of ice cream in Eskimo pie than there is in bulk or brick ice cream.

Make a good ice cream.

Buy the best grade of coating you can secure. Keep away from adulterated and so-called cheap coatings. Your pie business will be dead before you know it. Remember, a 100% profit is unprofitable if the public will not buy your product. Successful manufacturers recommend a pure, high grade, sweet milk coating.

If you have had coating troubles and do not know where to secure a good coating, investigate.

Buy your coating already mixed. Do not try to add your own cocoa butter. Leading coating manufacturers have Eskimo coating mixed ready for dipping.

THE carton holding one dozen seems to predominate. For the shipping trade, dispense with cartons and pack the pies carefully and tightly in an ordinary bulk or brick can.

The Ice Cream Review can supply you with information as to where cartons may be reasonably purchased.

Wrappers may be purchased from foil manufacturers who have authorization and license to print wrappers bearing the registered trade mark and imprint.

For your own protection, be sure you are purchasing wrappers from an authorized foil licensee.

Unless you have less than ten accounts and a very limited chance for development, it is recommended that you purchase a machine.

1. See that cream is hard and free from moisture. Cream direct from the hardening room makes the best pies. Moisture quickly thickens and ruins your coating. Note:—Moisture in coating can be removed by slowly agitating it in a double boiler at a temperature of 100 to 108 degrees
2. See that all pies are uniform. Better throw away a pie smaller than standard, than to make a dissatisfied customer.
3. See that pies are neatly and completely wrapped. Particular people will judge you by its appearance. It costs no more to have your pies properly wrapped—merely occasional inspection and attention.
4. See that pies fresh from the machines or wrapping table are thoroughly hardened before being checked out to the trade. Soft pies cause dissatisfaction and disgust and hurt sales quicker than any other cause. This mistake has been made many times. Far better to advise your dealer you have no pies for delivery than to send him soft ones.
5. See that your pies are uniform, properly wrapped and delivered in good condition. This keeps your dealer satisfied—your purchaser buying.

THE greatest savings and improvements, from the manufacturer's end of the business, can be made in the handling of the coating. A good coating is vital to your continued success, and if you are not dipping 40 pies to the pound, you are not making a properly balanced pie.

If you are not getting 40 pies to the pound, advise us of the following:

Brand of coating used.

Amount of cocoa butter, if any, being added.

Number of pies you are dipping per pound.

Temperature at which you keep the coating for dipping.

You'll make better ice cream if you get "The Ice Cream Review."

A Profitable Combination

Northwestern Cutting and Dipping Machine

+

Northwestern Bar Cabinet

PROFITABLE—First, because the production of Eskimo pies on this machine is 120 dozen per hour.

Second, because the original investment is so low—only $375.00 buys the complete cutting and dipping machine.

PROFITABLE—Because more than 300 users have proved it so.

THE NORTHWESTERN BAR CABINET is the ready salesman that helps to rapidly dispose of the large production of the NORTHWESTERN Cutting and Dipping Machine by keeping the product in good condition and handy for the trade that is the biggest buyer of Eskimo pies.

$50.00 to the Person Who Names This New Unit
($25.00 second prize, $15.00 third prize)

— *SEE BELOW* —

A NEW 100 GALLON GLASS LINED PASTEURIZER

(ICE CREAM MIXER-PASTEURIZER, STARTER CAN, BUTTERMILK TANK, STORAGE TANK, AGING TANK, ETC).

To place glass lined equipment within the reach of every dairy, irrespective of size, we have created this new 100-gallon unit which will handle batches as small as 35 gallons. This unit is a further application of the Pfaudlerette and our other smaller equipment, in that it is specially built on a production basis, and is sold at a price commensurate with this production.

Furnished as shown in the photograph, ready to operate, for $325.00 f. o. b. Elyria, O.—Motor drive substituted for pulley drive, and recording thermometer for angle stem, if desired, at additional charge.

Mail coupon below for complete specifications.

$50.00 FOR A NAME

($25.00 Second Prize
$15.00 Third Prize.)

To facilitate correspondence and simplify records, we must give a name to this new 100-gallon unit. Anyone is eligible to submit a name, except employees of The Pfaudler Co. or other persons directly or indirectly interested in the sale and promotion of its equipment. Three executives of The Pfaudler Co. will be the judges and prizes will be awarded for the three best names submitted, the first only being used.

A minutes thought may win you $50. Names now being used for other of our equipment are "Pfaudlerette," "Pfaudlerizer," "Elyria 300 Special," and "Elyria Junior Pasteurizer." Don't feel that your suggestion must be a work of art. Use the coupon or write a letter. Send any number of suggestions.

All names must be in by January 1st, 1925

New Size Package for 5¢ Sundae

The growth of the packaged Sundae Business has proven tremendous—it continues to increase. Mono-made packages are an important factor in this growth. Mono-Service Sundae Packages earn dividends for every user. They represent the highest attainment in paper packages. Distinctive—command attention—sell their contents. Millions used annually by the progressives in the industry. Packages of our make prove a sound and profitable investment—they assist the user to increased sales volume—sell their contents when other packages fail. It's the one package to use for packaged sundaes. Our new size for a 5c sundae is identical to our 10 and 15c package except for capacity. It holds less. We want you to compare Mono-made packages with other packages. We will gladly send samples for comparison. You cannot help but conclude that the Mono-made package possesses the greatest merchandising value—is better made—more attractive—gives full protection to its contents. Make your package pay you dividends. Ask for "Packaged Sundae Kup Samples."

Here's to the Ladies!

Southern Convention Will be Featured by Activities of the Ladies' Auxiliary to the Southern Association of Ice Cream Manufacturers and Dixie Flyers

NO ONE contributes more to the success of Southern conventions than do the ladies. For years famous for its social features, Southern conventions in late years have been especially marked by the interest displayed by the feminine members of the industry. The Ladies' Auxiliary to the Southern Association of Ice Cream Manufacturers was formed just a few years ago. Miss Sally Mahoney, for many years one of the industry's most popular members, is president of the association, and Mrs. R. J. Massey of Chicago, who is intensely interested in the Southern industry and in Southern people, is vice-president. The secretary of the association, Mrs. E. B. Geisel of New Orleans, is one of the handsomest ladies in Dixie, and can be counted upon to lend grace and charm to any gathering of ladies and gentlemen anywhere.

The ladies will have their place in the ice cream event at New Orleans this year. Of that everyone may be assured. Their luncheon at Little Rock last year was attended by 150 members. The great New Orleans convention undoubtedly will draw out a much larger attendance.

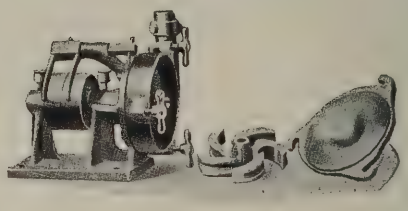
THE ladies usually have their own entertainment program. Mrs. Geisel has been working out some plans of her own in this connection, in addition to conferring with other officers of the association. She had not announced her program when this issue of The Ice Cream Review was ready to go to press.

The purpose of the ladies' auxiliary is to add a little social cheer to the atmosphere created by a large number of men gathering for business matters. They make it possible for the wives of visiting manufacturers and supplymen to be entertained while the delegates are in convention.

Count upon the Ladies' Auxiliary of the Southern Association of Ice Cream Manufacturers and the Dixie Flyers to do themselves proud this year.

MISS SALLY MAHONEY,
Chicago,
President.

MRS. E. B. GEISEL,
New Orleans,
Secretary.



MRS. R. J. MASSEY,
Chicago,
Vice-President.

Texans to Meet in December

Tentative Plans Formed at Committee Meeting for Exhibits by Long Horns

PLANS are going forward for the 1924 convention of the Texas Ice Cream Manufacturers' Association. Although manufacturers of Texas will take considerable interest in the Southern and national conventions at New Orleans in November, extensive preparations are being made for the state's own annual convention at Dallas, Dec. 3, 4 and 5. It is probable that the Jefferson Hotel will be convention headquarters.

A. J. WHITE,
Secretary.

Texas Longhorns, late in October were forming their plans for an exhibit in connection with the convention. It was pointed out in a circular by Sherwood L. Quinker, secretary-treasurer of the Texas Longhorns, that the Jefferson Hotel affords ample space for a nice exhibition of ice cream machinery, supplies and equipment.

The tentative program calls for banquet and ball on the second night of the convention. The first night will be given to the initiation of the White Caps. The ladies attending, wives of the ice cream manufacturers and supply men, will be entertained "in royal fashion," according to the promises of the Longhorns. They request delegates to bring along their wives.

THE committee on entertainment has expressed the intention to make the 1924 an even greater success than was the San Antonio convention two years ago, when the Texas ice cream manufacturers reached the high water mark in successful conventions. The tentative program of the Texas Association of Ice Cream Manufacturers calls for two speeches by members of the Longhorns. These papers probably will pertain to something of special interest to the ice cream manufacturers.

The Longhorns laid their convention plans at a meeting of a committee of ice cream manufacturers in the office of Secretary Quinker, 501 Central Bank Bldg., Dallas, Tex., on Saturday afternoon, October 18. Dallas is a good central spot for the convention. It is expected that this city, which always has been popular with ice cream manufacturers, will attract a very large attendance this year.

DAIRY PRODUCTS ASSOCIATION OF KENTUCKY TO MEET IN DECEMBER.

A general meeting, including the three auxiliary divisions of the Dairy Products Association of Kentucky, will be held in Paducah, Palmer House, Tuesday, December 9, 1924.

Paducah is not only the metropolis of Western Kentucky, but it is also the home of Charles G. Vahlkamp of the City Consumer's Company, the former president of the association. A full attendance is expected for these reasons, and the Illinois Central Railroad is arranging to provide a special Pullman out of Louisville to accommodate the dairy products manufacturers from Cincinnati, Louisville and Lexington, who plan to attend the meeting.

OFFICERS OF THE TEXAS LONG HORNS

C. W. SMITH,
President.

HAL B. COX,
Vice-President.

S. L. QUINKER,
Secretary-Treasurer.

Powdered Lemon Juice

How Merrell-Soule Powdered Milk is Packed

EACH barrel used in sending out our powdered milk to ice cream manufacturers is of absolutely the finest grade of kiln-dried stock, made to withstand a test of 100 degrees heat and atmospheric moisture for a period of three weeks. Each barrel is as near non-porous and moisture-proof as wood can be and is completely paraffined inside. The seams also are paraffined, the staves tongued and grooved and the heads and bottoms made of one solid piece. Before the powder is packed, each barrel is lined with a double bag made of waxed crêpe-paper to avoid any possibility of dust or moisture. It is interesting to note that even in the filling of these barrels, the hands of Merrell-Soule employees do not touch the milk powder and that, as a final precaution, the powder is again sifted before being deposited in the barrel by means of a bag funnel.

HOW FAR IS IT TO THE CONVENTION CITY?

(Continued from page 16)

Even W. J. Barritt, president of the Southern Association of Ice Cream Manufacturers, will have to travel 828 miles before he can swing the convention gavel and get his Southern delegates down to business, providing he makes the trip from Tampa by train; if he goes by boat across the gulf, the journey should be much shorter. Memphis manufacturers won't mind their little journey of 400 miles, and the Texans will be glad to travel from 350 to 500 miles when they attend a Southern and national convention close to the same time.

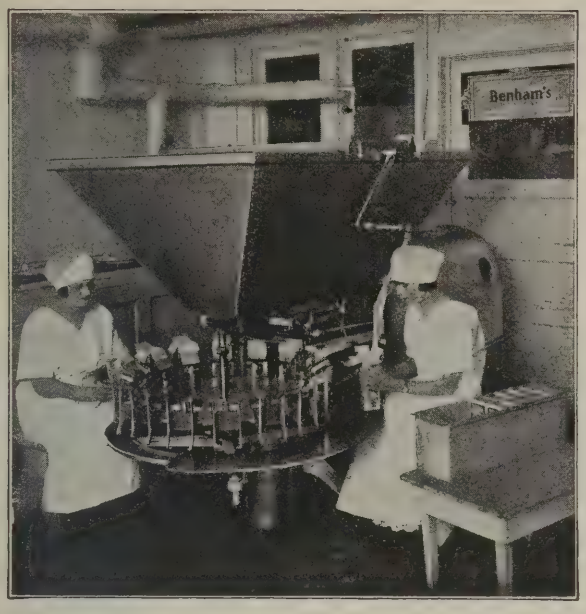
Bert Walker and fellow members of the Pacific ice cream manufacturers will do the heavy traveling, as also W. S. V. Robb of the same association, and those manufacturers around California and the Pacific Southwest.

⚜

UTAH SIX MONTHS' COURSE.

Logan, August 11—A six months' course in dairy manufacturing will be conducted at the Utah Agricultural College during the fall and winter quarters of the coming school year, it was announced today by Professors George B. Caine and Gustav Wilster, of the department of dairy husbandry. The course will be designed to meet the needs of practical cheese and buttermakers and is offered in response to a widespread demand in this and adjoining states, stimulated by the rapid growth of the dairying industry during the past few years.

The course begins on the opening day of the school year, September 29, and continues until the close of the winter quarter early in March. The subjects are so planned that students may enter for either the fall or winter quarter only, if they do not desire to attend for the entire six months. The work of the fall quarter carries sixteen hours of credit and that of the winter quarter eighteen hours.



The cirriculum is so planned as to give each student a thorough ground work in every phase of commercial dairying. It includes such subjects as dairy engineering, principles of dairy factory management, dairy arithmetic and accounting, judging dairy products, and elementary bacteriology, in addition to daily practice periods in the making of butter and cheese. The faculty will consist of Professors George B. Caine, Gustav Wilster, J. E. Greaves, W. E. Thain, and Wilford Cole.

Full particulars in regard to the course are contained in a 12-page illustrated catalog now in course of preparation. This catalog will be mailed to all of the commercial dairies of Utah and nearby states as well as to interested individuals requesting copies.

The college operates a modern creamery where the milk from the college dairy herd, as well as that purchased from about sixty farmers is handled.

The creamery is located in the three story modern livestock building, and is fully equipped for the handling of milk for market, and for the manufacture of butter, cheese and ice cream. In addition there are well equipped laboratories for testing, as well as large lecture rooms.

About 4,000 pounds of milk are handled daily in the creamery. Modern machinery is used for the manufacture of the various products, and ample storage facilities are available. A 10-ton capacity ice machine is being used to furnish refrigeration for the butter coolers and ice cream hardening room. The department maintains a dairy store in the building where all the products are sold.

Model A Mojonnier Packaging Machine in Plant of Benham Ice Cream Co., Fresno, Calif., Filling Quart Cartons.

Quality Product
AND
Technical Control

Cleanliness or sanitary packaging; conservation of time and labor in packaging; accuracy, or uniform packaging; these are the big features of technical control applied to the manufacture of ice cream by the use of the Mojonnier Ice Cream Packaging Machine, enabling the manufacturer to produce a quality product for which there is a universal demand. Under the Mojonnier Process the ice cream is automatically and hermetically sealed in the carton with the least exposure to air and absolutely no contact with HUMAN HANDS.

Our circular "Packaged Ice Cream of Quality" tells the story. Write for it.

GROWING VALUES

The effort to manufacture a better product is resulting in higher quality ice cream and the discovery of newer methods of production.

Each success brings its contribution of interesting factors which serve to stabilize this great industry.

Contributing to no slight degree of this success is the increasing use of

Wyandotte Dairyman's **Cleaner and Cleanser**

Indian in Circle

in Every Package

by the ice cream trade, and the many virtues and uses of this cleaner are greatly assisting the standardization of high quality, nutritious, palatable ice cream foods.

As a consequence, this cleaner stands unrivaled as the most efficient and economical cleaner for the ice cream manufacturer.

SO THIS IS NEW ORLEANS.

(Continued from page 27)

Royal Street is one of the richest in interest of the French Quarter thoroughfares and is perhaps the most convenient for beginning an exploration of the old community. Upon the site of the Hotel Astor, fronting Royal Street, there formerly stood the four-story brick home of Dr. Antommarchi, Napoleon Bonaparte's physician, who practiced in New Orleans for a number of years after Waterloo. Adjoining is old 127 Royal Street, where insurgents of the Radical State Legislature were expelled by the governor's police.

On the other side of Royal Street stands the old Merchants Exchange, once used as a United States Court; in it William Walker, the filibuster, afterwards executed in Central America, was tried and acquitted of violating the neutrality laws, in 1858. At the intersection of Conti Street the banking interests of New Orleans once centered; a bank was located at each corner and two of the buildings, yellow with age, still stand.

At 417 Royal Street is a building erected in 1816 by the Louisiana Bank Company; it is Spanish-Mooresque in style and contains one of the most picturesque courtyards in the city. Now occupied by a curio shop, it was once the home of Morphy, champion chess player of the world. Opposite stands the imposing new courthouse, replacing an entire block of old buildings.

At the corner of Royal and St. Louis is the site formerly occupied by the Hotel Royal, first known as the St. Louis Hotel. It was erected in the early thirties and for many years was the leading hotel in the South, subsequently becoming the state capital, then resuming its character of hotel. It was the favorite hostelry of wealthy planters, who lived there in princely style. Henry Clay was entertained there in 1843, and the supper, served on gold plates, cost $20,000. In the rotunda was the slave block where negroes were auctioned.

At the corner of St. Peter and Royal Streets stands a large structure erected in 1809, known as "Seiur George's House," because it is thus designated in one of Cable's stories. A few steps further, at Orleans Street, is a large weather-stained brick building occupied by the Sisters of the Holy Family. Built in 1817, this structure was originally the Orleans Theater, where Lola Montez and other theatrical personages appeared. It was once the meeting place of the fashionable, but in 1835 it became the scene of the wild "Quadroon Balls," and acquired an evil reputation.

Court Yard in the Old Quarter of New Orleans.

At St. Ann and Royal Streets stood the **Cafe des Exiles**, where many French **emigrees** and, later, fugitives from the negro insurrection in San Domingo, gathered to discuss the past. In Dumaine Street, just off Royal, is an old colonial house, with tiled roof, celebrated in song and story and popularly known as "Madame John's Legacy." At the corner of Royal and Dumaine is the former residence of Mme. Poree, where fashionable Creole ladies waved farewell to General Jackson's troops as they marched out to fight the British in 1815. At the corner of Hospital and Royal Streets is the "Haunted House," built in 1813 as the home of Mme. Lalaurie. There the Marquis de Lafayette was entertained at a splendid fete in 1825, and Napoleon's brother was also a guest. In 1834 the building caught fire and those attempting to extinguish the flames made the ghastly discovery that negro slaves, chained to the wall, were being tortured. Mme. Lalaurie, then a widow, fled to France, where she was killed in a boar hunt at Versailles. Ghosts of the murdered slaves are said to haunt the scene, rattling their chains at night and sending their shrieks from the chamber where a deranged woman of refinement revelled in human agony.

At 527 Royal Street stands one of the most interesting of the city's old houses, erected by Governor Miro in 1784; it has a Moorish archway guarded by cannon and within is a spacious courtyard with a fountain and orange trees. It was used as the headquarters of the mounted police during the Spanish rule.

Chartres Street also is rich in history and romance; until 1838 it was the principal thoroughfare of New

You Can Buy the Lifetime Services of the Best Advertising Man for the Cost of A Good Dinner

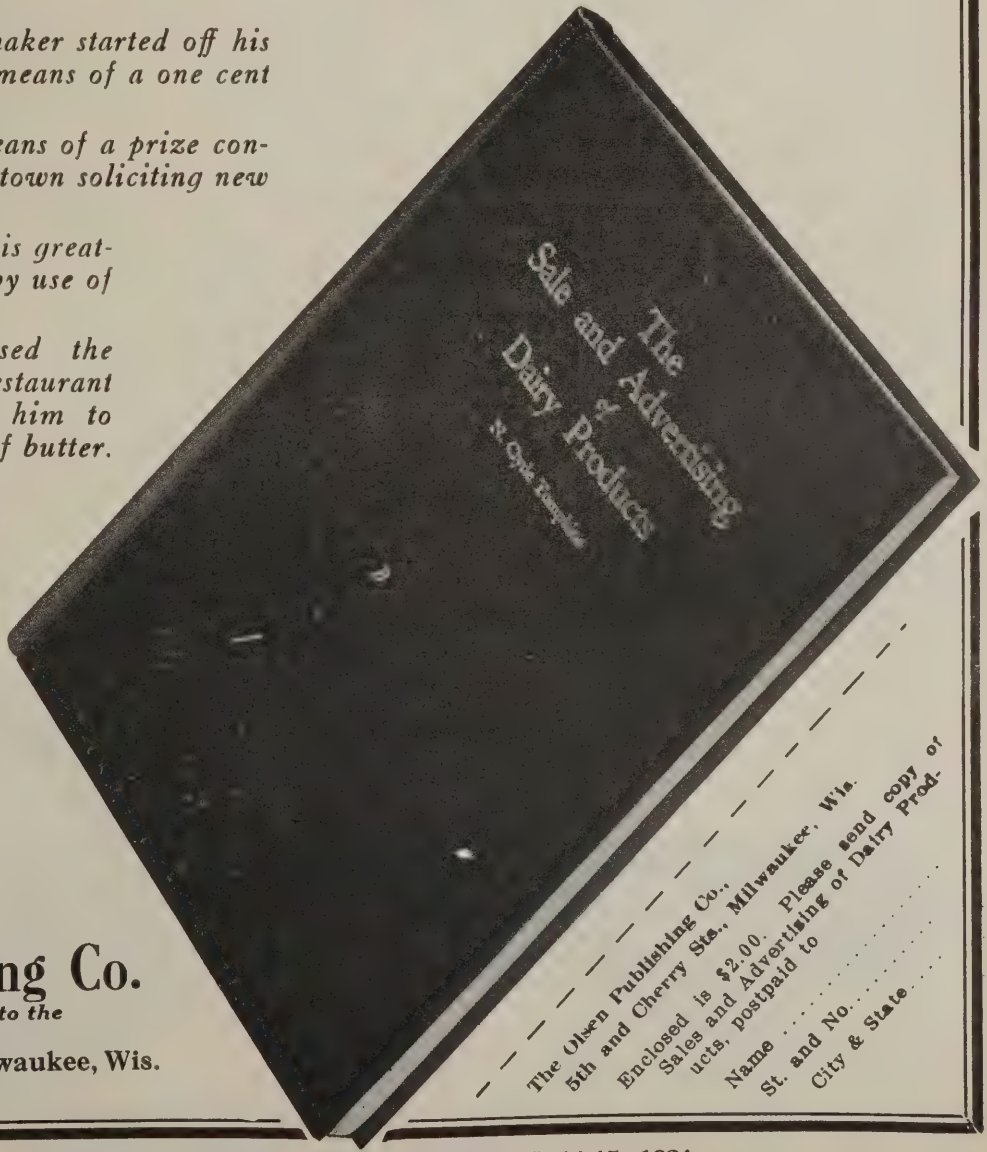
In fact in the book entitled "The Sale and Advertising of Dairy Products" you get far more than the experience of one man. You secure the experience of scores of concerns in the milk, ice cream, butter and cheese industries. They tell you the advertising and sales plans they have found which have been successful—plans which anyone can use to increase their sales of ice cream and dairy products.

It tells how one ice cream maker conducted a popularity contest at small expense and had everyone in town talking about him.

Another ice cream maker started off his season with a bang by means of a one cent sale.

A milk dealer, by means of a prize contest, had every child in town soliciting new customers for him.

Another milk dealer is greatly increasing his trade by use of telephone sales-ladies.



A creamery increased the trade of their best restaurant customer by inducing him to feature a one cent cube of butter.

Another one created much interest by means of a prize candy contest, etc., etc.

The above are but a few of the hundreds of sales creating ideas that are fully explained — any one of which are worth several times the cost of the book. In addition, the book has scores of charts, illustrations and samples of business producing advertisements.

Hundreds of copies of this book have been sold to date. No doubt your competitor has one or more copies and is using it to help build up his business. Here is your opportunity to learn how progressive concerns everywhere are advertising and selling their products.

The book contains over 100 pages, handsomely bound in blue cloth, with gold lettering, and is profusely illustrated.

Fifth & Cherry Sts. Milwaukee, Wis.

Orleans. At Chartres and Esplanade is the site of Fort San Carlos, erected by Governor Carondelet in 1792; from the ramparts General Jackson reviewed the little army with which he defeated the British. The fort was dismantled in 1821; a few years later the United States Mint, which still stands, was built upon the spot.

In the block between Hospital and Barracks Streets were the French barracks erected by Governor Kerlerec in 1758 to receive the troops driven from Fort Duquesne by General Washington. There, in 1764, occurred a gruesome legal tragedy suggestive of the Inquisition; the murderers of an army officer were executed, two being broken on the wheel, while the ringleader was nailed alive in his coffin, then sawed in two by negro slaves.

The upper part of the next square is occupied by the Church of St. Mary and the Archiepiscopal Palace, the latter dating from 1727; it is the oldest building in the Mississippi Valley. Opposite, is a house distinguished by a broad portico upheld by Ionic columns; it is the birthplace of Paul Morphy, the great chess player; later it became the home of the Confederate general, Beauregard. At Chartres and Dumaine Streets is a rare old Spanish house roofed with tile, dating from early in the eighteenth century; it was once a rendezvous for soldiers of fortune and frontiersmen. Half a block farther is the old **Cafe des Refuges,** a tavern laden with historic associations. Facing the cafe is the **Hotel de la Marine,** once a gathering place for buccaneers and other adventurers. Behind the latter is Vendetta Alley, a small arched passage that acquired its lawless name from a number of Mafia murders.

AT St. Philip and Chartes Streets stood the blacksmith shop of Lean and Pierre Lafitte, the daring pirates who had their stronghold in the wild Barataria country. Because of their assistance at the Battle of New Orleans, the Lafittes and their crew were pardoned by the government. Opposite the site of the St. Louis Hotel is an old house in Chartes Street, where, according to tradition, the Lafittes met General Jackson one winter night in 1814 and offered their military services. At the intersection of St. Louis Street is a colonial structure, once the cafe of Pierre Maspero; there, the story goes, General Jackson, with Jean Fafitte beside him, mapped his defense of New Orleans.

Throughout Chartres Street are buildings with absorbing stories, among them the Orleans Hotel, built in 1799, and the Stranger's Hotel, erected a few years later. At 514 Chartres is the former home of M. Girod, a wealthy merchant, who, with the aid of Dominic You, one of Lafitte's buccaneers, planned to rescue Napoleon from St. Helena. A fast yacht was to be chartered for the emperor's escape, and Girod fitted the house magnificently to serve as the imperial home. The plot was abandoned when the news of the exile's death, in 1821, reached Louisiana.

Bourbon Street has its historic buildings, chief among them, perhaps, the Absinthe House, at the corner of Bienville Street. The weather-worn structure was erected in 1798 and has been used as a cafe and meeting place for adventurers since 1825. Its marble dripping stone, pierced by holes worn by drops of water as the frappes were mixed, may still be seen.

At the corner of Toulouse and Bourbon is the site of the famous French Opera House, burned in 1919. This noted playhouse was opened in 1860 and became the brilliant social center of the city; upon its stage many operas now famous were first presented in America, and many European singers, among them Adelina Patti, made their debuts in the western world. The French Opera House was the scene of the annual Carnival Balls. Plans for rebuilding are under way.

Rampart Street marks he line of defenses built around the old city in 1793 by Governor Carondelet. Electric cars now run where the moat was sunk in front of the fortifications, and the Terminal Station occupies the site of Fort Burgundy, the southwestern citadel Beginning at St. Peters Street and extending to St. Ann's is the former Congo Square, now Beauregard Square, the market for slaves from the Congo, where Voodoo enchantments and frenzied revels of the jungle took place; during the Spanish regime the Square was used for bull and bear fights. Marie Leveau, a mulattress, was high priestess of the Voodoo cult and had a large alabaster box in which the negroes fancied she kept the "Great Zombi," a huge serpent that fed upon children.

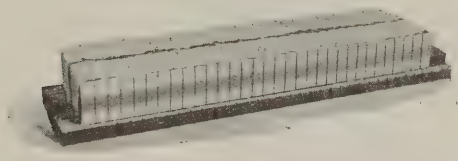
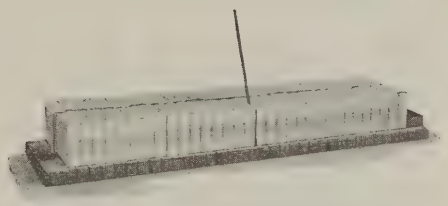
Anderson "CUT-WRAP" MACHINE

"It Wraps as it Cuts"



Simple—Practical—Fast—Low Priced

IN designing and experimenting on the Cut-Wrap idea, it was the desire to perfect a faster machine that would quickly cut ice cream slices wrapped on three sides. Our final accomplishment was greater than this, because while it does this rapidly, yet it as capably cuts quarts and pints. This wrapped idea is a good one for every Ice Cream Manufacturer — large or small.



Send to-day for Literature and Price.

Quarts Are Cut Uniform

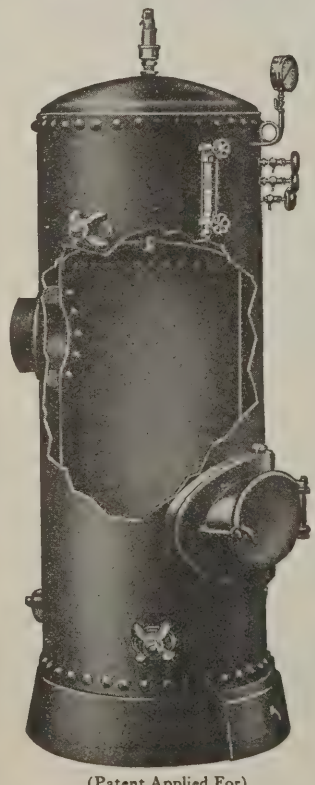
Individual Bricks—Wrapped 3 Sides

BECAUSE of the moisture of the soil, New Orleans formerly interred its dead in tombs, commonly called ovens—small, narrow crypts built out from a solid brick wall. This practice has been abandoned. The old cemeteries, however, are among the most interesting places in the city, and no visitor should fail to see them.

Metairie Cemetery is one of the richest burying grounds in the country; it contains many costly and beautiful mausoleums. At the entrance, surmounting the tomb of members of the Army of Tennessee, is a great equestrian statue of General Johnston, the Confederate commander killed at Shiloh. A pretty lake lies alongside the cemetery, which occupies an area once used as a race track. Greenwood Cemetery is just across the canal from Metairie. At the entrance is a monument to the Confederate dead, with marble busts of Generals Robert E. Lee, Albert Sidney Johnston, and Leonidas Polk.

The St. Louis cemeteries, in North Basin Street and Claiborne Avenue, are historic burying grounds laid out by Bienville, and the oldest in the city. Many noted men and women of colonial times lie sleeping there; among them are Charles de La Salle, brother of the great explorer, and Benedict Van Preebles, an officer in the Revolutionary Army under Lafayette. On a number of the marble tablets is inscribed, "Mort sur le Champ d'honneur," which indicates that the deceased was clain in a duel.

NEW ORLEANS has many monuments, the most imposing of which is perhaps that to General Robert E. Lee, the great Confederate commander-in-chief, which stands at the head of St. Charles Avenue. The statue is of bronze and rests on a column 106 feet high, with an interior stairway.



At Camp and Prytania Streets is a statue erected in memory of Margaret Haughery, a well-known philanthropist. Herself an orphan, she built up a prosperous bakery and devoted the proceeds to the founding of orphan asylums. The monument to Henry Clay, designed by J. T. Hart in 1850, stands in Lafayette Square; until 1901 it stood at Canal and Royal Streets. In front of the square is a bronze bust of John McDonogh, the philanthropist who left his fortune to build the city's public schools.

The statue of General Beauregard, the brave Confederate soldier who won the victory at Bull Run, stands at the Bayou St. John Gate of City Park. The Jefferson Davis monument stands at the entrance of Jefferson Davis Parkway on Canal Street. The statue of General Jackson, in Jackson Square, was designed by Clark Mills and is noted for the accurate poise of the charger.

A FEW miles below the city, and within easy walking distance from the car line, is Chalmette, the famous field of the Battle of New Orleans. On this spot, January 8, 1815, General Jackson, with some 6,000 soldiers, most of them raw recruits—woodsmen from Kentucky and Tennessee, Creoles, and Lafitte's buccaneers—defeated the English army of 12,000 men under General Pakenham. The British soldiers were largely the Duke of Wellington's veterans of the Peninsula campaign who had conquered the French in Spain and Portugal; but they could not withstand the fire of the American riflemen. The battlefield is marked by an obelisk.

The chief dueling ground of old New Orleans was in the park; so many deadly encounters took place under one of the trees that it was known as the "Dueling Oak." U. S. Senator Waggaman was killed there by a rapier thrust of Denis Prieur, afterward mayor of New Orleans; ten other duels were fought on the spot that same day. Marcel Dauphin, a French master of arms driven from Paris during the Revolution, was killed by the Sword of Bonneval, a rival teacher and a friend of Robespierre. Lula, a Spanish swordsman, fought thirty duels in the park and once dispatched three antagonists in a single day.

IDAHO FIVE-MONTHS' SHORT COURSE.

In Dairy Manufacturing at the College of Agriculture, University of Idaho, Moscow, Idaho. October 27, 1924—March 27, 1925.

Equipment.

The University of Idaho is well-equipped for the teaching of dairy manufacturing. The cheesemaking equipment includes a new 2,000 pound Wisconsin cheese vat, a two-row continuous pressure press, two smaller experimental vats and the necessary molds and other appliances. In the buttermaking laboratory two small commercial churns are used, a new Simpson butter cutter, can steamer and drier, etc. Market milk equipment includes a clarifier, bottle filler, bottle sterilizer, steam turbine bottle washer, etc.

The university boasts one of the best ice cream making laboratories in the West. It includes a new Cherry batch mixer, a new C. P. homogenizer, cooler, 40-quart horizontal brine freezer, upright freezer, ice crusher, cabinets, etc. A five-ton ammonia compressor furnishes the refrigeration. A small amount of ice also is made.

Buttermaking: History of buttermaking, separation, grading of cream, neutralizing, pasteurizing, starters and ripening, churning, salting, working, packing, storing butter, defects of butter.

Cheesemaking: Process of cheddar cheesemaking,

25% Off Gross Weight On Glacifiers

On Oct. 1st the new express rate is effective

And the gross weight of Glacifier—five gallon size—packed ready for shipment, is 90 pounds.

When the tub costs.....	$0.77	$0.84	$0.89	$1.08	$1.26
The Glacifier costs.....	.46	.49	.52	.64	.74
Saving by use of Glacifier..	.31	.35	.37	.44	.52

The gross weight of Ice packed tubs — five gallon size, ready for shipment is 155 pounds.

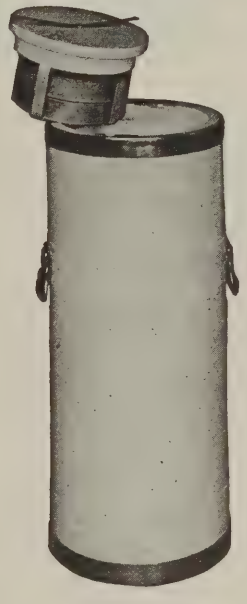
Note this rate effective now in

NEW YORK
PENNSYLVANIA
MAINE
VERMONT
MASSACHUSETTS
OHIO
TENNESSEE
IOWA
ILLINOIS
WISCONSIN

With Glacifier packers you pay the rate on 67 pounds.

With Ice-packed tubs you pay the rate on 115 pounds.

See the complete display of Glacifier Products at New Orleans Convention, Space Number 49.



With Glacifier you save the rate on 47 pounds in every five gallon shipment.

20 Quart Brick

And you save the cost of 60 to 95 pounds of ice — *on every five gallon shipment.*

And you save twenty to thirty per cent on the cost of handling—*on every five gallon shipment.*

5 Gallons Bulk

And you save the wear and tear (due to corrosion) on your packing and delivery equipment.

Glacifier Packers are made in 1 gal., 3 gal. and 5 gallons for bulk and brick cream.

Send for cost comparison and express rate comparison.

And—now—as a plus in all this:

You save 25 per cent on the gross weight!

Figure it out for yourself.

Write us your requirements and we will tell you just how much Glacifier will save you based on these requirements.

The Glacifier Co.

15 Miller St. SOMERVILLE, MASS.

coagulating agents, grading milk, control of gas, control of acidity and control of moisture content, starters, soft cheese of different kinds, curing and marketing of cheese.

Dairy Bacteriology: History and importance of bacteriology in dairying, nature and sources of microorganisms occurring in milk and milk products, normal and abnormal changes brought about by them, relation of bacteria to disease, sanitation, sterilization, pasteurization, starters.

Dairy Mechanics: Pipefitting, valves, soldering, babbitting, tap and die work, erecting line shafts, pumps, care of boilers, steam and gas engines.

Factory Management: Organizing, planning, constructing, equipping plants, water and power requirements, cost of operation, a thorough study of refrigeration, buying, marketing, advertising.

Factory Tests: Testing of various dairy products for moisture, fat, salt, adulterations.

Farm Dairying: General survey of dairy industry; secretion, composition, and properties of milk; tests for butterfat, specific gravity, sediment; separation, farm care of milk and cream, farm buttermaking.

Ice Cream Making: History, classification of ice cream and ices, standardizing, pasteurizing, homogenizing, aging the mix, formulas, freezing, storing, packing, marketing ice cream, defects in ice cream.

Market Milk: Sanitary handling of market milk, clarification, pasteurization, inspection, certified and other grades of milk, milk ordinances.

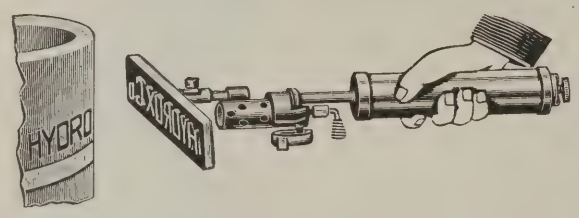
Milk Production: Study of dairy breeds of cows, care and management of the dairy herd.

Poultry Marketing: Classes of market poultry and eggs, killing and dressing poultry, candling and selection of eggs, packing eggs, storing of poultry and eggs, market requirements, packing boxes, finishing for market, etc.

Scoring Dairy Products: Scoring of milk, butter, and cheese according to official score cards and market inspection.

Opportunities.

Idaho is fast becoming a great dairy state. Its recent progress made in dairying is remarkable. In one year the number of cheese factories in Idaho increased from 15 to 60, an increase of 300 per cent. The J. L. Kraft Company is operating a large cheese processing plant at Pocatello, Idaho, which supplies the entire West and draws heavily on Idaho cheese.



New creameries are being organized in different sections of the state and there will be considerable increase in butter production in 1924. From 1921 to 1923 there will be an increase of over 100 per cent in butter production, according to government figures. Cheese production, during the same period, increased 146 per cent, and ice cream production 43 per cent. The second largest milk condensery in the United States is the Carnation plant at Nampa, Idaho. The Sego Milk Products Co. will soon be condensing milk at Buhl, Idaho.

With production constantly increasing more factories will undoubtedly continue to spring up, and excellent opportunities should develop for trained operators and managers. Specific as well as practical training is absolutely necessary to make successful men for such positions, for many a creamery has failed because of poor management and unskilled operation.

Qualifications.

The greatest benefit is derived from the course by men who have had some experience in plants such as helpers and assistants. However, no such experience is required for entrance. Students should be 17 years of age or over, have eighth grade education, or its equivalent. No tuition is charged. Assistance is given worthy students in securing positions. Certificates are granted after at least six months of satisfactory employment in some dairy manufacturing plant.

For further information address Dairy Husbandry Department, University of Idaho, Moscow, Idaho.

Outstanding Features of Climax Model C

1—Rotary Compressor a marvel of simplicity—positive and efficient in operation.

2—Model C operated by 2 H.P. motor. No power wasted in belts or other transmission.

3—No valves—no small frail parts.

4—Only 3 moving parts—all heavy, rugged and permanent.

5—Most compact—Model "C" size only 52" long and 21" wide, and 36" high. Weighs only 750 pounds.

6—Compressor direct connected to electric motor.

7—Continuous flow of gas through the compressor.

8—All lubricating oil confined to the high pressure side of compressor.

9—No oil can come in contact with liquid refrigerant.

10—No violent fluctuation of hands on pressure gauges.

11—Simplest starting. Just open water valve to start, close water valve to stop.

12—No throwing of electric switches—tightening of belts—or clattering of valves.

13—Nothing to forget. Shuts off automatically in case of failure of cooling water supply.

14—Particularly adapted to automatic control.

15—All parts made interchangeable.

16—Each unit factory tested before shipment to produce refrigeration in excess of its rated capacity.

The Climax Model C Rotary Refrigerating Unit makes mechanical refrigeration so simple—so dependable—and so economical, there is really no good reason for being without it any longer.

—It requires but little space, being only 52" long, 21" wide, 36" high, and weighs only 750 pounds.

—It has only 3 working parts—all heavy, rugged and permanent. No frail valves or other parts.

—It is simple to install—easy to operate, and inexpensive to maintain.

CLIMAX Model C ROTARY

Driven by Gas Engine or Electric Motor

offers you all these advantages:

—It is absolutely dependable.
—It keeps temperatures constantly within the seven degree safety range, below 40° and above 33°.
—It keeps foodstuffs safe from spoilage—safe from freezing.
—It requires almost no attention.
—It is always under your own control.
—It is always sanitary.
—It provides dry cold—no water soaking of foods.
—It provides odorless refrigeration—no tainted food.
—It is not interrupted by holidays.
—It is never wasteful.
—It protects you and builds trade.
—It enables you to store foodstuffs in quantities at low prices, and profit by market advances.
—It is surprisingly economical.
—It operates at the turn of a switch.

If interested, just fill out and mail coupon today for full information.

Wheel Dried Gelatine

High Percentage Of Increase In Ice Cream Production Shown By Southern States

Rapid Development of Dixie Industry Shown.
South Carolina Leads Nation

SINCE the National Association of Ice Cream Manufacturers will hold its first bonafide convention in the South next month, it will be of interest to reflect upon the strides made in the ice cream manufacturing industry of that section in recent years. The South often has been referred to "the logical scene for the development of ice cream manufacturing on a large scale."

Experts in the industry have pointed out the many favorable opportunities for the promotion of the industry in that section, included among them being Prof. A. C. Baer, widely known for his technical department in The Ice Cream Review.

FIGURES on production in the different states last year makes the Southern states show up unusually well. South Carolina leads the entire United States in percentage of increase last year, having an increase of 36 per cent over production in 1922. Next in the running was another Southern state, Kentucky, with an increase of 32.4 per cent.

The percentage of increase in different Southern states last year follows:

	Per cent		Per cent
Maryland	.7	Florida	12.8
Virginia	8.1	Kentucky	32.4
West Virginia	17.5	Tennessee	14.3
North Carolina	11.1	Arkansas	.71
South Carolina	36.	Oklahoma	.5
Georgia	10.3	Texas	12.7

LEADERS in the Southern industry are confident that from now on the ice cream production of that section shall materially increase from year to year. The different constructive lines of action now being followed out in the Southern states, promises to be a far reaching influence in developing of the industry.

For this great development, much credit must go to the Southern Association of Ice Cream Manufacturers, which will be host to the first national convention ever held in the South, when the national association convenes at New Orleans, November 17, 18 and 19.

Among the Southern delegates to be at the convention, national delegates will meet some of the nation's most aggressive ice cream manufacturers. Many of them are men who heretofore have not had the opportunity actively to take charge in national association affairs. There is little doubt that after the convention the national association will find itself stronger in that part of the country than ever before.

ICE CREAM MIX

New and Enlarged Edition

A book every ice cream man should have handy

Contains formulas for making mix of all ingredients. Tells how to figure formulas, costs, etc.

PRICE $1.00

Sent anywhere postpaid on receipt ot remittance

ROUGH ON THE BABIES.

An Aurora newspaper calls attention to a nursing bottle advertisement which concludes with: "When the baby is done drinking, it should be unscrewed and laid in a cool place under a tap. If the baby does not thrive on fresh milk, it should be boiled."—Railroad Red Book.

* * *

Tell me not in mournful numbers advertising is a dream, for the business man who slumbers has no chance to skim the cream. Life is real! Life is earnest! Competition's something fierce! If for dividends thou yearnest learn to parry, thrust and pierce. In the business field of battle, mollycoddles have no place; be not like dumb driven cattle, be a live one in the race. Lives of great men all remind us we must bring the bacon home and departing leave behind us footprints on another's dome. Let us then be up and doing, otherwise we may be done; still achieving, still pursuing—advertise and get the mon.—De Laval Separator.

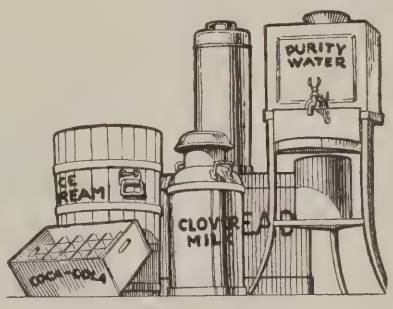
First impressions are lasting—They always see the package before the can is opened

Your Ice Cream May Even Be Too High Class for the "Ritz"



But if it doesn't come in a snappy attractive package you lose the advantage of your quality. First impressions are the lasting ones.

A high class package makes a big impression. It helps the taste. A cheap dirty package makes a poor impression and cuts the quality in the customers' mind. Hundreds of manufacturers have found that ENAMELAD is the most durable—lasting and the most beautiful. Sold to meet your approval.

(Continued from page 12)

ciding upon the Crescent City for this year's convention was to develop closer contact with members of the Southern industry. There is every assurance that this purpose will be well served. Southern delegates are sure to turn out in greater numbers this year than ever before in history. Nearly all of them are sure to remain over for the national convention. The close of the national convention should find more new names on the membership roster than has been the case at any previous convention. And there is no doubt that the greater number will be the names of men doing business somewhere below the point where the Ohio river draws a line that once separated this country like a knife-blade.

MUCH has been said about entertainment in connection with New Orleans. Entertainment features are an important part of every Southern ice cream convention The national association, in addition to the many courtesies to be extended by Southern members, will receive especial attention from The Association of Ice Cream Supply Men in the line of entertainment. This association has set a high record for features of this kind.

The real high light of the recreational features at New Orleans, however, will be the special cruise to Cuba and Panama, which will follow the convention sessions. Arrangements have been made with the United Fruit Co. for the sailing of one of the company's finest steamers from New Orleans to Cuba and the Canal Zone. Special rates have been secured for the ice cream delegates. The vessel will leave New Orleans Saturday, November 22, for a seventeen-day cruise. Fare has been set at $250 to $285.

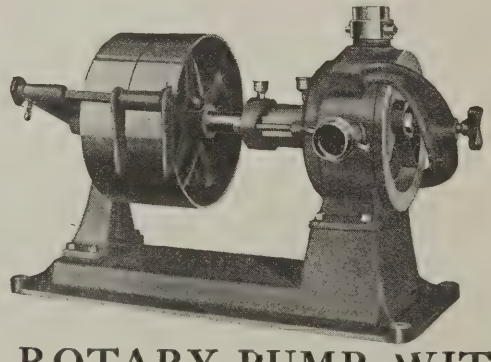
This will be one of the most startling convention features in the history of any trade association. It rivals the extraordinary convention held a few years ago by the Western Confectioners' Association, which held its convention on board a vessel that cruised to Alaska.

Among those who have reservations for the cruise, among many others, are:

John J. McDonald and four, Arctic Dairy Products Co., Detroit, Mich.
J. W. Newman and wife, Secy. Pa. and N. J. Assn., York, Pa.
J. A. Risch and wife, Tip Top Creamery Co., Vincennes, Ind.
F. W. Fisher, Seattle Ice Cream Co., Seattle, Wash.
Conrad B. Blommer, Blommer Ice Cream Co., Milwaukee.
W. Winston and party, Blanke-Baer Ext. and Pres. Co., St. Louis, Mo.
Calvin Leichtman and wife, Leichtman's Ice Cream Co., Hazelton, Pa.
J. R. Smith and wife, DeRidder Ice Cream Co., DeRidder, La.
S. M. Ross, wife and family, Moores and Ross Ice Cream Co., Columbus, O.
Frank Doyle and party, E. St. Louis, Mo.
Fred Hollweg and wife, New York, N. Y.
L. W. Roszell and family, Peoria, Ill.
John W. Cherry and wife, John W. Cherry Co., Danville, Ill.
F. W. Martin and family, Hazelwood Co., Spokane, Wash.
Edw. Kleinenberg and family, Chicago, Ill.
J. W. Kisner and wife, Champaign, Ill.
N. Lowenstein and wife, national secretary, Chicago, Ill.
G. E. Thompson and wife, Thompson Ice Cream Co., Chicago, Ill.
B. F. Frick and wife, Frick Ice Cream Co., Corsicanna, Tex.
W. W. Dunn, Jr., wife and family, J. C. Vander Bie Co., St. Paul, Minn.
F. W. Babcock and wife, J. C. Vander Bie Co., St. Paul, Minn.
Julius D. Hodskin and wife, C. E. Hall Co., Binghamton, N. Y.

The cruise schedule follows:

FIRST DAY—Saturday, a. m.—
Leave New Orleans on a ship of the Great White Fleet. Saturday and Sunday at sea.



THIRD DAY—Monday a. m.—
Arrive Havana, Cuba. Suburban automobile trip, visiting Colon Cemetery, the Casino, race track and Marianao Beach. Time about four hours.

FOURTH DAY—Tuesday—
Trip by launch across the bay to Morro Castle and Cabanas Fortress.

FIFTH DAY—Wednesday—
Passengers will have this day free for sight-seeing trips and shopping tours at their own convenience and expense. The steamer leaves in the afternoon for the run to Cristobal.

SIXTH, SEVENTH AND EIGHTH DAYS—
Thursday, Friday and Saturday—at sea.

NINTH DAY—Sunday a. m.—
Arrive Cristobal, Panama Canal Zone. Ninth, tenth and eleventh days—Sunday, Monday and Tuesday: In Panama. Passengers will be provided with hotel accommodations at the U. S. Government owned Hotel. Washington, Cristobal, C. Z., Hotel Tivoli, Panama City, R. of P., or the Hotel Aspinwall, Taboga Island on the Pacific side. Trip across the Isthmus by auto and rail to Panama City and

A ROTARY PUMP WITH HIGHER EFFICIENCY

Operating at a low R. P. M., and with a minimum power requirement, the Viking Rotary Pump delivers an unusually high efficiency, even under extremely difficult conditions.

Built ruggedly of best materials and involving an improved pumping principle, the Viking has become the universal choice for every pumping purpose.

Could you ask for greater proof of what the Viking will do in your plant than that over 50,000 are now in successful use?

New, enlarged catalog, showing Vikings for every use, mailed upon request. Ask today.

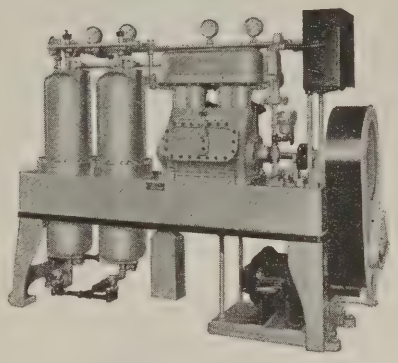
Why Not Refrigerate at a *Profit?*

Maybe you think it can't be done. Especially after taking another look at your monthly overhead for ice, salt, time and trouble. A lot of money, isn't it, on the red-ink side of your ledgers?

Supposing you shift those figures to the other side. You can do it with a Lipman Full-Automatic machine in your plant and Lipman automatic ice cream cabinets for your dealers. And it's as easy as "falling off a log."



Your Lipman equipment will do away with your ice bills. It will give you harder and full-volume ice cream. It will provide your dealers with automatic icing service. You will sell more and better ice cream—so will your dealers.

Above all, you will save money. You will save enough money every month—in comparison to your old ice system—to meet your Lipman payments. And after your Lipman equipment is paid for your saving is your own. Instead of loss it will be profit—you will earn money where you formerly spent it.

FREE INSPECTION SERVICE

Let our engineer in your section call and show you—better than this "ad" can—just how you can refrigerate at a profit. Your inquiry costs you nothing. Write today, to

A New Service For Users of *Bristol Recording Thermometers*

For the convenience of our customers we have established a new Mid-West Service Laboratory at Chicago, Ill. A similar institution is also established at Toronto, Canada.

These new Service Laboratories together with the extensive plants at Waterbury, Connecticut, enables users of Bristol Recording Instruments to secure within easy reach a complete service in rebuilding, repairing or special adaptation.

At these locations, a staff of specially trained Sales and Service Engineers are at your disposal and will be glad to assist you with all your Instrument problems. When you have occasion to enter Repair orders, free consultation is offered in regard to selecting specifications best suited to your present needs and details of your applications. Exact shipping instructions will be furnished upon request, by writing direct to the home office or any of these Service Station addresses.

return is provided, going by auto to Gatun where an opportunity is afforded to inspect Gatun Locks, Dam, Spillway and control towers of the Panama Canal; thence to Panama City and return to Cristobal by rail.

A three-hour trip around Panama City, R. of P., and a two-hour trip around Colon are also included. During the stay in Panama, passengers may employ their time to suit their individual preferences. As before stated, accommodations and meals at the hotels named are included in the cruise fares and passengers have option of dividing their time among them as they see fit.

Exceptional facilities for fishing, bathing and golf are afforded; the fishing and bathing being unusually fine at Taboga Island in the Pacific Ocean, twelve miles from Panama City, where a stay may be made at the Hotel Aspinwall, while good golf is available at Gatun and Panama City.

TWELFTH DAY—Wednesday 11 a. m.—
Steamer leaves Cristobal for the return voyage via Havana, Cuba.
Thursday and Friday—at sea.

FIFTEENTH DAY—Saturday p. m.—
Steamer touches at Havana, arriving and leaving the same day.

SEVENTEENTH DAY—Monday p. m.—
Home, Sweet Home.

ESKIMO PIE CAMPAIGN CONTINUES.

The Eskimo pie campaign continues to drive forward. The early start recorded in the October issue of The Ice Cream Review has gained headway. The outlook is that manufacturers will push the product more vigorously this winter than ever before. Many manufacturers previously "unsold" on the chocolate-coated bar are taking up the matter with a new interest and enthusiasm. The general outlook, according to the survey of the trade last month by The Ice Cream Review, is "a banner Eskimo pie season."

A quota of 171,000,000 Eskimo pies for the year 1924 has been set by one onlooker. He believes the proper initiative will mean the sale of 561,000,000 pies in 1925.

In 1923 the manufacturers of the country sold 70,000,000 pies, which represented the sale through the chocolate-coated bars of 87,500 gallons of ice cream. Holding up the pace set thus far, the sale of Eskimo pies this year should represent an outlet for nearly two and one-half million gallons of ice cream. In 1925, according to predictions, Eskimo pie should assist in the sale of 7,000,000 gallons of ice cream.

It is not to be understood that The Ice Cream Review is advising the trade thoughtlessly to "rush into" this business without properly preparing themselves. It is to the interest of the industry to point out that others are making money by following plans that may be more or less generally adopted.

NO DAMAGE DONE.

After much excitement, the Smiths had at last managed to catch the train.

Now, when they could sit quietly for a while, they began to wonder if they had left anything behind.

Mrs. Smith gave a shriek.

"Oh, Harry," she gasped, "I forgot to turn off the electric iron!"

"Don't worry, darling," he replied, "nothing will burn, I forgot to turn off the shower bath."—The Christian Advocate (N. Y.)

Unwise Policies

Striving for Greater Gallonage Leads Many Manufacturers to Forget Cost Records

*By S. T. NIVLING**

ONE of the first thoughts that occurs to me is the insatiable effort on the part of ice cream manufacturers to gain a large gallonage, without properly considering the profits which might accrue from their efforts. This intensive strife for greater gallonage, coupled with unwise selfishness, has brought with it a train of abuses which have caused no end of trouble for all of us. Part of the cause of this scramble is due to the fact that many new manufacturers have started in business since the war, and, while they have developed some new business, the greater amount of their gallonage has been taken from older manufacturers. The older manufacturers having increased the capacity of their plants to take care of the war demand now find themselves operating at very much less than the capacity of their plants. The result of operating very much below capacity is **high costs** due to the item of heavy fixed expense or overhead. What has caused this condition? The unwise policy of the older manufacturers, who during the war period, instead of being satisfied with capacity business for their plants, increased the size of their properties, and they are now suffering the result. Possibly it is unfair to assume that not many manufacturers had sufficient acuteness to analyze the future, and to have anticipated the influx of many new ice cream manufacturers in the post war period. It is perhaps unnecessary to say that there are many manufacturers in many lines of business who are now paying for their insatiable desire to reap high profits during the war boom. We manufacturers who made this mistake have plenty of company sharing our experience.

Some of the older manufacturers have resented having new manufacturers coming into the ice cream field, claiming, with good logic, that where there were plants with sufficient capacity to take care of the demand, the addition of new plants increased the cost of ice cream to the consuming public. While this is good reasoning and economically sound, at the same time as long as this country is doing business on what is known as the "competitive basis" there is no way of preventing the influx of new competition. We may as well make up our minds to the fact that the business of the country probably always will be on the "competitive basis" and in the future, the same as in the past, it simply means a question of "the survival of the fittest." "The survival of the fittest" is a truth in nature, and it is also true in business.

The result of the condition just mentioned has been a wild scramble for business, and it has caused many manufacturers to adopt policies which, to some of us, seem unwise as well as unprofitable.

Unprofitable Policies.

Regarding unprofitable business policies I will direct your attention to—
